SELECTED AND REVISED BY THE AUTHOR.

ESSAYS AND DISCOURSE

BY DR. SIR PRAFULLA CHANDRA RAY

The Amrita Bazar Patrika :—The book has undoubtedly supplied a want which was long felt and we doubt not the student community in particular will go in largely for book.* * * We have much pleasure in commending it. * *

New India:—The whole book is charged with the vitality of original enquiry and rati idealism and is a powerful incentive to the promotion of national efficiency.

The Hindustan Review:—Sir Prafulla is not only a great scientist but a great thinker, his speeches and writings now brought together are highly thoughtful and suggestive. volume should be carefully read by the author's English-knowing countrymen who will it extremely stimulating. Prefixed to the book is an excellent sketch of Sir Prafulla's, w adds to the value of the book.

The Mahratta:—This admirable volume gives a collection of the essays written by eminent Indian scientist, research worker and patriot on many scientific, social, political industrial subjects and will be perused with keen interest and admiration by the lite Indian public. It throws much light on Ancient Hindu Chemistry and other cognate mat and therefore we have no hesitation in recommending it to our readers for perusal and st

The Burma Observer:—The papers collected in this volume are worth careful reading.

The Modern Review:—The world knows Sir Prafulla Chandra Ray as a great chemist, but fact that he can wield a pen as powerfully as he can handle a test tube will be a revela to those who will read this book. It shows an amount of erudition, culture, and beauty style rare even among famous literary men of our country.

CONTENTS.—Scientific Education in India, Progress of Chemistry in Bengal, Chemistry at the Preside College, Pursuit of Chemistry in Bengal, Chemical Industries in India, Chemistry in Ancient India, Antiquit Hindu Chemistry, Higher Science in the Universities, Chemistry and Medicine, Science in the Vernac Literature, Indian Education, The Educational Service, Centenary of the Presidency College, The Ben Brain and its Misuse, Social Reform in India, Government and Indian Industries, Ananda Mohan Bose, Da bhai Naoroji, Sir William Wedderburn, The Indian School of Chemistry, Bengal Chemical and Pharmaceut Works, Ancient India, Modern India. *With a Frontispiece.*

Price Rs. 3. To Subscribers of the "I. R." Rs. 2-8.

Indian National Evolution.

BY AMVICA CHARAN MAZUMDAR.

The basal principle underlying the last thirty years' work of the Congress has been one of nation-buildi and the evolution of a national life in India, and the writer with his intimate knowledge and personal experience the movement almost ever since its inauguration has attempted to draw out this feature of the national organisati without bias or prejudice. The book also clearly defines the aims and objects of the Congress and shortly de with some of the problems which must engage its attention for the fulfilment of its high mission.

CONTENTS:—Introductory. The Genesis of political Movement in India. The Early Friends of India. T Indian Press. The Gathering Clouds. The Clouds Lifted. The Dawning Light. The Inaugurati and the Father of the Congress. The First Session of the Congress. The Career of the Congress. T Surat Imbroglio and the Allahabad Convention. The Work in England. The Congress: A National Moveme The Success of the Congress. The Partition of Bengal. The Indian Unrest and its Remedy. The Depressi The Reorganisation of the Congress. The Reconstruction of the Indian Civil Service. The Indian Representati in British Parliament. India in Party Politics. The Indian Educational Problem. Indian Renaissance. The A and Goal of the Congress. India and the War. Appendices and Illustrations.

Price Rs. Two. To Subscribers of "The Indian Review" Rs. 1-8.

Indian National Congress.

AN ACCOUNT OF ITS ORIGIN AND GROWTH, FULL TEXT OF ALL THE PRESIDENTIAL ADDRESSES. REPRINT OF ALL THE RESOLUTIONS. EXTRACTS FROM ALL THE WELCOME ADDRESSES NOTABLE UTTERANCES ON THE MOVEMENT, AND PORTRAITS OF ALL THE PRESIDENTS

The Bengalee.—We have no doubt the book will command an extensive sale.

The Hindustan Review.—It is obvious that no public man or publicist's book-shelf of works of refere can be complete without a copy of Mr. Natesan's excellent compilation of the Congress literature. Considering bulk and matter, it is cheaply priced at Rs. 3.

Rupees Three. Cloth Bound. 1,200 Pages. To Subscribers of the "Review," Rs. 2-8-0.

DADABHAI NAOROJI'S SPEECHES AND WRITINGS

This is the first attempt to bring under one cover an exhaustive and comprehensive collection of the speec and writings of the venerable Indian Patriot, Dadabhai Naoroji. The first part is a collection of his speec and includes the addresses that he delivered before the Indian National Congress on the three occasions that presided over that assembly; all the speeches that he delivered in the House of Commons and a selection of speeches that he delivered from time to time in England and India. The second part includes all his statem to the Welby Commission, a number of papers relating to the admission of Indians to the Services and many o vital questions of Indian administration. The Appendix contains, among others, the full text of his evidence bef the Welby Commission, his statement to the Indian Currency Committee of 1898, his replies to the questions pu him by the Public Service Committee on East Indian Finance.

Price Rs. 2. To Subscribers of "The Indian Review," Rs. 1-8-0.

POCKET EDITION

THE BHAGAVAD-GITA.

PRICE AS. TWO

WITH THE TEXT IN DEVANAGARI AND AN ENGLISH TRANSLATION BY MRS. ANNIE BESAN

Note.—It has long been my ambition to place within reach of the English-reading public a cheap edition of Bhagavad-Gita with the text in Devanagari and an English translation of the same. Mrs. Annie Besant, that w and tried friend of India whose services to our land it were vain to count, has enabled me to realize that ambit by generously granting the use of her English translation. It is devoutly hoped that this great scripture of Hindus will find a place in thousands of homes both in India and elsewhere.—G. A. NATESAN.

The Prabudha Bharata.—In clearness of type, in size and shape, the book leaves nothing to be desired. We heartily recommend it to all who want a trustworthy pocket-edition of the Gita. *The Modern Review.*—Mr. Nate is bidding fair to be the Indian Routledge. The finely printed edition of a well-known and excellent transla has been here offered at an impossibly cheap price, and it should make its way to every Indian home and heart.

PRICE AS. TWO. POSTAGE ON EACH COPY, 6 PIES.

THE INDIAN REVIEW

A HIGH-CLASS MONTHLY

EDITED BY MR. G. A. NATESAN

ANNUAL SUBSCRIPTION INCLUDING POSTAGE: Inland .. Rs. 5 (Five) Great Britain. Ten Shillings; U. S. A. .. Three Dollars.

Special Features

A number of original contributions by well-known Indian and English writers on a variety of subjects. Critical Reviews of the latest books. Summary of noteworthy articles in leading English, American and Indian periodicals. Selections from the notable Utterances of the Day. Notes and News on Industrial, Commercial and Agricultural matters; also select notes on Literary, Educational, Legal, Medical, Scientific, Personal, Political and General Topics. Among other special attractions of the "Review" may be mentioned 'Current Events,' 'Diary of the Month,' 'Indians Outside India,' Feudatory India,' 'Questions of Importance,' Portraits and Illustrations.

☞ **Each issue contains at least eighty pages (crown quarto) of solid matter.**

Single Copy, As. Eight; Annual Subscription, Rs. 5 only.

If you have not already seen "The Indian Review," send a two-anna postage stamp for a free specimen copy to Messrs. G. A. Natesan & Co., Publishers, 3 & 4, Sunkurama Chetty Street, Georgetown, Madras.

THE INDIAN REVIEW

SELECT OPINIONS.

Sir Henry Cotton.—Allow me to express to you the admiration I feel for your energy in literary production and the valuable service you are thereby rendering to your fellow-countrymen.

The Gujarati.—Mr. Natesan may well be congratulated upon the commendable enterprise he has shown and the great success which has crowned his efforts.

The Telegraph.—This excellent Review.

Bengalee.—It is ably edited by Mr. G. A. Natesan, B.A., that distinguished publicist of Southern India. * * * Well-known monthly magazine.

Rast Goftar and Satya Prakash.—The periodical is one deserving of liberal patronage from the public, and, indeed, we believe that a journal which furnishes such ample reading and excellent literary materials for an annual charge of five rupees should have several thousand subscribers on its roll.

The Mahratta.—The *Indian Review* is doing useful service as a monthly magazine and attempts to keep a high level of thought in its articles which usually come from the pen of men who have devoted deep thought to the subjects they handle.

☞ The annual subscription to the *Indian Review* is Rs. 5 (Five) only per annum including postage. Subscription can commence from any month. If you have not already seen the *Review* send postage stamps for As. Two for a free specimen copy to G. A. Natesan & Co., Madras.

G. A. Natesan & Co., Sunkurama Chetty Street, Madras.

☞ Current numbers of the Review (sold at As. 8) will not be given as specimen copies

Notable Books on India

My Indian Reminiscences.—By Dr. Paul Deussen, Professor of the University of Kiel, translated by A. King. Dr. Deussen's account of his tour throughout India, his description of its principal cities, its shrines, etc., afford much interesting reading. The language in which he describes the customs, ceremonies, manners, traits and traditions of the Indian people—shows profound admiration and love for the land which, to use his own words, "had for years become a kind of spiritual mother-country" to him. Price Re. 1-4. To Subscribers of the "Indian Review," Re. 1.

Glimpses of the Orient to-day.—By Saint Nihal Singh. In this book, Mr. Singh describes the transition that has taken place in Asia, during the last few decades, traces the causes of the awakening and offers a prophecy as to its ultimate effect. Price. Re. 1. To Subscribers of the "Indian Review," As. 12.

All about Delhi.—An Exhaustive hand book compiled from authentic sources. With 36 Illustrations Re. 1-8. To Subscribers, Re. 1-4.

Essays in National Idealism.— By Ananda K. Coomaraswamy, D. Sc. Popular Edition with 6 illustrations Re. 1. To subscribers of the *Indian Review*, As. 12.

The Swadeshi Movement.—A Symposium by Representative Indians and Anglo-Indians. An excellent and authoritative collection of official and non-official views. Re. 1. To Subscribers of the "Indian Review," As. 12.

SURENDRANATH BANERJEA'S Wedderburn's Speeches & Writings. Wacha's Speeches and Writings. The Publishers have made every endeavour to make

SURENDRANATH BANERJEA'S

SPEECHES AND WRITINGS.

An up-to-date collection of the speeches of the Hon. Mr. Surendranath Banerjea. It contains his many important Congress Speeches including his two Presidential Addresses, his Speeches in the Viceregal Council, and several important ones delivered both in India and in England during his visits to that country in connection with the Press Conference and Congress Propaganda Work.

CONTENTS.

Introductory.—The Study of Indian History. Congress Speeches.—Congress Presidential Address, Poona, 1895; The Congress: Its Mission; The Partition of Bengal; Self-Government for India. Speeches in the Imperial Council.—University and Secondary Education; The Press Act; The Decentralization Commission; The Defence of India Act; The Calcutta University; Judicial and Executive Functions. Miscellaneous Speeches.—Indian Unity; The Vernacular Press Act; The Queen's Jubilee; An appeal to the Mohamedan Community; Government and Municipalities; Swadeshism. Speeches in England.—The Meeting in Finsbury; The Debate at the Oxford Union; Reception by Mr. E. C. Schwann, M.P.; India and English Literature; The Indian Press; The Indians' Dinner in London; The Situation in India; Contributions to the Press.—Lord Morley's Reform Proposals; What India Wants; Indian Unrest. Personal.—Mazzini; Lord Ripon. Appendix.—Evidence before Welby Commission.

THE NEW INDIA.—Messrs. G. A. Natesan & Co., of Madras, have done well to have brought out a handy edition of his speeches and writings at the present time when public thought requires all the material it can possibly obtain for its stimulation.

THE KARNATAKA.—Being the utterances of our greatest of his time, they deserve constant study by every public worker and patriot.

PRICE. Rs. 3. To Subscribers of the "I.R." Rs. 2-8.

G. A. Natesan & Co., Sunkurama Chetty Street, Madras.

Wedderburn's Speeches & Writings.

The Publishers have made every endeavour to make this collection comprehensive and up-to-date. The matter was selected by Sir William Wedderburn himself. The first part contains the full text of his two Congress Presidential Addresses; the second, all his speeches in the House of Commons; the third, Miscellaneous Speeches on a variety of topics relating to India; the fourth, "Contributions to the Press" comprising his writings to the daily and the periodical press on Indian Questions; the fifth, "Personalia" being his speeches and writings in appreciation of his Indian and European friends; and the sixth, Replies to addresses and Entertainments given in his honour on various occasions in India and England. In part seven, entitled "Appreciations," we have a selection of tributes paid to Sir William's services to India by his numerous English and Indian friends and admirers.

Part I. Congress Speeches: Presidential Address, Bombay Congress, 1889. Presidential Address, Allahabad Congress.

Part II. Speeches in the House of Commons. Simultaneous Examinations. The Condition of the people of India. Parliamentary Inquiry for India. Indian Expenditure. The Government's Policy in Chitral. Speech on the Indian Budget, 1895. The Retention of Chitral. The Cotton duties and the Indian poor. Indian Troops at Suakin. The Maharajah of Jhalawar. The Scrutiny of Indian Accounts. The Condition of the Indian Masses. The Problem of the Indian Rayat. The Condition of India. The Poverty of India. The Calcutta Municipal Bill. Parliament and Indian Affairs. The Famine in India. The Indian Budget," 1900.

Part III. Miscellaneous Speeches:

Part IV. Contributions to the Press:

Part V. Personalia:

Part VI. Replies to Addresses:

Part VII. Appreciations:

With a portrait and Index. Cloth bound.

Price Rs. 3. To Subscribers of the "I.R." Rs. 2-8.

G. A. Natesan & Co., Sunkurama Chetty Street, Madras.

Wacha's Speeches and Writings.

The Hon'ble Sir D. E. Wacha's numerous speeches and writings are brought under one cover for the first time in this volume. This publication contains his Congress Speeches, his Speeches in the Imperial Council and addresses to various public bodies as also his select essays on economic, commercial and financial subjects. Contains also his evidence before the Welby Commission.

CONTENTS.

Congress Presidential Address, Calcutta, 1901. Evolution of Indian Trade; Science of Commerce; Stray thoughts on the Study of Economics; Statistical and Economic Study among Indians; Indian Railway Finance; Indian Military Expenditure; The Indian Commercial Congress; Agricultural Banks in India; The Currency Question. Addresses to the Millowners' Association. Bombay Congress Reception Committee's Addresses. Simultaneous Examinations. The Indian Civil Service, Evidence before the Welby Commission. Appendix. Index with a portrait. Bound in cloth.

The Hindu.—Sir Dinshaw's *forte* is, as is well-known, finance and it is not surprising that out of 19 selections about 15 directly relate to finance and constitute an exposition of his views on the Indian financial questions.

Commonweal.—All the subjects have been handled with masterly ability and can be appreciated not only by specialists but by lay readers as well.

Price Rs. 3. To Subscribers of the "I.R." Rs. 2-8.

G. A. Natesan & Co., Sunkurama Chetty Street, Madras.

THE GOVERNANCE OF INDIA

AS IT IS AND AS IT MAY BE

A HAND-BOOK OF PROGRESSIVE POLITICS

BY GOVINDA DAS.

Crown 8vo. Cloth Bound.

Price Rs. 3. To Subscribers of "I.R.," Rs. 2-8.

SAROJINI NAIDU'S

SPEECHES AND WRITINGS.

This exhaustive and comprehensive collection of the speeches and writings of Mrs. Sarojini Naidu, includes her speeches delivered from time to time at the various sessions of the Congress, the Indian Social and Theistic Conferences. It includes also her notable utterances on Self-Government for India, the Education of Indian Women, the Elevation of Indian Womanhood, Hindu-Muslim Unity the Privileges of the Younger Generation, the Arms Act, Indians and Military Service, Indentured Labour and several select addresses to students.

COMMONWEAL.—The book under notice contains Mrs. Naidu's speeches on a variety of subjects. Religion, Politics, Social Reform, Education—all have been dealt with in a style which one always associates with every literary production of Sarojini. The "Reminiscences of Mr. Gokhale" which is an appreciation of her great leader published soon after his death is fittingly included in this volume.

WITH A PORTRAIT AND APPRECIATIONS.

Crown 8vo printed on Featherweight paper.

Re. One. To Subscribers of "Indian Review," As. Twelve.

THE INDIAN REVIEW

SELECT OPINIONS.

Sir Henry Cotton.—Allow me to express to you the admiration I feel for your energy in literary production and the valuable service you are thereby rendering to your fellow-countrymen.

The Gujarati.—Mr. Natesan may well be congratulated upon the commendable enterprise he has shown and the great success which has crowned his efforts.

The Telegraph.—This excellent Review.

Bengalee.—It is ably edited by Mr. G. A. Natesan, B.A., that distinguished publicist of Southern India.* * * Well-known monthly magazine.

Rast Goftar and Satya Prakash.—The periodical is one deserving of liberal patronage from the public, as, indeed, we believe that a journal which furnishes such ample reading and excellent literary materials for an annual charge of five rupees should have several thousand subscribers on its roll.

The Mahratta.—The *Indian Review* is doing useful service as a monthly magazine and attempts to keep a high level of thought in its articles which usually come from the pen of men who have devoted deep thought to the subjects they handle.

☞ The annual subscription to the *Indian Review* is Rs. 5 (Five) only per annum, including postage. Subscription can commence from any month. If you have not already seen the *Review* send postage stamps for As. Two for a free specimen copy to G. A. Natesan & Co., Madras.

G. A. Natesan & Co., Sunkurama Chetty Street, Madras.

☞ **Current numbers of the Review (sold at As. 8) will not be given as specimen copies**

LIFT-IRRIGATION

BY ALFRED CHATTERTON,

Professor of Engineering, on Special Duty, Madras.

CONTENTS. Introduction, Water Lifts. Underground Water-Supply, Well Irrigation with Oil Engines, Irrigation from Artesian Wells, The Value of Wind-Mill in India, Experiments with Wind-Mills, Wind-Mills Irrigation in America, The Cost of Power, Cost of Lifting Water, Flow of Water in Sand, Well-Boring, Steam Pumps in the Kistna Delta, Development of Lift-Irrigation, Lift-Irrigation, Irrigation by Pumping, Progress in Irrigation by Pumping in Madras, Irrigation by Pumping in the United States.

PREFACE TO THE SECOND EDITION

Some years ago, Messrs. G. A. Natesan & Co. reprinted a number of papers and articles which I had written at various times on the improvement of the methods of lifting water for irrigation. The little volume apparently served a useful purpose as it met with a ready sale and has been out of print for some time. The demand for information, as to the methods to be pursued and as to the results which have been achieved, still continues and in the absence of any formal treatise on the subject, a fresh compilation of papers has been made which it is hoped will to some extent supply what is needed.

Price Rs. Two.

To Subscribers of the "Indian Review," Re. 1-8.

My Indian Reminiscences

By Dr. Paul Deussen

EXTRACT FROM THE INTRODUCTION

In recording my impressions of my trip to India in the winter of 1892-93, and thus presenting them to the public I have yielded to the wishes of my friends, partly because, notwithstanding the shortness of my stay in India, I was enabled, being favoured by circumstances, to get a deeper insight into the life of the natives than a European usually gets.

My knowledge of Sanscrit, the study of it had been to [illegible], my daily bread for the twenty years previous to [illegible], was of immense service.

[illegible] was to be of still greater use to me in India than [illegible] knowledge of the ancient and sacred language of the [illegible]s the fact that I had happened to have spent the [illegible]ies of a number of years in entering into the [illegible]n Upanishads and the Vedanta based upon

GOKHALE'S SPEECHES AND WRITINGS.

The first Part includes all his utterances in the Supreme Legislative Council; the second and third Parts contain his important Congress speeches and his notable utterances on the South African Indian question; in the fourth Part we have his speeches in appreciation of Mr. A. O. Hume, Lord Northbrook, Mr. Dadabhai Naoroji, Mr. Mahadev Govind Ranade, Mr. W. C. Bonnerjee, Sir P. M. Mehta, Sir William Wedderburn, and others; the fifth Part comprises selection of miscellaneous speeches delivered in England and India. The sixth Part contains his Evidence before the Welby Commission and full text of the Note prepared by him for the Royal Commission on Decentralisation. In the Appendix will be found his paper on "East and West in India" read at the Universal Races Congress and the Constitution of the Servants of India Society founded by him in 1905. With seven Illustrations and an Index.

Crown Octavo 1,236 *Pages. Price, Rs. 3. To Subscribers of "The Indian Review," Rs. 2-8.*

INDIAN NATIONAL EVOLUTION

A SURVEY OF THE ORIGIN AND PROGRESS OF THE INDIAN NATIONAL CONGRESS.

BY AMVIKA CHARAN MAZUMDAR.

It is, as we have said, so crammed with information that we cannot pretend to have done more than scratch the surface. But if we have succeeded in sending any reader of these lines to the book itself we are content. Its perusal is an education.—*India.*

Price, Rs. Two. To Subscribers of "The Indian Review," Rs. 1-8.

INDIAN NATIONAL CONGRESS.

AN ACCOUNT OF ITS ORIGIN AND GROWTH. FULL TEXT OF ALL THE PRESIDENTIAL ADDRESSES. REPRINT OF ALL THE RESOLUTIONS, EXTRACTS FROM ALL THE WELCOME ADDRESSES. NOTABLE UTTERANCES ON THE MOVEMENT, AND PORTRAITS OF ALL THE PRESIDENTS.

The Bengalee.—We have no doubt the book will command an extensive sale.

The Hindustan Review.—It is obvious that no public man or publicist's book-shelf of works of reference can be complete without a copy of Mr. Natesan's excellent compilation of the Congress literature. Considering its bulk and matter, it is cheaply priced at Rs. 3.

Price, Rs. Three. Cloth Bound, 1,200 Pages. To Subscribers of "The Indian Review," Rs. 2-8.

Dadabhai Naoroji's Speeches and Writings.

This is the first attempt to bring under one cover an exhaustive and comprehensive collection of the speeches and writings of the venerable Indian Patriot, Dadabhai Naoroji. The first Part is a collection of his speeches and includes the addresses that he delivered before the Indian National Congress on the three occasions that he presided over that assembly; all the speeches that he delivered in the House of Commons and a selection of the speeches that he delivered from time to time in England and India. The second Part includes all his statement to the Welby Commission, a number of papers relating to the admission of Indians to the Services and many other vital questions of Indian administration. The Appendix contains, among others, the full text of his evidence before the Welby Commission, his statement to the Indian Currency Committee of 1898, his replies to the questions put to him by the Public Service Committee on East Indian Finance.

Price, Rs. Two. To Subscribers of "The Indian Review," Rs. 1-8.

THE INDIAN REVIEW

SELECT OPINIONS.

Sir Henry Cotton.—Allow me to express to you the admiration I feel for your energy in literary production and the valuable service you are thereby rendering to your fellow-countrymen.

The Gujarati.—Mr. Natesan may well be congratulated upon the commendable enterprise he has shown and the great success which has crowned his efforts.

The Telegraph.—This excellent Review.

Bengalee.—It is ably edited by Mr. G. A. Natesan, B.A., that distinguished publicist of Southern India.* * * Well-known monthly magazine.

Rast Goftar and Satya Prakash.—The periodical is one deserving of liberal patronage from the public, as, indeed, we believe that a journal which furnishes such ample reading and excellent literary materials for an annual charge of five rupees should have several thousand subscribers on its roll.

The Mahratta.—The *Indian Review* is doing useful service as a monthly magazine and attempts to keep a high level of thought in its articles which usually come from the pen of men who have devoted deep thought to the subjects they handle.

☞ The annual subscription to the *Indian Review* is Rs. 5 (Five) only per annum including postage. Subscription can commence from any month. If you have not already seen the *Review* send postage stamps for As. Two for a free specimen copy to G. A. Natesan & Co., Madras.

KASINATH TRIMBAK TELANG

THE MAN AND HIS TIMES

BY MR. VASANT N. NAIK, M. A.

PREFACE

The years between the seventies and nineties of the last century, however tame they may appear to us now have a deeper significance for us as being the epoch of pioneer work. Those were the years when the foundation was laid of many an activity, the ripening of which is yet to come. In all these activities Telang played a very conspicuous part. The knowledge of his life, his ideals, his methods of work and his aspirations will not come amiss, nay is bound to be immeasurably useful in an age when passion is apt to run riot and "enthusiasm is made to do duty for reasoned scrutiny."

The sketch can lay no pretentions to the name of a biography. It is but an humble *essay* on the part of the writer to understand the man and his times and to draw for himself a picture of the man as accurate and faithful as possible from the very scanty materials at his disposal.

FOOLSCAP 8VO. 158 PAGES.

The Indian Social Reformer.—Mr. Naik enables us to get a fairly good idea of Mr. Telang as an educationist, as a social reformer, and as a political leader.

LIFT-IRRIGATION

BY ALFRED CHATTERTON,

Professor of Engineering, on Special Duty, Madras.

CONTENTS. Introduction, Water Lifts. Underground Water-Supply, Well Irrigation with Oil Engines, Irrigation from Artesian Wells, The Value of Wind-Mill in India, Experiments with Wind-Mills, Wind-Mills Irrigation in America, The Cost of Power, Cost of Lifting Water, Flow of Water in Sand, Well-Boring, Steam Pumps in the Kistna Delta, Development of Lift-Irrigation, Lift-Irrigation, Irrigation by Pumping, Progress in Irrigation by Pumping in Madras, Irrigation by Pumping in the United States.

PREFACE TO THE SECOND EDITION

Some years ago, Messrs. G. A. Natesan & Co. reprinted a number of papers and articles which I had written at various times on the improvement of the methods of lifting water for irrigation. The little volume apparently served a useful purpose as it met with a ready sale and has been out of print for some time. The demand for information, as to the methods to be pursued and as to the results which have been achieved, still continues and in the absence of any formal treatise on the subject, a fresh compilation of papers has been made which it is hoped will to some extent supply what is needed.

Price Rs. Two.

To Subscribers of the "Indian Review," Re. 1-8.

G. A. Natesan & Co., Sunkurama Chetty Street, Madras.

INDUSTRIAL INDIA

BY MR. GLYN BARLOW, M.A.

CONTENTS.

1. Patriotism in Trade. 2. Co-operation. 3. Industrial Exhibitions. 4. The Inquiring Mind. 5. Investigation. 6. Indian Art. 7. Indian Stores. 8. India's Customers. 9. Turning the Corner. 10. Conclusion.

SECOND EDITION

Re. 1. To Subscribers of the "Indian Review," As. 12

SELECT PRESS OPINIONS.

"*The Madras Mail.*"—Throughout the book there is a cheery note of optimism which ought to be encouraging to those who are exerting themselves to bring about improvements.

"*The Madras Times.*"—This little book is well written, well edited and well published, and we can safely recommend our Indian friends to read, mark and inwardly digest its contents.

"*The Daily Post,*" *Bangalore.*—The book is an eminently readable one, and if it does not prove useful that will not be due to the fault of the writer.

"*The Indian Spectator.*"—Every young man in India ought to read Mr. Glyn Barlow's book.

G. A. Natesan & Co., Sunkurama Chetty Street, Madras.

The "Friends of India" Series

This is a new Series of short biographical sketches of eminent men who have laboured for the good of India, which the Publishers venture to think will be a welcome addition to the political and historical literature of the country These biographies are so written as to form a gallery of portraits of permanent interest to the student as well as to the politician Copious extracts from the speeches and writings of the "Friends of India" on Indian Affairs are given in the sketches. Each volume has a fine frontispiece.

Lord Morley	*Henry Fawcett*
Lord Ripon	*Mr A O Hume*
Sir William Wedderburn	*Sir Henry Cotton*
Mrs Annie Besant	*Lord Macaulay*
Lord Minto	*Sister Nivedita*
Edmund Burke	*Rev Dr Miller*
Charles Bradlaugh	*Sir Edwin Arnold*
John Bright	*Lord Hardinge*

THE LEADER :—Will be a welcome addition to the political and historical literature of the country

THE MODERN REVIEW :—On the cover of each volume is printed a portrait of the subject of the sketch and the stories are told in a lively and interesting manner with short extracts from notable speeches delivered The series should be welcome to the public

As 4 each, 6 (Six) at a time As 3 each

Shakespeare's Chart of Life

BEING STUDIES OF

HAMLET, KING LEAR, OTHELLO AND MACBETH

BY THE REV. DR. WILLIAM MILLER, C.I.E.

CONTENTS.

KING LEAR AND INDIAN POLITICS
HAMLET AND THE WASTE OF LIFE
MACBETH AND THE RUIN OF SOULS
OTHELLO AND THE CRASH OF CHARACTER

Dr. Miller does not appear as an annotator or critic. He fixes his student's attention especially on the ethical side of Shakespeare's teaching. According to him the plays of Shakespeare, whether designedly or not, are not calculated merely to amuse. They have each "an inner meaning," a "central idea," which it does the student good to search out and assimilate.

The Madras Mail.—Dr. Miller has taught Shakespeare for over 40 years to hundreds of students, who have passed through the Christian College. And in his classes, if he has enforced one lesson more than another, it has been that these plays must have been written with the object, among others, of making plain the moral principles, which underlie the ordinary occurrences in human life, and that it is this feature of Shakespeare's plays which makes them not only an intellectual discipline but a means of real benefit to those upon whom they have their full and proper influence.

All About the War : The Indian Review War Book.

A COMPREHENSIVE AND AUTHENTIC ACCOUNT OF THE WAR WITH NUMEROUS ILLUSTRATIONS, PORTRAITS, CARTOONS, MAPS, & DIAGRAMS

CONTRIBUTED BY

OFFICERS OF THE INDIAN CIVIL, MILITARY & MEDICAL SERVICES, MINISTERS OF NATIVE STATES, ENGINEERS, EDUCATIONISTS, JOURNALISTS, LAWYERS, AND PUBLICISTS

EDITED BY MR. G. A. NATESAN, B.A., F.M.U.

WITH AN INTRODUCTION BY H. E. RT. HON. LORD PENTLAND.

THIS book presents under one cover a comprehensive and authentic account of the war with illustrations portraits, cartoons, maps and diagrams. It deals among other subjects with the ethical, historical and immediate causes of the war: the political history of the Belligerents and the Neutrals; sketches of the Rulers at war the leading Statesmen and Ministers of the Powers; the Army and Navy Chiefs and other famous fighters in the front; the moral and economic aspects of the war; prize courts; the position of Neutrals and other International problems; and the latest engines and weapons of warfare on land, sea and air. It contains also a general account of all forms of rescue, relief and humanitarian efforts in time of war; and copious other information of the most interesting and useful kind compiled from various sources with the fullest particulars of the magnificent rally of India and the Colonies to the British Flag and a narrative of the campaigns on land and sea.

HIS EXCELLENCY LORD PENTLAND'S OPINION:

It is an interesting record of contemporary views and of the impressions made on thinking minds by the great events taking place around us, and to the ordinary reader it affords a compendium of information which he has neither time nor opportunity to collect for himself. As such it deserves a wide circulation.

240 PORTRAITS, 107 ILLUSTRATIONS, 37 CARTOONS AND 16 MAPS.

☞ **Patronised by The Secretary of State for India, the Government of India, Local Governments, Native States, Directors of Public Instruction, District and Taluq Boards, and Municipalities.** ☜

☞ **Lord Hardinge :** *A well-planned volume which should be of very great use to the public for whom it is intended.* ☜

A very interesting feature of the book is the account given of the part played by the princes and the People of India in this Great War. The portraits of almost all the Ruling Princes and Chiefs of India will be found in the volume.

Crown quarto 604 Pages, Cloth Bound, 240 Portraits, 107 Illustrations, 37 Cartoons and 16 Maps.

☞ **Price Rs. Four. Special offer Rs. 3.** ☜

☞ **(i) Presidents or Secretaries or any recognised officers of Reading Rooms, Clubs or Asssociations (ii) Principals, Headmasters or Managers of Educational Institutions (iii) Presidents of District and Taluq Boards and Municipalities ordering for FIVE copies at a time can have at Rs. 2 (Two) a copy** ☜

THE INDIAN REVIEW

A MONTHLY PERIODICAL DEVOTED TO THE DISCUSSION OF ALL TOPICS OF INTEREST.

EDITED BY MR. G. A. NATESAN.

Vol. XX. FEBRUARY, 1919 No. 2

INDUSTRIAL PEACE

BY

MR. D. S. GORDON, M.A., (EDIN.)

WITHIN the last few months various places in India, notably the great cities, have been the scenes of industrial war. Time was when it used to be thought that strikes and lock-outs were the peculiar legacies of Western civilisation and industrial system, with which people in this land had nothing to do. The situation has since changed; India has adopted Western methods of production, and it seems from recent occurrences that she has also imported the Western industrial unrest. Given a capitalist-owned factory and a working-class, the "labour problem" naturally arises. It arose in England in the last century, it has arisen in India to-day. In the former country, the Industrial Revolution transformed, within the space of eighty years, its whole industrial organisation and ushered in the factory system with its thousands of wage-earning "hands". The suddenness of the metamorphosis paralysed labour; and it took some time before the working classes came fully to realise what the recent changes meant for them.

In India we are more fortunate, for here we have not had, and shall not have, an Industrial Revolution as there was in England, or France, or Germany. It is true that some writers on Indian economics have spoken about an imaginary revolution which might bring about sweeping changes in our industrial system. This can only be explained by saying either that they were mistaken or that they used a stronger word where a milder one would have described the impending change more accurately. A revolution in industry can only be brought about by the sudden or quick introduction of machinery and mechanical power, and by the rapid adoption of these agents in production. The first power-driven machinery came into India more than half a century ago, but still the greater portion of our industries is in the domestic stage. India, therefore, will not have an industrial revolution but will have an Industrial transition.

The slowness with which the industrial transition of this country is being accomplished is, from the point of view of labour, a blessing; for then labour will not be precipitated into a sudden and unequal struggle with capital, but will have time to deliberate and gradually adjust its relationship to capital. In spite of the recent disturbance in the mills at Bombay, Madras and elsewhere, which seems to have brought on the conflict between labour and capital sooner than one might have expected, the truth is that we have not yet been familiarised with the real combat as it prevails in industrially more advanced countries. The causes for strikes in those countries are fundamentally different from those which at present actuate Indian labour. There a strike is not so much due to specific grievances as to an intelligent comprehension by the labourer, of the incompatibility of capitalistic

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

interests with his own interests. It is even born of that hatred of capitalism fostered by trades-unions and by propagandist socialist associations such, for instance, as the Fabian Society in England. The working class in the West knows what it is about. It has been taught that of the three primary factors of production, land, labour, and capital, the second alone is an active agent and that therefore to it alone is due the fruits of production. Its final goal is thus the elimination of capital, either gradually and peaceably as the moderate section of labour advocates, or immediately and violently as the Syndicalists desire.

The education of labour in political economy has not advanced in this country to this dangerous pitch. The recent strikes are not due to a reasoned understanding by Indian workmen, of their own rights and of capitalistic usurpation, but must be attributed to a more or less temporary cause. The suggestion that the present industrial unrest has been fomented by certain interested political malcontents may be at once dismissed with scant courtesy as both malicious and without foundation. As the Bombay workmen stated in their petitions to their emlpoyers, the real cause for their striking work was the increased cost of necessaries, which made it impossible for them to make both ends meet with the old wages. The plea was certainly true, but what gave additional force to their argument was the knowledge that their employers had made enormous profits during the war, and the feeling that it was but just that they should part with a little of it to the needy workmen who had helped them to gain the profits.

Everyone knows that the price of food-stuffs has more than doubled, and even at these enhanced rates it is difficult to obtain them in several places. The food-riots will always be an interesting episode in Indian economic history. In ordinary years, when the monsoon did not grievously disappoint, the 200 million acres devoted to food production in India not only easily supplied her own wants but made it possible for her to export considerable quantities of food-stuffs, especially wheat, to Europe. The acuteness of the present situation, however, cannot be attributed to failure of the monsoon rains but rather to the impolicy of the Government of India in allowing export of enormous quantities outside the country, without considering the requirements of the population in the country. It is now patent to all that there is a world-shortage of food-stuffs, and unless the harvests in the present year make up for their past remissness, we shall be plunged into deeper misery and starvation.

As regards cloth, the hand-loom industry of India together with her power-driven mills, had, in the pre-war days, not only supplied the coarser kinds for home consumption but had also exported further East. Lancashire supplied us only the finer kinds of cloth, chiefly used by the comparatively well-to-do classes. But looking at the present cloth situation, it is the poorer classes, who went in for coarser stuff, that suffer most. The Indian workman, or for the matter of that, all people near the tropics are satisfied with a minimum amount of covering for the body, consistent with decency. In such a country for the prices to rise to the present abnormal level, the scarcity must be phenomenal indeed. In view of the lack of tonnage and the slump in the export of raw cotton to England owing to the labour situation there, we should have expected an unprecedented expansion in the native cloth production. So there was; but the increased output was more than counterbalanced by the new and insistent demand created by the war. Never before, as statistics prove, has there been such huge production of piecegoods, and never before was there such enormous export. The quantity (of piece goods) exported was more than double that in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the preceding years and nearly three times the average export during the pre-war quinquennium. There was thus more reason for the prices to rise than to fall. The high prices, however, not being confined to one or two articles, but being general, there is reason to believe that there has been an inflation of the currency.

To whatever causes the high level of prevailing prices may be due, it certainly gave the strikers ample cause for their action. Should, then, the prices return to normal level, which by the way is improbable, will the strike cease? There may be a cessation of strikes for a period, but not for long, for contentment is not a virtue of humanity. The Indian workman is intelligent, and intelligence is the mother of ambition. It makes him understand his surroundings better; it plants in him the desire for emulation; it opens to him the vision of a more commodious house, better clothing, and an improved standard of life. This desire for the good things of the world, however, means higher wages and slender profits to the capitalist. When the Indian working-class has fully realised what it wants and how to set about to gain its objects, we would have a real labour problem. The world of industry will not then be marked by a strike here and a strike there, in order to gain a paltry four annas a week, but by a more intelligent and universal demand for a "living wage" which would be amply sufficient for the workman and his family to provide the necessaries of life. To bring about this situation labour must be strong, and only organised labour can be strong; hence our workmen in mills and factories must form themselves into associations.

But the question may well be asked: Is it desirable to have a strong, well-organised labour population in the country? This is a difficult question to answer, for it determines whether the struggle with capital shall be prolonged or cut short. The stronger the combatants the longer the fight. Solidarity among labourers will so strengthen their hands that they will collectively stand on an equal footing with the capitalist. We desire industrial peace, but if conflict between labour and capital is an inherent evil of the present industrial system, which cannot be avoided, then our sense of fairness requires that one party shall take advantage of the weakness of another, that capital shall not always crush labour. Hence, unless a solution is found which would give the quietus to this fundamental antagonism, it is the duty of labour to protect itself by organising. And India has now to learn the first lessons in organisation; but the task is less difficult, for the excellences and defects of the Western trades-unions are at once an encouragement and a warning.

The history of these trades-unions furnishes us with one or two very important points, essential to the success of any association of workmen. A labour-union is not a mere combination. This, the earliest, the easiest, and the weakest form of organisation to oppose capital, has long ago been abandoned for better methods of securing the interest of labour. The permanence and unanimity of the members are not assured in a mere association. The men have to be held together by the golden thread; common financial interest must be the binding force and strength of the organisation. The vitality of a labour-union depends upon its common fund to which all the members have contributed. This has been again and again demonstrated in the early history of English and French trades-unions. Strikes are wars of attrition, the greater the financial efficiency of the strikers, the longer they can maintain, and the nearer the victory. Belgium and Germany, which before the War possessed the best organised trades-unions in the world, have set the pattern in regard to sound financing, centralisation, and leadership. Haphazard co-ordinations, and overlapping federations have been a source of inefficiency in England and in the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

United States, though in respect of leadership and finance they are second to none. In India, however, we are not concerned with problems of co-ordination and concentration, but with the creation of local unions with strong funds and sagacious leadership.

Too much emphasis cannot be laid upon leadership, for whether the union shall be a force for good or for evil, whether it shall make or mar the progress of the working man, depends upon the choice of a successful leader—one who is distinguished for his character, integrity, sense of justice and zeal for the uplift of labour. Organising labour is like training an army; and as an army without a leader or with a bad one, is capable of inflicting enormous injuries, so is organised labour liable to inflict serious damage to trade and industry under similar circumstances. Capable leaders, however, are not common, especially in the ranks of labour, and they must therefore be secured from among the well-to-do classes until labour itself produces suitable men. Even in England, which is a pioneer trade-unionist, some of the labour leaders have always belonged to other classes.

It is a disappointment to think that labour and capital should always be in a state of war, that preparedness should be the test of the efficiency of labour. But human ingenuity has not been idle; voluntary concilliation was tried, and compulsory arbitration too, but with little success. We now await with interest the result of the proposal for international regulation of labour over which the Peace Conference is sitting.

A LONDON LETTER

BY "A FRIEND OF INDIA."

ON February 4, members of the new Parliament will commence to meet in order to take the oath, with a view to the forthcoming opening of Parliament by the king. It will be a very different House of Commons from the last one, and most of the well-known friends of India will no longer find a place there. The Government will have such a huge majority that they will not know what to do with it. The House could not contain all the members even before their number was enlarged; but no one supposed that such a stage of affairs would be reached that one party alone would have an absolute majority over all other parties in the House, assuming that they all attended. As it is, the Government majority will be obliged to spread themselves over to the opposition side of the House. I say "the Opposition side" advisedly, for no one knows exactly who will be the Opposition. Ordinarily, the honour, if it be one, would fall to the largest of the minority parties. But this happens to be Sinn Fein, and Sinn Fein has sworn a vendetta against all kinds of English institutions, including Parliament, which it has decided to boycott. It has meanwhile set up its own "Parliament" in Dublin, appointed a secret Cabinet (evidently thinking that the elect might otherwise see the inside of one of His Majesty's Jails), and proclaimed the Irish Republic and its independence. What will come of this political freak remains to be seen. Whilst I am on the subject, it is as well to record two other phenomena in Irish politics. The first is the disruption of the Unionist party, owing to the secession of the Southern Unionists who are opposed to the Ulstermen's panacea of separation of Ulster from Ireland and its attachment to England for purposes of political administration. The other is the formation of a centre party by Captain Stephen Gwynne, one of the few survivors of the Nationalist wreck. Reverting to the House of Commons, the next largest party is the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Labour party, which wishes to occupy the front opposition benches. But the Asquithian Liberal rump does not like this idea at all. It is not anxious to be dispossessed of its ancient dignities and prerogatives, even in favour of Labour, and claim that its members of the Privy Council should be entitled to sit on the coveted bench, side by side, at any rate, with the Labour leaders. It is not to be expected that there will be any attempt on the part of either to eject physically the others.

When Parliament meets, it will have to face a very difficult and dangerous industrial situation. Labour unrest is everywhere. The workers are kicking over the traces rather viciously, and strikes are breaking out all over the country, with or without obvious provocation. Some of them are sympathetic strikes, but all are symptomatic of the chaotic conditions with which the country is faced at the commencement of the period of reconstruction, which finds the Government so far apparently unprepared with a definite industrial programme. The worst strike centres at the moment are in Belfast and on the Clyde. The Labour element in Ulster is becoming much stronger, and is spreading its influence to Dublin, where it will contest the control of the situation with Sinn Fein, on the one hand, and with the Roman Catholic Church, on the other. On the Clyde, however, the position is somewhat different. Here Labour extremists have been preaching their doctrines for a very long time, and the Government were unable to deal effectively with a situation of peculiar difficulty during the war owing to the great need of ship-building specialists. It was in Glasgow, it will be remembered, that the only avowed British Bolshevist candidate for Parliament stood, and it is believed that the hostility aroused against his candidature spread to the neighbouring constituency which Dr. G. B. Clark was contesting, and at least partially accounting for the latter's defeat. There is no doubt that a considerable section of labour has become restive, and is unwilling to listen to the warnings of the older Labour leaders. Men like Mr. J. H. Thomas, Mr. Clynes, and others of like calibre are beginning to realise that, unless they and the country take heed, the control of labour politics will have passed from their hands. It is not easy to say what will be the immediate results of this unrest; but meanwhile the process of reorganising the National life is impeded by reason of uncertainty. It is very natural that the workers should demand far better conditions than obtained when the war broke out. They are entitled to take their proper place in the life of the country and this position they certainly did not enjoy before. Many of the employers are still, however, living in the dark ages, and do not recognise that a new light has dawned, and that the old conditions will not be tolerated nor can they be revived. On the other hand, a large portion of the industrial population is in the hands of younger leaders, who have never really had to work their way up like their predecessors. They have found things much easier for them, and have been nurtured on a pabulum consisting chiefly of incitements to a class-war. As eloquence is cheap among them—like other strata of society in other countries—their stock-in-trade is not expensive to acquire. The mass of the workers are dangerously ignorant still and only too docile, and they thus provide good material for the energetic extremists to work upon.

It is because of this spread of industrial unrest, for bad reasons as well as good, that American Industrial heads have encouraged the campaign against the sale, purchase, manufacture or distribution of liquor throughout the United States. Almost at the same time that the announcement was made here that the campaign had succeeded with wholly unexpected rapidity, another announcement was made here that, in response to a growing demand on the part of the British

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

worker, the Government was making arrangements to increase the quantity and quality (which means the strength) of beer. It is a very sad commentary upon the fact that we are in many ways a generation behind the States, in this country, in matters of social reconstruction.

One cannot write a letter for public perusal to-day and ignore the Peace Congress that is now sitting in Paris, with its Inter-Allied Conferences, its War Cabinet meetings, its Supreme Councils of War and of Food, and all the other subordinate or connected bodies conferring among themselves on one subject or another intimately related to the matter on which all are anxious to see a settlement. Not only is a definite peace urgently needed, in order to put an end to the present uncomfortable intermediate period, in which no one seems to be able to determine whether he is at war or peace with his neighbour, but the peoples of the world demand insistently that they should, so far as is humanly possible, for ever be free from a repetition of the menace from which, it is hoped, the world has escaped. Permanent peace may be a mirage, a beautiful fiction of imaginative minds. But it must be attempted, everyone feels, for otherwise the burden of armaments will be unbearable, and the nations will be crushed, unless they are driven into the arms of Bolshevism, which implies the same result by another and scarcely more acceptable means. It has so far been decided that a League of Nations must at any cost be founded. What will be built upon the foundations, even if they are well and truly laid, we are all waiting to see. It is not anticipated that a perfect building will at once arise; but it is earnestly hoped that, with good-will and inspired by right desires and ideals, a good, sound, storm-proof structure will result. President Wilson is working hard to that end, and it would be unfair to other statesmen to suppose that they are not animated by like principles, though they may differ among themselves as to the method of the expression. But under the observation of t democracies of the world, whom, and not t Governments, the Peace delegates represent, may be accepted that they will not rise from the labours until they have devised some workin plan that will diminish the possibilities of inter national ill-will and friction, and so create favourable atmosphere for the spread of idea of mutuality, concord, co-operation, an brotherliness.

Mrs. Besant's appeal to the Privy Council fo the reversal of the decisions of the Madras High Court in regard to "New India" will come o early next week, and it will be known, probably before this reaches you, what the result will be unless, as frequently happens, the Judicial Committee reserves judgment. Another case of very great interest in India is the libel suit o Mr. B. G. Tilak against Sir Valentine Chirol an Messrs. Macmillan and Co., which commenced i the King's Bench Division yesterday, before Mr. Justice Darling and a special jury. Six separate libels are complained of in the book "Indian unrest," and the jury will have a very difficult task before it, and at the conclusion o the trial, some dozen Englishmen, at least, wil know a good deal more about Indian affairs than the majority of their countrymen do to-day. Sir John Simon is leading for Mr. Tilak, who is now under cross-examination, and Sir Edward Carson for Sir Valentine Chirol. The case promises to take several days yet, and the decision should be known immediately, for the jury is bound to give a verdict. The Court is thronged with interested Indian visitors. There is one Indian counsel in the case, young Mr. Padshah, nephew and step son of Mr. B. J. Padshah, so well-known in connection with the Tata enterprises.

A WRITER'S RECOLLECTIONS

BY J. C. MOLONY.

MRS. Humphrey Ward begins her "Recollections"* with a half-playful apology for the inevitable garrulity of old age. Such apology is needless in this particular case; for if some might in malice suggest the sub title "Great People I have known" for Mrs. Ward's literary autobiography, the great people presented to the reader, at any rate in the earlier part of the book, are well worth reading about. Towards the close, the aristocratic atmosphere becomes somewhat oppressive; one would welcome the appearance of a pawnbroker named Miggs as a relief to the glittering procession of ambassadors, cardinals, and statesmen.

Mrs. Ward is a grand-daughter of Thomas Arnold, whom "Tom Brown's Schooldays" immortalised as "The Doctor." It is interesting to learn how the great "Doctor's" bent of mind was reproduced in his descendants. The young Arnolds essayed sundry callings, but what was bred in the bone was sure to come out in the flesh, and the Doctor's sons soon busied themselves about education. Mathew, the eldest, and best known to the outside world, became a school inspector, and there, Mrs. Ward seems to think, did his most worthy and enduring work. William Arnold reached India as a subaltern in the army; in a few years he was Director of Public Instruction in the Punjab. Thomas Arnold, Mrs. Ward's father, like the hero of Clough's "Bothie"—probably "Philip" of the "Bothie" is Thomas Arnold—"rounded the sphere to New Zealand," intending there to "dig and hew, subdue the earth and his spirit; in a short time he was called to Tasmania, there to organise primary education. Mrs. Ward admits that without the constant promptings to action of J. R. Green she herself would in all probability have ended a mere bookworm, a student lost in blissful enjoyment of old and out-of-the way chronicles in the Bodleian Library. From Tasmania to the Bodleian is certainly a far cry, and the story of how and why Mrs. Ward as a small child accomplished the journey is not the least interesting part of her book. "The Doctor" had been a doughty champion of English Protestantism, and in "The Oxford Malignants" he lustily smote Newman and Newman's followers. His son at Oxford "had only once crossed the high street to hear Newman preach, and felt no interest in the sermon"; in his early days at the antipodes so aloof did he stand from dogma and ritual that he would scarce agree to the baptism of his children. But "under the surface an extraordinary transformation was going on." At Hobart, in 1854, young Thomas Arnold was received into the Church of Rome: two years later on reaching England he announces the fact to Father Newman, and receives the following letter: "How strange it seems! I knew your father a little, and I really think I never had any unkind feeling towards him. In seeing you I have a sort of pledge that he at the moment of his death made it all up with me."

Religious feeling ran high in those days. Conversion to Catholicism meant for Mr. Arnold the loss of his Tasmanian appointment: he re-crossed the seas, and spent the best of his life in teaching at Birminghan, Oxford, and Dublin, in laborious study, and in the editing of ancient records. A temporary reaction against Catholicism brought him to Oxford, and incidentally, shaped Mrs. Ward's career. Mrs. Ward's first vision of Oxford can scarcely have decreased her sympathy with her father's temporary lapse from faith. "There," said Mr. Arnold pointing to a window, "lives the arch-heretic." It was Jowett's window; and Jowett's salary as Professor of Greek had been withheld from him for years "on theological grounds" by a governing body which contained Canon Liddon and Dr. Pusey. There are

* *A Writer's Recollections.*—Mrs. Humphrey Ward. (London, W. Collins, Sons & Co., Ltd.)

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

doubtless many methods of upholding the orthodox faith, but repudiation of a lawful debt is surely one of the strangest.

Into the learned life of Oxford Mrs. Ward plunged with the delight of a young retriever fetching his first stick from a pond. So modestly does she write of her own achievements that one scarcely visualises her as anything more than a young lady with a taste for serious reading. But there must have been something vastly more than a mere blue-stocking tinge in a girl of 18 who became the intimate friend of Jowett and Mark Pattison, whose writings on early Spanish kings and bishops were solemnly weighed and not found wanting by Bishop Stubbs, and to whom Creighton paid such a compliment as "tell her to go on. There is nobody but Stubbs doing such work in Oxford now." One story of this historical period is worth repeating; it illustrates amusingly Freeman and his eternal bugbear James Anthony Froude. In a letter to Mrs. Ward dealing with Spanish Historical Geography, *á propos* more or less of nothing, Freeman suddenly observes, "I have always held that the nursery account of Henry VIII

And Henry the Eigth was as fat as a pig

is to be preferred to Froude's version. For though inadequate, it is true as far as it goes." Not without reason did Froude on returning to Oxford as Professor of history express the pious hope that the ghost of Freeman might not haunt him.

Miss Arnold married Mr. Humphrey Ward, Fellow and Tutor of Brasenose: after a few years her husband became a leader writer in the "Times," and she left Oxford for good. Thereafter the book tells of the success of Mrs. Ward as a novelist, of a full and busy life, of solid and well rewarded work. But interest wanes; for one hardly thinks that Mrs. Ward the novelist will live in literature. "Robert Elsmere," "David Grieve," "Helbeck of Bannisdale," dealt with topics which then interested the thinking public; "Robert Elsmere" had the good fortune to interest Mr. Gladstone, whose notice probably did much more for Mrs. Ward than the intrinsic merits of the novel. For though Mrs. Ward's books, unlike those of modern lady novelists, are built on a solid foundation of learning and reflection, there is in them little artistry. They are "serious" and "thoughtful," but they are painfully lacking in charm and in the magic of style. The fact is illustrated by the occasion which Mrs. Ward finds to quote certain passages from "Marius the Epicurean": these catch the eye as gleaming threads of silk in the homely worsted of Mrs. Ward's prose.

Most interesting are the writer's criticisms of her contemporary workers in fiction. She has known them all; she is unfailingly generous, and as a rule shrewd and instructive. Henry James one suspects, she over-rates somewhat: in later years did not his genius rather lose itself in a waste of words? Mrs. Ward considers the *Portrait of a Lady* the masterpiece of James' earlier manner; of the same book R. L. Stevenson said in a letter to the author "I can't stand your having written it; and I beg you will write no more of the like." Meredith, Mrs. Ward admires with a somewhat qualified admiration: "the man is great enough, and rewards the reader's effort to understand him with a sense of hightened power, just as a muscle is strengthened by exercise;" a strange testimonial. To Kipling she is more kind than was Stevenson in this judgment; "he is all smart journalism and cleverness, it is all bright and shallow and limpid, like a business paper." On H. G. Wells this is surely an excellent pronouncement; "Mr. Wells seems to me a journalist of very great powers, of unequal education, and much crudity of mind, who has inadvertently strayed into the literature of imagination."

But quotation cannot do justice to these "Recollections." Mrs. Ward has met most people worth meeting, read most things worth reading, written honestly and well, if a trifle heavily and uninspiredly. Her present book is the interesting record of a well-filled, well-spent life.

Protection, Free Trade and Imperial Preference.

BY PROF. BRIJ NARAIN

THE Report of the Industrial Commission is not altogether disappointing. But having said that, one may still doubt whether the recommendations made by the Commission for assisting Indian Industries, if accepted in their entirety by the Government, would tend to make India self-contained to any substantial extent. This is because foreign competition is a more formidable obstacle in our way than the lack of banking facilities, the shyness of our capital or the inefficiency of our labour, and it was not within the scope of the Commission to deal with this aspect of the question. It can, in fact, be shown that to some extent foreign competition is responsible for the shyness of our capital, if not also for the fact that our labour is still untrained. Our money, says the Commission, has been invested in commerce rather than industries and only those industries have been taken up which appeared to offer safe and easy profits. This is only natural. If, on account of foreign competition, profits in certain industries are small and unsafe, those industries will attract little capital. Our capital is shy because profits in Indian Industries which have to compete with imported manufactures are uncertain. If this element of uncertainty could be somehow removed, capital would be less shy than it is. The point is simple. Suppose I have ten lakhs of rupees which I am willing to invest for the sake of profit. But how shall I invest the money? If I set up a match factory, I must be able to manufacture matches at about the same cost as the Japanese, Swedish, Austrian or British manufacturer in order to earn substantial profits. I should earn good profits even if my cost of production were slightly higher than that of the foreign manufacturers, for he has to pay the cost of transportation of his product to the Indian market, which I save; but if the difference between my cost of production and his is much greater than this, it is obvious that I cannot afford to sell at the price that he charges. Also remember that the foreign manufacturer can lower his prices, for a time, just to destroy his rivals. In these circumstances, I should think twice before I invested my money in the match industry. That is also how other investors would argue, and it will be said that the lack of capital hampers the development of the match industry. But there would be no lack of capital for this and other industries if the price of the product was not fixed for the Indian manufacturer by his foreign rival, that is, if prices were higher and if profits were large and not uncertain.

That our capital is not inherently shy is shown by the fact that during the war several new industries have been started with Indian capital. To take an example. No lammetta was manufactured at Delhi before the war. The imports of lammetta before the war came chiefly from France, Germany, Austria-Hungary and the United Kingdom. When the war broke out, imports from enemy countries ceased altogether, and imports from France and the United Kingdom fell off. The price of imported lammetta in the markets of Delhi rose rapidly and continuously; and within a few months after the outbreak of the war, lammetta was selling in Delhi at about three times the pre-war price. The process of manufacturing lammetta is not very complicated and more than one factory was set up at Delhi for its manufacture. The price was much higher than cost of production and profits realised after the payment of wages, etc., were good. One of the manufacturers showed the writer over his factory. When asked about the prospects of the new industry after the war, the manufacturer explained how he was utterly unable to compete with foreign manufacturers. He could go on so long as prices did not fall and imports continued to be small. As

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

soon as foreign competition began and prices fell, he would simply be unable to produce. Well, he had no difficulty in finding capital for his factory when the price of lammetta was rising. Whether he would be willing to invest any of his capital in the industry after the war or whether he would be able to induce others to place their capital at his disposal, is a matter of the greatest doubt.

Our capital in this respect is not peculiar. Capital all over the world seeks those industries in which it can earn the greatest profit. Expectation of profit breaks the shyness of capital; otherwise, capital remains shy. This may be shown by an American example—the growth of the iron and steel industry of the United States of America under protection. In 1870, Great Britain was the greatest producer of iron and steel; the United States "held but a distant second place." In that year, a duty of $7·00 per ton was imposed on pig iron imported into the United States, and the production of pig iron in the United States began to increase by leaps and bounds. In 1890, the American output exceeded the English production and in 1910 the production of the United States was double that of England. The British out-put increased from 5,963,000 tons in 1870 to 10,012,000 tons in 1910, but during the same period, the American output increased from 1,665,000 tons to 27,304,000 tons. "If as the extreme protectionists contend," says Taussig in his "Some Aspects of the Tariff Question," "the growth of domestic industry is in itself proof of the success of their policy, a degree of success was attained in this case that could admit of no cavil."

The production of steel rails was insignificant in 1870; it increased to 1,000,000 tons by 1880 and 2,000,000 tons by 1890. "So far as the increase of domestic production is concerned, the protectionist may well point with pride."

A free trader might urge that the growth of the American iron trade was due not so much to protection as to other causes—cheap transportation, large scale production, the boundless extent of the American market, the enterprising nature of the American people and their inventive spirit and lastly the natural resources of the country. Protection or no protection, it might be said, the American industry was bound to grow. Taussig admits that the free trader's argument "is not without show of reason." But it is difficult to say what would have been, and he thinks it to be improbable that the productive forces of the United States would "have turned in this direction so strongly and unerringly" without protection against foreign competition. "Beyond question the protective system caused high profits to be reaped in the iron and steel establishments of the central districts; and the stimulus from great gains promoted the unhesitating investment of capital on a large scale." If prices had been lower, profits would have been smaller and the American capitalists would have been less eager to invest capital in this industry and the American manufacturers, to exploit the natural resources of the country.

The intensity of foreign competition explains why Indian capital does not readily flow into manufacturing industries.

This is, in a way, admitted by the Commission: "Of the readiness to invest money in industries which can already claim a number of successes we have had abundant evidence; indeed, this tendency has had the unfortunate effect, in some instances, of creating more individual undertakings, than the industry can support. This seems, at any rate, to indicate that there is capital seeking industrial outlets, and that the directions in which it can be employed are at present, from the point of view of the Indian investor, insufficient." Again, the labourer is trained in the factory by doing the work. The greater the intensity of foreign competition the more limited

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

will be the scope for the scientific training of labour in the methods of industrial work.

It seems to me that, unless the intensity of foreign competition can in some way be lessened, the industrialisation of India is an impossible task. Foreign competition has destroyed many of our indigenous industries, and it has seriously retarded the growth of factory industries. As regards the Punjab, the indigenous paper industry is gone, the wire drawing industry is gone and it is with the greatest difficulty that the weaver makes a living. There is the Sialkot Sports goods industry which has grown up in spite of foreign competition. The measure of success which has been achieved in this case is due to the enterprise of certain Panjabee manufacturers whose names are well known throughout India, but even in this case, but for foreign competition, the industry would develop much more rapidly than at present. One finds the Lahore market flooded with British sports goods of all kinds. Sialkot has shown what it can do and what it is capable of; it has become the home of the Indian Sports goods industry. If it could be protected for some time against foreign competition, it might be able to supply, in time, most kinds of sports goods of the same quality as imported goods, at even cheaper prices. Take another example. Very good gold and silver thread is made at Delhi. But the work is done by hand, and lately, the Delhi manufacturers have been finding it increasingly difficult to compete with the imported gold and silver thread. In 1913-14, gold and silver thread of the value of £262,000 was imported from France, £25,000 from Germany, £5,000 from Austria-Hungary and £3,000 from the United Kingdom; the value of the home production is not known. During the war the imports have decreased, but after the war foreign competition will begin again. It is too much to hope that the Delhi manufacturers who employ hand labour, will not be undersold by their foreign rivals who employ power-driven machinery. It would be different if our manufacturers could substitute machinery for hand labour, but machinery has to be imported for that purpose from foreign countries and the substitution cannot be easily effected. Unless they were protected during the period of transition, they would be ruined by foreign competition long before they were ready to compete with the foreigner on equal terms.

The effect of foreign competition upon the wire and tinsel industry of the Punjab is described in a Monograph by Mr. E. Burden, I. C. S. (published by authority).

> "While it cannot be said" Mr. Burden says, "that the demand for tinsel made from drawn wire has in any way decreased, there is no doubt that the indigenous wire drawing industry is and has for some years been declining and indications are not wanting that it may in time disappear altogether."

The importance of this industry to the Delhi people may be judged from the fact that not long ago about 300,000 miles of gold and silver wire were turned out annually in Delhi, and that about one hundred thousand men, women and children in Delhi and the surrounding villages were dependent upon this industry.

The cessation of imports from Germany during the war revived the industry. Its fate after the war when German competition begins again, can be easily imagined.

I have described the effect of foreign competition upon some of our industries. The case of other industries is similar. The lack of technical education, the shyness of capital, the lack of banking facilities, the inefficiency of labour, the aversion from industrial pursuits of the educated Indian are undoubtedly great evils, but the greatest of all evils is foreign competition.

Foreign competition cannot altogether be abolished. In the first place, it is impossible; in the second place, it is not desirable in the interests of the Indian consumer. But foreign competition should be brought under con-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

trol, in the interests of the Indian producer, the Indian working man and in the ultimate interests of the Indian consumer. It is useless to pretend that protection does not raise prices to the consumer in the beginning, but, in the long run, as the case of the American industries shows, it lowers prices, provided combinations are not formed behind the tariff wall.

Protection is the only means by which foreign competition can be effectively controlled. The economic history of France, Germany, the United States of America and Japan shows what protection, judicially applied, can do for native manufactures. Great Britain herself at one time, before the days of power-driven machinery, made use of protection to develop her industries. She abandoned protection when she had no longer any use for it. And recently the growth of Germany, Japanese and American competition, which has seriously affected some British industries, has revived the agitation in favour of protection. In view of this fact does it not seem desirable that the question of a protective tariff for India should be reconsidered?

* * * *

Some time ago the British Cabinet declared itself in favour of Imperial Preference as the fiscal policy of the Empire. What is the meaning of Imperial Preference? There is an idea that Imperial Preference means Imperial free trade, that it means the formation of a Zollverein within which trade will be entirely free, while imports from foreign countries into any country which belongs to the Imperial Fiscal Union will pay protective duties. That is not the meaning of Imperial Preference. Imperial Preference, we are told, does not mean Imperial free trade.

"The idea of the 'Preference' is" says Mr. Chiozza Money "that each part of the Empire should remain an independent fiscal unit and levy such duties for revenue or protection as may seem good to it, but should relax them in part in favour of other parts of the Empire, thus taxing foreign goods on a higher scale than British goods."

The British self-governing Colonies object to a Zollverein. They cannot give up protection. All that they can do is to give British imports a preference by taxing foreign imports at a higher rate. This is recognised by British statesmen. In a speech delivered in June 1905 before the members of the Canadian Manufacturers' Association when they visited Birmingham and were entertained at the Birmingham Chamber of Commerce the late Mr. Joseph Chamberlain said:

I know there are difficulties. We all know there are difficulties. You have your difficulties. I recognise the limitations which your conditions impose upon your statesmen. I can see how impossible it would be for a great country with unlimited resources and opportunities and policies like Canada to mortgage its future to make a treaty which would hamper the progress of its natural industries; which would either injure them in the present or prevent their development in the future. I recognise that that with you is a cardinal condition of a treaty.

In another speech delivered in February 190 on "Preference, the true Imperial Policy," Mr. Chamberlain had said:

I quite agree that at the present moment you cannot get free trade from the Colonies. Rightly or wrongly they believe in a certain amount of Protection. They are not going to hand over their growing industries entirely to competition, even from the mother country. Very well, you cannot get that. But are you like a child that has set his heart on the moon? Will you not be satisfied with, say, a bun instead? You can get the bun.

The bun means a share in the home industries of the colonies and a large part of the trade of the colonies with foreign countries.

Mr. Bonar Law gave expression to a similar sentiment in a speech delivered at Newcastle in October 1907:

No one either at home or in the colonies who advocates Preference has ever suggested that the result of it will be to induce the colonies to cease to develop their own manufactures, to confine themselves simply to the production of raw material, and to buy their manufactured goods from us. Such an aim, even if it were desirable, is obviously impossible. The Colonies would never make such a bargain, and more than that I do not believe that there is any one who looks upon the Empire as a whole, who considers that the increasing strength of any part is an increase in the strength of the whole, who would desire that such an arrangement should be made even if the Colonies were willing to accept it. The development of a country which depends solely on raw material must be extraordinarily slow, and it is therefore in the interest of the whole Empire, not only from the point of view of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

natural strength, but from the point of view even of our trade, that the Colonies should develop in the most rapid way possible. Imperial Preference does not mean free trade within the Empire. If there were free trade, there could be no Preference. The case for Colonial Preference is, and always has been, that even after the Colonies have developed their own industry to the greatest extent that they find desirable or possible, there will still be an enormous surplus of manufactured goods which they must import from somewhere and that it is greatly to our advantage that they import this surplus from us.

Unless the British colonists now think differently, and likewise, the British statesmen, Imperial Preference means for the self-governing Colonies protection not only against the foreigner but also against the United Kingdom. For the United Kingdom Imperial Preference means protection against the foreigner in her own markets and a limited amount of protection in the colonial markets. What amount of protection will the United Kingdom get in India against the foreigner? To answer this question we must consider the position of India under Imperial Preference.

British statesmen have repeatedly declared that they do not want to force free trade upon the colonists if the colonists do not want free trade. The late Mr. Joseph Chamberlain, as we have seen, would have been well satisfied with a 'bun' from the Colonies; and he asked his countrymen to accept the 'bun' because they could not get the "moon."

Now India wants protection quite as much as the Colonies. She, in fact, wants it more. "No remedy for present evils can be complete," wrote the Famine Commissioners of 1880, "which does not include the introduction of a diversity of occupations through which the surplus population may be drawn from agricultural pursuits and led to find the means of subsistence in manufactures, or in some such employments." For other countries, the question of industrial development and protection is a question of higher profits and higher wages; for us it is a question of life and death. The improvement of our industries would insure us against famine. For this, if for no other reason, India should be allowed to adopt a protective tariff with the object of lessening the intensity of foreign competition.

The question of protection for India is outside the sphere of practical politics, we are constantly told. But how can England refuse our demand for protection when she wants to adopt it herself? If Imperial Preference does not mean Imperial free trade, then India has as good a right to protect her industries from British competition as the Colonies. Mr. Chiozza Money says:

"As I have pointed out in the case of our self-governing colonies, if we decide that our old established industries which do as much export trade as that of America and Germany put together, need Protection, it is illogical to deny import duties to newly established colonial industries, which with reason regard the British manufacturer as their chief competitor. And if our self-governing colonies are protected, and we also are protected, who shall deny Protection to the industries of India?"

Even if Imperial Preference meant Imperial free trade, England, in fairness to us, cannot deny protection to our industries. Imperial Preference is simply another name for protection for the British manufacturer against foreign competition in the Colonial and Indian markets. The chief object of Imperial Preference is to enable the United Kingdom to recover her old supremacy in our markets. To gain that end she is willing to sacrifice her *laissez faire* traditions in matters of trade. That being so, how can she deny Protection to us?

India was forced to adopt free trade because England thought that free trade was for India's good, and because she herself was a free trade country. It was not denied that the abolition of protective duties would benefit English manufacturers, but it was not this fact which determined the decision of the fiscal question in 1878.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Free trade, it was said, was essential to India herself. It was not desirable that the Indian cotton industry should grow up under unhealthy conditions.

"Whether the question be regarded as it affects the consumer, the producer or the revenue," wrote Lord Salisbury, the Secretary of State for India in 1878, "I am of opinion that the interests of Indian imperatively require the removal of a tax which is at once wrong in principle, injurious in its practical effect and self destructive in its operation."

Sir John Strachey who was then the Finance Member thus comments upon the opposition to free trade in India in his "India, its Administration and Progress :"

"Popular opinion in India had always in regard to questions of fiscal reform been obstructive and ignorant and the fact that the abolition of customs duties would be favourable to English manufacturers was enough in the belief of many to prove that the party purpose of obtaining political support in Lancashire and not any care for the interests of India, was the real motive of the Government. This foolish calumny deserved no notice or reply. The opposition to the reform of cotton duties satisfied Lord Lytton that he must carry out the measure himself or acquiesce in nothing being done. He believed that the interests of India required it and he was not to be deterred by the imputation of base motives."

India was never quite convinced that the cotton duties were abolished in her interests, and it would be still more difficult to convince her that the proposed change in the fiscal policy of the Empire is in her interests. This is recognised by English economists. If it is decided to adopt preferential tariffs, then so far as India is concerned, there would be two alternatives before British statesmen, says Lees-Smith.

"It is possible for them to assert unashamedly that India is merely a 'plantation' whose good must be sacrificed to the interests of British Capital. They can acknowledge that their arguments and pledges in the past were mere hypocrisy, which having served their purpose, can now be abondoned. This alternative is, of course, inconceivable. The only other is to grant India her fiscal freedom and to allow her to erect a protective tariff."

India, let it be clearly understood, wants Protection, and not Imperial Preference. Some English writers are fond of talking about the "Indian offer of Imperial Preference" as if India could not get along without a preferential tariff and begged England's permission to adopt one. "The Indian Offer of Imperial Preference," the title of Sir Roper Leithbridge's book published in 1913, was probably suggested by a resolution *re* preferential tariffs moved in the Imperial Legislative Council by Sir Gangadhar Chitnavis on March 17th 1913. But the Hon'ble mover himself regarded protection as a necessity to India. In the course of his speech, he said :—

"Sir, I have said more than once that protection is a necessity to us. We have infant industries to protect. Granted even that as free traders we lose wealth thereby, yet wealth is not the only thing that nations desire.....We want protection because we have to find employment for our people and to foster our growing industries. The question is not whether free trade or protection is the most profitable policy, but whether the benefit that we expect to get from protection is worth the price that we shall pay for it. I contend that it is."

As every one knows, public opinion in India is sincerely protectionist; and most of us understand the difference between protection and Imperial Preference. The late Mr. Gokhale once drew a valuable distinction between two kinds of protection, the right kind and the wrong kind. The right kind of protection gives the necessary encouragement to nascent industries. The wrong kind of protection is that under which powerful combinations and interests receive assistance to the prejudice of the general tax payer. "And I beleive," said Mr. Gokhale, "that the right kind of protection, if available, will do good to India." But if the right kind of protection was not available, and the choice lay between Imperial Preference on the one hand and the existing system on the other, India will know what to choose.

Imperial Preference is protection of the wrong kind for two reasons. In the first place in the actual framing of the tariff, British interests may receive more consideration than Indian. The kind and amount of protection required for British industries may not in all cases be exactly that which Indian industries require. And if a conflict arises between Indian and British interests, while the final decision in settling the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

details of the tariff, directly or indirectly, rests with the British people or their representatives, it would be too much to expect, human nature being what it is, that British or 'Imperial' interests will not be regarded as of greater importance than Indian. In the second place, a preferential tariff would most certainly injure the Indian consumer; whether it would be of any great assistance to the Indian producer is doubtful. The Indian consumer will have to pay the full price of protection; the benefit of it will be largely reaped by British manufacturers, unless the Indian industries are protected to some extent against British competition also. British manufacturers need protection against the competition of Japan, the Central Powers and the United States of America; Indian competition, they can, in most cases, disregard. But he would be a bold man who would say that Indian producers can ignore British competition. In spite of the growth of foreign imports into India during the last twenty or thirty years, about 60 per cent of the imports in 1913–14 came from the United Kingdom. Imperial Preference is no solution of the difficulties of the Indian producer, unless he is protected against British competition also. The effect of British competition upon our industries is the same as that of German or Japanese competition—in both cases the growth of our industries is retarded. The imports of certain classes of British goods into India have decreased in recent years, the proportion of most other imports is smaller now than what it was about forty years ago, and the chief object of a preferential tariff is to enable the United Kingdom to regain what is called her 'natural' share of Indian trade. The adoption of a preferential tariff by India will certainly help in the attainment of that end, but how will that assist the development of Indian industries? From the point of view of the Indian consumer Imperial Preference is worse than free trade; from the point of view of the Indian producer there is not much to choose between the two.

UNIVERSITY EDUCATION IN INDIA

I. BY HIS HONOUR SIR HARCOURT BUTLER.

LOOKING back over 28½ years, I see vast strides in the education of this province. One great change is the extension of the hostel system which has done much already and assuredly will do more as an agency for forming character. If we compare India of to-day with European countries at a corresponding stage of development, we need not be ashamed of our achievements. England did not get facilities for compulsory education until 1870 and it took six years, until 1876, before education was made generally compulsory. For several years after that, the teachers in elementary schools in England were largely illiterate. Secondary education in England is still unsatisfactory, although there has been great improvement in the last few years. True, our own educational ideals in India are still far from clear. Our educational machinery is in part worn out and rusty. But still it has accomplished much. Faulty and makeshift as it necessarily has been our education has made modern India. It has purified the public services; it has increased the number of men who think; it has prepared the way for new ideas and larger conceptions of civic duty; it has opened new avenues of employment; it will end, I trust, in the growth and the spread of imperial ideas. There are still great walls of ignorance to be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

battered down. There are many and great temples of education to be built up. There is a call for the highest service from the best of India's sons. But the embers have been stirred. The beginnings of a desire for free and compulsory education are manifest. Great hopes thrive and grow. In a short time we have fulfilled a long time. Sir Alfred Lyall said truly in his inaugural address: "Whatever else may be said of the English administration of India, no one can assert that in the matter of education the English have not been open-handed and unreservedly, almost audaciously, liberal." We have tried to give education to India on the basis of trust and common aspiration.

HUMANITIES AND SCIENCES.

No country is satisfied with its educational system. All are trying to improve it. We in this province, the Government and the people, are striving shoulder to shoulder to better things. It is mainly a question of finance, in other words, of material progress. For education and material progress go hand in hand. As education improves, so material prosperity advances; and with the advance of material prosperity funds become available to make education more efficient. The United States of America with a population one-third of that of India spend 160 million pounds sterling annually upon education. In India, we cannot yet anticipate such an expenditure; but every sacrifice made for the cause of education will bear fruit a hundredfold in the years to come. Never forget that education breeds prosperity and prosperity breeds education.

None appreciates more than I do the value of a liberal education for its own sake. But we have to face things as they are. Every educational system rests on certain social order. The social order has changed and with this there must be a change of educational system. Even before the war, new ideals of educational policy were in the air; and the war has changed the aspect of policy much as a stream of lava changes this country at the base of some great volcano, or a tidal wave changes some island in the Pacific ocean. The war has broken up the despotism of the humanities and has installed a federation of the sciences and humanities. This is the great, the master change. For centuries education has, to use Macaulay's phrase, disdained to be useful. It must be useful now. And yet one may hope that the humanising of science, the scientific use of the humanities will go on side by side. No mere materialistic education will ever satisfy India. Over and above us all towers the peak of sheer educational power, over us all is still cast the spell of the ideal.

Some of you will remember how Sir Auckland Colvin preached the importance of science to this University, and how his arguments were then regarded as an insidious undermining of political aspiration. I have seen one of our public men attacking Government in those days for its designs on humanistic studies and of late attacking Government for its neglect of science in education. I welcome the change of view. I will do my best to help you to meet the new demand, to promote "research and discovery and the application of knowledge for the improvement of mankind."

In England the epoch-making report of Sir J. J. Thomson's committee has pealed the bells of a new era. On every side one hears the cry for more and more applied science. The day of the specialist has dawned at last. Chemistry, as Sir Thomas Holland aptly said, is the foundation of all modern civilised activities. India's great need to-day is the application of chemistry to agriculture and industry.

REFORM OF UNIVERSITIES.

The question of university reform will soon come upon us. The policy of the Government of India has been to restrict the area under which the affiliating universities have control by securing, in the first instance, a separate university for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

each of the leading provinces of India, and secondly, to create new local teaching and residential universities in each of the provinces in harmony with the best modern opinions as to the right road to educational efficiency. We have already a new university in the province, the Benares Hindu University. It is not a provincial institution, but it serves a larger number of our people. Considerable funds have been collected for a Muslim University at Aligrah. May I, as an old friend of Aligrah, who had the honour of knowing Sir Saiyid Ahmed Khan and was an intimate friend of Mr. Justice Mahmud, Nawab Mohsin-ul-Mulk, Nawab Viqar-ul-Mulk and others, appeal to my Muslim friends, who have done so well under trying conditions during the war, to close up ranks and work together for their sons and companions' sake in order that they may play their proper part in the educational development of the province. I contemplate the creation of new universities at Lucknow and later on at Agra. I shall appoint a committee to consider the establishment of these new universities as soon as the report of Dr. Sadler's committee is published. Great distinction must be drawn between the conditions that prevail in Calcutta and the conditions that prevail here, but I hope that we shall learn much from the report of that committee. We must also try to develop a teaching university in Allahabad. This will involve the separation of what may be called the internal and external branches of the university. There are rumours that Dr. Sadler's committee will make important proposals in this connection. It has long been my own view that all work above the standard of Bachelorship in arts and science should be university work concentrated at the university centre and directed entirely by the university. It was an objection to this view that it would lower the standard of collegiate study and so lead eventually to a lowering of the college professional staff. This argument will be met in the future by increasing the number of local teaching universities. The province lends itself extraordinarily well geographically to a rearrangement of this kind. In any case, the view advocated resembles the line of advance in the West. Sir J. J. Thomson's committee is clear on the point. In America, distinction is already drawn between the disciplinary education of the college and free-ranging education of the university. This, according to one American authority, is "the most characteristic fact in the history of higher education during the past quarter of a century." "The college," he continued, "has for its object the important work of training students for the duties of citizenship, not primarily the duties of scholarship." Another eminent American authority has outlined his idea of a university. The success of the higher work, he says, depends upon the intellectual and moral qualities of the professors, their freedom from all pecuniary anxiety, the widest publicity for their work and that of their assistants and students, and the steady improvement of libraries and laboratories.—*From the Convocation Address to the Allahabad University.*

II. THE HON. JUSTICE SIR JOHN WOODROFFE

We cannot separate the question of University Education from that of Education in general. The under-graduate has already been made or spoiled in the family school, or college. Nor if we pursue the subject to the end can we avoid an enquiry into political, religious, and cultural questions in general. The fundamental fact is that a Government alien in race, habits, thoughts, feelings, religion and general culture controls the Education (more and more strictly in recent years) and essays to teach the people of this country. It has been well

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

said that probably in the whole world there are not two more dissimilar persons than an Englishman and a Hindu. The position is unnatural, and injurious to the true interests of this country. This control may be, and I think has been, directed by self-regarding political motives. But even if the point of view be one which primarily regards the interests of the Indian people, there is still place for conflicting theories and practice. There are some (the foremost of whom may be called Missionaries of Race) who, sincerely believing in the superiority of Western Civilisation, think that it will be for the benefit of India to impose it on the East. The product of this system is Macaulay's "Coloured Englishman." The drift of Education has been in this direction. As my friend, Mr. Havell (formerly Principal of the Calcutta School of Art) has rightly said, the fault of the Anglo Indian Educational System is that instead of harmonising with, and supplementing, national culture it is antagonistic to, and destructive, of it. Sir George Birdwood says of the system that it "has destroyed in Indians the love of their own literature, the quickening soul of a people, and their delight in their own arts, and worst of all their repose in their own traditional and national religion, has disgusted them with their own homes, their parents, and their sisters, their very wives and brought discontent into every family so far as its baneful influences have reached."

Since writing the above, I have read a speech recently addressed by Sir Subramania Aiyar to the law students at Madras, in which he, pointing out that it seems to be thought that the aim and end of British tutelage in India is to westernise its children, says that the fulfilment of that aim must in the very nature of things tend to sap all true life and initiative natural to the people as a distinctly Eastern race destined to evolve on lines of its own. He also refers to a recent issue of the Journal, "The Statist," to the effect that the object of the present rule seems intended to metamorphose the Indian into "a quasi-Engl breed." Such a breed, I may add, is likely to l to half thinking, inefficient action and worse.

As nothing is wholly evil, I personally beli that some benefits have been gained through Education given, but looking upon the matter a whole, I concur in thinking that this Educati has had baneful effects. What else can be expe ed from a position so unnatural? Wrong Educ tion is the cause of physical and mental str and sapping of moral strength. It is producti of instability leading in the case of some to vi lence, in the case of others to a paralysing inn conflict or a sense of intolerable oppression, a in a large number of ordinary and inferior natu to imitation, automatisms, and sub-serviceab The influences working on the student have be deracialising (if I may use the word to den destruction of racial characteristics) devitalisi and deforming.

If they have not worked their full evil, it due to the resistance of the racial spirit defendi itself against the assaults, increasing in numb and strength, made upon it in recent years.

Personally I should like to see the education the Indian people in the hands of Indians the selves without any interference from Governme as at present constituted. But if Governme must control education, the principle on which now proceeds should be changed.

Let us recognise the strength, persistence a value of the racial characteristics of the Indi people, who have survived in a way, and to degree, which is not seen in the case of any oth country in the world. It is not necessary enquire into the question of the respective sup riority of the civilisation of East and West. is sufficient to hold that Indian civilisation is t best for the people whose forefathers have ev ved it. Let us stop all attempts, direct or i direct, whether political or religious, to impo our beliefs and practices on a people to wh they are foreign. Let us admit and give eff

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to the claim of the true Indian patriot that his language, history, literature, art, philosophy, religion, general culture and ideals should be given the primary place in the prescribed courses of study.

If education be to educe, what can be educed from the Indian mind and character but inherited racial impressions? Is it education to neglect or suppress these and to cram it with foreign stuff? This observation does not exclude any form of knowledge Western or otherwise. Knowledge is knowledge whether it comes from East or West. An Indian student is none the less true to his type because his own cultural inheritance has been enriched by what of worth the West can give. It is directed to the positive cultivation of Indian culture, and in other matters the adoption of an attitude favourable to it. The 17th question asks whether the conditions under which students live undermine traditional morality. "Conditions" (if I understand the question rightly) indicate that the question has in view only some superficial features of the student's life. Where morality (I use the term in its general sense) has been undermined, it is due in primary degree to the alleged "neutrality" of the State as regards religion, its teaching, which ignores religion, the past attacks on the Indian religions, Hindu and Mussalman, westernising influences and the general atmosphere produced by these and other causes.

How can traditional morality be preserved when the whole course of education is to ignore it and thus leave it the easier prey of sectarian attack and secular scepticism? How can the Indian student present an effective attitude to life if the source of his vitality is neglected or suppressed and his movements are cramped by foreign vestures? It is true that an increasing national consciousness has been to some extent remedying the evils of an English education on English principles by English teachers; but the necessity to remove the causes of these evils still remains.

It follows from the above views that in my opinion education should be such as a true and not a denationalised Indian would desire to see given and would himself, if an educator, give. Such an education can only be properly given by an Indian, able in his subject and inspired by great ideals, who has not been denationalised under the English system of education which has hitherto prevailed. The class here excepted may be less competent to teach than the English original of which they are a copy. All intriguers for posts of teachers and professors should be rigorously suppressed. As a result of this, it follows that distinctions in the educational service should be abolished and Indians should be employed in every case except those in which the expert knowledge of an European (and not necessarily an Englishman) justifies his appointment. The educational curriculum should give Indian culture and the Indian standpoint the primary place. Art should be recognised and not as it is now ignored by the University. India being an agricultural country, there should be courses of agriculture, professorships and travelling agricultural lectureships (Q. 13.). Law is at present too much encouraged. All the public opinion with which I am acquainted made from a study of the archæological is against the further multiplication of lawyers. Teaching should be in the vernacular as much as possible. Students are greatly strained by having to learn in a foreign tongue. The University should be as free of Government interference and have as much independence of action as is possible. There should certainly be a large degree of freedom of teaching and study. In short, I would claim for the University every freedom to follow those ideals which the past history of India, and its past and present Indian culture, present to it.—*Note in reply to questions issued by the Calcutta University Commission.*

PATEL'S MARRIAGE BILL

BY

MR. K. G. KRISHNASWAMI AYYAR, B.A.

I

THE ordinances laid down in the various Smrithis have to be considered in the first instance before coming to a conclusion as to the desirability or otherwise of the Marriage Bill introduced by the Hon. Mr. Patel.

According to the 23rd Verse of Chapter I of Parasara Smrithi, the authoritative Smrithi for Kaliyuga is the said Smrithi, as against the Code of Manu which was the authorised Code in the Satya Yuga, the Code of Gautama which was the authority in the Tretata Yuga and the Codes of Sanka and Likhita in the Dwapara. In Verses Nos. 20–26 of Chapter IV of Parasara Smrithi, various ordinances are laid down permitting and forbidding marriages under various circumstances, but there is nothing said either for or against mixed marriages. Rules regarding parentage of children conceived under various circumstances are laid down in verses 17 and 18 of the same Chapter, but there is nothing in them for or against mixed marriages. The Parasara Smrithi, therefore, does not throw much light on this question. In Chapter X of the said Smrithi which deals with penances in cases of prohibited intercourse with women, incestuous intercourse, and intercourse with Chandala or Svapaka woman is referred to and there is nothing about intercourse with women of the four castes except in cases where the intercourse is an illicit one. In the case of female offenders, the Chapter deals with adulturous intercourse and intercourse with a Chandala. In the seventh chapter of the said Smrithi which lays down rules regarding the time at which a girl ought to be married; the following verses occur :—

A Brahmana marrying such a girl (a girl w menstruates before her marriage) through temp tions of flesh, should be looked down upon as husband of a Sudra wife (Vri Shalipati). should neither be spoken to, nor allowed to sit the same row with other Brahmanas at a din (Verse 9).

A Brahmana visiting a Sudra woman even a single night should live by begging for th years from the date, in order to be absolved fr the sin thereby committed. These two ver give rise to the inference that Parasara approved of the marriage of a *Brahmana* wit *Sudra*.

There is nothing in the Parasara Smrithi f bidding marriages between members of the vari castes other than Brahmanas; and even in t case of the Brahmanas, there is nothi against their marriage with women belonging the other twice-born castes (Kshatriya and Vai and marriage with Sudra woman is looked do upon with disfavour without being actu prohibited.

In Verse 19 of Chapter I of Parasara Smrit Vyasa is addressed by Parasara as his son a Verse 8 makes it clear that the Vyasa referred is the son of Parasara. Parasara's son is Krish Dwaipayana Vyasa or Veda Vyasa as he popularly known, and from Chapter 1 of Vya Smrithi, it will appear that the ordinances la down in the said Smrithi have emanated fr Veda Vyasa. Ordinances promulgated under t authority of Veda Vyasa have to be consider to be supplementary to those promulgated und the authority of his father Parasara; and in matters where Parasara Smrithi is silent or is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

explicit, the rules in Vyasa Smrithi ought to be considered valid and binding. In Vyasa Samhita, the following injunctions are laid down :—

(1) At the close of Vedic studies and having performed the rite of Avabhuta ablution, a twice-born one, wishing to be a house holder, should seek the hands of a girl of unimpeachable birth and family (Chapter II Verse I).

[*N.B.*, It will be interesting to know how far the above is done except merely in name].

(2) The daughter of an erudite father of good conduct and having sons of his own loins and born of a family free from all blemishes or any contagious or hereditary disease and not plighted for money to any other bridegroom before, and not of the same pravara or gotra, nor related to him as sapinda in his father's or mother's side, and belonging to his own varna and social order, slender of auspicious signs, clad in silken garments and not above eight years of age and whose paternal ancestors to the 10th degree in the ascending line were all men of renown, should be solemnly wedded, if preferred, in marriage.

(3) A daughter should be given in marriage to one, befitting her family in respect of learning, birth, etc., and suited to her in years according to the rites of a Brahmana marriage or according to any other regulation where the former would not avail.

[*N.B.* It cannot be pretended that the above two rules are followed in their entirety. A reading of the rules will show that the rules are merely recommendatory instead of being mendatory. Thus even if there were no express provisions in the Smrithi authorising intercaste marriages, these two Verses could not be regarded as a conclusive authority against intercaste marriages].

Verses 7 and 8 of Chapter I of Vyasa Smrithi lay down rules for the religious rites to be done for the children born to a Brahmana by his Brahmana, Kshatriya, Vaisya and Sudra wives, to a Kshatriya by his Kshatriya, Vaisya and Sudra wives and to a Vaisya by his Vaisya and Sudra wives. The Brahmana wife of a Brahmana is called a Vipravinna, and the Kshatriya wife, Kshatravinna. Verses 8 and 9 will show that the marriage of a man of an inferior caste with a woman of a superior caste is reprobated.

In Verse 11 of Chapter II, it is said that a Brahmana may marry a Kshatriya or Vaisya girl; a Kshatriya can take a Vaisya wife and a Vaisya can wed a Sudra's daughter, but the member of an inferior caste cannot wed a girl of superior caste.

In Vishnu Samhita, there are rules similar to those found in Vyasa Smrithi allowing intercaste marriages. In Chapter XXIV, it is laid down that a Brahmana may have four wives in the direct order of castes, a Kshatriya three, a Vaisya two and a Sudra one. Wives marrying husbands of their own caste shall join their hands. In marrying a husband of a different caste, a Kshatriya girl shall take hold of an arrow in her hand; a Vaisya girl a goading stick, and a Sudra girl the skirt of her cloth. Chapter XVI lays down rules regarding the castes to which the offsprings of intercaste marriages are to be assigned, the rule being that in all cases of Anuloma marriages (marriages of women of inferior caste with men of superior caste) the caste of the issue is that of the mother and in cases of Pratiloma marriages (marriages of women of superior caste with men of inferior caste) the offsprings ought to be assigned castes inferior to that of Sudras ranging from the Ayoguva (musicians) to which the offspring of a Sudra upon a Vaisya woman is assigned, to the Chandala caste to which the issue of a Sudra upon a Brahmana woman is assigned.

Chapter XXVI deals with the status of the co-wives of different castes and Chapter XVIII

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

with the rules regarding division of property between sons of twice-born fathers by wives of different castes, the general trend of which is to give the largest percentage to the son of a Brahmin woman, a little less to the son of a Kshatriya woman, still less to the son of a Vaisya woman and the least to the son of a Sudra woman. In cases of only sons, those born of wives belonging to the twice-born classes inherit the whole property, while the son by a Sudra wife gets only half the property. From the above, it will appear that the marriage of a higher caste woman with a man of a lower caste is discouraged in all possible ways if not actually prohibited. The Hon. Mr. Patel's Bill, so far as it relates to marriages between men of lower castes with women of higher castes, is in conflict with the ordinances laid down in the Smrithis. But Anuloma marriages (marriages of women of inferior caste with men of superior caste) is not against the ordinances, though owing to various causes they have fallen into disuse during several centuries. If Mr. Patel's Bill is to be confined to Anuloma marriages, it is a question for consideration whether the non-Brahmanas may not think it inconsistent with their self-respect to consent to legalisation of Anuloma marriages alone. Are the non-Brahmanas likely to be satisfied with the provisions in the Smrithis regarding the distributions of property?

If the Bill is passed into Law, the legitimacy of intercaste marriages may be assured. But the question of shares to properties will have to be regulated by the rules laid down in the Smrithis. If the rules in the Smrithis are not abrogated, no Pratiloma marriage may take place and the issue of such marriages as may take place may be as helpless as the issues of intercaste marriages are supposed to be at present. Thus without introducing a provision of equal status as regards property, the bill is not likely to prove an effectual measure in practice.

The question arises, whether the legislature will not be making inroads into the personal Law of the Hindus by attempting to over-ride the provisions in the Smrithis about division and devolution of property. No doubt, there is the precedent of the Convert's Disabilities Act. It may be said by the opponents of the bill that the Convert's Act stops merely with removing the bar which conversion placed in the way of inheriting property and did not pretend to place the convert within the society of Hindus, whereas the present bill aims at giving a status in society to persons born of unions which have fallen into disuse for a very long time. To justify a legislation which aims at not merely reviving ancient usuages but also to validate unions which are reprobated in the Smrithis, and which requires to make it effective that alterations should be made in the law of inheritance as laid down in the very Smrithis that allowed such marriages, the promoters of the bill ought to satisfy the public that the Hindu ideal of marriage will be kept up by the proposed Legislation.

The World

BY

MR. C. C. CHATTERJEE, M.A., B.SC.

The child thro' time doth grow to man,
God lends him grace; he lives a span;
The smiles of childhood's years to scan
The sighs of old age only can,

He finds his wishes far and near,
And oft betrays his joys in tear;
He lives like wronged but silent Lear,
And doting fondly on the dear.

In sorrow's season he would smile;
In hours of darkness, moments vile,
The light of heav'n on him a while
Would flash, like beams thro' clouded pile.

He saw the frailties hid in might,
He saw the shadow follow light,
He saw in heav'ns of darkest night
The prospect of a starry sight.

He found the creeds were faithless faith,
Too weak to blunt the sting of Death;
"We gain a life through quick'ning Death,"
Re-orient Nature mutely saith.

INDIAN AGRICULTURE

BY

THE HON. MR. G. F. KEATINGE, C.I.E.

IN farming there are two fundamental units, the farm and the farmer. For agricultural progress it is necessary that the farm should be a fixed and permanent unit, so that it may admit of permanent improvement and adequate development, and that the farmer should be fluid and moveable unit, so that the right men may get to the right places. Speaking generally, we find, to our misfortune, that in India the exact reverse is the case, that the farm, on the one hand, is subject to a continuous series of economic earthquakes, and that the farmer, on the other hand, is fixed and rooted.

To turn first to the farm. So much has been said during the last few years on the subject of the sub-division and fragmentation of holdings, and the evil has been so generally recognised that I do not propose to go into the matter in any detail. No orderly development, no effective improvement can take place in a holding which is the wrong size and shape and which has no stability. The fact that this is true not only in theory but also in practice can be verified by anyone who will take the trouble to do so. Not only is the land totally undeveloped, as development is known in other countries, but the idea of progressive development is hardly understood by the landowners. To develop and improve a permanent 10 or 20 acre farm is an intelligible proposition; but to develop and improve a 10 or 20 acre farm which must in the near future be split up and fragmented is not an intelligible proposition to anyone; and since this is the proposition which confronts the Indian farmer, it is not surprising that he does not consider it seriously. In this way, a low standard in set of agricultural methods and of agricultural results, a serious obstruction to progress is presented, and there arises a generally uneconomic situation which tends to become worse rather than better.

UNPROGRESSIVE FARMING.

Now let us turn to the farmer. The farmer owns his small and fluctuating area of land, it may be 15 acres of land in three plots of one generation, and 5 acres in 6 plots in the next generation. The point is that the farmer is fixed and permanent. His farm may fly into fragments and grow steadily smaller, but generally speaking he himself persists, whether he be a good, bad or indifferent farmer. In highly individualistic and competitive countries, efficiency is secured largely by the elimination of the unfit, who are squeezed out of the race by keen competition coupled by a high standard of living. This law is in constant operation in England, and there have been periods of agricultural depression there, when unprogressive farmers have been ruined and squeezed out wholesale, while on some kinds of soil it is recognised that a bad farmer cannot hope, even in prosperous times, to survive many seasons. In rural India, however, the competition is less keen, the standard of living lower and an easy-going tolerance, combined with an elastic joint family system, helps to tide the less effective members over their difficulties and to keep them in their places to the obstruction of the more effective members of the community. It is by no means contended that there are no good farmers, nor can it be expected anywhere that all farmers will reach a high degree of excellence; all that is suggested is that, owing to the causes mentioned above, the proportion of bad and indifferent farmer is unduly large. And after all it is this proportion which counts; for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

while we would term a country backward in agriculture in which only 10 per cent. of the farmers were good farmers, we would be able to class it as advanced in agriculture if 50 per cent. of the farmers were advanced and progressive.

REFORMS NEEDED.

We may then sum up the situation thus—

The majority of the farms are of the wrong size and the wrong shape, they are not permanent units and are not susceptible of orderly and adequate improvement. The majority of the farmers are deficient in skill, industry and energy, and balance a low standard of endeavour by a low standard of living.

These are the fundamental obstructions to agricultural progress to which I have to refer. The question is how we are to overcome them. It is clear that what we have to do is to endeavour to create and maintain suitably sized and suitably situated holdings which will admit of adequate development, and to arrange that there shall be nothing to prevent these economic units from passing by natural laws into the hands of the most progressive farmers who will be in a position to make the best use of them. If we can do this, we can trust to the natural fertility of the soil and the natural industry of the farmers to secure the progress which we desire, aided by the scientific investigations which have been made and which will be made in future. But until we can do this, we shall not secure anything like the full results that we look for from our natural advantages or from our scientific labours.

Now what is it that prevents us from taking action of the nature indicated? Whenever any remedial action of this nature is suggested, it is always urged that the people have not asked for such action and do not want it, that such action would be opposed to their religion and to their sentiments, and that a shuffle of farms and of farmers would constitute a political danger. These aspects of the question must, of course, be carefully considered. This is a country where religious and sentimental ideals count for much where political dangers must be given due weight. But there is also a persistent demand on the part of a section of the population for material progress. We have come to the parting of the ways, and India must decide which road she wishes to take. You may set up a sentimental ideal, an æsthetic ideal, an ideal of voluntary poverty, or an ideal of political caution. Such ideals are quite intelligible. The trouble is that to a large extent they are not compatible with the ideal of material progress. All that I say is this, if the former ideals are chosen to the exclusion of the latter, let us stop all talk of rapid material progress, for we shall have deliberately refused to take the first steps that lead to it.—*From the Presidential address to the Agriculture and Applied Botany Section at the Indian Science Congress.*

A PATRIOT-POET OF BENGAL

BY MR. HEM CHANDRA NAG, B.A.

I

"*Devi amar, sadhana amar,*
Swarga amar, amar desh!"
"Goddess mine oh! thou my haven,
Paradise mine, Motherland!"

THIS is the last and the most beautiful line of a famous Bengali song which attained wonderful popularity at the time of the Partition and Swadeshi agitations. The late Mr. Dwijendra Lal Ray, the most popular play-wright of Bengal is the author of the song. Two biographies of this great poet have of late been published in Bengali. Babu Devkumar Ray Chaudhury, one of the biographers and an intimate friend of Mr. Ray, describes how and when this song was composed. Mr. D. L. Ray was Magistrate-in-charge at Gaya in 1907, and Babu Devkumar, himself a poet of no mean repute, was a guest of his. So was also the late Babu Baroda Charan Mitra, the celebrated poet and Judge. The late Mr. Lokendranath Palit, I.C.S., the distinguished son of the distinguished father, the late Mr. T. Palit of Calcutta, was then the District Judge at Gaya, and he was a daily visitor to Mr. Ray. One fine evening Dwijendralal stood before them and sang the song in his unique voice and style. When he finished, it seemed that the air of the room was surcharged with love for the country. The effect was thrilling, and the friends lost their power of speech in wonder, awe and admiration. For a time they looked at the deep blue sky outside, and then suddenly, up rose Mr. Palit, grasped the two hands of Mr. Ray, and broke out: Oh! how wonderful—how magnificent! Let me confess, my dear Dwiju, it's undoubtedly the very—very—very best and noblest national song that I've ever heard or read in my life. It's indeed a Divine inspiration!

Soon the song came before the country. From the streets of Calcutta it entered the innermost depths of villages in Bengal, ennobling, inspiring and strengthening the national movement. When the judgment of the country was passed, it of-course agreed with the verdict of Mr. Lokendra-nath Palit.

II

This is not the only song of Mr. Ray which has attained celebrity, Mr. Ray wrote poems and dramas innumerable, but there is no doubt that if he lives for any of his writings, he will do so for his songs. They are the life-breath of his dramas, and there are a good many of them which may be mentioned. The above song is known in Bengal as the song of *Amar Desh* or *My Country*. There are at least two other patriotic songs—*Amar Janmabhumi* or *My Native Land* and *Bharatavarsha*—which appeal equally powerfully to imagination and patriotism. While the latter has a most forcible diction, the former sends imagination to a dreamland, such is the charm of its wording and sentiments.

Mr. Ray began his poetical career as a satirist. He composed a good many satirical and comic songs, and it may be said with confidence that they have to this day no equal in Bengal. Through these songs, Mr. Ray ruthlessly attacked every form of social abuse of the day. They left no sting in the heart of the reader, for they were not aimed at individuals; nevertheless they carried a needed lesson to the person who required it. The sham patriot who *must* live for his country at the cost of allowing his brother to die of cholera unattended, the so-called reformed Hindoo who is "a queer amalgum of Sasadhar (a Hindu revivalist), Huxley and goose," preaching profusely but practising none of his precepts, the England-returned *sahib* who smiles in the Parisian and coughs in the Russian fashion—these are all things of beauty and joy for ever, and there was a time when they were on the lips of everybody. Mr. Ray did not spare his own faults in composing these songs. He was a *pucca sahib* when he returned from England as agriculturist in 1886, and was appointed a Deputy Collector, but that did not deter him from writing his exquisitely fine satire on the England-returned. Mr. Ray was pre-eminently a hater of sham. Look at the merciless way in which he ridicules the man of fickle faith who changes his religion as often as he would change his coat. He is made to adopt Christianity for the sake of a girl and leave it for a kick of his father. He becomes a Brahmo for the fun of the thing, but has to abandon that faith when he is married in due course in accordance with the rites of Hindu orthodoxy. He turns an atheist, but leaves atheism on the birth of a daughter or two. And so on till the end. The finest touch of satire is reached when the man excuses himself at every change on the plea that everyone must act in the same way under such circumstances. Beautiful as these songs will read in paper, the fullest depth of their humour and satire can only be felt when they are set to the tune.

III

The first comic play of Mr. Ray is *Ekghare* or *The Excommunicated*. It is full of "withering sarcasm," as said by the late Babu Rajnarain Bose and was an attack on the leaders of the orthodox movement. The book has a history of its own. When Dwijendralal returned from England, he married a daughter of Mr Pratap Chandra Majumdar, a famous Homeopathic practitioner in Calcutta. The marriage was celebrated in the Hindu way, and he was anxious to return to the bosom of the old society. But the leaders of orthodoxy would not allow him to do so. Pandits demanded money when their opinions were sought by the friends of Mr. Ray, and this injustice and shamefacedness made him rebel against the society. The stinging satire of the book created a sensation and its banters produced heart-burning in the noted quarters. We read in his biographies that a Bengali gentleman went to a bookshop to purchase a copy of the book. He went through it then and there, and tore it to pieces at the time of leaving the shop. This shows that the book served well the purpose for which it was written.

While he attacked orthodoxy, he did not spare those who went to the other extreme. The artificiality, greed of money and the luxurious living of the Indo-English stung him to the core, and the result was a comedy called *Prayaschitta* or *Rightly Served*. The obvious object of the comedy was to teach that it was well for the Bengali to live in his native way. These books have been criticised on the ground that they are guilty of exaggeration. But no comedy can avoid exaggeration, and it may be said without hesitation that there was a real need for both of these plays in Bengal when they were published.

The other comic plays he wrote with no more definite object in view than provide innocent amusement for theatre-goers. The bad taste of the existing farces pained him deeply, and he turned the tide by his powerful pen. The exquisite but refined humour of these plays made the whole Bengali Society roar in laughter. Who can indeed help it when he finds a lover devouring sweets in the sheer despair and putting up flesh in the utter exhaustion caused by the pangs of separation, and who can help it when he is seriously advised by Mr. Ray not to be re-born on Thursday afternoons which are considered particularly inauspicious by the Hindu almanac?

IV

Mr. Ray's wedding took place in 1887. He was a loving and devoted husband. Properly speaking, his literary career began in 1894. With a loving wife of many virtues and accomplishments, this was a period of unalloyed domestic enjoyment to him, and this happy period continued till the death of his wife in 1903. The happiness which he enjoyed at home was successfully transmitted to his literary productions, and it is worth recording here that all his comic plays and songs were published in this period. He also tried his hand in the composition of serious dramas, and produced three of them in this period. The first was on the basis of the unfortunate story of Ahalya who was beguiled by Indra and was turned into stone, the second was on Sita, the model of Indian womanhood, and the third was on the basis of the historical story of Prithwiraj of Rajasthan and his wife Tarabai. *Pashani* or *The Stone Statue* and *Sita* received high encomium from the Bengali reading public, and these two books will for long occupy a high place in the Bengali literature, be they considered from the standpoint of character painting or the arrangement of the plot. Saint Gautama is simply superb, and his Sita is even more noble than the Sitas of Valmiki and Bhababhuti. *Tarabai* was not as successful as the above two, but in spite of its defects it established the reputation of Mr. Ray as a writer of historical plays in which he was latterly so much to shine. These books were, however, criticised on the ground that verse, especially blank verse, was not suitable for drama. Many including the late famous poet, Nabin Chandra Sen, were of this opinion, and Mr. Ray accepted this view and definitely abandoned the idea of writing dramas in verse.

V

"All my smiles are gone in this evening of life; they are asleep by the side of tears." Thus wrote the poet in a pithy Bengali poem a few years after the death of his dear wife. This portrays the true picture of the plays he was producing after the tragic event referred to. His wife died in 1903 leaving a son who is still a student and a daughter who is now daughter-in-law of the Hon'ble Babu Surendra Nath Banerjea. After this we seldom meet him as a writer of comic plays and songs. Henceforth he dedicated himself to the production of serious and patriotic plays, and almost all his plays of this kind are tragedies. The loss of the dear partner of his

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

life cast a deep gloom over him, and he was not able to get rid of it till his end in 1912, the forty-ninth year of his life. He was a most open-hearted man of jovial disposition, loving and loved by all who came in contact with him. But there came a change over him after the death of his wife. He was the same kind and loving friend, but he was no longer the same jolly man. He became moody. In the midst of joviality, he used to become serious and gloomy and it is believed that this mental depression was one of the causes of his premature death. As usual, he was pressed by his friends and relatives to marry again, but he remained firm in his determination not to commit the same foolishness. "How many times must a man marry?"—was his only reply to them. He used to say that a second marriage was not a marriage in the proper sense of the word. It was only feeding the lower desires of life. Such marriages might be neceasary at a certain stage of the society. A man or a woman must be free to contract such marriage if he or she thought it necessary, but it was better to avoid it. It may be thought that a man holding such an opinion must bear prejudice against widow remarriage, but such was not the case with Dwijendralal Ray. However that may be, as he was still being pressed by his friends for marriage, one day he thrust a note into the hands of one of them and asked him to show it to all who might come to induce him to marry. The note was written in Bengali and ran thus:

"Dr.	"Cr.
"1. It is a mistake to marry at all. Those who desire marriage for the second time require treatment.	"1. Who is to look after my household? Answer—It is a meaningless word to him who has no house.
"2. It is wrong to marry when one has not the money necessary for the purpose....In my opinion I have not that money.	"2. Who is to look after me in my old age? Answer—Susi and Giris (his sister-in-law and her husband).
"3. It is madness to try to serve two masters. The service of a second wife is terrible, specially if her temper be a little high.	"3. Who is to look after my children? Answer—Their guardian-tutor.
"4. It is not wise to bring a step-mother for the children.....	"4. A bride's father would be saved by my marriage, as I would not take money? Answer—I am not selfless enough to marry for this reason only.
"Dr.	"Cr.
"5. It was not the wish of my wife that I should marry a second time in case of her death."	"5. Life will be purposeless without marriage? What would be the object of my future life? Answer—*To serve the mother tongue.*"

The above is taken from Babu Devkumar Ray Chaudhury's biography of the poet, and it shows that he could be humorous in the midst of deep sorrow. But the temper indicated by the above is not just the kind of temper required to produce comic literature, and it was well that he bade adieu to it.

VI

"I have wasted half of my life in jest," the poet says somewhere. So he was no longer to jest. He was now to learn "how to shed tears in deep sympathy." His object was achieved, and he learnt the lesson under the guidance of the best of teachers, Time. The time was propitious for him. It was indeed the time most suitable for such a lesson. Bengal was then a vale of tears. It was the time of the Partition of Bengal. It was exactly in the year of the Partition that his first patriotic play, *Pratap Singha*, was published. There was immediately a stir in the Bengali community. Another Bengali play of the same kind—*Pratapaditya* by Pundit Khirode Prasad Vidyabenode had been in the field, and both received a most hearty welcome from the Bengali public. They drew enormous and unparallelled crowds to the theatre halls, and were eagerly discussed by every gathering that met. Thanks to a historical novel by the late Mr. R. C. Dutt, the life of the great hero of Rajputana was already familiar to the people of Bengal. Bengali students learn the histories of Rajputana and Maharastra, not from their text books on history, but from the admirable novels of Mr. Dutt, *Rajput Jeeban Sandhya* and *Maharastra Jeeban Prabhat*, and it may be said with certainty that these novels are better history than many of the so-called histories of the day. It was due to these two books that Rana Pratap and Sivaji became objects of worship in Bengal. Dwijendralal Ray touched therefore a familiar chord, and the response was immediate and full. The historical character of Rana Pratap was preserved, but the poet sought to impress a moral on the public through him. Throughout the book he has tried to prove that narrowness and bigotry cannot win. According to him, Rana Pratap fought more for the race and racial pride than

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

for the country and therefore he failed. The best character in the play is not the Rana, but his brother Sakta, the cosmopolitan, who married a Mahomedan wife. It is needless to tell the student of history that his Sakta is the creation of his imagination with the exception of the name.

When Pratap Singha was receiving the homage of the theatre-goer, Mr. (now Dr.) Pramathanath Banerjee requested Mr. Ray to write a drama on Durgadas, the Rathore hero. Durgadas was an embodiment of the virtues of selflessness, faithfulness and dutifulness, and a nobler character than his does not exist in the whole history of Rajputana. So he at once agreed, and the play was shortly published. This play has, too, a moral like the other. Durgadas was an ideal man, he had no narrowness, no bigotry, but still he failed to drag the nation out of the mire. And why? Because the nation was divided against itself, manhood was gone. *Durgadas* is a tragedy in spite of the successes of the hero, and its tragic character lies in the fact that his successes led but to the grave.

There is one other important drama which Dwijendralal Ray wrote with an aim. It is *Mewar Patan* or *The Fall of Mewar*. The execution of the book is excellent, but conception defective. It is unfortunate that the poet set up in this drama an artificial quarrel between Universalism and Nationalism, and deliberately gave the superior place to the former. Nationalism, rightly understood, can have no quarrel with Universalism, and that Nationalism is no Nationalism at all which quarrels with Universalism. If the Nationalism as displayed by some of the characters in the drama was defective, it would have been enough to teach the right kind of it. However that may be, one may boldly say that the lesson that was sought to be impressed was lost upon the people, and even this book they accepted and applauded as a gospel of Nationalism. The quarrel referred to was ignored by the general public as a most minor matter.

VII

It has been said by an English critic that success is the only test of merit. If by "success" we are to understand the applause and patronage of the people in general, then it must be said that the above three dramas were highly successful. It would however appear to many that their real value does not lie so much in the intrinsic merits of the plays as dramas, as in the useful service they rendered at an important period in our national life. Mr. Ray has observed somewhere that his dramas must not be considered as political essays. The people however accepted them as such. They may or may not survive the ravages of time, but that does not imply that they had no use in the economy of Bengal's national life.

These plays are valuable for another reason. In spite of their imperfection, it was through them that the real Dwijendralal came out to the public. Dwijendralal Ray has produced works of art, but it is not as an artist that he is adored by the populace in Bengal. He is admired and adored as a poet of patriotism, and there is no doubt that his was a highly patriotic soul. Mr. Ray has said himself that he could never feel easy after he had sung his famous song, *Amar Desh*. He was an official, a Deputy Magistrate, but we found him singing national songs with procession parties in Calcutta, attending the famous Partition-day meeting at Bagbazar, and so on. His patriotism was based on love and not on hatred. We find ample evidence in his letters and conversation that he for ever refused to admit that race or class-hatred could ever be a factor of a nation's progress. It is this patriotism—noble and unalloyed—that he propagated through his dramas. They are the embodiment of a highly patriotic soul, and as such they are valuable. The entire teaching of the above pieces may be summed up by citing one line of a song of Mr. Ray, *viz.*, *Giachhe desh duksha nai, abar tora manush ha*— Mourn not for the country fallen low, be men again.

VIII

The chief defect of the above dramas is that their characters are not life-like. They are either too good or too bad. Babu Navakrishna Ghose observes in his biography of Mr. Ray that Mr. Lokendranath Palit used to call Durgadas a bundle of qualities. So he is, and so also are most other characters. If they are not bundles of qualities, they are bundles of sins, Except one or two, the characters in these plays are not troubled by a conflict of emotions. The heroes are almost all so many incarnations of singleness of purpose. In a word, the principal characters in these plays are idealistic and not realistic. It is not recognised in these dramas that the life of a man is but the resultant of many forces acting from different directions. A man is actuated by various motives even at one and the same time. It is not unoften that one and the same action is inspired in life by different motives, some good, some bad. It was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Mr. Palit who pointed out this to Mr. Ray, and he learnt the lesson from him. Mr. Palit was a singularly well-read man, and he produced a great impression on the poet. He therefore began to try his hand in the production of realistic plays and live-characters, and he succeeded to a certain extent, though not to a very great extent. *Nurjehan, Shajahan* and *Chandragupta* are the result of this effort, and considered from all points of view these are perhaps the best dramas of Mr. Ray. It is in Nurjehan that we first come across a real internal struggle, a strong conflict of emotions. The world-famous consort of Selim is actuated by hundred different feelings in her actions—feelings some of which, at times, she was trying to conceal from herself. But even this character is not so intricate as one would like it to be. The character of Aurangzeb in *Shajahan* is admirably drawn up, and it is one of the most successful characters of Mr. Ray. He is neither the villain of the Hindu writers, nor the idol of worship of the Mahomedan writers. One of the most remarkable characters of Mr. Ray is certainly Chanakya, the Indian Machiavelli, and chief minister of Chandragupta. It has its merits and demerits, but on the whole it is unique. It is not known what sort of man the historical Chanakya was, but Mr. Ray's Chanakya is a strange mixture of sanity and insanity, hardness and softness; a weird touch has made the character almost uncanny. But Mr. Ray has failed to make a great diplomat of him. The Machiavellian side of his character is very imperfectly developed. The reader feels fascinated with him because he appears to him not of this earth, earthy, but he is at the same time sorry that it is not the traditional Chanakya he meets. A certain mysteriousness hangs about the figure all along, and that is the principal charm of the character. There is little in him to identify him with his traditional namesake except the name and his own confession. This defect is probably due to the fact that there is so little in history and traditions to help the author in the successful drawing up of this side of Chanakya's life. I am also disposed to agree with the late Babu Baroda Charan Mitra that intricacy was so much out of tune with Dwijendralal Ray that it was difficult for him to conceive intricate characters. On the whole, however, it must be admitted that Mr. Ray's Chanakya is a really artistic production.

I have not exhausted the list of Mr. Ray's publications, but I stop only to mention the names of *Sinhal Bejoy* or *The Conquest of Ceylon*, published after his death, and *Lyrics of Ind*, a collection of his English poems. These lyrics are nearly the earliest productions of Mr. Ray, and they were warmly received by Indians and Englishmen alike.

IX

One noticeable incident in the career of Mr. Ray is his clash with Sir Rabindra Nath Tagore, his once dear friend. Dwijendralal Ray was an upholder of morality in literature, and mysticism in poetry never appealed to him. Sir Rabindranath is preeminently a mystic poet, and Dwijendralal came to hold that some of the poems of the great poet bore no meaning. Besides this, somehow or other, he also came to think that some other poems of Sir Rabindra were not in keeping with the eternal principles of morality. He contributed an article on this subject to a Bengali magazine and a bitter controversy followed for sometime between the adherents of the two poets. This embittered the feelings of Mr. Ray, and he went so far as to write a parody on Sir Rabindra and had it staged at a Calcutta theatre. It is a relief to learn from Babu Devkumar that Mr. Ray confessed it to him as a great mistake of his life.

While the extreme length he went must be regretted by all, there is no doubt that the whole controversy arose out of Mr. Ray's zeal for morality. He was an agnostic all his life, though we are told that a change was coming over him at the later period. Like many of the agnostics of the past, however, he was a man of sterling moral worth—a worthy son of a worthy father, Dewan Kartikeya Chandra Ray of the Krishnagar Raj, named after Raja Krishnachandra of Plassey fame. A close friend of Pundit Iswar Chandra Vidyasagar, Babu Bankim Chandra Chatterjee and many other great men of the then Bengal, Dewan Kartikeya was a remarkable man of his time. He was a man of varied gifts, but the greatest of them was perhaps his unimpeachable character. Pundit Sivanath Sastri, the recognised leader of the Brahma Samaj, has observed in one of his books that Dewan Kartikeyachandra led an ideal life at Krishnagar at a time when that town was notorious for giddy immorality. Dwijendralal Ray fully inherited his father's moral fervour, and much may be forgiven of a man whose failings rose from virtue's side.

X

The above episode serves to illustrate another important trait of his character—his sturdy independence. Sir Rabindranath was a dear friend of his, all his life he was an ardent admirer of Sir Rabindranath, but he did not spare him when

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the choice lay between friendship and public good according to his ideas. Mr. Ray was a close student of every phase of public life in the country —politics not excepted. More often than not we meet him as a critic in his letters and conversation, and as a critic he was original and independent.

He was no less independent in service, and he came in conflict with the Government several times in life for this particular trait of his character. I shall refer to one incident he himself described in a Bengali magazine. He was for some time a Settlement Officer somewhere in the district of Burdwan. In a certain case pending in his court, he stood by the tenants and gave his decision against the Government setting aside a plea for increment of rent. The decision was set aside by the District Judge on appeal to him, and the Government increased the rents accordingly. Sir Charles Elliot was then the Lieutenant Governor of Bengal, and the case attracted his attention. He called for the papers and severely condemned the action of Mr. Ray. Mr. Ray, however, defended himself vigorously, but the only answer the Lieutenant Governor gave him was that he had been a Settlement Officer himself, and that he was well-versed in settlement regulations. Conscious of the justice of the cause he represented, Mr Ray, however, did not yield, and he retorted by saying that His Honour had been a Settlement Officer in the Punjab and not in Bengal, and that there was a great deal of difference between the regulations of the two provinces. On this, the Lieutenant Governor issued a Resolution and Mr. Ray's promotion was stopped. The case, however, went to the High Court, and the decision of Mr. Ray was upheld. In another case, the Resolution of Sir Charles came in for severe criticism at the High Court, and thus the triumph of Mr. Ray was complete. This however intensified the wrath of the Lieutenant Governor, and he remarked in the *Calcutta Gazette* that Mr. Ray was not an industrious officer. To the eternal credit of Mr. Ray's European superior, it must be recorded here that he came to the aid of Mr. Ray at this juncture, and protested against the unjust aspersions of the Lieutenant Governor in his report. He wrote that Mr. Ray's work was a "monument of industry and ability."

The fact that he published his stirring plays at the time of the great political ferment in Bengal offers abundant testimony of this side of Mr. Ray's character. There are few Government officers in these days who would venture far less.

Independence, liberality, moral zeal, and an ever waking eye for public good marked him out as man, and it was due to these qualities that he uttered nothing base. The least that can be said of him is that his memory will be enshrined in the heart of Bengal for many a year to come.

THE CHIEFS' CONFERENCE

THE VICEROY'S SPEECH

THE third Conference of Ruling Princes and Chiefs assembled at Delhi in the Imperial Legislative Council Chamber on January 20, H. E. the Viceroy presiding. Over forty of the Ruling Chiefs of Feudatory India were present. His Excellency opened the proceedings with an address of welcome to the Princes who had come from far and near. He deplored the death of the Maharajas of Jodhpur, Rewa and Faridkot, the Maharana of Dungarpur, the Nawab of Palanpur, and the Raja of Khairagarh since the Princes assembled last. He then paid a handsome tribute to the magnificent services rendered to the war by the Feudatory States and their Rulers for the cause of the Empire and referredat some length to the recommendations embodied in the Montagu Scheme of Reforms. The first recommendation, said His Excellency, is that with a view to the future improvement of relations between the Crown and the States, a definite line should be drawn separating the Rulers who enjoy full powers of internal administration from others. While discussing the methods of such classification, His Excellency pointed out "that the Government of India are concerned to safe-guard the rights, privileges and interests of their relatively small States no less than those of their larger neighbours, and welcome their rulers equally as partners and co-workers."

The next recommendation is that with "the consent of the rulers of States their relations with the Government of India should be examined, not necessarily with a view to any change of policy but in order to simplify, standardise and codify existing practice for the future."

His Excellency added that he would welcome

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

any general observations which any of Their Highnesses might desire to make during the conference, either on the subject of the infringement of treaty rights or in regard to the possibility of revising treaties or simplifying and standardising custom and practice.

COUNCIL OF PRINCES

Of the proposal to establish a permanent Council of Princes, His Excellency said:—

I desire at this point to make it quite plain that the institution of the Council of Princes will not prejudice the relations of any individual Durbar with the Government. It has already been said in paragraph 306 of the Report that the direct transaction of business between the Government of India and any State would not, of course, be affected by the institution of the Council, but it is important to emphasise this in the clearest possible terms. The durbar of a very important State, in their written memorandum, have said in this connection that it would be more desirable to have a properly constituted deliberative assembly with defined powers to deal with matters applicable to all the States generally as well as questions of common interest between the States and British India. The assembly could be vested with defined powers unless the Rulers who compose it are willing in some measure to entrust to a corporate body rights which they at present enjoy as individuals. Such delegation of powers is apparently deprecated by the Durbar, because they say later that the preservation of the right of dealing direct with the Government of India should in fact be an absolute *sine qua non* of the working of any such general Advisory Council.

Lastly, His Excellency urged them to bear in mind an essential point:—

We on our part are glad to develop means whereby Your Highnesses may maintain your rights and peruse your *Izzat*. You on your part will not forget that the British Government is the paramount power in India and that this fact must colour its relations with your Highnesses in respect of the institution and proceedings of this Council as in other matters.

The Viceroy then dwelt on the need for the appointment of Standing Committees and Commissions of enquiry and concluded with a reference to the proposed Council of State and its joint deliberation with the Council of Princes.

Such joint deliberation would take place only at the instance of the Viceroy, and it will be obvious that in making use of the provision the Viceroy would attach the greatest weight to any wishes which Your Highnesses might from time to time express in the matter. The arrangement would be permissive only, and at the outset I suggest that simplicity and freedom from restrictions will be a supreme merit of a scheme which rightly used may well hold a rich store of benefit for this great country, which we all love and in which the Princes and Chiefs have a joint heritage with the peoples of British India.

On the conclusion of the Viceroy's address, H. H. the Maharaja Scindia of Gwalior thanked His Excellency for opening the proceedings.

MAHARAJA OF KAPURTHALA

A Resolution on the Victory of the Imperial and Allied Forces which was carried unanimously, was moved by H. H. the Maharaja of Kapurthala in the following terms:—

That the Ruling Princes of India assembled in this Conference request His Excellency the Viceroy kindly to transmit to His Imperial Majesty the King-Emperor the respectful but warmest congratulations on the glorious termination of the War, coupled with an assurance of their abiding loyalty and attachment to His August Person and Throne. They also desire to seize the opportunity of paying a collective tribute to the brilliant achievements of the Imperial and Allied Naval, Military and Air Force on all fronts, which have so completely crippled the enemy power and resistance and have brought the prospect of an enduring peace within measurable distance.

This was seconded by H. H. the Maharaja of Bavanagar and supported by the Jam Saheb.

MAHARAJA OF GWALIOR

The Conference concluded its sittings on the 25th instant. His Highness the Maharaja of Gwalior explained that the Banquet as announced in the original programme was dropped owing to the mournful event in the Royal Family.

PRESENTATION TO THE MAHARAJA OF PATIALA

His Highness then requested H. E. the Viceroy to present a Sword to H. H. the Maharaja of Patiala on behalf of his brother Princes, in recognition of the "dignity and self-restraint with which he exercised the functions of a representative of the States at the Imperial Conference." His Excellency then presented the Sword to the Maharaja of Patiala.

THE REFORMS AND INDIAN PRINCES

The Maharaja of Jaipur then moved the following Resolution:

"This Conference of Ruling Princes and Chiefs desires to express its sincerest gratitude to H. E the Viceroy and the Right Hon'ble the Secretary of State for India for the solicitude shown by them in their report on the Indian constitutional reforms for promoting the welfare of Ruling Princes and Chiefs and safeguarding their interests. They are especially grateful for the assurance that no constitutional changes which may take place will impair the right, dignities and privileges secured to them by treaties, *sanads*, and engagements. This Conference also desires to place on record its deep sense of appreciation of H. E. Lord Chelmsford's noble endeavour in bringing together the Ruling Princes and giving them an opportunity for free and frank discussion and friendly exchange of views with their brother-princes and the Government of India in all matters affecting their States. They are specially grateful for the confidence His Excellency reposed in them where questions of Imperial interests were concerned, thus bringing the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Princes and Chiefs of India in closer touch with the Imperial Government and encouraging them to take an active interest in the problems not only of India, but of the whole Empire."

H. E. the Viceroy thanked His Highness for the cordial words in which he moved the Resolution and promised to communicate its terms to the Secretary of State.

INDIA AND THE WAR

H. H. the Maharaja of Gwalior made a lengthy speech, in the course of which he dealt at some length with "certain epoch-making events" which by their importance, he said, "claim priority of mention." He referred to the armistice and the solidarity of the British Empire which made the victory inevitable. He next turned to the influence of His Majesty's personality which rendered perfect cohesion possible at a time when crowns are tumbling into the melting pot. Reverting to the subject of the reforms, he said :

THE REFORMS

These measures, which are irrevocably promised, will bring in their train enhanced loyalty and contentment in India, and the ampler they can be made with due regard for the conditions that are, and the quicker they can be enforced, the greater will be their certain result. I am not using the language of convention, but I speak from conviction, when I say that both amplitude and expedition are assured by the combination which we all regard to be of happy augury, *viz.*, the continuation of Your Excellency's Viceroyalty, and the re-appointment to the Secretaryship of State for India of the Right Hon'ble E. S. Montagu. The recent elevation of our distinguished countryman, Sir Satyendra Sinha, to the Peerage and his appointment to an office in the British Government, is an example of true insight, great political imagination and what is even more important, of genuine honesty of purpose and we refuse to credit the libel from wherever it emanates that in this measure of simple justice to people, there is even the slightest taint of party or other questionable tactics. The recognition of India's rights is further emphasised by her direct representation in the Peace Conference, and in the inclusion of our illustrious brother, the Maharaja of Bikanir, amongst the delegates to Versailles, we recognise the determination to accord to the Indian States their rightful place in the fabric of the British Empire. For all this our heartfelt thanks are due to Your Excellency's insight into the existing conditions, Mr. Montagu's powerful support, no less than to the sympathy and sense of justice of the British Cabinet.

Referring to H. E. the Viceroy's opening address, His Highness emphasised that "the paramountcy of the British Government is a fact that is not open to challenge. "Alluding to the importance of a Council of Princes," he pointed out :

The absence of an organ for the collective expression of opinion was also responsible for bringing about a condition of affairs in which the interests of the States in such matters as affected them jointly with British India were exposed to the risk of being ignored. In addition, there were certain crying needs which it has now been sought to meet by the application of plain and direct remedies, and these remedies such, for instance, as the appointment of Commissions of Enquiry for the purposes stated, and the placing of States in direct political relations with the Government of India are, I may say, so essential that their application does not admit of delay.

Touching the relations between Native States and the Imperial Government, His Highness defined the scope of the old treaties :—

It will be admitted that no treaties are for ever comprehensive documents. Ours having drawn up to meet the conditions that existed at the time of their conclusion, and having had for their purpose the attainment of particular objects, they can cover but a very limited field. Their tenor, however, is unmistakeable, and their general clauses clearly indicate the enjoyment by the States of a status and position which, in the course of time, have suffered deterioration in practice. Therefore, what the States ask for is, that no measures inconsistent with this tenor and those clauses should be adopted by the Imperial Government and imposed upon the States. In any case, to all such measures as are likely to affect in any degree the internal autonomy of the States their free consent should be previously obtained.

His Highness concluded by recounting the result of the present Conference :

We have decided by a majority that a definite line should be drawn hereafter between the Sovereign States and others. As regards the question of the examination of treaties and the need of codifying and standardising past usage, we have appointed a Special Committee to thrash this question and make suggestion at our next meeting. We have unanimously decided in favour of the early establishment of an organisation of Princes, which is to be hereafter called by the name of "Narendra Mandal" (in English "Chamber of Princes.") We have carried resolutions for the establishment of Commissions of enquiry and for the election of standing committees as outlined in the Montagu-Chelmsford report, but with slight modifications. We have cordially and unanimously supported the propositions of direct political relations between all the important States and the Imperial Government. A Committee has been appointed to deal with the question of precedence under Section 7. We have also decided that this Conference recommends that the consideration of the question of the means to be provided for joint deliberation between the Government of India and the Princes should be postponed until the Chamber of Princes and Chiefs has been established, and until the result of the proposals made for the introduction of the reforms in British India is definitely known.

The Conference closed with a reply from H. E. the Viceroy who assured the Princes assembled that the debates of the Conference would receive the most careful consideration of the Government.

"THE DANCE OF SIVA"

A REVIEW BY

MR. K. HANUMANTHA RAO, M.A.

AT a critical juncture in European political and social story no greater service could be rendered to the statesmen concerned in National re-construction than a clear presentation of the Indian Ideal as embodying a fundamentally different "motif" in social organisation and cultural vitality. And it is part of the good fortune as certainly it is part of the mystery of all great human movements, that a new epoch in Indian Nationalism, which sprang at first whole from the heart of the common people, should so rapidly find for itself a large and powerful band of writers, artists, and thinkers, who, blessed with the word and vision divine, have each, in the measure and vein peculiar to him, successfully striven to express one aspect or another of its infinite-faced idealism in Art and Life. Not the least among these and in a sense occupying a unique place of his own as gathering into one braid many separate threads of thought and criticism is Dr. Ananda Coomaraswami, whose most recent contribution to Indian Literature constitutes as much a testimony to the variety of his intuition and the patient devotion of his love-labour as it is a wonder-striking revelation of the consistency and one-heartedness of the Indian Ideal in its application to all the varied and vital problems of human well-being.

The fourteen Indian essays, named appropriately after the most characteristically Indian of them, "The Dance of Siva,"* were written and published during the critical years of the European war and owe their peculiar interest and suggestiveness to their continual reference to the vital imperfection and self-destructive contrariety of the European scheme of personal art and competitive social order. Over against this background, dark with the primeval passions of the forest and the mountain, the Indian Ideal shows clear and chaste, illuminating with flashes of light the depths of an infinite mystery of Life and Being.

The essays are mostly distinct in theme dealing with a variety of topics, all however making one clear and related garland about the central thread of all Indian culture, a pure and consistent monism of thought but expressing it variously, now in terms of the technique of Indian music, the fundamental relation between 'srtuit' and 'alap' and again as the philosophy of the Hindu communal organisation, a subtle and successful blending of the "Pravrutti" and "Nivrutti" marga in an arc of social experience which leads with varying insistence but with compulsive sweep through the four-fold 'purushardhas of life,' or again by a characteristic theory of the æsthetic positing for every perfect experience of 'Rasa' the realisation of emotional identity between the Artist and critic or 'Rasika' and interpreting every perception of beauty in nature as essentially a direct intuition-impression of Reality and Identity.

Such a close and critical analysis of every phase of the Indian experience not only brings out the pure consistency of higher Indian thought but helps to explain how through untold centuries of varying National fortunes Indian Life has remain-

*The Dance of Siva: Fourteen Indian Essays.. By Dr. Ananda Coomaraswami, D. SC., George G. Harrap & Co., London and New York.

ed entirely faithful to itself, spiritually whole and united though outwardly under the need of alien domination. The picture of such an embodied culture alive and functioning to-day as in the vigour of youth should yield lessons of importance both to the modern Indian in the re-adjustment of individual and communal life successfully to resist the general characteristic vulgarisation of experience in the present predominantly industrial epoch, and to the statesmen of Europe and America in their anxious endeavour to re-habilitate the most elementary virtues of communal life in a social organisation weighted with the worst passions of individual rivalry and insatiate greed. Thus to the modern occidental, it must help to create and unravel a new series of individual values and a new order of progress based not on wealth, or the will to power and self-assertion but on the measure of true self-denial and self-regulation and the keenness of spiritual insight which must spring out of it. It must teach him too some of the characteristic and to him most needed, of oriental virtues, preached through its simplest folk-lore, the capacity for deep and undisturbed inwardness amidst an eddying whirl of external action, the pre-occupation with the eternal elements of life through all the abandon to the richest and the most delicate variety of sense-experience.

A higher service perhaps for the moment would be to explode the long-accepted doctrine that it is only the economic bond which could effectively hold communities together and to do it by a clear and positive illustration of how at least one society in the past very early outgrew the merely economic stage and deliberately moulded itself into a purposive organisation where the finer powers of the human soul would have free and untrammelled play, and so guided and controlled the lower desires and passions of Nature that Life thereby grew more abundant, and to wider and larger amptitude for æsthetic apprehension, emotional rhythm and spiritual richness, and how similarly the European type of communal organisation too must rapidly release itself from the grip of physical want and struggle, to be free to reach out to the finer Ideal hidden in its own ardent industrialism and love of power, and so perhaps add its own contribution to human culture by a persistent and passionate emphasis of the Individual note in the Absolute.

To the Indian himself, such a clear exposition of the underlying philosophy and æsthetic unity of the most important situations of his social life is even more important as finally deciding for him the absolute impossibility of any change of "venue" for his social and spiritual evolution. It would be little short of moral and cultural suicide now to let himself launch out on the new seas of a purely economic and individualistic civilisation, and whatever the final chances of self-fulfillment for a communal life tuned to an "Idealistic Individualism" his must for ever remain a nursery of communal co-operative virtues, of group-harmony and guild-government if the characteristic virtues of gentleness, hospitality, æsthetic self-abandon, and spiritual pre-occupation, in other words his essential and innermost Indianness, are to continue to distinguish him from, and keep the memory of his fathers among, the important nations of the earth. Not that all or even any of the social moulds should remain into the future as of old all unbroken, but that however the forms may change or be deliberately changed to suit new times and new relations between Nations, the Indian Spirit, with its unfailing touch on the universal behind every note of individualistic experience, must have firm hold of every social situation and cultural advance, guiding and governing every step of the National Life into nearer and nearer intimation with the Ideal determined once and for ever by the ancient Aryan Rishis, the builders of the "City of Gods."

Surdasa: The Milton of Hindi Poetry

BY

MR. KANNOOMAL, M.A.

In the pantheon of immortal saintly bards who consecrated their lives in tuning their soul's song to the praises of the Lord and held direct communion with Him through the all-absorbing ecstasies of their holy music, Surdasa occupies one of the highest—if not the highest—places. He stands head and shoulders above his contemporaries—successors and predecessors as far as religious poetry goes. Although sufficiently well known in the land of his birth, Surdasa's greatness remains to be duly known and appreciated by the western world, which has so far worshipped only its own idols.

Surdasa was born in 1483 of poor Saraswat parents at the village of SIHI in the vicinity of Delhi. From his very childhood, he was of a religious frame of mind and passed most of his time in the society of spiritual teachers and holy men. From them he drew his inspiration, and while only a boy of eight years, he left his home and parents and wandered about in search of the idol of his heart—Lord Krishna. He ultimately came over to Muttra—the holy birth-place of Krishna and settled there for life. From this place he used to make his wanderings in Vrijmandala where lay the scenes of the sports and deeds of Lord Krishna's early life. Surdasa had by now become the pupil of holy Ballabacharya —the spiritual head of the Vaishnavite sect consecrated to the love, devotion and worship of Sri Krishna. Surdasa died at the ripe age of eighty, in 1563.

Although Surdasa wrote some light works, all of devotional poetry, *his magnum opus* is Sursagar—a collection of songs mainly describing the early deeds and sports of Lord Krishna. Tradition says that this book contained no less than a lakh of songs but the modern manuscripts do not contain more than five or six thousands of them. Each of these songs is a masterpiece of poetry that has never been excelled. From a literary point of view, they stand unmatched and unsurpassed in the whole range of human literature. Their external beauty is immensely enhanced by their depth of devotional feeling that pervades them through and through. The poet loves his Krishna as a child or as a companion and lavishes the riches of his heart upon him. None who can understand the language of the songs, remains unmoved by their pathos. For chastity, beauty, grace, poetic art and depth of devout feeling, the songs of Surdasa, poured out of the depth of his heart in praise of his deity Krishna, remain unsurpassed. Sursagar is a priceless treasury of poetry. To hear and understand its songs is to be inspired by them. While the learned find in them a wealth of poetic beauty and charm, the devout hear in them a clear call to come and merge themselves into the undying, ineffaceable ecstasies of divine bliss. Surdasa was a very advanced saint, a matchless poet, a peerless musician whose harp, inspired by his immortal songs, has poured forth divine and blissful melodies that still reverberate in their undying musical vibrations in the sacred groves of Vrindaban where he saw his Lord face to face, though physically blind.

Sursagar is an inexhaustible treasure-house of beauty. Let some Indian scholar make it a work of his life just as Max Muller did in regard to the Rigveda.

THE RECENT CONFERENCES

In the January number of the *Indian Review* we published an account of the proceedings of some of the important Conferences held in the Christmas week. In this issue we give further accounts of various other gatherings held subsequently at different places. We have no doubt that this attempt to present a bird's eye view of the more important Conferences will be appreciated by our readers. [Ed. *I.R.*]

Indian Science Congress

The Indian Science Congress met at Bombay, on January 13. H. E. the Governor, in welcoming the delegates, expressed his appreciation of the honour in inviting him to be the patron of the Congress. He then paid a compliment to the President, Sir Leonard Rogers,—"a scientist of international and world-wide repute who has rendered incalculable service to India in the field of tropical medicine and research." After referring to the munificence of Sir Dorab Tata, Chairman of the Reception Committee, H. E. concluded with an appeal to bring medical aid within the reach of the millions.

Sir Leonard began by thanking the Congress for including medical research among the subjects of deliberations at the Congress.

> Realising that I owe my present onerous position to having been fortunate enough to make some practical life-saving advances in tropical medicine, I felt that I shall be most likely to interest my audience by illustrating the subject with some account of my own researches in which the collateral sciences of physiology, chemistry and physics were utilised in solving problems arising in the treatment of deadly diseases: for I feel sure that pure scientists will always rejoice in seeing their discoveries being made practical use of by medical research workers.

He then referred to the immense advantages that modern medicine has derived in the last few decades from advances made in closely related sciences and discoursed at some length on the research work done in the past.

More may yet be done, he continued, but sufficient has already accrued to prove the inestimable life-saving and economic value of medical research work. On this subject Sir Leonard grew warm and urged that increasing facilities should be afforded for medical work.

> In order to get the medical officers with the highest abilities and scientific training required for success in research to devote their lives to it, and to abandon the much more lucrative clinical side of medicine, it will be absolutely necessary to give them salaries in proportion to the long and expensive scientific training of from six to eight years, which they receive after finishing their general school education.
>
> Unfortunately the short-sightedness, to put it as mildly as possible, of the controlling service in India, the senior members of which, admitted before the age of entry was raised to the present standard, were recruited from schools, often with the aid of cramming, and almost invariably without any scientific knowledge, and whose education ceased before they became of age, has for long used its almost uncontrolled power in India to prevent the more highly educated members of the scientific service, including the medical, from receiving pay adequate to their training, much less the princely salaries which the Indian Civil Service obtain for themselves."

Contrasting the emoluments of medical experts with those of the Civil Service, he said:—

> That the Simla authorities are unaware of the value of scientific training and experience will be clear from the fact that, when recently sanctioning a new appointment as director of a post-graduate scientific school and research institute, they cut down the emoluments recommended by the local government, which is finding the money, to below a comfortable living wage in the expensive location of the institution, and actually to below the present pay in a much less responsible position of the very officer whose nomination to the post they at the same time accepted, and that too although he happens to be a Fellow of the Royal Society. Further proof of the truth of the above statement is surely unnecessary.

The Science Congress resumed its sitting on the following day when two papers, one on "Nitrogenous Fertilisers" by Mr. C. M. Hutchinson and another on "Celloids and their Relation to Industry" by Mr. Mackenzie Wallis were read.

In the evening, a public lecture illustrated by lantern slides on the "Life History of a Star" was delivered by Dr. Gilbert Parker.

The next day the four sections of the Congress were in session, these being the agriculture and applied botany, physics and mathematics, medical research and geology sections. At the medical section, Major Glen Liston read a paper on "The Next War: Man versus Insects." Mr. Keating read a paper in the agricultural section on "Some Economic Factors affecting Agricultural Progress" which appears on page 103.

The Engineers' Conference.

A Conference of Engineers was held at the rooms of the Asiatic Society of Bengal, Calcutta, on December 30, to discuss the question of the formation of an Indian Institution or Society of Engineers. On the motion of Sir R. N. Mookerjee, Sir Thomas Holland was proposed to the chair. Sir Thomas, in the course of his speech, dealt at some length on the exact nature of the Institution they were organizing.

"We want to be quite sure," he said, "that the Institution membership will be recognised not only in India but outside as the standard of technical efficiency and competence. That is the line that has been taken up by the Institutions at Home, and in consequence of the standard of official recognition, the membership, according to its grade, has a definite market value."

He then offered some suggestions for forming the central and provincial bodies.

Mr. E. M. Hughman, the Secretary, announced that 179 applications had been received for membership.

The following resolution was adopted: "That it is desirable to form a society for the advancement of all branches of engineering science in India."

A committee was appointed to report to the meeting on the 3rd January regarding the following points: (a) The steps to be taken to approach with a view to co-operation of the representatives of the provincial engineering congresses, the Mining and Geological Institute and the local branches of the English institutions of Engineers; (b) to suggest a name and provisional constitution for the new society; (c) to nominate a list of the provisional committee with a view to completing the negotiations with the related congresses and societies; (d) to provide means for provincial finance; (e) to propose a date for and arrangements for an inaugural meeting.

Sir Claude Hill welcomed the organisation and said that the attitude of the Government of India was one of sympathy and encouragement. He pointed out that they had no intention to officialise such an institution.

The Committee held several meetings and decided on all the subjects allotted for its discussion. The decisions of the committee were then submitted to the general body.

The third day's proceedings consisted of a joint meeting of British and American Electrical Institutes. Mr. H. P. Gibbs, of Bombay who presided made a few remarks concerning the possibilities for the extended application of the electrical art in India.

The fourth and last meeting of the Engineers' Conference was held on January 4th. The Chairman explained to the meeting what the committee appointed on the 30th of December had done. He said:—

"The committee met on the 31st and spent the whole day in discussing the proposals decided upon at the previous general meeting. The committee agreed on certain principles for organisation and certain principles that should govern the drafting of rules and regulations for the proposed society. They then appointed a sub-committee to work out these details, draft the rules, and prepare a financial scheme. The sub-committee worked on the 1st and 2nd January and the full committee reported its consideration of the proposals last night. The proposals that were agreed upon by the committee yesterday evening have been reviewed again this morning by the full committee and we are now in fair agreement about certain points to be put before this engineeering meeting."

Resolutions touching the name, composition and the lines of work of the Indian Society of Engineers were then passed. Sir R. N. Mookerjee proposed and Mr. Cowley seconded the vote of thanks to the President who replied in felicitous terms.

In the afternoon, a special session was held, presided over by Mr. J. W. Meares, at which Mr. Richard H. Martin, District Engineer and Acting Electrical Engineer, South Indian Railway, read an interesting paper on "The Problem of the Electrification of Mountain Railways, with special reference to the Nilgiri Mountain Railway."

The All-India Cantonment Conference

The first session of the All-India Cantonment Conference met at Amballa on January 25. There were about a hundred delegates from different Cantonments. The objects of the Conference are to obtain certain civic rights in cantonments. The Chairman of the Reception Committee, Rai Sahib Benarsi Das, in the course of his address, defined the conditions under which the civil population of cantonments live and contrasted them with those of the people of other parts of British India. He said :—

> Even in normal times of peace there are sections in the Cantonments Code that hang like the sword of Damocles over the heads of peaceful residents of cantonments. Even the elementary rights of British citizenship such as are enjoyed by every resident of British India are not extended to us in their entirety.

He deplored that, with all the advantages of the contact with fresh Europeans of broad sympathies and democratic outlook and ideals, the cantonment people are faring worse.

> With such elevating influences of our environment, we in cantonments are more intimately acquainted with and better fitted for the free institutions of the west than other. But it is an irony of fate that though we deserve more we have got much less.

The claims of the Conference are modest enough. The Reception Committee stated in clear terms that the Conference did not desire to meddle with the military administration of cantonments. The Chairman continued :—

> All that we desire is, that in matters pertaining to our own welfare we should be given a free hand. The Montagu-Chelmsford Scheme lays down the principle that in local-civil administration the people's voice be supreme. What we contend and pray for is that this principle be extended to cantonments. The constitution of the cantonment Committee is at present most unsatisfactory to my mind. A future cantonment committee should be a more inviting institution where the chosen representatives of the people be as welcome as the Military officers.

The President, Rai Sahib L. Laxminarain, in the course of his Presidential Address, pointed out the scope of the work of the Conference after which he summarised their views on the Montagu-Chelmsford Reform Scheme. He said :—

We do not doubt but heartily wish that the policy of self-determination should be applied to India in as full a measure as possible, but I do not think there is any one among us who will prejudice India's cause by adopting a policy which may result in the frustration of all our hopes and the perpetuation of the autocratic system under which India is governed at present. However great might be our regret that during the last election many of our most trusted friends have not been returned to Parliament, the British Premier, Mr. Llyod George, has at the present moment done all in his power to restore confidence in us that the pledges held out to us will be fulfilled. The inclusion of Sir S. P. Sinha in the British Government as Under-Secretary of State for India and his elevation to the peerage are landmarks in the history of India's connection with England.

He then dwelt on the special grievances of the residents of cantonments. Resolutions of loyalty, of condolence with Their Majesties in their bereavement and congratulations to the allied armies, were passed.

The next day the following resolutions were discussed and passed :—

(1) This Conference respectfully but emphatically urges on the Government the necessity of introducing in the construction and working of the Cantonment Committees an element of popular control in consonance with the spirit of the recommendations made regarding the constitution and working of municipal and district boards in the Montagu-Chelmsford Scheme; that for the purposes of civic administration, the areas occupied by the civil population should be separated from the regimental lines and constituted into separate Municipal Committees, but until this reform is brought about at least 50 per cent. of the Cantonment Committees should consist of non-official Indian Members elected by rate-payers, and separate representation should be accorded to house-owners; (2) this Conference, while viewing with satisfaction the memorandum issued by Army Head-quarters regarding house property in Cantonments, regrets to notice that they are not observed in practice and urges that the same be enforced. The difficulties which the landlords in cantonments experience are (1) the cantonment administration do not act with sufficient consideration towards owners as a class; (2) the house-owners are required to make alterations, repairs and additions to their houses to suit individual fancies; (3) the rents of the houses in many cases were fixed four or five decades ago and are now, when prices have so much advanced, too low to make house property attractive or offer an inducement for investment of capital in new house property; (4) the allotment of houses by cantonment authorities to officers and regiments results in their being vacant for long periods and causes loss of rent. This practice, though it is contrary to law, is vigorously persisted in some cantonments; (5) the owners should have statutory power to deal directly with the tenants; (6) the language used in notices, etc., served upon landlords conveying threats of criminal prosecution sometimes for most trivial points is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

most discourteous and humiliating; (7) that wear and tear due to the usage and negligence of tenants should be made good by the tenants, the service of such notices on house-owners is contrary to the intentions of cantonment law, which contemplates the intervention of the cantonment authority only when somebody's safety is endangered; (8) the awards of arbitration committees would not be final, but should be subject to appeal to the court of original civil jurisdiction; (9) that the tenants should have no right to sublet bungalows occupied by them without the written permission of landlords.

This Conference is of opinion that employment in the cantonment services would become more attractive, and the status of the service would be raised, if cantonment services are regularly granted and made pensionable. This Conference considers that sections 2-15, 21-6 and 21-7 in the Cantonment Code empowering the G.O.C. to expel, without assigned reason, being opposed to the fundamental rights of British citizenship should be expunged from the Cantonment Code.

It was further resolved that a deputation of the Conference should wait on His Excellency the Viceroy, His Excellency the Commander-in-Chief and the Franchise Committee with a memorial embodying the purpose of the resolutions passed by the Conference. The next session will meet at Meerut.

The Mathematical Conference

The Indian Mathematical Society held its Second Conference at Bombay on the 11th, 12th and 13th January. H. E. the Governor of Bombay who was unable to be present on the occasion referred in his opening address to the importance of concerted action on the part of Mathematicians all over India. The various papers read at the Conference were mainly of technical interest. But the President, Prof. A. C. L. Wilkinson, in the course of his address, pleaded for an organised attempt to place the teaching of Mathematics on a sound and practical basis and concluded:—

I therefore urge upon you the necessity of carrying into practice that article of our constitution that provides for the formation of branches in the various presidencies, whose duty it will be to promote the study of elementary mathematics by setting on foot inquiries into the methods of teaching, the extent to which each subject should be taught and numerous other questions which will be suggested and then with the material collected, classified and discussed we shall be in a position to advocate such further reforms as may be considered necessary and thus in the future initiate where in the past we have followed.

The Bengal Mahishya Conference

The Bengal Mahishya Conference, the fifteenth session of which was held on 31st December 1918 and 1st January 1919 at the residence of Babu Nut Behary Shee of Howrah, was attended by delegates from the various districts of Bengal. There was a large gathering of distinguished educationists whom the Chairman of the Reception Committee, Babu Preo Gopal Chakravarti, welcomed in a neat little speech. The Mahishyas who number about twenty four lakhs, and formed the main agricultural population of Bengal, he said, were not receiving the degree of attention and sympathy they deserved at the hands of the Government. Rai Bahadur B. N. Das, M.A., B.SC., Vice-Principal of the Dacca College, took the chair on the first day and Babu Bepin Behari Das I. S. O., on the second. The President, in the course of his speech, emphasised the supreme importance of education and advocated its spread amongst the members of his community as the sole means of promoting their material and moral welfare. After referring to the benefit derived by the Mahomedan community from the Muslim Fund, he earnestly appealed to all present to contribute to the 'Mahishya Educational Trust' which had as its object the granting of scholarships to poor deserving Mahishya students.

Then the following resolutions among others were passed after lengthy discussion:

That this Conference urges on every Mahishya to realise the importance of education and to push forward its advancement in all its branches amongst the members of the community and their priests. The Mahishya District Associations are accordingly requested to raise funds through the adoption of the following means:—

(*a*) Monthly subscriptions and donations.

(*b*) Donations on such occasions as Marriage, Shradh, Puja etc.

That steps be taken to collect funds for the creation of an endowment to provide free studentship for deserving poor Mahishya-students in the proposed Howrah College.

The Zoroastrian Conference

The seventh annual conference of the Parsis met at the Empire Theatre, Bombay, on the 11th January. Miss Shirni Manackji Cursetji welcomed those present in a lively little speech in which she contrasted the condition of the Parsis of to-day with that of the state of things half a century ago. She referred to the freedom of women and the growing Europeanisation of the Parsi people. She advocated the starting of charity organisation and in conclusion deprecated sending Parsi boys and girls to mission schools. Khan Bahadur Adarji Dalal, in his Presidential address, referred to the loss sustained by the Parsis by the death of Dadabhai Naoroji and Sir Ratan Tata. He deplored it was not possible to raise a Parsi contingent.

He next pleaded for the creation of a body of self-sacrificing missionaries to serve the community and the public at large on the style of Mr. Gokhale's Servants of India Society, the Deccan Education Society, Mr. Apte's Women's University, the Benares Hindu University, and the Mahomedan University. Referring to politics, the President said it was a good thing that the aversion which the Parsis showed ten or twenty years ago to a participation in matters political, had gradually decreased, and the tendency now among educated Parsis was towards increased participation in politics in conjunction with other communities.

He favoured the representation made by Sir Jamsetji and others for communal representation because when other Indian communities asked for this, they should take care to press their demand. He again asked the Parsis to co-operate with other communities in the public political movement for the good of the country, and concluded with a word of warning against extremism in politics.

The Economic Conference

The Economic Conference which was held under the auspices of the Indian Economic Association began its sittings at Bombay on December 30. Prominent Economists like Prof. Jevons of Allahabad and Prof. Hamilton of Calcutta were present. Principal Anstey of the Bombay College of Commerce who presided over the Conference discussed in his opening remarks, the constitution of theIndian Economic Conference. Last year, he said, they had a Conference of professional economists. Its scope should now be widened, he said, by the inclusion of members of the civil service, journalists and others interested in different branches of economics. He said that Government should pay due regard to the "collective voice of economists," and he contrasted the conditions in the West where, unlike in India, Economic experts are consulted by Government. Prof. Kale of Poona, in the course of a paper on the "Study of Village Economics," suggested that some distinguished economist must be associated with the Government officials to guide them in their policy. Prof. Coyajee, in his paper on "Some lines of Co-operative Progress," urged that the Co-operative movement might be utilised in organising and guiding the political opinion of the raiyat. Prof. Stanley of the Allahabad University read a paper on "Finance and Economic Development," while Mr. R. B. Ewbank, Registrar of Co-operative Societies, in a paper on "The Co-operative Movement and the Present Famine in the Bombay Presidency," drew attention to the material and moral advantages of Co-operation for the raiyats.

Among the other papers read at the Conference was one by the Hon. Dr. Harold H. Mann entitled "First Investigations on the Efficiency of Agricultural Labour in Western India," excerpts from which appeared in our last number.

THE LATE NAWAB SYED MAHOMED

We regret to record the death of Nawab Syed Mahomed which occured on Feb. 12. The Nawab Syed was a familiar figure in the public life of Madras. He was a staunch Congressman and an adherent of Hindu-Muslim Unity. He was a nominated member of the Madras Legislative Council having been before Sheriff of Madras. As an elected member of the Imperial Council he served with Mr. Gokhale for several years. He presided over the Karachi Congress in 1913.

PRATAPCHANDRA MAZUMDAR*

BY

PANDIT SITANATH TATVABUSHAN.

INTRODUCTION

PRATAPCHANRA MAZUMDAR, the writer, orator and theologian, was a great leader of the Brahma movement and in many respects the most eminent of the immediate disciples of Kesavchandra Sen. But he belonged not merely to the small community which recognised him as one of its great leaders, but to the whole country, and in a sense to the whole world. His sympathies were wide, and his literary and missionary activities far-reaching. The most important of his works were published in America, and some of his most remarkable addresses delivered there; and his English and American admirers would perhaps equal, if not actually exceed, in number those who admire and appreciate him in this country. His writings, though written, as they could not but be, from the standpoint of the Brahma Samaj, are so liberal in views and sentiments, that they may be read with profit and without the least offence being felt by men of the most varying opinions. Being written, as all his works are with the exception of two little Bengali treatises, in most elegant English, they afford a great literary treat apart from the value of the teachings embodied in them. A sketch of the life and teachings of such a valued writer and worker cannot but be welcome, we hope, to all, irrespective of creed or class.

FAMILY AND PARENTAGE

Mr. Mazumdar belonged to the same caste as his great master, Kesav, and was distantly related to him. It is called the Vaidya (physician) caste, one which is peculiar to Bengal, having no corresponding caste in other parts of India. It is a high non-Brahmana caste equal in social rank to, if not higher than, the Kayasthas. Pratap was born in 1840 at his maternal grandfather's house at Banseria, a noted village 24 miles north of Calcutta; but his infancy was spent at Garifa on the Hugli, not far from Calcutta, a village which is the ancestral seat of both the Sens and the Mazumdars. Mr. Mazumdar's description of his own childhood reminds one of Wordsworth's *Intimations of Immortality from Recollections of Early Childhood* and lends a remarkable testimony to the truth of the poet's reflections. This description is embodied in a biographical sketch attached to Mr. Mazumdar's *Heart-beats* and is written by the Rev. S. J. Barrows, President of the Chicago Parliament of Religions and a great admirer of Mr. Mazumdar. This sketch and the present writer's personal knowledge of him derived from a rather close acquaintance with his career as a preacher and writer, are the only available sources from which the following narration of his life, uneventful but rich in thought and sentiment, is drawn. Of his father, Mr. Mazumdar says: "In the dim, far, sad past I trace my father's face, a large, generous, loving face, in which great impulsiveness was written in strong characters. He was a stout, florid, full-sized man, very kind, very angry, frank, artless, warm-hearted beyond discretion but not very learned. He was educated up to the ordinary standard of those times, was a teacher in the Hugly College for some time, and then a senior clerk in the bank. I believe he had some leanings toward the Brahma Samaj; for I faintly recollect he had some volumes of the *Tattvabodhini Pattrika*, the organ of the Adi Brahma Samaj, in his room. Oh that he had lived a few years longer for me to have known him better! Oh that he had gone after putting me under the care of some one able to take care of me and teach me! But he

Digitized by Arya Samaj Foundation Chennai and eGangotri

died very early, too soon. In fact, he could not have been more than thirty-two when he died, and I was about nine. He left me an orphan under the care of my young mother, who did not know what to do under the paralysis of her great sorrow. The village woodmen speak of him with tears in their eyes. He always lent them money, took it not, but gave them more. The village widows talk of him to bless his memory. And the village boys, who have grown into older men than myself, mention him with honour and affection. He taught them and read with them, and preferred them before his own son. He often showed severity to me outwardly; but I know he always loved his boy in the heart of his heart, with all the fulness and fondness that there was in him." Mr. Mazumdar's memories of his mother are even more vivid and tender. He says of her: "She was a beautiful being, young, high-minded, intelligent, queenly in her features. She was unlettered, like other women of her time; but she was a lady with the high training of her caste and her position. She became a widow at about twenty-five, and loved me as a heart-stricken widow can love her growing son. She wished I should be comfortable and learn the best that a boy of my age should. But her means were very limited and she could have no hand in my education."

EDUCATION

Having passed through the usual *pathsala* and school courses, young Mazumdar entered the Presidency College. He spent two years there, making good progress in all studies except Mathematics. His deficiency in this branch he attributes to the too frequent promotions with which he was favoured in the school department, and it was perhaps this deficiency that led him to leave college without taking a degree. Henceforth he was left to self-education and to the influence exerted by his friends and companions. For some time the latter was not of the most desirable character; but he was soon thrown by Providence into contact with the two great souls who exerted the greatest influence on his character. They were Maharshi Devendranath Tagore and Brahmananda Kesavchandra Sen. The former stood before him "in his character as a finished piece of workmanship, to be admired, loved and, as far as possible, imitated. Kesav was yet unfinished. But he had the fascination of a growing beautiful character," says Mr. Barrows. "He grew with and into us," says Mr. Mazumdar, "from within: he was in perpetual contact with us. He was most natural, and made everything about him as wholesome as the earth and air. He was so true, strong, warm, elevated and magnetising that he became to me really a part of myself, the better part. He was like another self to me, a higher, holier, diviner self. Yes: we grew together, he in one direction, and I in a somewhat different. I was conscious of the difference; but he grew into me, and I grew into him, in a relationship which outlived the separation of death itself."

MARRIED LIFE

Mr. Mazumdar was married when he was only eighteen years old. The union, though a child-marriage, without choice on either side, proved to be a very happy one.

CONVERSION TO BRAHMAISM

Mr. Mazumdar signed the Brahma Samaj covenant in 1859. This in itself did not lead to any severance of connection with his relatives, but when in 1862 he took his wife to the house of Maharshi Devendranath Tagore on the day of Kesavchandra Sen's appointment to the Brahma Samaj ministry, he was subjected to a good deal of persecution. The Tagore family had lost caste, even before embracing Brahmaism, through Muhammadan influence. A letter was therefore sent to young Mazumdar, while at the Tagores', to the effect that as he had violated the wishes of his guardians in taking his wife to the house of an ex-communicated man, he should no longe

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

return to the ancestral house. But Mazumdar "determined for once to stand on his rights. He would cross the threshold and see what came of it. But his poor wife trembled from head to foot. How could she go and show her face to women who were so furious? Her husband took her firmly by the hand and said, 'We must go.' All the houses in the neighbourhood were crowded; every house-top was full of women; every house door was full of men. They were curious to see the destiny that awaited her. There was no open violence, but that fearful boycotting which was one of the consequences of ex-communication was immediately experienced. No cook would prepare their meals. No servant would touch their clothes. The people in the neighbourhood would not talk to them. The experience was painful and humiliating. His wife, in this emergency, managed things with the firmness, heartiness and industry which have always characterised her." There has been incomparably more fearful persecution than the above in the case of many a convert to Brahmaism; but as this was all that fell to the share of Mr. Mazumdar, we have given as full a picture of it as we could.

PREPARATION FOR LIFE'S WORK

Mr. Mazumdar served for a short time at the Bank of Bengal, but he soon found out his real work—the preaching of religion—and devoted himself to it with all the zeal that characterised him. His father left him a property worth about Rs. 15,000, but much of this was wasted through the mismanagement of his guardian, so that when a settlement was effected, it was found to be worth only Rs. 10,000. With this money Mr. Mazumdar subsequently bought his "Peace Cottage" near Kesavchandra Sen's "Lily Cottage." Latterly he built another house at Kurseong, below Darjiling, and called it the "Sailasram." At the time we are speaking of, Mr. Mazumdar's chief occupation was study and writing for the *Indian Mirror*, which was first started as a fortnightly by Kesavchandra Sen and his friends, but which gradually became a weekly and then a daily. Mr. Mazumdar's studies at this time lay mostly in the line of general literature and philosophy. It is said that he was a voracious reader of novels and read almost every book of romance known to him. This seems to explain to some extent his great command over the English language and the refinement and elegance of his style. His connection with the *Mirror*, of which he was often the editor, was also of great use to him in forming his style.

AS A PREACHER OF RELIGION

In 1865 Mr. Mazumdar, with many others, seceded from the Adi Brahma Samaj under the leadership of Kesavchandra Sen. The secesion was due to the difference in the types of religion held on the one hand by the old leader, Maharshi Devendranath Tagore, and on the other by Kesav and his followers. While the religion of the former was essentially Hindu and in favour of slow and cautious progress in social matters, that of the latter was essentially Christian with a cosmopolitan flavour, and advocated radical reform in society. The immediate cause of the schism was Devendranath's re-installation of two Brahma preachers who had been dismissed for retaining their sacrificial threads, but whom Kesav and his party could not tolerate on the Samaj pulpit. After vain efforts to retain their influence in the parent Samaj the latter came out and founded in 1865 the "Brahma Samaj of India," of which Mr. Mazumdar was appointed Assistant Secretary. He also became a minister of the Samaj and began to preach about this time. His prayers and sermons were greatly appreciated, and this appreciation grew with the growth of his influence and spiritual experience. His ministrations were at first in Bengali, and sometimes in Hindi, but from about the time he was thirty, he began to deliver public addresses in English. He gradually became one of our ablest

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and most eloquent speakers, and his influence was felt by vast audiences in this country, in England and in the United States of America. His delivery was slow, but dignified and impressive. He used the choicest words and the aptest figures and imagery, and all that he said was suffused with the glow of his deep emotions and spiritual experience.

AS A JOURNALIST

In or about 1872, Mr. Mazumdar began to edit and publish a yearly record of religious thought and missionary activity under the name of the *Theistic Annual*. This was followed by the *Theistic Quarterly Review*, and much later by the *Interpreter*, a monthly and, for sometime, a fortnightly journal. He also wrote for the *Dharmatattva*, the Bengali organ of the Brahma Samaj of India. When the *Indian Mirror* passed out of the hands of the Brahma leaders, and the *Liberal and New Dispensation* was started as the organ of Kesav's church, Mr. Mazumdar also wrote for it occasionally. He also contributed occasional articles on the principles of the Brahma Samaj to Anglo-Indian, English and American journals. Until 1882, when his first work, or at any rate his first important work, came out, his literary activity was confined to writing for the periodicals.

PART IN THE SECOND BRAHMA SCHISM

In 1878 the schism in the Brahma Samaj that followed the marriage of Kesavchandra Sen's eldest daughter with the then young Maharajah of Kuch Behar, took place, and the Sadharan Brahma Samaj, the third great section of the Brahma community, was established. Pandit Vijaykrishna Goswami, one of Kesavchandra's closest followers, with many others who had followed him more or less closely, joined the new organisation. Mr. Mazumdar might have done the same and for a time it seemed he might do so. Though deeply attached to Kesav and indebted to him for much of what was valuable in his own life, it was very widely known that he was an independent thinker and had never blindly followed his leader. He did not also quite approve of the marriage that formed the bone of contention. But nevertheless he clung to Kesav and condemned the schism.

EXPOSITION OF BRAHMAISM

In 1882 appeared the first book, at any rate the first important book, written by Mr. Mazumdar. It consisted mostly of his public addresses and contributions to periodical literature, recast and partly re-written, and was named *The Faith and Progress of the Brahma Samaj*. It was in three parts; (1) Speculative and Doctrinal; (2) Devotional and Practical; and (3) The New Dispensation. It thus professed to be a defence of the religion of the Brahma Samaj and an account of its missionary and other activities. But it was so only partly and rather imperfectly. On its speculative side it contained no reasoned and systematic exposition of Brahmaism, such as would convince, or even be fully intelligible to, a non-Brahma wishing to know what Brahmaism is. The writer simply stated, with his usual wealth and elegance of language, what he believed Brahmaism to be.

VISITS TO THE WEST

Mr. Mazumdar paid his first visit to England in 1874. In 1883 he re-visited England and extended his journey to America. "The memory of his visit," we quote from Dr. Barrows, "and the inspiration and enthusiasm it awakened, will still be fresh in the minds of many who read this book (Mr. Mazumdar's *Heart-beats*). He returned to India by way of San Francisco, stopping in Japan and lecturing in the University." The experiences of these two visits to the West are recorded in his interesting *Sketches of a Tour Round the World*. On returning from his second visit to the West, Mr. Mazumdar found that his great friend and leader, Kesavchandra Sen, had gone to a better world. The period following this event was the most troubled period of his life. But we shall speak of these troubles later on. In 1893, Mr. Mazumdar paid his third visit to the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

West. He attended the meeting of the Parliament of Religions at Chicago, where he read a paper on the "World's Religious Debt to Asia." "In Boston," we again quote from Dr. Barrows, "he was invited to deliver four lectures on India before the Lowell Institute. So great was the interest in these lectures, that he was induced to repeat them afternoons, under the same auspices, to a crowded hall. These lectures were reported and published in the *Christian Register*" (a Unitarian weekly). They have since been published in a book form under the name of the *Lowell Lectures*.

"THE ORIENTAL CHRIST."

In 1883 was published Mr. Mazumdar's *Oriental Christ*. "This remarkable volume," says Dr. Barrows, "was at once recognised as the product of a devout mind, active intellect and a glowing imagination. It was essentially a new contribution to Christology." In Mr. Mazumdar's Christology, however, there is no appeal either to the philosophic intellect or to the historical sense of the reader. The author neither draws upon Metaphysics to show that the Logas or Universal Christ incarnates himself in, and lighteth, every man coming into the world, nor upon the newly founded science of Higher Biblical Criticism to reconstruct the real historical Christ out of the semi-mythological records of the New Testament. He simply explains, in the light of his spiritual experiences, the sayings and doings of Jesus as they are narrated in the gospels. As such, it is a very valuable book and will be read with great pleasure and profit by all devout persons. As to Mr. Mazumdar's exact position in regard to Jesus Christ, it will be found expressed in a brief but very clear form in another work of his, *The Spirit of God*. Jesus, to him, is neither the Trinitarian Christian's third person in the Godhead nor the ordinary Theist's religious teacher, one among many. To him he is the embodiment of all human excellences, the human image of God's moral perfections and the very type of perfected humanity. "He is the type of humanity. Humanity broken up before and after is bound up in him, so that he is the human centre and bond of union in the religious organisations of mankind. . . . He taught us to be the sons of God. In all things did Jesus, so far as the times permitted, conform himself to the mind of God; that is to be the son of God." This is the typical Unitarian Christianity of men like Channing and Martineau, and neither ordinary Brahmaism nor ordinary Hinduism. For holding this view Mr. Mazumdar has often been accused of being a disguised Christian. But though such a view is rare among Brahmas and Hindus, we do not see that it is anyway opposed to the fundamental principles of either Brahmaism or liberal Hinduism.

DIFFERENCE WITH FELLOW-DISCIPLES

After the death of Kesavchandra Sen, serious differences about doctrinal and ecclesiastical matters broke out among his disciples and divided them into several opposed parties. The chief questions that divided them were succession to the office of the chief minister, the mode of conducting public service, the trust-deed of the Mandir, and the authority of the Apostolic Darbar or Missionary Conference. Mr. Mazumdar found himself, most unwillingly perhaps, at the head of one of these parties. As the ablest of his fellow-disciples, he might perhaps expect, and the public seemed clearly to expect, that he would be recognised as the rightful successor to the leadership of his church, but the party chiefly opposed to him, 'the Darbar party,' not only did not give him the expected recognition, but actually resolved to keep the Brahma Mandir pulpit vacant as a mark of their perpetual relation with their departed master. Mr. Mazumdar regarded and publicly represented this as the setting up of a fetish in a theistic temple, and long refused to preach there. We need not however enter into the details of these divisions, as the general public are not likely to feel any interest in them.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Suffice it to say that Mr. Mazumdar felt himself misunderstood, unappreciated, distrusted and persecuted by his colleagues, more or less, during the whole time that intervened between Kesav's death and his own, and that his usefulness suffered much from these causes. He however had a number of faithful followers with whom he prayed while he stopped in Calcutta, and who helped him in carrying on his work according to his own ideas. It may be added that he at last felt the need of some sort of constitution for his church and tried to secure it. But he was not successful in his attempts, and up to this time the more thoughtful among his followers are trying, with very indifferent success, to bring some order out the chaos and anarchy into which the affairs of the New Dispensation body have fallen. The seeds of autocracy have been too long and too thickly sown by the leaders to allow of a constitutional and representative form of church government being established without long-continued, persevering and perhaps violent efforts on the part of those who wish it.

OTHER WRITINGS

Soon after Kesav's death, Mr. Mazumdar wrote an excellent biography of him. It did not quite please his fellow-disciples, some of whom wrote, in collaboration, a lengthy life of their leader in Bengali. But the general public will find in Mr. Mazumdar's book a faithful account of the great Brahma leader's life and teachings. One great merit of the book is its impartiality and absence of strong bias, a merit which could hardly be expected in a biography written by an ardent follower and admirer. Mr. Mazumdar also wrote in the years following *Aids to Moral Character* for young people, and *Stri-Charitra-Sangathan* in Bengali for women. While in America during his third visit to the West, Mr. Mazumdar published his *Heart-beats*, which has already been referred to, and shortly after came his *Spirit of God*. The former is a collection of short paragraphs containing reflections on religious other matters and embodying spiritual expe ces. "To me," says Dr. Barrows, "the seems the most remarkable devotional book that of Thomas a Kempis."

LAST DAYS AND LAST WORK

In the last years of his life, Mr. Mazumda his hand to a very useful work,—the found with the help of others, of an Institution fo Higher Training of young men. It is now the University Institute and is housed in building in College Square, Calcutta, which have been a great joy to him if he had liv see it. He was for several years a Presid the Institution and delivered several addres connection with its Moral Section. Durin very last days, one of his fondest cares carry through the press a volume of reflec prayers and autobiographical sketches in Be under the name of *Ashish* (blessings). It is that when this book, just out of the press brought to him only a few days before his d he silently and devoutly placed it upon his We also may place it on our heads as th legacy of our revered countryman to us. The is of great value, as embodying the last tho and experiences of the great thinker and de

Mr. Mazumdar died on the 27th May, 190 Diabetes, from which he had long been suffe His body was followed to the crematorium large number of his friends and admirers, inc ing some leaders of the Sadharan Brahma Sa The procession made a halt once before Brahma Mandir of India and again before Sadharan Brahma Samaj Mandir. At the la place several ladies came out from the adjoi Brahma houses and paid their respects to the remains of the great leader and preacher. Mazumdar was childless and has left only a reaved widow. But his admirers are many they meet every year on the anniversary of death to honour his memory.

THE SANKHYA SYSTEM*

A REVIEW BY

PROF. T. RAJAGOPALACHARI, M.A., M.L.

THIS is a volume of the newly issued series of books, called the Heritage of India Series, under the joint Editorship of the Right Reverend V. S. Azariah, and Dr. J. N. Farquhar. "Everything must be scholarly, and everything must be sympathetic" is proclaimed in the editor's preface as the keynote of the series, and as far as the present volume is concerned, we have no hesitation in saying that this double promise is amply fulfilled. In a short compass of about a 100 pages, a mass of information is collected and arrayed from all possible source which gives a clear picture of the Sankhya philosophy and literature, and its relation to other schools of Indian thought. Dr. Keith's small volume must be welcomed as a really useful publication calculated to aid and instruct modern students in understanding the nature of the Sankhya.

Indian tradition ascribes the priority in age to the Tatwasamasa, then to the Samkhya Karikas. The Samkhya Sutras are generally accepted as the latest production. Dr. Keith however adduces reasons for the conclusion that the Tatwasamasa is a late work, probably of the 14th century, much later than the Karikas which are assigned to the fourth century A.D. Max Muller follows in his Six Systems of Indian Philosophy the Indian view that the Tatwasamasa is an early work on the Samkhya. Anyhow the Tatwasamasa is so brief and characterless that all Indian students read the Samkhya Karikas of Iswara Krishna as the principal work of authority of this School. It is this work that is quoted by Sankara, Ramanuja and other later scholars as the source of their knowledge of the Sankhya School.

The author of the Samkhya Karikas, whose style is terse but not without charm, gives no indication of his date; but it may be guessed that the school had other extensive literature of a diffuse kind, as indicated by the 'Samkhya-Smriti' refutation in the Brahma Sutras,(II. 1). We can say for certain that at the date of the Brahma Sutras, whatever that may be, the Samkhya had become crystallised as a Niresvara or God-less philosophy, postulating one active principle the Prakriti with all its modifications, and numberless Soul-entities, action-less, and pure in essence, but subject to influence by the co-ordination of the former, but no God or Supreme Soul. Liberation means the cessation of the Prakriti's action on the soul, bondage the continual play of the same entity on the soul. The Prakriti is matter, not spirit; the soul is pure spirit, liable to apparent modification by the mere presence of matter, as a sensitive and emotional individual of the world may be by the presence of an attractive female, coquettish and not too prudish. The final Liberation comes when the soul realises its independence, to the folly of its delusion, and discards the idea that the Prakriti is necessary for its existence. These fairly simple doctrines form the essence of the Samkhya and are set forth in the Karikas, and the Sutras. But the details of the system and its endless classifications of the prakriti's form and effects require careful attention, and Dr. Keith deals with them fully in his chapters on the Samkhya Karika and the Sutras.

Dr. Keith's chapter on the Shastitantra is very interesting reading. The author is said to be Vaisahaganya, and the Ahirbbdhnya Samhita, a Pancharatra work, recently published by Dr. Schrader, of the Adyar Library, Madras, is referred to as giving some indication of the

* By A. B. Keith, D. C. L., D. Litt., Heritage of India Series, Association Press, Calcutta.

Digitized by Arya Samaj Foundation Chennai and eGangotri

nature of the 60 principles making up the system. A question is raised whether the Shastitantra is a mere name for the Sankhya or the name of an independent work of the Sankhya school. A Chinese tradition is referred to, that sage Pancha Sikha was the author of a Shashtitantra, of 60,000 slokas. This no doubt contradicts the story of the authorship of Vaishaganya. Pancha Sikha is traditionally the 3rd of the Samkhyan founders, the prior ones being Kapila, and Asuri, and therefore there is nothing improbable in the early Shastitantra being a work of Pancha Sikha and of a voluminous kind, fit to be called a Smriti, as the Vedanta Sutras style it. Dr. Keith draws the important conclusion that the Shastitantra was not atheistic like the later Samkhya from the Karikas downwards, but was a theistic system. Though such a theistic Samkhya System is unknown to later literature, it is curious that later writers speak always of the Samkhya known to them as "Nirisvara Samkhya" or *a theistic* Samkhya, a qualification which would seem to be purposeless if there was no "Seshvara Samkhya." The analogy may be mentioned that the Mimamsa which is now practically atheistic, not recognising the existence of a supreme deity nor in fact any deities other than Mantric, had a precursor, "The Seshvara Samkhya," in which God-head was not disregarded. The references to the Sankhya in the Mahabharata and the Bhagavad-gita especially clearly assume that system to be Seshvara, as there is no refutation of their supposed god-less tendency. The attitude of the Brahma Sutras is therefore to be explained by the fact that the system having developed into an atheistic, the Vedanta retained its physics, and asserted its falsity in so far as the immanence of God was denied. This is the theme of the Vedantic references to Samkhya, by Badarayana, and his solicitude to explain away Vedic texts which seem to assert Samkhyan ideas or imply them in various places, (I. 1. 5, I. 4, 1,) as for example the ea Chandogya and Katha Valli texts, and also b elaborate refutation of the Samkhya Smriti II. 1, 1, etc. All the above may be called a s of defensive warfare of the Vedantin. Dr. Kei does not discuss the relationship to the Samkh of the Brahma Sutras. Dr. Keith howe indicates his views when he says (at p. 7 "just like the Vedanta of Sankara, or t Vedanta of Badarayana, the Samkhya is system built on the Upanishads: from bo of these it differs in that it goes radical and essentially beyond the teaching of t Upanishads." Dr. Keith also rightly criticis the Samkhyan views (at p. 87) on the grou that "no reason is given for the belief of spi that is bound" by matter. Again, "the deni of the Samkhya of any connection between spi and matter as in the Adwaita or Visishtadwai forms of the Vedanta shuts off the Samkh from any possibility of logical explanation of i main principles." These criticisms of the Sam khya, elaborated already by the Brahma Sutra and the prevalence of the theistic Vedantic do trines in India must have led to the decline o Samkhya in the country; and merely spasmod life was given to it by Iswara Krishna (thir century A.D.) and by other writers up to th fourteenth century, the date of the Samkh Sutras. If writers like Ramanuja (eleventh cen tury) elaborately refuted the Samkhya, it wa in deference to the Sutras which they were com menting upon, and not because the System had much life in it as a philosophy in their days.

Among other chapters of interest, we would draw attention to chapter VI, *Greek Philosophy and the Samkhya*, where Dr. Keith discusses the probability of Greece having borrowed from the Samkhya, and comes to the conclusion that the Samkhyan influence on Greek philosophy is practically *nil* or at best negligible.

Cabinet or President ?

Prof. A. V. Dicey, writing in a recent number of the *Nineteenth century*, discusses whether it is desirable to introduce some of the qualities of Presidential Government into the Monarchical and Parliamentary constitution of England. The essential characteristics of the English Cabinet are (1) That it links or fuses together the English Executive and the English Legislature (2) that it can in general dissolve the Parliament by which it was created and appeal to the next. The existence of the Cabinet protects the King from responsibility for his acts, and on the other hand the vagueness of the King's powers, most of which are exercised through the Cabinet, increases the moral and the legal authority of the Cabinet. The Cabinet links the electorate and Parliament and produces harmony between the will of Parliament and the will of the people. In short, it harmonises the action of every part of the constitution.

Presidential Government means the real administration of affairs by an executive officer who may, when occasion requires, exert considerable power, but he is an official whose authority is under the constitution definitely restricted. The Presidential Government, as it exists in America contrasted with Cabinet Government as it exists in England, has the following virtues and defects. It does not appear at its best in a period of peace and it appears to good advantage in only times of war. Then the authority of the President if supported by the nation will become almost despotic. The independence of the President within the sphere of his powers not only increases the dignity of his office but limits to a considerable extent the evils of Party Government. The power and independence of the President especially in strong hands will considerably increase the sense of patriotism and of the duty owing to the country by its chief and chosen representative. On the other hand, a Cabinet Government ensures the presence in Government of men of ability; it educates the nation; it possesses a special kind of flexibility which at times may be of extreme advantage. But in times of War, its defects become very obvious. It is deficient in the energy, promptness and decisiveness of action which should mark a Government then. It is based on partisanship and it is all but impossible to transmute partisanship into patriotism.

The only matter worth consideration for English people is to see whether it would not be possible in times of warfare to create a dictatorial power such as has fallen under the constitution of the United States to Abraham Lincoln and President Wilson. In spite of a final triumph, the English Cabinet did certainly exhibit weak sides during the War. The coalition of adverse parties, the creation first of a War Council and then of a War Cabinet were in the main efforts of patriotism; the working of Parliamentary Government since the beginning of the War has exhibited the radical defect of the Cabinet, namely its constant dependence for office upon the will of the House of Commons, and Cabinet Government now-a-days even in peace does not come up to the ideal of Bagehot. The Prime minister is in reality chosen by the will of well-organised factions and the nation has come to loath party cries. The Presidential dictatorship of America has not damaged its freedom and Prof. Dicey concludes by asking the question whether it is absolutely impossible to discover some constitutional arrangement by which in times of War a real leader of the nation may be given that independence and that patriotic supremacy which was possessed by Lincoln and is possessed by Wilson.

Oriental Religions

The Quarterly Journal of the Mythic Society for January 1919 has an interesting article by Prof. A. G. Widgery on "The Theories of Salvation and Redemption from Sin and Suffering as found in some Oriental Religions." The writer says that the mild influence of the image of the sitting Buddha must have helped millions of suffering minds to realise a feeling of resignation and fortitude. The earliest religious attitude towards suffering was to think of it as due to disobedience or some form of wrong-doing against the Gods or as coming from deliberate malevolence of bad spirits. Sacrifices and offerings were then resorted to as means of reconciliation or propitiation. In the consciousness of some wrong committed and the desire to overcome the wrong is the beginning of a genuine feeling of repentance and it is the earliest form of the consciousness of sin. From its most primitive conception to its latest theory sin is some thought, feeling or action regarded as being disharmonious with the wishes or will of the God. Tho position of emphasis varies; at first, predominantly on the external acts and its consequences it is moved more and more on to the inner attitude of the will and the feeling of loyalty or disloyalty to God. Aristotle and the stoics go beyond the Socratic position of '*virtue is knowledge*' in their recognition and insistence that for the moral life the right use of the will is essential. The most thorough-going presentation that suffering is the result of our iniquities is to be found in Buddhism, Jainism and the various forms of Hinduism and in the Doctrine of Karma. Zoroastrianism traces all evil back to wrong thought, wrong words and wrong deeds. Buddhism originated in a measure and has always been preached essentially as a way of redemption from evil especially from suffering. Early Buddhism teaches the suppression of desire as the way of redemption from suffering but was opposed to methods of self-torture, for expiation or the acquisition of merit. All sin has been thought off as being due to ignorance, in other words 'virtue is knowledge.' In Hinduism, suffering is represented as an inevitable characteristic of the life of a finite being. The only redemption from suffering is escape from finitude and salvation is thus described as escape from rebirth, *i.e.*, freedom in fact from all thought of self. There are several ways in which this may be achieved, action—Karma Yoga; emotional devotion—Bhakti Yoga and knowledge and contemplative insight—Gnana Yoga. According to the Jains, possession of true knowledge will obtain redemption. In Zoroastrianism, we find saviours who by their good deeds help in the work of final restoration of the world and who destroy the breakers of promises and servers of false idols. Mithraism which spread over a large portion of the Roman Empire and became the most formidable opponent of Christianity also contains the conception of a mediator. The Jews see in suffering not only the punishment for sin but also a means of divine preparation for the religious mission in the world. Amongst many Sunnis and Shyyas the Prophet Mahmet has a particular function in the salvation and redemption of men.

Drink and Housing

Professor Radhakamal Mukherjee, Lecturer in Economics, Calcutta University, writing on the Housing Question in a recent issue of the *Modern Review*, testifies to the demoralising effect of the drink traffic upon the workmen in Indian cities. Grog shops are many, he says, and they are situated so near the lines where the people have to live that drunkenness and debauchery are the inevitable result. We would also draw attention in this connection to the inquiries recently set on foot by the Calcutta Temperance Federation. The moral of it all is: shut up the drink shop and open the social institute. Improve the housing conditions and remove temptations. In short, make it easy for the people to do right and hard for them to do wrong.

Missionary Organisation and Life

A writer in *The International Review of Missions* (January, 1919) describes the character of the present-day methods of missionaries and missionary organisation and declares that "organisation which not only ignores the fundamental spiritual laws of Christian character and obligation, but substitutes for them motives and appeals drawn from business conceived in its old and gross commercial and competitive aspects, is costly to set up and operate, and no matter what its returns, is a foolish missionary expedient." The present day tendency among missions is to *sell foreign missions* to the whole Christian public by publicity and advertisement, by prudent use of the lessons of mass psychology by parish organisation and methods of benevolence and by the rational adaptations of the principles of business efficiency and organisation.

Jesus Himself rejected all forms of influence and subjected Himself to conditions which deprived Him of any method of action except simple personal influence. Money in any capacity, and least of all as a method of influence, was of no interest to Him. As for organisation, that too He treated with silent indifference. St. Paul was surely an organiser, he sought out capable young men and laid responsibility upon them, he dealt with all levels of society and used the means of access which were necessary. He worked out systems of supervision and responsibility and moved about personally and through his missionaries in a programme of comprehensive and skilful world evangelisation. But the question is not that modern methods of efficiency and publicity should be rejected; The problem for missionary organisation is, not between the employment and the refusal of all conceivable instrumentalities of efficiency and influence; but it is a problem of the spirit and the end, the proportion and the actual result.

Beware of Bolshevism

The January number of *Business* contains a very interesting and thoughtful article on "Is Bolshevism Democracy? Six Cardinal Points," by Mr. A. H. S. Hinchliffe, B. A. The writer first speaks in glowing terms of the virtues of democracy and applies its six main principles to Bolshevik ideals of Government. The first principle, he writes, is "self-preservation," and the Bolshevists who, far from ready to face public danger themselves, lay themselves out to prevent others from preserving the State and destroy discipline and efficiency, cannot have any claim to this ideal. The next three principles are from the democracy of France: Liberty, Equality and Fraternity. Applying these principles to Bolshevists, he remarks:—

> In their actions they pull down everyone of those things which are accepted as the practical proof of Liberty. Trial by Jury, one of the most prized possessions of the liberty-loving English, they dispense with summarily. Freedom of the Press another sign of liberty, they obliterate. Freedom of the individual, they interpret to mean confinement within the walls of prison. Freedom of speech they agree with, so long as the speaker is a Bolshevist. Never is a Bolshevist so hypocritical as when he speaks of liberty, scheming all the while how he may pull down every edifice erected by its devotees.

The fifth and sixth principles are culled from Mr. Lloyd George and America respectively, Honesty and Unity, and Mr. Hinchliffe, after careful examination and comparison, comes to the conclusion that the Bolshevists deplorably lack these cardinal democratic ideals. This article is concluded with the following beautiful paragraph:

> "In these days, when royalties are a slump upon the market, and traditions are being overturned daily, we here much talk of Democracy and Democratic ideals. We feel that we have fought for such ideals and those of us who have been permitted to survive are expected to find consolation in the fact that our efforts have made the world 'safe for democracy'. If they have, I, for one, am more than content, but the democracy which we have fought for must be the real thing: there must be no cheap substitutes. Like men who have been tramping over a scorching desert and see water ahead, we feel that our thirst will soon be relieved, but it can only be so if the water is pure, if it is salt and we drink it, we shall only find ourselves in a worse plight than before. **Beware of Bolshevism; it is as salt as the Dead Sea itself.**"

The Lot of the Indian Labourer

The January number of *The Social Service Quarterly* contains three very informing articles on the all important question of Indian labour, *i. e.*, one on "Factory Legislation" by Mrs. R. M. Gray, the second an editorial note on "National Minimum for Indian Labour" and the third on "Housing of Factory Workers" by A. E. Mirams, F. S. I., F. S. A. Mrs. R. M. Gray first speaks of the early stages of industrial revolution in England and thinks that the bad conditions of Indian labour in the Indian mills are nothing when compared to the low and intense economic depression of the former before the time of factory legislation. The principle underlying all factory laws, she says, has up till now been the protection of the younger and weaker workers from injury by overwork or unwholesome conditions. The conditions of men's labour remain unchanged. The Indian Factory Commissions of 1891 and 1908, she further writes, expressly repudiated the idea that they had any intention of interfering with men's work, though they acknowledged that the men's hours were far too long. The remedies suggested for improving the hard lot of the Indian labourer are the creation of sound public opinion which is invariably followed by legislation, and trade unionism following on compulsory education. Turning to the present condition of Indian workmen, she remarks :

> At the present moment all classes of operatives are equally inarticulate in India. They submit with such extraordinary patience to their hard conditions that it has been possible even for enlightened people to argue that they like the life. But after all they are human beings, and it is hard to imagine that any human being really wants to rise long before dawn, hurry half-fed and half-rested through the dark streets to his work, snatch another short spell of sleep on the stones outside the factory doors, work at a dull, mechanical task, for 12, 13, 14 hours, amid crashing machinery, stifling heat, and flying dust and then return at dark to his home so weary that he can only get sleep enough to be able to resume his Sisyphean task. Is this what any of us call Life?

The editor in a thoughtful note on "National Minimum for Indian Labour" discusses the ideal towards which efforts at social reconstruction may be directed. Commenting on the Industrial Commission Report with reference to the question of the welfare of workers in factories, he remarks :

> The effect of the halting recommendations they make in respect of hours of work, education and housing may be only to perpetuate the existing state of things and to enable employers of labour to take refuge behind the tone of hesitancy adopted by the Commission and resist all demands at enforcement of the national minimum.

Further, the Industrial Commission, he then proceeds to observe, believe in the statement that the Indian workman is such an irrational and perverse human being that once his wages are increased his output diminishes, that he only earns enough to feed him and his, and that he is "content" with a very low standard of living. This standpoint leads the Commission to support another charge put forward by employers against labour. The Indian workman does not actually work for twelve hours as permitted by Factory laws as he is naturally inclined to waste much of his time during his work. As regards the Commission's attitude towards the shortening of the working day for labourers, the writer states :

> "The Commission fail to treat the workers as human beings with social interests and with a desire for leisure and recreation like other men, and can only look upon the reduction of the working day as an act of grace on the part of the employer."

Mr. A. E. Mirams, writing on "Housing of Factory Workers", discusses in detail that part of the Commission's report which treats about housing problems, and thus summaries the main remedies suggested therein :

> They are of opinion that the ideal to be aimed at is a single or at most double storyed building with court-yards, or if possible, double-room units; and in any case ample space round the buildings; that, further inasmuch as the City of Bombay is directly interested in the question of housing its operatives, the Municipality and the Improvement Trust should bear the largest share in the cost of erecting and maintaining industrial dwellings, and that the Bombay Government should render such assistance as they may be able to spare. All that the employers are expected to do is to pay any additional taxation it may be necessary to impose upon them, contingent on the resources of the local authorities, together with Government assistance, not being sufficient for the purpose of carrying out the programme of building contemplated.

The Future of Russia

Dr. Sudhindra Bose has contributed a very thoughtful paper to the February number of the *Modern Review*, in which he takes a bird's eye view of Russia, her stained past, her strange metamorphosis, and her future hope from the standpoint of President Wilson's ideal of the League of Nations. The old Russian Government, he says, was one of absolute bureaucracy, of base and abominable despotism, and autocracy was the hall-mark of the Romanoff family.

When Germany declared war on Russia on August I, 1914, it was greeted with enthusiasm in Russia. The reasons for such a loyal support of the war on the part of the people are not far to seek. The strong belief that Kaiser incited the Czar in his aggressive policy in the Far East which brought about the Russo-Japanese War, and the increasing German influence in Constantinople and in the internal Government of the country settled the mind of the Russian Nation, and all Russia joined, with heart and soul, in the momentous issue of the overthrow of Kaiserism. But as long as there were victories, Russia was safe. When the Russian armies met with defeat after defeat, the whole complexion of the Russian Government changed, and it was accused of corruption and incompetence. The Russian people began to talk of radical changes in the government, and a coalition in the Duma, composed of Conservatives, Radicals and Moderates, was formed to get rid of Nicholas II. Discontent became widespread in the country and riots and strikes were in evidence in the early part of 1917. The Duma was asked to be dissolved, but it refused and began to defy the Czar. A provisional Government was set up by the executive Council of the Duma, and the Czar was asked to abdicate, which he did. It initiated many excellent reforms, but soon found an enemy in the Petrograd Council, organised by the Soviets. The former was for continuing the war, while the latter was for securing peace. Among the Russian socialists there were two parties, the Bolsheviki, in favour of complete socialism and absolute political democracy, and the Minsheviki in favour of a gradual and moderate reform programme. The Bolshevik party grew stronger and stronger and the October Revolution in 1917 swept the Provisional Government out of existence. The new Bolshevik Government stopped all military operations and sued Germany for peace. The treaty was signed, and Germany obtained command over Russian economic resources.

The main reason for making such a precipitate peace seems to be that the Bolsheviks wanted to get Russia out of war. Once that was finished, they desired to overhaul the internal system of the Russian Government in the light of their social ideals and dreams and, if need be, to force their ways of thinking by violence and revolution. The army has been completely democratised. Local Government has been placed in the hands of the Soviets. Everywhere socialistic experiments are being tried on a large scale. Banking has been nationalised. It is the avowed object of the Bolsheviks to render the bourgeoisie, the exploiting class, powerless, and they have excluded them from all political power.

But the present chaotic condition of Russia, in spite of the fall of Czardom and the declarations for the rights of small nationalities and self-determination for all the peoples, calls for immediate solution at the hands of President Wilson who has promised to help her. As the great President said :—

"What we are about to do has as its single and only object the rendering of such aid as shall be acceptable to the Russian people themselves in their endeavours to regain control of their own affairs, their own territory and their own destiny."

Dr. Sudhindra Bose concludes :—

"To be sure, Russia is passing through a spell of social sickness, but unless all signs fail, Russia will recover.

England's Mission in India

In discussing the "Goal of India" in the special Indian number of *Overseas*, published by the Overseas club and Patriotic League in London, the Rev. D. E. S. Holland, the late Principal of the St. Paul's College, Calcutta, has some illuminating points to offer for solution to the British democracy. As a preface, he expresses his political conviction that the transference of power from the British bureaucracy to the Indian people will inaugurate an era of inefficient rule, if not misrule; and as the only one alternative to it, he puts down the ideal that it is "our own continued domination, not self-determination in India but a foreign rule, beneficent no doubt, as heretofore, but that is the very claim that Germans advance as their right to dominate the world". He asks whether England which fought so nobly for the overthrow of race domination will herself follow in the path of Germany for perpetuating bureaucratic ideals in India, and asks again: "Is our championship of the right of Nations only political camouflage for war propaganda against Germany?" He himself answers this question:

> "No, as Sir Henry Campbell-Bannerman once so well said, good Government is no substitute for self-government. If we have to choose between the loaves and fishes of fat and soft security under domination and all the ennobling pains and risks that make us men, we will choose the arduous path to freedom every time. And because we know it is the highest good, we must choose that for others as well as for ourselves so far as they are in our hands."

The Rev. Mr. Holland concludes his interesting paper with the following appeal for the introduction of progressive ideals in the Government of this country:

> "Nor will India any longer be content with the offer of security and comfort in place of freedom. It is too late to go back upon world's pronouncement in favour of popular government; and the thought-nerves of the world that have so decided now run through India from end to end. This is the exhilirating task that now confronts British statesmanship, the training for freedom of one-fifth of the entire world's population of peoples, besides whose hoary civilisation, milleniums old, we seem to be but a mushroom growth of yesterday. And we shall not shrink it",

The Historicity of Salivahana

In the current number of *The South Ind... Research*, (a monthly Journal devoted to all ki... of research) there is an article of great histor... interest written by the Editor and entitled "S... vahana: Who is he?" The writer refers to the... gious significance of the word *Salivahana S...* which Hindus come across in the performance... religious ceremonies, and then proceeds to det... mine who that great personality is, whose fa... and good deeds deserve an era, whether he wa... God or an ordinary mortal, there are any fr... ments of his illustrious history, and so forth. ... we have no other story about Salivahana, he s... the mythical traditions that have sprung ab... this great personality might have confr... historical criticism. He also points out th... "popular traditions and recent literat... give us these stories as the history of Salivaha... but books written four or five centuries bef... our time associate these fables with a certa... King Satavahana." He then narrates two stor... that speak of Satavahana and other two th... relate to Salivahana.

After giving a short summary of these impo... tant evidences, the Editor cites epigraphical e... dences which only speak of Satavahana, not Sa... vahana. Then, what is our next goal? he as... and then proceeds to consider the evidences th... show that Salivahana is Satavahana. The chi... evidences are:

1. The Prabanda Chintamani of Merutun... Acharya (1362 Salivahana Sake).

2. Poet Srinatha's reference about Salivaha... in one of his poetical works (1334 of the sa... era).

By means of these positive historical proof... the identity of Salivahana with Satavahana a... the existence of a book called Saptasati unde... the authorship of Salivahana are proved

Government Control in War & Peace

The vast expansion of Government control in the economic sphere which has taken place during the War is without parallel in the history of the world. In the period of transition which has followed immediately on the declaration of peace, some proportion of that control is justified. One school of thought claims that this control should be permanently retained. Professor A. C. Pigon explains and criticises in the last number of *The Economic Journal* three distinct types of Government control, *viz.*, (1) administrative intervention by Government in industry designed to increase production, (2) Government interference with the allocation of supplies between different industries, different firms and different individual consumers—which may be grouped together under the general name of rationing and (3) Governmental regulation of prices.

(1) The underlying motive of intervention in the first case has been to force capital enterprise and labour forthwith into the production of particular urgently needed things. Government has also intervened with a view to breaking down various rules and customs which have been built up by trade-unions for the protection of working people and which are believed to hamper output. There is no particular reason why government should not return, so far as administrative intervention to stimulate production is concerned, to the general attitude which it was accustomed to before the War. The quasi-public administrative control of railways during the War may be continued even after the return of normal peace conditions; whether this should be developed into definite nationalisation may be regarded as an open question.

(2) The question of rationing in the permanent peace practice of the country is permanently bound up with the question of price control. The solution will be quite different according as prices are or are not limited in such a way, that, at the legalised price, the quantity of the things demanded is greater than the quantity offered for sale. Not all price control involves this kind of limitation. The distinction is not between control and absence of control over prices, but between a kind of control that causes demand at the controlled price to exceed supply and absence of this control. In industries which obey the law of increasing returns, obstruction to purchase will actually increase the price to others and lesson the supplies available for them. In industries which obey the law of diminishing returns, rationing which limits the consumption of some, would, even as a permanent policy, benefit others. The technical difficulties of building up a permanent rationing system will be very great. The rationing of materials to various firms engaged in the same industry, and the rationing of them between different industries as a whole would present much greater difficulties.

(3) *Price Control.* The main motive of price-control is a desire to prevent profiteering. Permanent Government control over the price of things produced under competitive conditions, is not required as a preventive of profiteering, because for competitive industries as a whole, competitive conditions are themselves an adequate preventive, while Government control is objectionable, because it will hamper production. But there is a strong case for State action to regulate the charges which may be made for monopolised and partially monopolised articles, and the case for Government control over these has been strengthened to some small extent by the experience of the War.

"All About the War—The Indian Review War, Book." A comprehensive and authentic account of the War with numerous portraits and illustrations. Edited by G. A. Natesan with an introduction by Lord Pentland and an appreciation by Lord Hardinge. Price Rs. 4. To Subscribers of the *I.R.* Rs. 3.

The History of Indian Guilds

A recent number of the *Bengal Economic Journal* has from the pen of Mr. J. C. Sinha a description of the guild-system as it existed in the industrial life of India from very ancient times. He says that the Laws of Manu (first century A.D.) and Yajnavalkya (200—300 A.D.) give us a glimpse of the laws of early Indian corporations. The earliest apparent reference to guilds is in the Brahmanas which were composed *circa* 800—500 B.C. The word Shresthin occurring in certain of the passages of the Brahmanas has been explained as meaning the headman of a guild. In the post-Vedic period, we come across distinct references to guilds which are mentioned in the Dharma Sutras and in the great epics. There are also frequent allusions to guilds in the early Buddhist literature. In the age of the *Jathakas*, the most important handicrafts were organised into guilds which had powers of arbitration even in purely social matters. Going next to the Artha Shastra, we find numerous references to guilds of artisans which were very wealthy institutions. In Manu, the laws of the guild stand on a footing of equality with the laws of castes and of families. In the Narada-Smrithi which belongs to about 500 A.D., there is an interesting description of the rules of apprenticeship. But this of course does not prove that there existed associations of craftsmen. In the Brihaspathi-Smrithi which belongs to a somewhat later period, there is an allusion to a board of advisers, the companies of artisans and other associations.

There are also numerous inscriptions giving us positive proofs of the existence of guilds during the early Hindu period. In the Nasik Cave Inscription of Ushawadatta, there is reference to guilds which received permanent deposits of money and paid interest on them for generations. As early as the tenth century and possibly in much earlier times, there were in South India professional guilds. In the Sukranithi which in its present form belongs to the tenth or eleventh century A.D., artisans were to decide their disputes according to the usages of their guilds. Alburuni writing about 1030 A.D. also speaks of eight guilds. But all these evidences do not give us detailed information about the nature and organisation of the guild. It is probable that the constitution was similar to that of a political and religious body. In the Muhammadan period, guilds continued to exist. In the Ain-i-Akbar of Abul Fasil, there is a distinct reference to guilds. Bernier, the French traveller, found during the 17th century traces of the guild system. In the British period, the history of Indian guilds is a history of their gradual decline. The chief causes of their decline are the rise of the modern class of merchants and manufacturers, improvement in communication and the rapid increase in the machine-made increase into India as well as the spread of individualism, modern ideas of personal selfishness, the gradual denationalisation of the Indians and their distaste for Indian handicrafts. There were, besides craft guilds, merchant guilds also in India and the former arose before the formation of the latter. The organisation and the function of the Indian guilds are in many respects similar to those of European guilds. The guilds now devote their attention mainly to their social and religious functions and they do not exercise any important trade functions at all.

Moslems and Turkey

An important memorial has been sent to Mr. Balfour by H. H. Aga Khan and other Moslems regarding the future of Turkey. The document urges:—

We have read with great concern the suggestions recently put forward in the Press from various irresponsible quarters regarding the future of Constantinople to the effect that it should be taken from its present possessors, in spite of the Ottomans being the most populous single nationality in Constantinople, and be made over to some Christian people or State, or be placed under international control. We therefore feel it our duty to point out at the earliest opportunity, that such a course, if adopted, would be in direct conflict with the vital principle of Nationality placed in the fore-front of the war-aims of the Allies and would cause not only among the Moslems of India but also among Mussalmans throughout the world grave dissatisfaction.

In the course of four centuries Constantinople has undergone complete transformation and is now in all essentials a Moslem City. It is honeycombed with Moslem institutions and is covered on all sides with memorials of their Faith. Its population is predominantly Turkish by race and Moslem by faith as was recently admitted in the clearest terms in the House of Commons.

The solemn declaration of the Prime Minister made only a short time ago that the Turkish nation will retain their sovereignty unimpaired in their home-land with Constantinople as the capital of their territories, had a re-assuring effect on the Mussalman population of India and elsewhere, and we feel certain that any departure from that memorable pronouncement would create the gravest disappointment. The Mussalmans who have shed their blood or helped with their resources in the defence of the Empire are entitled to expect that the principle of national unity and freedom will be maintained in the case of Turkey as in the case of the European peoples. Any other course would give rise to a most painful impression that the high principles and lofty ideals which secured for the Allied cause the adhesion and loyal co-operation of the larger part of the Moslem world were abandoned in the case of Turkey because she is a Moslem State. We feel confident, however, that no racial or religious prejudices will be allowed to impair the trust of the Moslem nations in the good faith of the Allies and that the settlement of this momentous world-problem will be based on the principles of justice and equity, and of national unity and national rule laid down by the Prime Minister of Great Britain and the President of the United States.

In Asia from the Northern Borders of Syria Proper up to the Ægean and the Black Sea, along the Southern littoral as far as the frontiers of Azerbaijan, the population, numbering roughly, 19 to 20 millions, is in some districts exclusively and in others preponderantly Turkish in race and Moslem in faith. In Thrace also the conditions are the same; the population is predominantly Turkish. We respectfully submit that the whole of this territory with Constantinople as its capital should be left in the hands of the Turkish nation in accordance with the declaration of the Prime Minister. The right of nations based on nationality to remain under their own governments and to possess the power of self-determination proclaimed and insisted upon by the Allies applies equally to Christians and Moslems. We do not ask for a new status for the Turkish nation; we urge that the Turkish nation should have the same rights as Christian nationalities to hold the territories which they inhabit exclusively or where they form the preponderant portion of the population, as they have done heretofore.

Hon. Mr. Sastry on the Rowlatt Bills

The Rowlatt Bills have been strongly condemned all over the country and as might be expected the speeches made in the Imperial Legislative Council by non-official Indian members in opposing this retrogade measure were of a high order. The Indian members strongly maintained their opposition to the introduction of any repressive legislation in addition to those already in the hands of the executive. The Hon. Mr. V. S. Srinivasa Sastry in opposing the Hon. Mr. Vincent's Bill No. 1 made a very impressive speech which was listened to with interest by officials and non-officials alike. We have no space here for the full text of the speech, at the conclusion of which, the reports say, "there was an outburst of applause in which the European members and even some officials were compelled to join." We extract a few paragraphs :—

My Lord, as I have read these things, whenever a repressive law is in exercise, every single exercise of it is at once openly challenged, a public enquiry is probably held anyhow, a committee is appointed to take evidence. What happens in India? A press law is passed. Ten years afterwards in the Supreme Legislative Council an enquiry to be conducted by a mixed commission appointed by the Council is asked for and Your Excellency's Government come forward and say, "We will not appoint a committee, we will not face an inquiry into this affair." Now that kind of thing is not a circumstance which encourages us to go forward and place summary powers in the hands of the executive, because we fear with some experience behind us that you will not submit your actions to the scrutiny of the public, as every exercise of arbitrary power should be submitted.

Then we are told with almost pathetic simplicity quite worthy of a parental Government, "why need the innocent fear"? The honest man need not walk in fear of these repressive measures. They are meant only to punish the wicked and they will be used only to punish the wicked. Let the virtuous go about as usual in the exercise of their work." I wish that this idyllic picture were true in India or anywhere. Now, My Lord, a bad law once passed is not always used against the bad, in times of panic, to which all alien Governments are unfortunately far too liable in times of panic, caused it may be by very slight incidents. I have known Governments lose their heads. I have known a reign of terror being brought about. I have known the best, the noblest Indians, the highest characters amongst us brought under suspicion, standing in hourly dread of the visitations of the C.I.D. I remember in my own time—it is not a very long experience I have of these matters, but I can remember—a very valued friend of mine now alas! no more, a saint amongst men telling me with almost tears in his eyes, "I have borne a good character all along but I have recently become a suspect of the C.I.D. and my life is passed in bitterness and sorrow. Why? Because the Government started a policy of suspicion generally in the locality and when they set their minions of the C.I.D., none, not even the most trusted friends of the Government, were safe. I can remember, My Lord, in the year 1908 when I went round organising District Congress Committees, such a blight had fallen on the political world. The C.I.D. had been so active, the repressive policy of the Government had been so manifest that it was impossible in many places to get people to come together to a public meeting. "Oh no, not now, not now," they said. A gentleman high in office at that time and about to retire from service, met me in the middle of the night on one occasion. I was quite surprised and he told me, "my dear fellow, I have been longing to see you these three or four days that you have been here, but this place swarms with spies and police informers. I am nearing my pension and have many children. I do not wish to be mixed up with a member of the Servants of India Society to their knowledge." But it is all very well to say that the innocent are safe. I tell you, My Lord, when the Government undertakes a repressive policy, the innocent are not safe. Men like me would not be considered innocent. The innocent man then is he, who forswears politics who takes no part in the public movements of the times, who retires into his house, mumbles his prayers, pays his taxes and salaams all the Government officials all round. The man who interferes in politics, the man who goes about collecting money for any public purpose, the man who addresses a public meeting then becomes a suspect..

* * *

There is one remark, Sir, which I must make and that in justice to the feeling in the country, of which for the moment I am the spokesman. I do not think the Hon'ble the Law Member could have meant all that he said when he said, that some of us were indulging in threats of agitation. I venture to think that no one here, who has spoken against the Bill indulged in anything, which might truthfully be described as a threat of agitation. None of us certainly, none of the Moderates, I take leave to say, has power to go and stir up a violent agitation in the country. It is impossible. The agitation must be there already. The heart must be throbbing, if any words that we use here can possibly have any effect on the general political atmosphere. The agitation is there. I wish to assure my official colleagues we had no share in it, but if our appeals fall flat, if the Bill goes through, I do not believe there is anyone here who would be doing his duty, if he did not join the agitation. That is not a threat. I take leave to think that is by no means a threat. Anyhow I am the best judge of my own mind and I do not indulge in any threats. I have yet borne no part in this agitation. But if everything goes wrong, if we are face to face with this legislation, how it is possible for me with the views that I hold to abstain from agitation, I for one cannot say.

Mysore and Communal Representation

In the rules prescribing the qualifications of voters and candidates at the Municipal elections in Mysore State under new Regulations extending the scope of local Self-Government in the State, some recognition has been accorded to the principle of communal representation. At first, the Government vigorously opposed communal representation in local bodies and municipalities. The present rule states that, if in any division of the municipality divided for electoral purposes into divisions under the foregoing rule, not less than 50 percent and in a municipality not so divided not less than 25 percent of the total number of persons eligible to vote belong to any one section of the inhabitants, then such voters may apply to the Government, provided that application is made by not less than three-fourths of the then total number for permission to elect one or more members of such section, and the Government may, thereupon, pass such orders as they deem fit.

Travancore State Finances

An official memorandum on the Travancore State's transactions of the year 1093 corresponding to 1917-1918 shows that in spite of war conditions the year was a prosperous one. The revenue was Rs. 1,65,90,000 and the ordinary expenditure Rs. 1,61,56,000, resulting in a surplus of Rs. 4,34,000. If the capital expenditure on the railway extension to Trivandrum be included in the last year's disbursement, the result is a deficit of Rs. 4,36,000. The Darbar balance has thus fallen from Rs. 43,83,000 at the beginning of the year to Rs. 39,47,000.

The total assets of the Darbar amount to Rs. 1,34,36,000 and the liabilities to Rs. 94,90,000 excluding the closing balance. These figures do not include the Darbar's liability till March last of Rs. 1,18,56,000 on account of the Shencottah-Quilon Railway and also Rs. 80 lakhs invested on the Kodayayar irrigation works. Another Rs.50 lakhs incurred by the Darbar is the extension of the railway from Quilon to Trivandrum.

Last year's income exceeded that of the previous year by Rs. 246,000 and the expenditure last year was Rs. 832,000 more than the year previous.

Co-operation in Travancore

The Travancore Government have issued a review of the work done by the Department of Co-operation during the past official year. There were 44 societies of which 33 were agricultural. Owing to the rush of applicants to join the non-agricultural credit societies and also to avoid the danger of permitting such credit associations to assume an unmanageable size, action was taken to prescribe a limit to the membership of some primary societies till they were able to establish a good busines reputation. A co-operative conference was held last year with the Dewan as president. The Government observe that the Department continued to progress during the past year.

Iron Works in Mysore

Mr. Perlin, the Iron Expert, is expected next month in India when he will work out details of the Mysore Government iron scheme and carry out the installation of machinery at Bankipur where the Mysore Government iron works will be located. The scheme, it is understood, is entirely financed by the Mysore Government and its management will be under the control of a Board of three representatives of the Mysore Government and two of the Tata Iron and Steel Co. The Company will act as agents of the Mysore Government for the manufacture of pig-iron.

A Weaving School for Pulayas

His Highness the Maharajah of Travancore has sanctioned a separate weaving school for Pulayas. This school will be under the management of a European Missionary of C. M. Society working in Travancore. Two other schools also for fibre and yarn industries were opened in pursuance of a scheme by the Travancore Government for the promotion of cottage industries.

INDIANS OUTSIDE INDIA

Indian Merchants in S. Africa

Mr. E. J. Asvat, Chairman of the Transvaal British Indian Association, has sent the following cable dated February 11, to Mr. G. A. Natesan, Editor, "The Indian Review": Legal proceedings under the precious Base Metals Act of 1898 resulted against Indian merchants of long standing at Krugersdorp area. The effect of judgment is the virtual ruination of the mercantile community throughout Wit Waters Rand. The Transvaal Ordinance IX of 1912, the Relief Act and other laws affecting Indian community are being rigorously enforced, the object being the elimination of Indian trade to the benefit of European competitors. The British Indian community emphatically protest against this cruel reactionary policy. It is significant that action had been taken almost simultaneously with the armstice. The community submits such policy as a poor mark of appreciation of Indian sacrifices for the Empire during the war. The community earnestly appeals for protection, meanwhile endeavouring to get the matter ventilated before the bar of the Assembly of Capetown. Please help in every possible way.

South African Indian Congress

The South African Indian Congress representing the Transvaal, Natal, and the Cape Province, passed a resolution asking the Government to amend the laws which were operating oppressively against them, including the Act prohibiting free movement of Indians throughout the Union. The Congress decided to send at least two delegates each from the Transvaal, Natal and the Cape Province to attend a special session of the Indian National Congress in London in order to support the claims for Indian autonomy. The delegates will also be authorised to plead the cause of South African Indians. The Congress passed a further resolution to urge the Imperial Government not to cede German South-West Africa to the Union until "the obnoxious laws" in the Union were repealed.

Indian Troops in Africa

On the termination of his command of the East African Expeditionary Force, General Sir Deventer, Commander-in-Chief, sent the following message to His Excellency the Commander-in-Chief in India :—

"On the termination of my command of the East African Force, I tender you my sincere thanks for your ungrudging assistance and constant co-operation. The troops sent from India have borne their full share of the hardships of the campaign in which the fighting has been severe and the physical difficulties enormous and have played a gallant part in the conquest of German East Africa. I am proud to have had them under my command. I beg that you will convey my warmest gratitude to those who by their generous gifts have allieviated the sufferings of the sick and wounded and contributed to the comfort of those in the field."

His Excellency the Commander-in-Chief replied : "I thank you for your cordial message. It has always been a pleasure to us to help you whenever we could. The troops sent from India are pround to have had the opportunity of taking part in these ably conducted operations upon the successful conclusion of which the army in India tender you their heartiest congratulations."

Transvaal British Indians

At the annual general meeting of the Transvaal British Indian association, at which some 80 were present, including representatives of the various bodies in the Transvaal, N. A. Cama, who presided, gave a brief resume of the association's activities during the previous year, and dwelt upon the loss sustained by the community in the death of A. M. Cachalia, Sorabjee, Esuph Hassim and other stauch supporters of the association.

INDUSTRIAL & COMMERCIAL SECTION

An Industrial Charter

The important features of a proposal submitted by Dr. Sidney Webb for industrial reconstruction are :—

I. The prevention of unemployment by a programme of public works undertaken in periods of slack private industry.

II. The maintenance of the standard rates of wages which shall be a minimum and not a maximum, and which shall be decided by a "joint board of employers and employees, to which all employers in the industry and all trade unions claiming to include any considerable number of workers in it should be invited to take part."

III. A constitution for factory and industry in which there shall be written guarantees of universal acceptance of trade unionism and provision for Conference with workshop committees on technical problems.

IV. No limitation of output.

V. Freedom for every worker to take or leave employment and freedom for the employer to use any and all machinery and to hire any employee, provided that the new employee will immediately join the union.

The Fibre Possibilities of India

The sowing conditions created by the war have emphasised the great importance of the investigation of fibre resources of the Empire, and India with its present monopoly of jute cultivation and its wide variety of climatic conditions offers a compromising field for investigation. It has accordingly been decided to extend the scope of Mr. Fillow's work (Fibre Expert) with a view to the thorough exploitation of the fibre possibilities of India. His investigations will extend throughout India, but his duties under the scheme will be purely advisory and his headquarters will remain at Dacca in order that his important work in connection with Bengal jute may not be interrupted.

Development of Indian Industries

The proposal put forward by the Indian Industries Commission to set up an Industrial Board to undertake the responsibility for framing and carrying out a programme of industrial development in India, will, if adopted, lay the foundation of a new scheme, in which Engineers will play a leading part. It is suggested, indeed, that the actual administrative work of the new organisation, which would be entirely decentralised, would be in the hands of officers whose qualifications would be gauged by their knowledge of mechanical engineering. The proposal has been received with much interest, and it is good news to those who have worked with the object of improving the status of the Engineer that the disadvantages of casual recruiting for these Indian appointments are to be overcome by the formation of an Imperial Industrial Service. The field to be covered is very wide, and its extent is hardly more than suggested by the summary of the Report of the Commission, which is all that is at present available; but it is clear that attention is being focussed on the development of industries, the absence of which has been shown to be a grave danger in time of War, and that industrial and technical education and training, research work, the collection and circulation of commercial intelligence, housing and welfare schemes, and the improvement of transport, are included in the other provisional plans. Other important questions which are raised are the extent to which the State should participate in manufacturing operations, under which head a policy of severe restriction is recommended, and the reform of the system on which Government stores have been purchased in the past. It is admitted that the old method of making such purchases has tended to retard industrial development in India.—*The Times.*

AGRICULTURAL SECTION

Agricultural Education in India

Mr. H. M. Leake, M.A., F.L.S., Principal, Agricultural College, Cawnpore, contributes a very informing article of practical interest in the January quarterly number of *The Agricultural Journal of India*, wherein he collects and analyses all the materials available for a policy of agricltural education.

One of the functions of education ought to be, Mr. Leake points out, to render the individual a useful citizen. Education, considered from a national aspect, must be diverse, and, in its practical aspect, consists in placing before the youth of the country the essentials for the development of the mind in a form which will leave the individual in a condition in which he will render useful service as a citizen. After dealing in detail on various ideals that should form the main objects of educational policy, the writer takes up the subject of agricultural education and the facilities there are for its future progress. He observes that true attempts have been made to introduce agriculture in the school curriculum and have come to grief from failure to distinguish between teaching agriculture and supplying an education suiting the pupil to return to the land. The first conclusion, therefore, arrived at is that "the present educational system totally fails to satisfy the needs of the largest single element, if not the major portion of the community. It is true there is an agricultural college, but that is a coping stone without the underlying structure." After referring to the importance of agricultural education, and legitimate functions of agricultural institutions, Mr. Leake points out that "the primary object of such schools will be to raise the receptivity of the younger generation of agriculturists and the method of attainment must be through education under conditions which retain the association with the land." As regards the organisation of an agricultural school of this type, he states that "the courses of instruction are to be educational and the students are to be introduced to an appreciation of a standard of country life something superior to the ordinary village life they have known, by a process of familiarity." He then describes the main features of such an organisation by a description of such a school as he conceived it, its educational and environmental aspects and its provisions for a ladder by which those intellectually qualified can arise. He winds up his interesting article with the remark that "it is essentially a case for trial and experiment the establishment of a few schools of the type described and their gradual extension in that direction which experience shows to be most desirable. What is essential is a clear comprehension of the fundamental principles which underlie the problem—a comprehension so sharp that it can be used as a test during each stage in the experiments."

Agricultural Banks.

H. H. the Aga Khan writes in his new book on *India in Transition* :—

In the autonomous provinces of the India of to-morrow the great work of the I.C.S. ought to be not alone the carrying on of surveys for settlement of the so-called land-tax or rent, but still more, that of guiding and assisting the agricultural banks in making the necessary advances for legitimate and long-overdue improvements. And these banks must constitute, far more than at present, a vitalising agency, ready to advance money, ready to advise improvement, ready to bring the surveyor and the expert to the help of the peasant. In each district there should be a central institution with touring specialists working in hearty co-operation with the agricultural department, and ready to advance money for necessary improvements at quite moderate rates. The advances they make should have a statutory relation to the rates at which Government borrows from the public.

NOTICES OF BOOKS

[SHORT NOTICES ONLY APPEAR IN THIS SECTION.]

Indian Women and War. By John Travers (Mrs. G. H. Bell.) Oxford University Press.

In this book John Travers treats mainly with the glorious part that Indian women took in the great War in sending their sons, brothers and husbands to the battlefields of Europe. In the chapter on "Great Women and War," there is a very good survey of the military achievements of some Indian women of old.

Cartoons from "Hindi Punch" for 1918. The *Hindi Punch* office, Bombay. (Can be had of G. A. Natesan & Co., Madras.) Price Rs. 1-12.

The nineteenth annual publication of the Cartoons from "*The Hindi Punch*" contains a varied collection of humorous pictures depicting the political and social history of the country during the year. This enlivening publication always maintains its high reputation for cartoon-representation of live topics, and is certainly a storehouse of genial laughter and vivid humour.

The Silken Tassel. By Ardeshir F. Khabardar. Theosophical publishing House, Adyar.

Mr. F. K. Khabardar, reputed to be a very gifted poet in Guzerati language, has attempted in this little volume to find expression to his wealth of ideas and richness of imagination in a foreign tongue. Indian ideas dressed in delicate English verses and shaped accurately to metrical rules are specially characteristic of his songs, and we commend them heartily to the public.

The Vedic Law of Marriage by A. Mahadeva Sastri, B A. V. Ramaswami Sastrulu & Sons, Madras.

This is the second edition of the book published in 1908. Deeply versed in Sanskrit Smritis and other well known ancient treatises, Pandit A. Mahadeva Sastri has added to this new volume his original studies of marriage and other socio-religious institutions, and we hope the book will have a hearty welcome from all.

"From a Kindergarten Window" By Corrie Gorden. Srinivasa Varadachari & Co., Madras. Price 1-8-0.

This small book contains a collection of essays on educational subjects for teachers and students, prepared on various occasions by Mr. Corrie Gordon, Lectuter, Teachers' College, Saidapet. The topics discussed in this book deal mainly with education for children, the Kindergarten, moral teaching, physical training and other instructive subjects.

President Wilson. (Speeches on World's Freedom). Ganesh & Co., Madras. Price Re. 1.

This book which contains a valuable collection of speeches delivered on various occasions by President Wilson, has a foreword by Dr. S. Subramania Aiyar and a life sketch by Mr. K. Vyasa Rao. President Wilson has won international reputation as a preacher of political morality and liberty, and a collection of the thoughts of such a great man cannot but be a document of the highest human interest.

BOOKS RECEIVED

CONSTITUTIONAL REFORMS. By Sir Arunachalam Kt, M.A., The Ceylon Reform League, Colombo.

SHORT STORIES. By Mrs. Ghosal, Ganesh & Co., Madras.

THE ENCYCLOPÆDIC INDIAN DIRECTORY: Delhi. Edited by Harnarayan Prasad, B.A., The Encyclopædic Indian Directory Co., Allahabad.

GUTTILA: THE DIVINE MINSTREL. By Lucy & Gordon Pearce, Ganesh & Co., Madras.

THE NEXT WAR: WILSON AND ANTI-WILSONISM. By Sir Charles Walston, University Press, Cambridge.

THE FUTURE OF DEMOCRACY: AN ADDRESS. By Lord Haldane, Headby Bros. Ltd., London.

ODE TO TRUTH. By James H. Cousins, Ganesh & Co., Madras.

PROGRESSIVE INDIA. By Akshaya K. Ghose, S. C. Sanial & Co., 26, Shampuker St., Calcutta.

Literary

A Visit to John Morley

Mr. James Milne has been to see Lord Morley (John Morley), and tells us about it in a very interesting number of his *Book Monthly*.

"'We shall get no more books from our most illustrious man of English letters, our greatest book-man,'" says Mr. Milne. "'Not a word,' says Lord Morley, 'not a word; I have finished.'

"His unwritten books are recited to him, that 'Chatham,' that 'Cavour,' perhaps others of an empty, bewitching shelf. He only shakes his head, a little sadly, because with a die cast.

"Quite recently somebody wrote from as far away as Kansas to the effect, 'Your chapter so-and so in "Rousseau"'—was it the "Rousseau"?—'"made life a different thing for me—thank you!' Possibly that might encourage even an author who has put off his armour to sit down and cut slices out of his books for a volume of 'Selections.'

"Saving that, and may be a word on the time of day, such as no eminent man can be sure of refusing, we had better assume that Lord Morley's 'So to my home in the falling daylight' is his word of literary farewell.

"Who has not read that lovely passage in the 'Recollections;' who, though it is only a year old in print, has not put it in the archives of affection as one of the noblest passages in English literature? It is the deliverance of a pilgrim, rich in mind and heart, a pilgrim who has set his feet in precipitious places, and has stoutly come through them. It is the farewell of a pilgrim scholar who has had entrance to the 'ancient courts of the men of old,' to the council chambers of modern statesmen, and in both spheres has left a name that will live in honour.

"As commoner or peer he has hitched his wagon to a star, and by that comradeship he abides in the Indian summer of his life—a spirit whose lamp age does not dim, only refines. His speech, measured in note and word, is a melodious token of this, and who would not be a listener? There is the stateliness of the sonnet in his talk, as, again, that is present in his writings.

"He may write little more and speak only in whispers, for he has earned rest, but the charm of his personality and the radiance of his pen are ours to have and to hold. Merely to be in his presence for an hour is to come away saying of him, as he says of Edmund Burke, that he had 'the sacred gift of inspiring men to use a grave diligence in caring for high things and in making their lives at once rich and austere.'"

Mysticism in Modern Art

Under the above title, Mr. W. P. Price-Heywood has contributed a very instructive article to the current number of *The Theosophist*, in which he discusses mysticism as one of the subtlest and most unique forces behind Art. The task of the mystic, he points out, is to pierce through outer appearances to the very soul of things, while that of the artist is to bring back and reproduce on canvas, with messy oil-paints, some glimpses of the spiritual vision and do so with such skill and feeling that the ordinary picture-goer will understand his meaning. The essential difference is shown between the great masters of the East and the West.

The East is idealistic and mystical, the West realistic and practical. The Westerner demands that the paintings he sees shall be as "true to life" as possible; to him every picture must tell a story. The Western painter, over-engrossed in his technique, is apt to forget that the aim of art is not slavishly to duplicate the actual (photography does that quite well enough), but to give a hint and promise of that ideal life of which the actual is but a shadow. The great masters of the East, on the other hand, never forgot the value of suggestion. How shall the soul of the artist communicate his ideas, his emotions, his aspirations, to the mind and the soul of the onlooker?—that is the problem they had ever before them. At the same time they knew that the understanding of art had to be based on mutual concession. The Eastern approaches a great work of art with a reverence which in the west is seldom paid. Our habit of lounging and yawning through art galleries would be sacrilege to him. "Approach a great painting," said an Eastern Master, "as thou would'st approach a great prince.

Educational

Poetry-Teaching in Schools

In the January number of *Indian Education*, Mr. V. H. Mehta writes a very thoughtful and informing article on the right and intelligent methods of teaching poetry in Indian Schools. While admitting that English is a language foreign to teachers, he laments over the general apathy of teachers who either have no true ear for good poetry or have become time-honoured victims to pedagogic theory of teaching —parsing, analysing and paraphrasing for the purpose of examination. Those who have got true educational interests at heart must try to remove the defects they invariably find in such methods of teaching. Mr. V. H. Mehta puts in a very strong plea for the better teaching of poetry in schools and finally for the strengthening and enriching of the child's imagination which plays so important a part in the battle of life. To stimulate imagination is to set free in the child the perennial springs of poetic beauty. The first point the writer emphasises on the true teaching of poetry is about the proper appeal that should be made to the imagination and to the emotions of the child. The next point is that "the ideas need to be understood and so understood that the pupil is able to visualise it. To help such an understanding the teacher should first fix the attention of the learners upon the idea not upon mere words." Then follows a practical advice as to how poetry should be taught by teachers, and the writer strongly deprecates the ideas of memorising and such other tame methods that stunt the imagination. He, in fine, speaks of the value of poetry in the following pretty words:

> One of the values of poetry is that it furnishes the reader with a choice vocabulary and a delicacy of expression which unconciously become a part of the language of the reader. If we examine the language of good writers, what do we find? How much of the masters enters into their vocabulary? In our own limited spheres what do we do? We quote and quo unconsciously. The language of the authors we m ter becomes part of ourselves and without knowing we reproduce him after. This is an ideal worth achie ing and the ideal which the teacher of poetry ought keep before himself. No amount of unintelligent m morising will help the attainment of this ideal. little more intelligent appreciation of poetry than ordinarily made possible in the class rooms of c schools will insure its attainment.

Mr. Fisher's Witty Advice to Teacher

Mr. Fisher, the Education Minister, put Fou teen Points on holidays before a meeting teachers:

1. Plan your holidays carefully, but be rea to abandon your plans on the slightest prov cation.

2 Never go north when you can go south.

3. A change of work is in itself a holiday.

4. Never drive when you can walk, and nev walk when you can ride.

5. Take short cuts if you will, but remembe that there is seldom time for them.

6. A good holiday is like eternity; there no reckoning of time.

7. One of the best fruits of a holiday is a ne friendship.

8. Stay where you are happy.

9. Soak yourself in the atmosphere of a ne place before you study the details.

10. The best holiday is that which contain the largest amount of new experience.

11. Holidays come up for judgment befor the next term's work.

12. In the choice of holiday books act on th principle that one of the main uses of leisure i to feed the imagination.

13. The principal experts in the art of takin holidays are painters, naturalists, travellers, an historians; the worst person to consult is a golfe

14. On occasions a very good holiday can be taken at home—if you change the hour o breakfast.

Wide vivacious, desultory reading of all kinds of books, continued Mr. Fisher, was the finest way of quickening the imagination. Quantity was almost as valuable as quality.

Legal

Legal Education in England

The Incorporated Law Society in England is pressing for the creation of a Minister of Justice whose duty it will be, amongst other things, to reform the procedure of the Law Courts with a view to make it more popular, take to the reconstruction of the administrative work connected with Law Courts, as also the reconstitution of the legal profession by means of a more efficient system of legal education and training and to remove the present distinctions existing between the different classes of the legal profession. Opinion rgarding the creation of a Ministry of Justice may differ but there seems to be little difference of opinion as to the need for a more thorough and rational system of legal education than at present prevails in England. Mr. Arthur Sharpe, Vice-President and Chairman of the Examination Committee of the Law Society, who is in favour of the establishment of a Ministry of Justice, says that a law student's education should be both scientific and technical in order to entitle him to practise. He says: "Once admitted as a student of the law, the question of legal education proper becomes all-important. And here I may observe that it must open the division of the subject which, to adopt the terminology of other subjects, I may call preliminary or scientific and applied or technical. It is open to discussion whether these two branches should be studied simultaneously or in sequence, but for my part I have no doubt that the preliminary law should precede and be studied apart from the technical, which is best acquired in practice. It should certainly be the duty of the new Ministry of Justice to see that they are both properly taught and studied and that a fair knowledge of both has been acquired before a student undertakes to practise on his own account."—*Calcutta Weekly Notes.*

Inquiry into German Culpability

Since its appointment two months ago, the British Committee of Enquiry, of which Sir John MacDonnell is Chairman, into the breaches of the laws of war has done a great deal of work through sub-committees appointed to deal with these breaches under various heads. Thus, the sub-committee on Law has already submitted an interim report on the jurisdiction of the tribunal to be established and kindred matters. It has also submitted a special report conveying the unanimous conclusion that it is desirable to take proceedings against the ex-Kaiser. Mr. Justice Petersen, the well-known criminal barrister and Mr. C. F. Gill have also been consulted.

The work of a second committee has been very heavy as it has had to deal with the ill-treatment of prisoners, their employment behind the enemy firing-line, the employment of illegal methods of warfare, the abuse of the Red Cross flag, the bombardment of hospitals and the execution of Edith Cavell and Captain Fryatt. A hundred thousand cases of ill-treatment of prisoners have already been investigated, but at least 150,000 more remain.

A third sub-committee has had to deal with offences at sea and in the air, including the destruction of merchantmen, the firing on ships' crews after the destruction of their vessels and the sinking of hospital-ships.

A fourth sub-committee examined the indiscriminate bombardment of towns and wilful and reckless destruction of hospitals.

All the committees have still a large mass of evidence to examine before issuing final reports dealing with the charges to be preferred and the degree of responsibility attaching *prima facie* to individuals. Although the final conclusions may not therefore be reached for some months, the present interim report says it must not be assumed that practical steps have not been taken to secure the arrest of the offenders.

Medical

All-India Ayurvedic Conference

The All-India Ayurvedic Conference under the presidentship of Pandit Umacharan Kaviratna of Benares held its sitting at Delhi on the last week of January. Nearly 200 Vaidyas from all parts of India attended. Hazi-ul-Mulk Hakim Ajmal Khan, Chairman of the Reception Committee, welcomed the delegates in a speech in Urdu and dwelt upon the superiority of Ayurveda and Tabbi. Pandit Gopiraman of Delhi proposed and Vaidyaratna Pandit Jogendranath Sen and Vidyaratna Pandit Gopalacharlu of Madras seconded and supported the election of the President who began his address in Sanskrit, but being asked by the delegates, continued in Hindi. The President expressed condolence at the untimely death of Prince John and expressed joy at the Allied victory. He discoursed on the superiority of Ayurveda and urged the audience for preparing educated Vaidyas. The Hon'ble Pandit Malaviya delivered a speech on the necessity of establishing Ayurvedic colleges all over India saying that Ayurveda is scientific and the best suited to the people of India. He announced that he contemplated to utilize the one lakh of rupees he received from a Marwari friend in Calcutta for the establishment of an Ayurvedic college and an Ayurvedic botanical garden under the auspices of the Hindu University. Resolutions were passed condoling the death of Prince John, Maharajas Rewa, Dongarpur, Khairagarh etc., praying for separate representation of Ayurveda in Councils and equal treatment with allopathy, thanking the Excise Commissioner, Bengal, for exempting Ayurvedic Asavas and Aviashtas and asking for complete exemption of all bona fide Ayurvedic preparations from the operations of the Excise Acts all over India.

Sub-Asst. Surgeons' Conference

The Annual Conference of Sub-Assistant Surgeons met at Calcutta on 23rd Dec. H. E. Lord Ronaldshay opened the Sanitary, Scientific and Indigenous Exhibition which formed part of the Sub-Assistant Surgeons' Association held at the Campbell Medical School. Dr. J. N. Maitra, Secretary of the Sanitary and Scientific Branch of the Association, read an address, in the course of which he pointed out the need for such Exhibitions. H. E. Lord Ronaldshay said in reply:

I too am glad that you have been given the chance of playing a useful part amid the stern and terrible realities of the past few years; and I congratulate you upon the manner in which you have risen to the occasion. I can speak for Bengal only; and so far as Bengal is concerned, out of a total cadre of 302 Sub-Assistant Surgeons, 83 have volunteered for military service, 51 for service in India and 32 for service overseas. It is, perhaps, unnecessary for me to remind you that your opportunities of rendering valuable service overseas have not come to an end with the cessation of hostilities.

He then spoke of the gigantic task of reconstruction and the wide field for medical and sanitary work. Knowledge and wealth are needed to solve the problems of medical relief. The third weapon with which to combat the forces of disease is an army of trained men. Steps have been taken to create an adequate supply of Sub-Assistant Surgeons, while a substantial increase of pay has been sanctioned them.

There are other respects in which I personally should like to see alterations made in the conditions of your service. For example, I shall like to see a course of post-graduate teaching take the place of the periodic grade examinations which you have to submit to under your present conditions of service. A small and very tentative beginning has been made in the right direction by the institution of a small class of post-graduate teaching in this school. I hope that this may prove to be the beginning of greater things.

The proceedings of the Conference were not open to the press. The Hon. Major-General W. H. B. Robinson, Surgeon General with the Government of Bengal and the patron of the Calcutta Branch Association, presided and there was a large attendance of members.

Science

Science and the Future

The main capital of the modern world consists of scientific knowledge. When we compile our War losses, let us not forget that our greatest asset, the store of knowledge science has collected is still intact. Without the aid science gives to agriculture the earth even now could not support its population. Lecturing on "Science and the Future," Mr. A. A. Campbell Swinton made these and the following statements: "It had been estimated that the total population the earth could maintain would be reached about 2100 A.D. If once the stage were reached in which population increased more rapidly than means of sustenance, then neither Leagues of Nations nor anything else would prevent conflicts between peoples struggling in dire necessity. The main resource when coal was exhausted would have to be the enormous flood of solar radiant energy that was falling on the earth. The problem was, how could this be utilised? The direct transformation of radiant energy into chemical or even into electrical energy was by no means impossible. The former transformation was already effected, inefficiently, by plants, and on a small scale in photographic processes, where light caused chemical reduction; Becquerel and Minchin had shown how radiant energy could be transformed into electrical. Perhaps in photo-electric chemistry we had the most important problem the science of the future had got to solve."

Physiological Effects of Cheerfulness

The good physiological effects of cheerfulness and confidence are ascribed to the fact that emotional conditions, such as fear, worry, etc., excite internal bodily reactions and accelerate the secretion of harmful products, which inflame already pathological conditions of the vital organs.

The "Schematograph"

The Popular Science Siftings publishes the following description of a machine designed to reveal the defects of the body:

"The schematograph is merely a means of registering in outline form the natural figure in various poses, all calculated to show the ordinary defects coming from faulty posture. The whole idea of the machine is to show the subject, graphically, the physical defects as indicated by his or her posture."

The device is as follows: An oblong box, about the size of a large camera, the bottom sides and ends made of wood, but the top with a sliding cover made of ground glass, a triple lens mounted in the front is an important feature of this machine. Inside this box, at the end opposite the lens, a reflecting mirror is mounted at an angle of forty-five degrees. The purpose of this mirror is to catch the rays from the image on the lens and reflect them to the ground glass cover above, where they can be observed by the operator. The "operating room" is long and narrow. A black screen about seven feet high stands against the wall at one end. Some twelve feet from the screen hangs a thick black curtain. Behind this the operator is posted, only the lens of the camera protruding through the curtain. This arrangement serves the double purpose of shutting off all rays of light and in securing complete privacy to the subject. To make a schematogram, as the tracing is called, the subject undresses and mounts a miniature model's throne in front of the screen. The operator focuses the machine, with the lens directed about at the subject's waistline. Just above and in front of the subject, two powerful electric lights are switched on to make the outline as clear as possible. On the ground glass at the top of the machine is clearly visible the image of the white figure, standing out against the dark screen. If the image is satisfactory, the operator lays a thin sheet of paper over the glass and traces the outline; and if it is not, images are taken from various poses to locate the defects.

The Use of Sea-Weed

During the last few years Swedish sea-weed has been coveted by the Germans who make it into fodder and also use it as a source of valuable chemical products. From a series of careful experiments carried out in Stockholm the dry distillation of 1 kilo. of dried sea-weed has produced the following:—illuminating gas 30—32 litres; carbon 43 per cent.; distillates (acetic acid, methylated spirit, formic acid, acetone, etc.,) 35 per cent.; salts (sodium sulphate, pottassium sulphate, potassium chloride) 14 per cent.; and in addition iodine, homene, a very aromatic tar product, and carbolic tar, an excellent preservative of timber.

Personal

Lord Sinha's Appointment

I

Mr. P. C. Lyon writes to the "Times":—

The appointment of Sir S. P. Sinha to be Under Secretary of State for India will be welcomed by all who are looking for a genuine advance towards Self-Government in India. It will be in the memory of your readers that it was Sir Satyendra who, as president of the Indian National Congress in 1915, pressed for a declaration of the policy and ultimate aims of England's Rule in India on the lines of the one actually made in Parliament some 18 months later. He has always been a sturdy advocate of progress in our administration, and his appointment will be of welcome assistance to the Moderate Party, who are putting up a plucky fight at this moment against the extreme Home Rule faction. Signs have not been wanting that the Moderates had some fear lest the attacks made in reactionary quarters upon the Montagu-Chelmsford Scheme might result in a whittling away of the reforms contained in it; but they will realize now that, whatever modifications may be found necessary in the details of the Scheme to facilitate its working and secure its main objects, the required changes will not be allowed to impair the responsibility and power which are to be entrusted by the Scheme to Indian hands.

II

Mr. J. D. Anderson writes in the "Times":—

As an old Bengal civilan, Mr. P. C. Lyon might have noted the remarkable part that is being played in recent Indian developments by Bengalis. The first two Indian members of His Majesty's Privy Council, Mr. Ameer Ali and Sir S. P. Sinha, are both Bengalis. Mr. Bhupendranath Basu is another. The one Indian who has a worldwide literary reputation is Sir Rabindranath Tagore, another Native of Calcutta. And now, to the gratification of all who know and love Bengal, Sir S. P. Sinha is promoted to the Upper House of the Empire. It was a Bengali, Sir Rabindranath's elder brother, who was the first Indians to enter the I.C.S. Another, the late Romesh Chandra Dutta, was the first to administer an Indian Division. Such successes mark more than intellectual distinction, and imply qualities of courageous industry and integrity not common anywhere. Surely our comment on Sir S. P. Sinha's elevation should be, "Well done, Bengal!"

III

The Parliamentary correspondent of the "Times" writes:—

Sir S. P. Sinha, the new Under-Secretary for India, who is to be made a peer will be the first Indian to become a Member of the House of Lords. Two Indians—the late Mr. Dadabhoy Naoroji and Sir M. M. Bhownaggree—have sat in the House of Commons; but nothing has come of suggestions put forward from time to time for Indian princes and nobles to be made peers of the realm. While Lord (then Mr.) Morley was in the House of Commons and Secretary of State for India his successive lieutenants were in the same Chamber; but there are obvious advantages in the more usual practice of the Under-Secretary being in "another place." These are especially strong at a time when a measure for Indian constitutional reform is in preparation and will run the gauntlet of criticism in the Lords from peers who have held high administrative office in India. Indian gratification at the appointment has been voiced by Mr. Bhupendranath Basu, Member of the Indian Council, in a telegram sent to the Prime Minister.

All India rejoices and thanks you for Sinha's appointment. You have appealed to the imagination of India and done what the greatest Moghul Emperor Akbar did in the 16th century. I join my personal thanks.

Political

India Office Reform

In accordance with the proposal made in paragraph 293 of the Report of the Secretary of State and the Viceroy on Indian Constitutional Reforms, the following committee has been appointed to enquire into the organisation of the India Office and the relations between the Secretary of State in Council and the Government of India: The Marquis of Crewe, Chairman; H.H. the Aga Khan, the Viscount Esher, the Lord Inchape, Mr. B. N. Basu, Sir J. R. Brunyate, Lt.-Col. Godfrey Collins, Mr. Harry Gosling, Professor A. B. Keith, Edinburgh University, Mr. Evelyn Murray, Secretary to the Post Office.

The terms of reference to the Committee are as follows: To advise what changes should be made in (A) the existing system of Home Administration of Indian affairs and (B) the existing relations between the Secretary of State or the Secretary of State in Council and the Government of India both generally and with reference to the relaxation of the Secretary of State's powers of superintendence, direction and control.

2. To examine in particular (A) the Constitutional powers of the Council of India, its relations to the Secretary of State as affecting his responsibility to Parliament and otherwise, and the financial and administrative control exercised by the Council. (B) The composition of the Council, the qualifications, method of appointment and term of office of its members and the number of Indian members. (C) The working of the Council in relation to office procedure. (D) The general departmental procedure of the India Office. (E) The organisation of the India Office establishment and question of modifying the system of its recruitment so as to provide for (1) the interchange of appointments with Indian services and (2) the throwing open of a proportion of the appointments to Indians.

3. To advise whether any of the charges on account of the India Office and if so what charges should be placed along with the Secretary of State's salary upon the estimates.

4. To advise how effect should be given by legislation or otherwise to the committee's recommendations.

5. To enquire into and report upon any other matters cognate or relevant to the above which it may consider expedient to take into consideration. The committee will have regard generally to the proposals made in the Report on Indian Constitutional Reforms for the Reform of the Government of India and Provincial Governments and in particular to the recommendations contained in the paragraphs 290 to 295 of the Report.

London Chamber on Indian Reform

The Council of the London Chamber of Commerce after discussion, declined to express any opinion on the questions referred to in the resolution of the East India Section last month, that the report on Indian Reforms did not sufficiently recognise the social, religious and ethical obstacles to the growth of purely Indian enterprise, the achievements of British merchants in building up India's prosperity, excellent relations between British merchants and the hereditary trading classes of India, and that it did not safeguard important commercial interests against the theories of doctrinaire economists, and the attacks of irresponsible antagonists of British enterprise.

The Future of Luxemburg

The question of Luxemburg is attracting considerable attention. The Grand Duchess is undesirable, and will probably leave the country soon. A considerable section of the population desires association with France, while others again incline to Belgium. The general opinion prevails that autonomy will be preserved after the Government has been changed.

General

The Ahmadiyya Congress

At the anniversary of the Ahmadiyya Anjuman Ishat Islam on the 26th December in Lahore, Shaikh Mahomed Ismail Sahib, Proprietor of the Flour Mills, Lyallpur, presided. After the recitation of the holy Kuran to the men, Mudassar Shah made an interesting speech. He was followed by Moulvi Ghulam Rasul, of Kabul, who spoke in Persian. He narrated the history of the development of the Ahmadiyya movement in Afghanistan, after the death of Sahibzada Abdul Latifs. He also pointed out that the people of the country never heard of the novel doctrines invented by Mirza Mahmood Ahmad, the present head of the Gadian section from the Sahibzada Sahib, and that these were denounced by the Ahmadees of Afghanistan.

Moulvi Muhamadazi then delivered a learned lecture on "Islam and the Causes of its Rise and Fall."

He was then followed by Moulvi Sadruddin who spoke on the way of success and explained how it was achieved in the times of the Holy Prophet.

Lord Haldane and the Future

Viscount Haldane, presiding at a lecture on 'The Possible Industrial Development of India,' at the National Liberal Club by Mr. Dickinson, said: Before the war we were taking things easily. There were those who dreaded Germany in peace more than Germany in conflict, because with their industry, with their science, and with their practical methods, there was at least a very serious risk of penetrating the whole word in a peaceful fashion, as to which we should have taken no exception, and Germany, without firing a bullet, would have attained her object. Then it was that she committed the most tremendous moral and intellectual blunder that a nation could ever be guilty of. She threw away her chance, she had resorted to us our opportunity. (Cheers.) We had got to take that opportunity, and we should not take it if we remained sleepily, in the old tracks. We had got to adopt new methods. Labour was setting up a new claim—that it was not capital that made wealth, but labour. As a matter of fact, it was neither the one nor the other. It was direction which guided both capital and labour, and we wanted to substitute for the present aristocracy of wealth an aristocracy of talent—the talent which arose out of the educated hand and brain. If they could only make use of that vast untapped reservoir of the children of the working classes, insufficiently educated to-day and to whom opportunities of advancement were denied, what an opening, what a prospect it gave them for the future. They must show Labour that they cared not only for the body, but also for the soul, by giving them equality in a spiritual as well as in a material sense. Until Liberals learnt that lesson, they would never get back their position as the leaders of the progressive movement in the country.

Newspaper Men and the War

A striking fact in connection with recruiting was mentioned in a speech by Sir Auckland Geddes. Of ten thousand men and boys employed in London newspaper offices, five thousand joined the Army and at the moment when the Armistice was signed there were not thirty men fit for general service in all the London newspaper offices. That was a record, said Sir Auckland Geddes, which placed the Press at the head of every trade group in the matter of recruiting.

THE INDIAN REVIEW
A MONTHLY PERIODICAL DEVOTED TO THE DISCUSSION OF ALL TOPICS OF INTEREST.
EDITED BY MR. G. A. NATESAN.

Vol. XX. MARCH, 1919 No. 3.

ARYAN RULE IN INDIA

BY

THE HON. MR. JUSTICE KUMARASWAMY SASTRI.

LORD Acton in one of his delightful letters to Mary Gladstone observes: "The great object in trying to understand history political, religious, literary or scientific is to get behind men and grasp ideas. Ideas have a radiation and development, an ancestry and posterity of their own, in which men play the part of God-fathers and God-mothers rather than of legitimate parents." To those who have studied the various books on Indian history that have appeared from time to time these remarks would appeal with great force. Events have been chronicled with painstaking fidelity and each period of the Nation's history has been dealt with as if it had very little relation to the past and a very problematical influence on the future. The rise and fall of great dynasties and the ebb and flow of the great waves of religious and political thought, the greatness of certain epochs and the stagnation and retrogression of others, have been treated as if capable of explanation without much reference to the laws of evolution, of thought and action which play so important a part in the shaping of the destinies of nations. Kings and Emperors, saints and sages, poets and warriors float before our vision not as links of a great chain but as isolated phenomena floating in an unending procession out of gloom, like travellers pressed by a breath of destiny.

It is therefore refreshing to turn to the *History of Aryan Rule in India*,* by Mr. Havell, where the learned author has tried to "get behind men and grasp ideas," and to show how and by what means Aryan leaven fermented and Aryan culture renewed itself at certain epochs.

To trace the history of the Aryans from the time of their first migration into India to the period when the hoary structure of Aryan State craft and culture was shaken to its foundation by the children of an alien faith, and to pick up the threads of the various under-currents that during a long and chequered history have mainly contributed to the building up of a civilisation and the formation of ideals, so characteristic of the Aryan dominion in India is no easy task requiring as it does not only great learning, industry and research but rare insight and sympathy. To this has to be added the difficulties of compressing the vast material and the divergent views on it into a handy and readable volume. If these difficulties are borne in mind, there can be little doubt that the work before us is one which reflects great credit on the author and lays a deep debt of gratitude on the student of Indian History.

The opening chapters take us to the dim antiquity of centuries when a young and gifted nation

* *The History of Aryan Rule in India.* By Mr. E. B. Havell, George G. Harrap & Co., London.

poured through the passes of the Himalayas and began to colonise the fertile places watered by the Indus and the Ganges. Ancient History as the term is understood in dealing with Europe appears very modern when dealing with the rise of Aryan civilisation and the progress of Aryan conquest. Vista after vista opens before us in unending panorama of thought and action, and while time has efaced detail and distance lends enchantment, the student of History has always the bed rock of the Vedas, the Brahmanas and the Upanishads to fall back upon both to build the structure and correct its proportions. The estimate of the worth of ancient Aryan culture and its influence on the Non-Aryan tribes must necessarily vary with the degree of knowledge one has of this ancient and vast literature and his sympathy with those ideas which the ancient thought were of enduring strength and greatness. Their idea of "Dharma," a word which, while it conveys a world of meaning to the Hindu, is often vague when tried to be translated as "Duty," no doubt varied from time to time, but throughout all their history it has certain fixed values which remained unalterable and which for good or evil shaped the destinies of the Aryan world. Under these circumstances, it cannot be wondered that divergent estimates have been formed of the nature and character of the ancient Aryan civilisation and the influence it had on the destinies of India. The views of Professor Max Muller, Vincent Smith, Weber and several other well-known writers are sometimes not supported by the evidence afforded by the study of Vedic literature and are not easily reconcilable, and several generalisations are only true if applied to certain epochs of their development. For example, the view of Professor Max Muller in his history of ancient Sanskrit literature that Greece and India represent two opposite poles in the historical development of the Aryan man, that, while to the Greek existence is full of life and reality, to the Hindu it is a dream and an illusion and [illegible] while the Greek is ready to sacrifice even his [illegible] to the glory and independence of Hellas, [illegible] Hindu enters the world as a stranger his thoug[illegible] being all directed to another world, can hardly [illegible] justified except when we consider the period w[illegible] after long ages of war, conquest and civiliza[illegible] the Aryan mind was directed to introspec[illegible] The satiety of conquest and the attainme[illegible] what one considers desirable to have in nation[illegible] individuals often resulted in the questio[illegible] eloquently put by the psalmist: "What sh[illegible] profit and what shall a man or a nation giv[illegible] exchange for his soul?" That this question [illegible] put by Aryans long before Greece was born is [illegible] not so much to a difference in temperament [illegible] to the fact that Aryan civilization was [illegible] when Greece was only beginning to awake [illegible] sense of national consciousness. The same exp[illegible] ences are undergone by different individuals [illegible] if one gives expression to them earlier, [illegible] because time has dispelled illusions and cha[illegible] the estimate of the relative power of each of [illegible] influences that moulded the past as he [illegible] through successive stages in life's experience. [illegible] fact, the progress and evolution of the Greek [illegible] tellect and philosophy present some remark[illegible] parallels to Indian thought. It is no d[illegible] true that to the Greek in the Golden Age of [illegible] history existence was full of life and reality [illegible] that he was prepared to sacrifice everything [illegible] his passion for liberty. But can it be said [illegible] the same is not true of the Aryan settler[illegible] India during several centuries? The hymns of [illegible] Rig Veda which present a faithful picture of [illegible] lives and aspirations of the Aryan conquerors [illegible] India abound in expressions of the joy of [illegible] and devotion to the sacred land of India, [illegible] consciousness of intellectual and moral superio[illegible] and the lust for conquest in a great many pra[illegible] in the Riks are hardly those of persons who [illegible] upon existence as an evil, the present world a[illegible]

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

illusion and whose entire aspirations point heavenward. I shall quote a few Riks from 12 various mandalas. "Let those enemies be asleep and oh hero let the friend be awake, oh Indra of extensive bounty and quickly make us worthy of esteem in point of cows and horses, bright riches and thousandfold wealth." "Destroy all misery and slay him who does us harm." "Ushas conduct better all the gods for drinking Soma. Set on us strength which would lead to good exploits and which would evoke admiration and was for us kine and steeds." "Be thou oh Indra, the dispeller of our poverty with kine and gifts of steeds. Procuring the annihilation of Dasyas at the hands of Indra through the glistening draughts of Soma we liberated from our enemies shall be amply supplied with sustenance. With wealth and sustenance we shall be filled, aye, with powers bright and extremely delightful, we shall be blessed with that favour of those whereby the power of our heroes will obtain scope wherever the gift of kine is prominent and which also bestows horses." "Set on us, oh Maruts, a highly commendable power, brilliant, unsurpassed in battles bringing wealth worthy of praise and encompassing the world may bring up progeny of a hundred winter's life. Set on us, Maruts, fortune which is stable, which abounds in heroes, which tires the enemies out, which is to be measured by hundreds and thousands and which is ever increasing. Only a hundred years are with us, Oh Gods, within which time you bring old age to our bodies and during which short space those who today are sons have to become fathers to-morrow. Do not therefore cut short our life in the middle of its course." "Perform, oh hero, with our warlike soldiers whatever heroic deeds thou hast to achieve. Long have the godless enemies been puffed up with arrogance. Slay them and bring to us the wealth they have usurped." "May we be masters of all sorts of wealth and endowed with manly spirit and impatient for glorious deeds. May we vanquish the unbelievers who may attack us with armed force." "Oh Indra, make us a gift of immense riches coveted by all. Grant a life of one hundred years and give us ever abiding good warriors."

Such prayers run through several of the mandalas of the Rig Veda and may be taken to represent the hopes and aspirations of generations of Aryan settlers.

Running through hymns like these there run like golden threads prayers to deliver men from evil and which recognise the existence of a Supreme Being to whose eternal laws it is the duty of man to conform. "Deliver me from sin as from a rope and let us obtain thy path of righteousness" cries the sage and there is many a prayer to keep the Aryan on the straight path. This world was to the ancient Aryans the best of worlds and there is little to support the view that it is the duty of man to renounce the good that the Gods in their bounty give. Death is not considered as a deliverance from evil but as an event which the Gods ought to avert before the "hundred winters" allotted to man. "May the thread not be torn while I am weaving my prayer, may the form of my pious work not decay before its season" is not the prayer of one weary of life.

It is when we come to the Upanishadic period (between which and the Riks several centuries must have elapsed) that Vedic outlook on life begins to undergo a change. Conquest of the fairest part of India and subjugation of foes internal and external gave the Aryan intellect free scope for speculation which seems to have been ingrained in its nature. The eternal questions "whence wherefore and whither" were asked and were attempted to be answered with the result that standing between two immensities the mind thought very little of the brief space allotted to man wherein to work out his destiny. "Look back how it was with those who came before, look forward how it will be with those who came

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

hereafter. A mortal ripens like corn, like corn he springs up again" says the Kathopanishad. "Regret and desire were as it were found equally vain in this world of impermanency for all joy was but the beginning of an experience that must have its end in pain." The result was that the *summum bonum* was considered to be a state of mind which was unaffected by "the pairs of opposites." It is a fascinating study—the philosophy of the Upanishads and the causes which led to so great a change in the outlook on life—but one which is hardly possible to treat with any adequacy in the pages of a magazine. But it is well to recognise the fallacy of thinkers that Aryans were, from the beginning of time, dreamers and pessimists.

The study of Greek thought and philosophy affords some very striking points of similarity. To the Homeric heroes, life was a very enjoyable thing and death had no compensations. The bravest of the warriors looked upon the life beyond with a shudder and prayed for long life and material prosperity in this world. The optimism of the Platonic School with its central thought of the *realization* of a divine purpose gave little scope for pessimism. As has been well observed, the philosophy of Plato centres round "the Supreme Goodness by the light of which all the processes of the natural world, all the functions of man on the State are to be interpreted." It is to the speculation of later philosophers that we have to attribute the tendency to glory in the insignificance of man and to view with rapture the prospect of self loss in the bosom of universal nature. Plato's confident and trustful idealism gradually gave place to speculation where the evil in life was recognised and the Gods were represented as sipping their nectar careless of mankind or who when they deigned to interest themselves in mundane affairs thought of men less for their welfare than for their chastisement.

I am afraid I have digressed considerably but the digression is necessary to show the soundness of the view which Mr. Havell has taken in his estimate of early Aryan culture and civilization which is more sympathetic and which accounts for a great deal of what would be otherwise inexplicable in early Indian history. The author is perfectly right when he rejects the theory that "the Aryans when first known to history were simple barbaric tribes who borrowed their civilization from the more cultured races they conquered both in India and Europe." That they had attained to a fairly high degree of civilization when they entered India is fairly evident from a perusal of the Vedas. Full of life and action, with a mind eager and responsive with just that amount of introspection that was necessary to keep them in the right path, they began their wonderful career in India and as the centuries unfolded themselves they built up a great civilization. It would be idle to deny that close association with the people they conquered did exercise a certain amount of influence on Aryan thought and ideals but as the author rightly points out, "it was their own creative genius which gave the material new higher forms and inspired it with deeper thoughts." In the long course of history, it is wonderful how little Aryan theories of life and conduct were affected or changed by the conditions of the people they found themselves amongst and how on the contrary the handful of conquerors gradually imposed their culture on the subject races.

The evolution of caste was the means of the race preservation and culture which we find characteristic of Aryan civilization in India. Whether the ideas of caste were founded on the colour bar or the differences in occupation of the various Aryan conquerers there can be little doubt that it came into prominence very early in the development of the race. The famous hymn in the Purusha Sukta shows not only that there was a sharp distinction between the various castes but

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

also a clear superiority of one caste over another symbolised with reference to the various portions of the body of the Creator from which they are said to have sprung. Two central ideas run through the history of the development of the caste system. One is the sharp line drawn between the Aryans and the aboriginies and the other is the importance given to the main occupations which demanded the energies of the handful of people whose destiny it was to subjugate a vast country. As rightly observed by the author, "the instinct of race preservation together with a profound conviction of divine guidance formed the basic principles of the code of laws and social customs which became part of the sacred literature of Hinduism. The distinction between Aryan and Non-Aryans was never lost sight of and was the pivot on which the whole social system turned. Within the Aryan fold however, there existed at first a great deal of elasticity and "the rigidity and exclusiveness of the caste system as we knew it was largely the product of medieval conditions." It is doubtful however if the author is right in his conclusion that the rigidity did not "exsist in the time of Buddha and for many centuries afterwards." The solution of the problem will depend upon the antiquity to be ascribed to the Smritis and earlier Grehya Sutras and it would be dangerous to speculate till we have some reliable dates to fix their date. Between the Brahmana and the Kshatriya castes the struggle for supremacy was long and bitter but the controversy seems to have ended in favour of the Brahmana before Buddha began to preach.

The first eight chapters of the book carry us from the dim antiquity of the past to about the second or third century of the Christian era. The survey of so vast a field within so short a compass must necessarily be confined to the more important landmarks in the history of thought and action, and it is not possible that there can be complete agreement on matters relating to which the data are so meagre. So far as the material progress of the Aryans is concerned, the various stages by which they conquered the continent and imposed their civilization on it are fairly clear. The struggle for supremacy was long and not often easy, but there can be little doubt that India was 'Aryanized' centuries before the Christian era. The struggle while it lasted and the peace which came after conquest had however a profound effect on the polity, the religion and the arts, and no history of ancient India can be adequate or correct which does not appreciate in its true bearings the change in the values.

As regards Aryan ideals of Government and the State, Aryan ideals hardened almost as soon as the valleys of the Indus and the Ganges were conquered. Conquest led to "the gradual consolidation of the small tribal confederations which characterised the Vedic period into considerable states ruled by hereditary dynasties." The divine right of Kings was tempered by the obligation of the King to govern with the advice of his ministers learned in the Dharma and the checks were more moral than by any counterbalancing machinery in the State. It is difficult to agree with the author when he states that "in the Aryan polity the divine right of Kings was never recognised as a personal attribute of the Monarch belonging to himself and his family" and that "he had no right except that which was conferred on him by Aryan law and he could be fined or be deposed by the General Assembly of the freemen or by the Council of ministers if he neglected his duties as King or offended against that law." The Puranas and Epics instance very many bad Kings but there is hardly a case where he was fined, much less deposed by the General Assembly and the theory that the King was an *amsa* of Vishnu is hardly reconcilable with the theory that the divine right was not a personal attribute. Nor is it clear whether confederacies of tribes governed not

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

by a single ruler but by a council of noble families were contemplated in the scheme of Government evolved by the Aryan settlers. If the Dharma Sutras, Epics and the Puranas afford any guide to the theory of the State as understood by the Aryans, the normal condition contemplated was Kingship associated with advisers whose advice at least in theory was binding on the King. The origin of Kingship as given in the Mata Bharata and the woeful picture given in the Ramayana of a country without a King do not support the ideas of republics being contemplated by the Aryan law-givers. In the Ramayana it is stated : " No country can be wealthy without a King nor can the people of a kingless country be virtuous. Money lenders do not lend money in a state of anarchy. Wealth is not protected nor do traders sleep fearlessly with open doors. Brave men do not learn the use of arms nor do traders go to trade in foreign places through fear of robbers. The conduct of people cannot be good without a King. In a kingless country learned men do not go about without fear discussing various subjects. A kingless country is like a waterless river, a waterless lake, a forest without verdure as a herd of cows without a cow herd. The King looks after the people as the eye looks after the body. The darkness of ignorance spreads over the people if there is no king." In social and domestic affairs, we find an immense gulf between the early Aryan settlers and the Aryans about the time when Buddha began his mission. Luxury had given peace and the simplicity of the early conquerors and trade and arts had reached a stage of high development. We find in the epics descriptions of large towns and glowing accounts of the luxury of the citizens, and there can be little doubt that, so far as material progress was concerned, India in the second century B.C was far ahead of any other country in the world.

It is however in religion and in the outlook on life that we find that there has been the most wonderful development. What the outlook of the early Aryans was I have attempted to show by extracts from the Rig Veda. It was a simple and joyous faith in the protective power of the Gods whose rewards and punishment were supposed to follow the prayers and sacrifice and gifts of persons who have not strayed from the path of rectitude. " The creator having in older times created men together with the sacrifice said, ' Propogate with this may it be the giver to you of the things you desire. ' Please the Gods with this and may the God please you. Pleasing each other you will attain the highest good. For pleased with the sacrifice the Gods will give you the enjoyments you desire " says the Geeta and this affords the keynote to the elaborate system of sacrifices so minutely outlined in the Brahmanas. Success and happiness in this life were to be got only by propitiating the Gods and by doing nothing which would be "Un-Aryan." Thus there arose two main ideas, ritual and adherence to what was considered as one's Dharma and this runs like a thread throughout all subsequent developments up to a certain stage when success was necessary to enable the Aryans to conquer the Dasyas : all thought was concentrated on how to please the Gods to obtain their help and vanquish the enemies of the Aryans. Elaborate ritual was thought the only efficient way, the greater the gift the greater being the reward. " Therefore the all comprehending Vedas are always concerned with sacrifies" (Geeta.) Right conduct was not lost sight of but the strenuous life of the early Aryans gave little room for serious lapses from virtue.

Gradually a change came over the relative values attached to sacrifice and conduct. The pantheism of the Vedas gave place early to the idea of one Supreme Being, the creater of the world through whose might and wisdom it was created was being protected and would ultimately be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

destroyed. "Some men under a delusion speak of nature, others speak of time as the cause of everything but it is the greatness of God by which this world is made to turn. It is at the command of Him who always covers this world, the knower, the time of time, who assumes qualities and all knowledge. It is at His command that this creation unfolds itself which is called earth, water, fire, air and ether" says the Swetasvataropanishad and instances may be multiplied from the Upanishads. Instead of sacrifices, knowledge of the supreme Isvara is represented as the only path to salvation. "A man who knows Him truly passes over death. There is no other path to attain Salvation," says the same Upanishad.

Speaking of the Upanishads, Professor Max Muller, in his Hibbert Lectures, observes: "Lastly came the Upanishads and what is their object? To show the utter uselessness, nay, the mischievousness of all ritual performances, to condemn every sacrificed act which has for its motive a desire, a hope of reward, to deny if not the existence at least the exceptional and exalted character of the Devas, and to teach that there is no hope of salvation and deliverance except by the individual self recognising the true and universal self and finding rest there where alone rest can be found". This seems also to be the teaching of the Bhagavat Gita in many places.

Small wonder it is that in this reaction against the efficacy of sacrifices there arose thinkers who went to the extreme length of denying an even an intelligent first cause. The Lokayaikes and the Charvakas presented to the world a purely materialistic theory. They accepted no other evidence than perception and recognised only four elements—fire, air, earth and water and considered sensation and perception as the result of the union of the elements existing only so long as the union lasts. To them the soul does not exist as a separate entity being so to say only a function of matter, and as a necessary consequence there is no heaven or hell and no use of any sacrifices to unseen powers. Mr. C. R. Sreenivasa Iyengar in his notes to the Ramayana well summarises these teachings: "Heaven and Hell, Bondage and Liberation in this world and the next, Body and Soul, caste and orders, these are not and exist only in the imagination of fools. The Agnihotra, the study of the Vedas, the bamboo staff and orange robes of the Sanyasis, the sacred ashes and other stock in trade of the sanctimonious hypocrites are but means of livelihood for helpless fools. If the animal sacrificed in the Jyotistoma goes to heaven, the sacrificer can very easily secure the worlds of bliss for his father and mother, wife, child and kinsmen and friend by making them take the place of the sheep, goat and cow or the horse slain in the Yagas. If the food given to the Brahmanas in the Sradha goes to satisfy the hunger and wants of his ancestors in the far-off worlds, travellers to distant countries need not trouble themselves about their meals, dress or other comforts for these are ever at their disposal if some one takes care to provide a Brahmana at home with these things."

In the Ramayana, we find the sage Jabali consoling Rama with these theories and Rama gravely refuting them. It does not appear that these theories of life and matter ever made any great headway amongst the masses, but there can be little doubt that a deep wave of scepticism as to the efficacy of sacrifices was early influencing speculations as to the future. Between these extreme views there were the agnostics who refused to dogmatise about the existence of a Supreme Being and the Sankhya System of Philosophy passes by the question of the existence and attributes of a Supreme Being. In the well-known Sutra 92 "Eswarasiddtreh," it is not proved that there is a Lord (Esvara) of the Sankhya aphorisms of Kapila and the reasons given in the subsequent

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Sutras explain the position taken up by the Sankhya System.

It is necessary to bear in mind these influences and speculations to appreciate the role that Buddha played in the history of thought and to appreciate his influence on the history of Hinduism. It is no doubt true that he represented the extreme part of the reaction against the ritualism of the Vedas and the Purva Mimamsa, but that was only one phase of his teachings. With a great deal of Hinduism as current in his time, Buddha did not concern himself and to him they were unessential to the attainment of Nirvana. When pressed by his favourite disciple Ananda as to the existence of the Supreme Being he evaded giving any definite answer. To him each man was the master of his own destiny and rituals were useless if freedom from the cycle of births and death was the *summum bonum*. There was no panacea of human ills of external application, no efficacy in what may be called the homeopathic treatment of Sin. "No use in making happiness and agreeable feeling the formal constituent of virtue or in seeking to deduce the laws of conduct from the laws of comfort." The aim of all the teachers of Indian philosophy is to save mankind from pain and so each system propounded its own cure. The aim of Buddha was the same as that of the other sages but his means differed in this—that he resolutely set his face against any means except through the eradication of desire which, according to him, was the cause of all evil.

The teaching of Buddha exercised a profound influence on the tribes of India and in so many directions was its potency manifested that the history of the country for the next thousand years is closely bound up with the rise, progress and decline of Buddhism. The growth of Buddhism marks the close of an age and it will be convenient to stop at this point with the following eloquent tribute to the memory of Buddha by Heine:

"Twenty four hundred years ago out of solitary meditation upon the pain and the mystery of being the mind of an Indian pilgrim brought forth the highest truth ever taught to man, and in an era barren of service anticipated the utmost knowledge of our present evolutional philosophy regarding the secret unity of life, the endless illusion of matter and of mind and the birth and death of the universe. He spoke and returned to his dust and the people worshipped the prints of his dead feet because of the love he had taught them. Thereafter waxed and waved the name of Alexander, the power of Rome and the might of Islam—Nations rose and vanished, cities grew and were not. The children of another civilization vaster than Rome begirdled the earth with conquest and founded far off empires and came at last to rule on the land of that pilgrim's birth. And those rich in the wisdom of four and twenty centuries wondered at the beauty of his message and caused all that he had said and done to be written down anew in language unborn at the time when he lived and taught. Still burn his footprints in the East and still the great west marvelling follows their gleam to seek supreme enlightment. Even thus of old Milinda followed the way to the house of Nagasena at first only to question after the subtle manner of the Greeks yet later to accept with noble reverence the nobler method of the master".

INDIA AND IMPERIAL PREFERENCE

BY

PROF. BRIJ NARAIN, M.A.

IN this article the probable effects of a preferential tariff upon India's export trade and Indian currency and finance are chiefly considered.

India has a very large export trade with foreign countries. The table given below shows the exports of Indian merchandise in 1913-14.

Exports.		Amount. £
To the United Kingdom	...	38,236,780
To other British Possessions	...	23,072,192
To Foreign Countries	...	101,492,027
Total	...	162,800,999

But of exports to other British possessions over 4 millions sterling worth were to the Straits Settlements and over 5 millions sterling worth were to Hong-Kong. A considerable proportion of the exports to the Straits Settlements and almost the whole of the exports to Hong-Kong are really destined for China and Japan. We may therefore add 6 millions sterling to the exports to the foreign countries and deduct this amount from the exports to other British possessions. The figures thus adjusted are :—

Exports.		Amount. £
To the United Kingdom	...	38,236,780
To other British possessions	...	17,072,192
To Foreign countries	...	107,492,027
Total	...	162,800,999

United kingdom thus took 23.5 per cent of our exports, other British possessions 10·5 per cent and foreign countries 66 per cent. Foreign countries are our largest and most important customers.

One of the principal objects of a preferential tariff is to deprive foreign countries of a great part of their share in India's import trade. A preferential tariff would fail to achieve its purpose if it did not bring about this result. Will foreign countries retaliate and have they the power to retaliate ?

They have no such power, says the advocate of preferential tariffs. Our exports to foreign countries consist of raw materials which are essential to their industries. They will cripple their own industries, if they tax imports from India. Much as they may like to retaliate, "in many important branches of commerce, outside nations will be forced to come to India whether (for political reasons) they wish to or not in order to obtain the raw materials and other products necessary to keep their own peoples occupied and their own industries prosperous," says Mr. M. D. P. Webb who is so willing to offer India as a sacrifice at the altar of Imperialism. Sir Ropar Lethbridge is equally positive. It is not easy for any country to tax imports from India. It is an "impossible task". Among all our customers, he says "there is not one that could by any possibility attempt to retaliate on India except at the gravest peril to its own industries, and there is not a single one that is in the least likely to attempt the impossible task." (The Indian Offer of Imperial Preference).

The question may be considered from another point of view. Under Imperial Preference, the Indian peoples will grow prosperous, with the result that "so far from selling less to the foreigner in these prosperous circumstances, they are certain to sell much more".

That is all very well, but the question is not whether we shall be able and willing to sell much more to the foreigner, but whether the foreigner will be willing to buy much more from us.

Optimists like Mr. Webb and Sir Roper Lethbridge may be referred to the study of the question of preferential tariffs by Lord Curzon's Government in 1903. According to Sir E. F. G. Law, India's position as an exporter of raw materials is one of considerable defensive strength, "but this is not the case with every country nor by any means with regard to all classes of produce exported." On the whole, therefore, "it is more in the interest of India to leave matters as they are than to embark on a new fiscal policy," unless it can be shown that a preferential tariff will secure "very great advantages" for our exports to the British Empire. Sir E. F. G. Law had stated the chief objection to a preferential tariff fairly clearly, but the Government of India thought that he had possibly "underrated both the powers of retaliation which foreign countries possess and also their readiness to use it." India has a monopoly of Jute, *till*, lac, teak wood, myrobolams and *Mohwa* and a less complete monopoly of some other articles. "With regard however to the greater portion of our exports," they said "they compete successfully in foreign markets by reason of their cheapness rather than of their quality or kind. We cannot feel confident that the conditions and requirements of foreign industries have yet been ascertained with the precision and fullness necessary to make them a sufficiently broad and stable basis on which to rest a fiscal policy of very problematical value to India, whilst the consequences of failure might result in irreparable disaster.

The views of the Government of India on the question of preferential tariffs were published in 1904. Sir Roper Lethbridge's "India and Imperial Preference" appeared in 1907; Mr. Webb's "India and the Empire" in 1908; and Sir Roper Lethbridge's "The Indian Offer of Imperial Preference" in 1913. As both these writers confidently assert that foreign nations have not the power of taxing imports from India, it may be supposed that they have investigated the conditions and requirements of foreign industries with respect to the supply of raw materials from India more fully than the Government of India could do in 1904. But not the slightest evidence of an investigation of this nature is found in their books.

Foreign nations would be unable to retaliate on India if she was the only country in the world which supplied them with raw materials for their industries. It is certainly true that we have a monopoly of certain articles. But the total value of the exports of these articles in 1913-14 was only £ 17,150,394 or 17 per cent of the total exports of Indian merchandise to foreign countries.

Exports		Amount. £
Opium	...	931,772
Lac	...	897,636
Til	...	1,762,031
Mowa	...	363,617
Myrobolams	...	231,948
Indigo	...	98,875
Jute Raw	...	12,709,748
Teak Wood	...	154,767
	Total	17,150,394

In the case of rice, hides and skins, oil seeds, spices and chemicals and drugs, our monopoly is less complete, while in the case of other articles of export we have no monopoly at all.

At the most, foreign nations are forced to buy from us less than 20 per cent of our total export of all articles to them. That is about the extent of their dependence upon us.

(If we include the exports of jute manufactures the percentage increases to 31, but we should not forget that before the War Germany was levying heavy duties on imports of jute manufacture

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

which shows that our jute manufactures were not indispensible to her).

It thus appears that foreign countries possess the power of retaliation.

Without crippling their own industries or ruining themselves, they may limit their purchases of those raw materials from India of which she has a monopoly and impose heavy duties on other goods for which India is not the only source of supply. They may thus do our export trade much harm. The onus of proving that they will not in any circumstances do so, rests on the advocates of Imperial Preference.

Lastly in 1913-14, we exported to foreign countries articles wholly or mainly manufactured of the value of about £ 21,051,000. The chief articles of export were chemicals, drugs and medicines worth £ 1,000,000; dyes and colours, excluding indigo, worth £ 319,000, hides and skins, tanned and dressed, and leather worth £351,000; metals, iron and steel, and manufactures thereof, worth £ 246,000; yarn and textile fabrics, including jute manufactures, worth £17,880,000. The total value of the export of manufactured articles from India is not negligible. We take pride in this fact and consider it to be a sign of the economic transition in India. The further development of our manufacturing industries will give our people increased employment; it will give them higher wages and it will be a means of diminishing the numbers dependent upon agriculture. But if a preferential tariff is adopted, the export of manufactured articles to foreign countries will be seriously affected. We have a monopoly of certain classes of raw produce and the foreigner may not be able to tax their imports. But he can easily retaliate on India by taxing imports of manufactured articles.

Connected with the question of retaliation is that of the indebtedness of India to the British Empire. The imports from the British Empire annually exceed the exports to the British Empire and the export to foreign countries annually exceed the imports from foreign countries. This is shown by the following table:

—	1909—10	1910—11	1911—12	1912—13	1913—14
	£	£	£	£	£
Imports from the British Empire.	55,000,000	59,000,000	63,000,000	74,000,000	85,000,000
Exports to the British Empire.	52,000,000	57,000,000	61,000,000	65,000,000	61,000,000
Excess of imports over exports.	3,000,000	2,000,000	2,000,000	9,000,000	24,000,000

—	1909—10	1910—11	1911—12	1912—13	1913—14
	£	£	£	£	£
Export to foreign countries	70,000,000	79,000,000	86,000,000	95,000,000	101,000,000
Imports from foreign countries.	23,000,000	26,000,000	28,000,000	32,000,000	36,000,000
Excess of exports over Imports.	47,000,000	53,000,000	58,000,000	63,000,000	65,000,000

In 1913-14, our trade with the British Empire gave us an adverse balance of 24 millions sterling, which sum does not include the Home charges which in that year amounted to £ 20 millions. As far as our commercial and financial relations with the British Empire are concerned, we are always a debtor country and our indebtedness has increased in recent years. Even the dullest intellect will perceive that it is upon exports to foreign countries that we depend for discharging our obligations to the British Empire and that, if owing to a change in our fiscal policy our exports to foreign countries should dwindle, we shall cease to be a solvent country. It is therefore absolutely necessary for India, under the circumstances, to develop her export trade with foreign countries as much as possible.

From the subject of India's indebtedness to the British Empire, we pass by a natural transition to that of currency and exchange. Our currency system is the gold exchange system in which the internal currency consists of token coins convertible into gold at a more or less constant rate for purposes of international payments. The maintenance of the gold exchange system depends upon stability in the value of the rupee, which in its turn depends upon a favourable balance of trade. It has been shown above that foreign countries possess the power to retaliate. If, as the result of the tariff wars in which India would most certainly become involved as soon as she adopted a preferential tariff, the balance of trade turned against India, her currency system would be thrown into confusion. The Government of India realised the danger which the proposed change in her fiscal policy would involve. "The national solvency of India," they wrote in 1903, "depends upon the preservation of an excess of exports over imports equal to the amount of the Home charges, that is, upon maintaining a favourable balance of trade." It is therefore a vital object with us to stimulate our exports by every means in our power, to seek new market and develop old ones and to remove all obstacles which stand in the way of growing external demand. If, then, notwithstanding the safeguards which we possess, we should unhappily be drawn into tariff wars with powerful countries, it can not be doubted that, whichever way the ultimate victory might incline, our export trade would, for the time being, be injuriously affected. Such a result would be fraught with the gravest consequences. Imperial Preference would involve India in tariff wars with foreign nations, and the set-back to our trade, our revenues and our credit would immensely outweigh any benefit that we might reasonably expect from the most unconditional surrender of our opponents in the war of tariffs. We cannot sufficiently impress this danger on your attention. Even if the chances of success were greater than we conceive them to be, we hold that the certain cost of the war and the severe penalties of defeat would be too heavy a price to pay." (Letter from the Government of India to the Secretary of State for India dated the 22nd of October 1903.)

Sir Roper Lethbridge, on the other hand, maintains that Imperial Preference, so far from endangering the financial stability of India, would increase it. It may be interesting to learn how Sir Roper proves his extraordinary thesis. The financial stability of India depends upon the maintenance of a favourable balance of trade. This Sir Roper recognises. But one of the causes of a favourable balance of trade in the case of India at the present time is a very large export trade with foreign nations. Every year we sell more raw materials to foreign nations than to the British Empire, which is positively wicked. The export of raw produce to foreign countries should cease, for it is a source of weakness to our financial system. We cannot depend upon the foreigner who in making his fiscal arrangements keeps

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

his own interests in view and not those of India. Suppose the foreigner restricted his demand for our commodities. What will be the result? The balance of trade will turn against India, the exchange value of the rupee will fall and India will be plunged into financial chaos. Let us therefore be wise before it is too late and develop our export trade with the British Empire. But the British Empire takes from us goods, raw and manufactured, worth only £ 55,000,000 while the export to foreign countries amounts to £ 107,000,000 (1913-14). One would think that the fact that our exports to the British Empire were only 34 per cent of total exports in 1913-14 showed that foreign nations wanted our produce more and paid us a better price for it, whether they were interested in the financial stability of India or not. One would also like to ask whether the countries which constitute the British Empire would be willing to buy Indian produce in excess of their requirements just to make our finances stable or to please us.

One wonders if Sir Roper is aware that, by declaring that our export trade to foreign protected countries is "obviously and undeniably at the mercy of their protectionist tariffs," he convicts himself of self-contradiction or something very like it. The fear that these protectionist countries will retaliate on India, says Sir Roper, is groundless, "for the protectionist foreigner must have Indian raw materials or cripple his own industry." This means that the protectionist foreigner cannot do without our raw materials and there is no immediate danger of India losing her profitable trade with him. If that is so, then the financial system of India is stable enough so far as its stability depends upon the preservation of a substantial excess of exports to foreign countries over imports. But, 'No' says Sir Roper; we cannot depend upon the foreigner which means that the foreigner can restrict his demand for our raw materials.

And thus you may kill two birds with one stone. Is it required to prove that our export trade with foreign countries will not suffer under Imperial Preference? Then say that the foreigner is no more able to tax our imports than Great Britain is able to tax the raw cotton for her cotton industry or the raw wool for her woollen manufacture. Is it required to prove that the export of the bulk of our produce to foreign countries endangers the financial stability of India? Then say that our exports are "obviously and undeniably at the mercy of their protectionist tariffs."

In the end, a few words may be said about India's trade with the self-governing colonies of Great-Britain.

"The recognition of India as a sovereign State" is the title of an interesting chapter in Sir Roper Lethbridge's book, 'India and Imperial Preference.' India, he says, cannot be asked to become a member of the proposed Imperial federation except as a sovereign State ruled by the King-Emperor. This would involve a recognition of the rights of Indians as citizens of the Empire. Possessing those rights, an Indian would claim in all parts of the Empire the same privileges as any other member of the Empire. Indians do not at present enjoy these privileges in the self-governing colonies of Great Britain.

The anti-Indian attitude of these colonies is to be regretted, but race prejudices, we are told, die hard in a democracy and, further, the British colonist cannot be dragooned into goodness. In order to raise our political status, let us appeal to his self-interest. The Colonies might be pleased to reconsider our case if we offered them a valuable and tangible concession in the form of a trade preference in our markets. What we have been unable to get by political agitation and representations through the Imperial Government, we may easily secure by means of Imperial Preference. "If I were an Indian delegate and entered the Imperial Conference with a mandate to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

offer Indian trade preference in return for British and Colonial trade preference plus equal treatment for British Indian subjects in all parts of the Empire," says Sir Roper Lethbridge, "I should do so with the fullest confidence of success."

One almost wishes that it were possible for India to make a tempting offer to the colonies. But the share of Great Britain's self-governing colonies in India's import trade is so small as to be negligible. The total value of the imports from Cape Colony, Natal, Transvaal, Canada, Australia and New Zealand is less than one million pounds. In 1913-14, the total value of imports from Cape Colony was £ 222, New Zealand £ 198, Canada about £ 6000, Transvaal £ 7000, Natal £ 148,000, Australia £ 611,000. The imports from Australia are not negligible but about 39 per cent of the imports consist of horses of which Australia is already the largest exporter to India. She has little to gain by preference in this respect; the imports from other self-governing colonies are so small that preference is out of the question. If the recognition of India as a "Sovereign State" depends upon her ability to offer to the colonies material and valuable trade concession, India will have to wait long for that recognition.

THE INDIAN RAIYAT*

BY

SIR DANIEL HAMILTON

IN his remarkable victory speech to the Houses of Parliament and the Empire, the King spoke thus:—"Now that the clouds of war are being swept from the sky, new tasks arise before us. We see more clearly some duties that have been neglected, some weaknesses that may retard our onward march."

These words of the King apply more appropriately to India than to any other part of the Empire, for here, the neglected duty, the failure to provide a banking system for the people, more than any other cause, has brought their onward march to a standstill.

Progress of a kind there has been, but how have the people progressed? Railways have stretched out in all directions; have the lives of the people stretched out? Jute mill dividends have expanded; have the lives of the workers kept pace? Bombay is a thriving city; do the people thrive in the chawls?

And what of the rural population? Does it march onward, or stagnate? The Maclagan Committee answer the question in these words: "The chief object of co-operation in India was to deal with the stagnation of the lower classes, more especially of the agriculturists who constitute the bulk of the population. It was found in many parts of India, as in most European countries, that in spite of the rapid growth of commerce and improvements in communications, the economic condition of the peasants had not been progressing as it should have done, that indebtedness instead of decreasing had tended to increase, that usury was still rampant, that agricultural methods had not improved, and, that the old unsatisfactory features of a backward rural economy seemed destined persistently to remain."

Gentlemen, this is a serious indictment of a

*A Paper read at the Bengal Co-operative Conference on 15th February, 1919.

hundred years of British rule, but unfortunately it is true, and my own personal knowledge and observation confirm it. Six or seven months ago, a missionary friend in the Deccan wrote to me to say that there influenza was a greater scourge than the plague, and that of ten couples married by him earlier in the year, only two remained complete. He was doing what he could with his small staff, to help the people, but what can one man do among a million? Two months later he wrote to say that the cotton crop had been almost destroyed by untimely rains. Another two months passed and he wrote to say that the jowari crop, the food crop of man and beast, have failed for want of rain, and the people were selling their cattle from Rs. 3 to Rs. 6 per head. There was no fodder to buy and no money to buy it. The people's harvest this year consists of the skins of their cattle. The cattle go, the people remain—to stagnate?

Another friend in the United Provinces wrote me the other day to say that "the people around here are dying like flies, and nobody cares" and it would matter little if they did, for no money means no doctors, no help of any kind.

India, with her huge population, may be described, aptly, as the minus quantity of the Empire—minus education, minus doctors and medicine, minus sanitation; and in this year of scarcity, minus food, minus water, minus clothes, minus oil, and all else that make the wheel of life turn smoothly.

Now all these minus quantities, the water, the food, the cloth, the oil, sanitation, doctors, medicine, education, are traceable chiefly to that other great minus, money—that vacuum in the body politic—the banking system which is not. In my school days I learnt that nature abhors a vacuum; so does Satan, and he fills it with the Mahajani.

Whose duty is it to provide a banking system for the people? It is the duty of the Government of India. Why?

1. Because it is the duty of Government to protect the people from oppression.

2. Because it is the duty of Government to destroy a system of finance—the 'mahajani'—which brings discredit on British rule, and dishonour to the British flag; and which sterilises the beneficent work of the Government.

3. Because no one else can provide the credit money required by 315 millions of people.

4. Because the Government currency note is the only possible form of credit money, and the only one which the people know and trust.

5. Because the trade balance on which the currency system turns, centres in the hands of Government, and will provide the capital required.

6. Because, if it is the duty of Government to provide a railway system which removes the surplus crops of the people, it is equally the duty of Government to provide a banking system which will bring back the price.

7. Because, without a banking system which will develop the money power of the country, the Montagu Chelmsford Reform Scheme, or any other, becomes a dead letter, and the new Legislative Council a farce.

These seven are only half of my fourteen points: the others ought not to be wanted.

A banking system to finance 300 millions of people implies two things; on the one hand, ample resources to lend, and on the other, ample credit on which to borrow. Let me say a word or two regarding the resources available. In Europe the banks depend on deposits for their resources, but in India the resources of the masses being nil, their deposits are nil. I might also point out that deposit banking never develops properly until metallic money has been replaced by paper: therefore, if India is ever to develop a large system of deposit banking, the one-rupee note must oust

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the silver rupee. Why deposit banking follows the development of the paper currency is easily explained. Silver money keeps, if hoarded, paper money perishes. To save its life the owner of the currency note is forced to bank it, and, if the Government has the courage of its convictions, it will push the one-rupee note all it can. If it does, I have little doubt that ere long, the damp and the middew and the white ant, to say nothing of the dacoit, will do more to develop deposit banking in India, than the Government has done in the last hundred years.

If, however, India is soon to begin her onward march, it would be well not to wait for deposits. Where then shall we find the resources to finance 300 millions of people? We shall find them in the trade balance and the paper currency and gold standard reserves of the Government. These reserves could be made to yield another three hundred crores of good credit money which only awaits the creation of a banking channel through which it can flow out to fertilise the country, and set India agoing on her onward march. At the Co-operative Conference in Simla, I drew attention to the unfairness, to put it mildly, of investing India's money reserves in England and elsewhere, while India is starving for money; and I was glad to see that the Indian merchants of Bombay drew Sir James Meston's attention to the same matter the other day. I hope India's publicists will keep an eye on these reserves, and see that India's money is used for India's good; for the loss to India by the present system of investing the money outside of the country, runs to hundreds of crores in the course of a few years.

So much for the resources available. What about the credit of the three hundred millions who are eager to borrow? What is it worth? An acre or two of impoverished land, a pair of lean cattle, an eight-anna plough, a drycow, a two-rupee goat, represent the assets of the borrower; who will trust him? The function of a bank is to monetise trust or credit, but if the credit is not there, the bank is powerless to monetise it. The development of trust or credit is, therefore, one of the chief tasks awaiting the attention of Government. Credit or trust is the key to industry as to all others, but trust does not grow afoot in a night like the bamboo in June. It is a delicate plant of slow growth. It requires for its cultivation carefully trained gardeners, thousands of them, and the sooner they set to work the better, if the three hundred millions are to begin their onward march within a reasonable time.

The Raiyat is a small man, but multiply him by 300 millions, organise his credit and his energy, and he becomes a giant, able to move the world. Finance the raiyat and he will finance the Government and the new industrial development, the Municipalities, the City Improvement Schemes, the District Boards, and everything else requiring money. Leave him as he is and India will remain what she is, a land of waste and want. The politician clamours for the power of the purse, but there is no power in it; it is as flat as the floor on which I stand, and only the raiyat can fill it. Finance the raiyat, take up the neglected duty, and India will march onwards at the head of the Empire, instead of hanging back in the rear where she now is.

SEDITION AND ANARCHISM IN INDIA

BY

PROF. S. C. RAY, M.A.

ALL the great political writers of the world, although they may differ in many important points of political theory, are, nevertheless, agreed in this fundamental principle of human psychology, *viz.*, that individuals have always tried to live peacefully in society in response to their natural desire to maintain what they consider to be their natural rights. The state is, accordingly, the ultimate form of evolution of the primitive society of "political animals" bound together by social necessities and interdependence and desirous of living in friendship and association and in the freedom of realising their highest ideals. Social order or peace is seldom disturbed unless either the economic interests of one class come into conflict with those of others living in the same or different states, or their rights are encroached upon by the executive in the exercise of their legal and discretionary powers. Commerce and Industry which was, at one time, believed to be the bond of peace and brotherhood among nations, have now become the fruitful cause of political and economic unrest throughout the civilised world, because civilisation has now come to be identified with head-long industrial and commercial progress and has ceased to be associated with the moral, intellectual, spiritual and artistic development of man. It has assumed, for good or ill, an extremely aggressive attitude, because all political power is associated with it, and it has as its aider and abettor an equally aggressive partner, *viz.*, a sense of social supremacy. The causes of disturbance of the social order are, therefore, in the ultimate analysis, threefold: (1) economic conflict (2) social or racial diversity, and (3) abuse of executive power.

The remedy for the third cause is provided in every state by the establishment of constitutions limiting the executive powers, and regulating the relation between the people and Government, and the legal relation between man and man. I am not concerned with this. My object in this article is to analyse how far economic and racial causes are responsible for the social disorder which every sober and right-thinking man deplores, specially because no remedy has yet been devised for these causes.

Human beings in India, as elsewhere, do not differ fundamentally in their desire to live amicably in society and to live in a way which conduces best to their happiness and well-being. What this happiness or well-being implies, depends upon the conception of it entertained by particular groups of human beings. This conception may be shaken or modified by external influences in certain respects, but in its essentials it remains unshaken and resists all outside attempts at encroachment or violation. It is in this way that conflict and discord arise. It is difficult to conceive that men having created society by their social instincts should themselves attempt to disturb its tranquillity unless they are compelled to do so by pressure of circumstances. There is, however, a limitation placed upon these circumstances by the nature of man.

We, in this country, have been accustomed to a paternal government which has given us, while we were ignorant of anything else but our elementary necessities, certain opportunities and blessings which were greatly appreciated. I need not stop to describe them. In certain matters of detail or minor importance, where we came into contact with foreigners, we have had no causes of grievance or conflict. But after the elementary necessities had been satisfied, relations between the two communities began to be deep and complex, and interests developed which threatened to be clashing or antagonistic. And it is in such matters that our nature began to revolt in certain fundamental points.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Fifty or sixty years ago when education had not been so widely diffused as now, when world intercourse had not influenced the lives of Indians, widened their horizon, and broadened their outlook, when the educated community had not come into touch with the realities of public life, and the aims, aspirations and ideals of the great society outside——the people depended more on public power for the realisation of their political life than now. Indeed, political consciousness had not then been aroused ; and self-reliance and self-respect which are the twin brothers in political evolution had not then been born. Government, on its side was accustomed to paternalism ; the people, on their side, were habituated to a mode of political obedience quite out of harmony with a period of political adolescence. The people began to realise that the system of irresponsible government established in the country was not favourable to the development of self-respect and self-reliance and it was coming into conflict with its new and advanced conception of social well-being. If India had remained isolated from the rest of the world, it is quite possible she would have remained contented with her own lot. But coming into close association with a nation whose mission was to uplift her people and to assimilate her civilisation to that of the West, she began to think herself whether she would allow this assimilation to be effected to the complete effacement of her nationality. Herein arose a conflict between the two nations, of which we are now reaping the fruits.

This conflict, as I have indicated above, had its origin in either economic or racial causes. The economic causes are identified with the interests of trade and commerce, which are given undue prominence owing to the fact that the traders have been the founders of the Indian Empire. But it is forgotten that other men are necessary to preserve an Empire than those who founded it. The interests, rights and immemorial sanctities of the Indian people have, as I showed in a previous article, been subordinated to the interests of trade and commerce. In the social sphere, considerations of racial superiority and British supremacy are the predominant elements. The Government refused to concede to popular demands either by changing the system of government or by allowing the conduct of the executive to be changed in their relations with the people, lest such a change might be interpreted as weakness in maintaining British prestige ; they began by differentiating between Europeans and Indians in all transactions where they feared that equal treatment would shake the foundations of that prestige. The Government was naturally supported by the whole European community, who became nervous over any attempt at government to give equality to all, irrespective of race or colour. Thus political cleavage reacted on social cleavage and *vice versa*. The situation may be illustrated by a few specific and glaring instances in which the differentiation was accentuated. It will not be difficult for the reader to judge in each case whether the cause is social (or racial) or economic :

(1) In the carrying of arms, Eurasians are classed with Europeans. In many other respects, they are classed as Indians.

(2) In cases of assault or murder of Indians by Europeans, the latter do not, in the opinion of right-thinking Indians, receive just punishment.

(3) The European and Indian services are graded on different principles. In the former, the number of posts in each grade diminishes as the salaries diminish ; in the latter, the case is quite the reverse, affording less opportunities of quick promotion.

(4) Appointments to the high offices have not always been made on the ground of fitness, but on political considerations. And attempts have been made by high officials to explain away the statutory abolition of racial disabilities.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(5) Honours and distinctions have been bestowed on the undeserving and the obsequious *i.e.*, on persons who have distinguished themselves not in the service of the public but in what is narrowly called "public service."

(6) Greater respect and consideration are shown in private and public places to the meanest European and Eurasian than to respectable Indians. Indians have complained that the criterion of respectability is a particular form of dress, and neither birth nor social position. This is foreign to the Indian idea of respectability.

(7) In public offices, the well-paid posts have been given to Europeans and Eurasians, many of whom are inferior in ability and education to their Indian subordinates. This feeling of bitterness has been aggravated by the distribution of offices in proportion to the population of the different communities irrespective of merit.

(8) Indian public opinion is usually subordinated to European public opinion; and even where there is no conflict between these two opinions, the former is treated with contempt. The statements of Europeans are more trusted than those of Indians and the result is that honest and truthful Indians have recourse to tricks, meanness and lies. This moral differentiation has wrought a revolution in the character of Indians; for "political despotism yields a harvest of deceit, evasions and trickery."

(9) In the case of wrongs done by Europeans to Indians, they mostly remain unredressed (1) because petty wrongs are never brought before Courts of Law and (2) serious wrongs are not adequately compensated. In hospitals, in railway trains and platforms, on public roads, in places of public recreation, events happen which lend colour to the dangerous doctrine that "Europeans can do no wrong."

(10) Criticism of government measures is misunderstood as contempt of government. As this is one of the few constitutional means left to the people to ventilate their grievances, the suppression of this means is naturally taken, rightly or wrongly, to be the grossest abuse of executive power.

(11) Government officials have frequently preached co-operation with Indian non-officials in administration. But this "co-operation," in actual practice, has been one-sided, and the opinions of responsible Indians have been swamped by the opinion of an isolated officer.

(12) In every country, with a semblance of constitutional government, the opinion of the numerical majority is respected and followed. But in India the "ruling majority" has taken the place of the numerical majority and the result is that the opinion of the real majority is disregarded.

(13) Our sentiments have been cut to the quick by the European community without the government raising its little finger to repair the injury. Witness the sewage, dirt, refuse and other impurities which are daily discharged by the jute mills into the sacred river Hooghly which has thereby been converted into a huge sewer for the benefit of commerce. This injury is submitted to by the people with a galling sense of restraint and patience. How many thousands of people thus feel their insignificance before a few magnates of commerce and industry!

(14) The notorious corruption and oppression of the Police has not yet been eradicated. And the people may be excused if they believe that the government is at the mercy of the Police.

(15) Whenever measures have been introduced in India in the interest of Europeans, they have been defended on the ground of western precedents. But when Indians have demanded certain reforms on western models, they have been told that whatever is good or suitable for one country is not good or suitable for another.

(16) It is now generally admitted that the average European in this country is not superior to the best type of Indian. The difference bet-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ween the two is gradually vanishing. But this fact has not removed the prejudice of government against Indians.

(17) Europeans (mostly belonging to the commercial community) are greater breakers of law than Indians of similar position. If confronted by the guardians of law, they get off with impunity by bullying them.

(18) The bye-laws of railways, tramways and other private undertakings are framed with an eye to the greater comfort and convenience of the European than the Indian. This is possible because the management of such undertakings is in the hands of Europeans.

(19) The Anglo-Indian press has been loud and strong in their vilification and abuse of Indians and in exciting racial feeling. But the government has made no attempt to stop this.

(20) The unrestricted practice of cow-killing in India has wounded the feelings of the majority of Indians. I have been assured on high authority that cow-killing is not sanctioned by Mahomedan law and it is quite possible to prohibit the practice without shocking the religious susceptibilities of our brother community. But the Europeans themselves are sinners in this respect. They are unable, for the sake of appeasing the Hindu sentiment, to set an example of self-sacrifice to the Mahomedan subjects by foregoing beef-diet and resorting to mutton or goat meat. "I cannot," wrote Zeller to Goethe, "conceive how any right deed can be performed without sacrifice". If the Europeans had considered this "right", I am sure they would have made this sacrifice.

It is these and such-like grievances, having their root in racial or economic causes, which lie at the bottom of the present discontents and which are responsible for the "sedition and anarchy" that are alleged to be rampant in the whole country. If the causes are carefully analysed, it will be found that the responsibility must be fixed, in the last resort, (1) on government, (2) on the European community. And yet, by a curious irony of fate, it is these two bodies that are emphatic in their denunciation of these two crimes, and emphatic in their determination to enforce the most drastic measures for their repression. The Report of the Rowlatt Sedition Committee is replete with passages * which prove *prima facie* that repression has preceded and is the cause of anarchism.

These passages in the Report convincingly prove that the young men were goaded to desperation by certain measures which were disliked by the people. Except in the case of their association with the German plot, which may now be said to be finally crushed, there was no idea to overthrow government, but there was undoubtedly a firm resolve to make the administration impossible as a protest against its methods. The suggestion that their aim was to overthrow the "established government" of this country appears to me to be a pure fiction. Their efforts were directed not against "established government" but against its methods, and against individual agents of government. Overthrowing the *methods* of government is not synonymous with overthrowing the government itself. In any other State where foreign rule does not prevail, the methods adopted by these youths would not, in theory, be interpreted as *seditious*.

(*) (i) Mr. Rand, who had become *unpopular* owing to his being the officer charged with the enforcement &c (p. 3)

(ii) Among those who united to excuse the murder and to praise the bomb as a weapon of offence against *unpopular officials* was Tilak (p 6.)

(iii) In the year 1897 the Poona-ites were subjected to *oppression* at the time of the plague (p 7.)

(iv) The disorder which prevails owing to the pride of military strength (p 7.)

(v) Destroy the government because it is foreign and *oppressive* (p 8.)

(vi) Protest against the *inhuman* transportations and hangings of Indian youths (p 9.)

(vii) The collapse of the whole machinery of oppression is not far off (p 11.)

although they were certainly *violent*; for the right of resisting the government in extreme cases of political discontent is recognised in abstract political theory, and in no country except in India would such a right be construed as an attempt against the *State*, although it is undoubtedly an attempt against the *constitution*. The young men were, rightly or wrongly, smarting under the impression that the people were not treated with justice and consideration either by the rulers or by the members of the ruling race. Impulsive or impressionable nature is quick to take revenge. The form which this revenge took, in the absence of a constitutional remedy, was *Swaraj i.e.*, government by themselves without the association of alien rulers. This was not a goal but an ideal—impracticable and imaginary. But like all ideals it sprang from the perception of an actual evil. An English political writer says: "Representative institutions, petitions, public meetings, a free press are various means through which the people can assert itself. When refused these means, and when yet sufficiently vigorous to use them, it will assert itself by armed rebellion or, if that is not possible, by secret conspiracies and assassinations. . . Political assassination is a clumsy and ineffective method of moving a vote of censure on the government in countries where the opposition has no constitutional means of expression. . . . Statesmanship has been defined as the art of avoiding revolutions; and this is so far true that the wise statesman will make revolution impossible by making it unnecessary, or certain of failure because not supported by the General Will."

A revolution, of course, is impossible in India, but the 'anarchism' is its substitute. If we survey the whole situation impartially, we have no difficulty in discovering that even "anarchism" has been magnified into something which it is not. Anarchism is the extreme form of individualism, and means the abolition of all government, the suspension of all sovereign power and the establishment of a form of individual rule. The more rigid and mechanical the autocratic power of government, the closer does this individualism resemble anarchism, because autocracy resents every form of resistance or restraint, however legitimate and constitutional. What is called "anarchism" in India would never be called "anarchism" in England; indeed, anarchism cannot exist in the latter country. Anarchism is incompatible with the social nature of man which implies mutual dependence and mutual service. If this inter-dependence is assumed, anarchism, which implies absolute individual freedom, cannot exist in a well-ordered society. Anarchism is the product of those countries where the "government" is divorced from the "*State*". It is pre-eminently a protest against autocratic rule; and in a democracy, it would be an anomaly, an exotic. 'Anarchy' has become a by-word in this country, because the political status of India is singularly anomalous; it is not a "State" in the strict political sense of the term; it is, however, theoretically a democracy because the executive are responsible to a remote and indifferent democratic Parliament; but it is practically an irresponsible autocracy. The political principles applicable to a "State" have been tried and applied in this country by administrators accustomed to the institutions of a free country. But India was unprepared for their reception and culture; and it happened that while the Englishmen were enjoying the fullest amount of freedom which they had carried with them from home, India suffered from the most flagrant inconsistency, namely the incongruous combination of the theoretical principles of liberty with the actual subjection of the people. The solution of this acute political problem has baffled some of the greatest of Indian statesmen imbued with the highest political sagacity and sympathy for the people. Such failures may in part be attri-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

buted to the opposition of the European community, whose vested interests in the country were too strong to give way to Indian interests. The European community in the preservation of these vested interests—which I repeat are economic and racial—have not felt the slightest compunction in rousing the bitter feelings of the Indians. By their insults and rudeness, by their imperious and over-bearing attitude, by their assertion of racial superiority and reminder of Indian inferiority in all their relations with Indians, by their encroachment upon the civilisation and traditions of India, and lastly by the desecration of our sacred rights and sentiments—they have goaded a few people—happily not all—to desperate remedies because all other remedies had failed. The situation has been accentuated by government sitting with folded hands and looking listlessly upon the situation, unwilling or unable to repair the wrong which the people suffered at the hands of their European fellow-subjects. The Anglo-Indian Press fanned the flame by their cowardly, mean and scurrilous attacks upon Indians for their "aspirations" to a position of equality in an Empire of justice. This equality of course did not mean equality in political privileges—but ordinary equality in the eyes of law and equal opportunities to develop their capacity. The government which now accuses Indians of sedition and of exciting ill-feeling between one race and another looked with perfect unconcern upon a similar action on the part of the Europeans. It is not now fair to the Indian community to say that they are the authors of the sedition, whereas the real authors are the Europeans, who, having done the mischief, now try to shield themselves under the protection of government. What has the government done to stop the wrongs committed by Europeans against Indians? What has it done by way of warning them to restrain from indulging in speeches, writings and action which, every statesman could see, were pregnant with seeds of discontent and disaffection? What law did the government enact to remedy a state of lawlessness which, as it was unchecked, was to lead to worse and more serious lawlessness in the future? Did the government in the early stage of this ferment realise that there really existed a state of lawlessness in the country which should have been nipped in the bud? Did not the government display a lamentable lack of statesmanship and knowledge of national psychology in not appreciating the critical nature of the situation which events were slowly evolving? If anarchy is identified with lawlessness, the European community in this country are guilty of sowing the seeds of anarchism of which the whole country is now reaping the fruits. Those who have broken the 'law' of the country (I do not mean statutory law alone) by injuring the feelings of the people, their deep seated prejudices, their dearest and most cherished institutions by means of physical and moral coercion are anarchists of a worse and more cowardly type than the men, who, because they have had no constitutional remedy available to them, were forced, by pressure of circumstances, to have recourse to unconstitutional and violent methods.

A jealous and nervous desire to preserve the economic interests of the European community and to maintain the racial (as distinct from British) supremacy are the insecure pillars on which the government is supported. This fact has shaken the confidence of the Indians in its foundation on justice. They are under the impression, right or wrong, that the obstacle to the highest life of man here is the distribution of "partial justice" in cases of conflict between an Indian and a European in the law courts, in public offices, in the field of commerce and industry, in social functions and generally in their daily intercourse in life. "The essence of justice," says a great political thinker, "is that different individuals

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

are not to be treated differently except on grounds of universal application, and that the most prominent element in justice, as ordinarily conceived, is a kind of equality *i.e.*, impartiality in the observance or enforcement of certain general rules allotting *good* or *evil* to individuals." This "universal justice" has been replaced by "partial justice"; and the change has been brought about by racial and economic causes.

The remedy for this state of things is "Self-Government." The Government of India has hitherto been a personal government, fluctuating in policy, fluctuating in political wisdom, fluctuating in methods, fluctuating in the appreciation of national psychology and fluctuating in its analysis of the lessons of experience. These fluctuations have been attributable to the personal factor in government. There has therefore been an antithesis between a varying and unstable element represented in the chief Magistrate and a stable though slowly evolving element represented in the nation. The psychology of the former has been changing and fickle; that of the latter, though changing, was a change of organic and steady growth from its primitive to its fully developed state, which, according to Aristotle, is called its "nature." It is difficult to reconcile these two elements politically:—one personal and the other organic in Indian society. An unstable element is unfitted, by the inconstancy of its nature, to govern a slowly evolving society containing in itself the elements of organic growth and stability. The combination is a psychological incongruity, but it has been maintained and preserved by artificial means which have proved disagreeable to both. The remedy therefore lies in placing the government, as far as the traditions, habits and sentiments of the people are concerned, in the hands of the stable element in society, *viz.*, the people. Self-Government, though it may not please and appease the Europeans, will certainly please and appease the Indians. It is not to be taken narrowly as a concession to political agitation, but as a concession to popular sentiments or general will, an affront to which leads to disaffection. It will facilitate and smooth the way to the steady evolution of the vital and stable element in society, unobstructed by the jarring elements that oppose it. It may not create a system of government that is efficient from the point of view of expert or the British administrator; but it will, if the European element is adaptable and flexible, bring about an adjustment between the conflicting sentiments and antithetic geniuses of the two nations. No government measures, no criticism or abuse by the Anglo-Indian Press, no vilification and insult by the European community, no threats nor acts of repression by government abuse of power can remove or cure the natural "defects of virtue" of a nation. Our nature hankers after ideals which we cannot realise; our nature repels certain foreign ideals which are forced upon us against our will. The European makes certain demands upon our nature which it is impossible for us to satisfy; we make certain demands upon the Europeans which they feel unable to satisfy. The former, on our part, is not an evidence of inefficiency. There can be no question of inefficiency in the management of affairs which are our own, or in the mismanagement, in the opinion of others, of affairs which are against our genius: there is no justification for abuse if we manage our own matters badly; there is no object in criticism if we understand a question in a different light from others. Such questions arise when there is a conflict of interests, or conflict of spirit, or conflict of views or conflict of power between us and the Europeans. In such cases, we are not competent to pass a free verdict. We are forbidden from saying that a certain thing is good or bad for us. We accept the verdict of another because we are under the incubus of moral or intellectual serfdom engendered by poli-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tical subjection. We say in cowardice of conscience what we ought not to say otherwise.

The remedy proposed by government for the suppression of sedition and anarchism may be materially effective; but it lacks moral force or sanction. And "the less the moral strength of any law, the greater the physical strength which government must exercise to enforce it." The analogy between anarchic India and the sick man demanding treatment by a specialist is amusing though not instructive. I wonder if it was meant seriously. It is specious reasoning to argue that *the remedy* for a sick man is the *medical* treatment, however drastic, prescribed by the *specialist*. But medical treatment alone is not effective. A man suffering from cholera stands little chance of being cured by external or internal application of "specialist" medicines if at the same time he is fed on ground-nuts, gram or Indian corn. He must be fed on barley water before the medicines can be expected to take effect.

The whole substance of my argument is that a repressive bill alone is not adequate; and that simultaneously with measures for effectually dealing with sedition, measures should be taken for rooting out its ultimate causes. *Cessante causa cessant effectus.*

We do not want responsible government of the Australian or South-African type where the basest commercial instincts of the British race find free play; where the native and oriental immigrant population are exploited to a merciless extent in the interest of commerce and industry; where God's great gift to man, *viz.*, freedom, is relentlessly used for the restriction of freedom, and abused in the persecution, exclusion and even extinction of the natives; where the government may be identified with a vast industrial and commercial organisation tending to "substitute interests for principles as the guiding star of political life"; and where the population is subjected to the most degrading disabilities in order that the white population may thrive and prosper —a population which cares a two-pence for the reputation and fair name of the mother country. We hate such a system of responsible government: we hate it as an ideal; we hate it as a reality. We want a government which shall be responsible not to the interests of race or commerce but to righteousness and humanity, to justice and brotherhood—not partial or imperfect justice, but impartial and universal justice to black and white, to the Hindu or the Mussalman, to the Jew or the Christian, to the high and the low, to the rich and the poor.

I may possibly be accused, in writing this article, of ridiculing and contemning the Government of India and the European community. I emphatically, and without any tinge of hypocrisy, deny this charge. My chief object has been to diagnose the political situation of India from a psychological point of view; and if, in discussing the situation, I have made certain reflections, they are not meant in any way to wound the feelings of the European community, but to emphasise and give point to my theory. It is my desire, and it should be the desire of all who take an interest in the well-being of India, that all communities should live in a spirit of cosmopolitan brotherhood and not as distinct and isolated entities. The State may be composed of diverse elements: but organically it is one whole. It should be the aim of all citizens, Hindus, Mahomedans, Christians, Parsees etc., to live a life of universal brotherhood in the service of the State; and not of one community or class to dominate over all the rest; to make the task of administration smooth, and pleasant; to point out, in a friendly spirit, its defects and dangers; to advise how they can be removed. In the attainment of this aim, the psychological factor is often ignored; and the personal factor is idolised. My purpose throughout has been to enforce recognition of national psychology in framing measures intended for the promotion of social order and well-being.

The Extinction of the Liquor Traffic in America

BY

SAINT NIHAL SINGH.

To India, as to the rest of the world, the American decision to abolish the liquor traffic from every square inch of American soil is a startling politico-social development. No other nation has had the courage to take such drastic action. Even under the stress of war, European peoples contented themselves with stopping the consumption of certain forms of liquor, such as vodka in Russia and absinthe in France, lowering the percentage of alcohol in intoxicating beverages, and curtailing the hours during which liquor could be bought. The American refusal to compromise with liquor in any way, therefore, is an epoch-making event in the world's history.

The legislative decree by which the American will to suppress the liquor traffic will be enforced has taken the shape of an amendment to the United States Constitution. The Congress passed it on December 17, 1917, and specified that it must be ratified by the legislatures of the requisite two-thirds of the States composing the Union within a period of seven years.

Within 13 months the amendment, which prohibits the manufacture, importation, exportation and sale of alcoholic liquors of all kinds anywhere in the United States except for purely medicinal and industrial purposes had been ratified by 36 of the 48 States comprising the American Union. On January 16, 1919, the House of Representatives and Senate formally announced the ratification of the amendment.

It matters comparatively little whether traffic in liquor ceases within a few weeks or within a few months. The main thing is that the victory has been won—won by constitutional agitation. People in America, and outsiders who closely follow American events are greatly surprised at the rapidity with which the prohibition movement gained support during the last few years.

Agitation for the suppression of the liquor traffic began in America 80 years ago. As long ago as 1846, a law to prohibit liquor was passed in the State of Maine. Five years later, a much more drastic Act was passed providing for the confiscation and destruction of intoxicating liquor, and has been in force ever since, with the exception of the years 1856 and 1857. The States of Vermont, New Hampshire, and Connecticut followed the example of Maine.

Similar attempts were made in the States of New York and Indiana, but failed. Prohibitory laws were passed in both States, but were declared unconstitutional.

In 1869, the prohibition party was formed to carry on organized agitation for prohibition, as it was felt that the liquor interests constituted a tremendous disrupting force in American politics, and unorganized opposition had little chance against such a wealthy and resourceful combine. Though the leaders of the party had right on their side, and though they were zealous and determined men, they appeared to accomplish but little for many years. They did, indeed, convert many individuals to their cause, and here and there a State went "dry" (prohibitionist.) But until quite recently the movement did not capture the American imagination, and remained more or less inert.

When I first went to the United States about fifteen years ago, all sorts of jokes were cracked at the expense of prohibitionists. Talk of fifteen years! Less than half a dozen years ago, when Mr. William Jennings Bryan gave his first official dinner as Secretary of State in Dr. Wilson's first Cabinet and astounded the Washington world by substituting unfermented grape juice

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and other "soft" drinks for the usual wines and spirits, he was lampooned by caricaturists and writers in newspapers, large and small all over the United States.

In the early days of my sojourn in the United States, I used to hear all sorts of stories about the irregularities that occurred in prohibition States. I was told, for instance, of a "dry" town in Louisiana where one of the doctors has his consulting room in a chemist's shop. Day-long men streamed into his office and described their imaginary symptoms, and he solemnly provided them with prescriptions for liquor which the chemist immediately filled. They drank a "dose" on the spot, and carried the rest away for consumption outside. I was also told of "dry" towns where railway trains came in loaded with jugs, bottles, cases and barrels, shipped by express companies from "wet" areas to private individuals who waited on the station platform to claim them.

I saw, with my own eyes, enough to confirm my suspicion that all was not right in prohibition districts. For instance, in a "dry" town in the State of Iowa where I lived for several months, I used to see many evidences of the surreptitious consumption of liquor. Empty whiskey and beer bottles lay hidden in bushes, hedges and alleys, where they had been thrown after their contents had been stealthily imbibed.

When I asked prohibition leaders for an explanation, they told me that, though irregularities were grossly exaggerated by the partisans of the liquor interests, yet it was quite true that some did occur. They ascribed them partly to the laxity of officials charged by the State or County with enforcing the prohibitory laws, who winked at such practices and often enriched themselves by helping topers to evade the law. But much of the mischief, they averred, was caused by the peculiar conditions regarding inter-State commerce prevailing in the United States. So long as there was not a specific law prohibiting the shipment of liquor into "dry" States, irregularities would continue, and they therefore were bending all their efforts to secure such an enactment. As I shall show later, they succeeded in that object in 1913.

I had not been in the United States long when I began to notice that the attitude of the American people towards drink was changing. Some of the young men who, not so very long before, had indulged in jokes about people who were "on the water wagon" and drinking "buttermilk," I found, were not so facetious on the subject as they used to be. Upon probing the matter, I discovered that these young men had learned that they could not afford to crack jokes, because their bosses had made up their minds that they would have no employees who drink liquor, no matter how moderately, and since they valued their positions, abstinence from liquor had ceased to be a joke so far as they were concerned.

At first I was inclined to believe that the employers who thus frowned upon liquor were exceptional, but I soon changed my mind. I heard again and again, of instances of employees being sacked because they would not or could not give up drink, and of others who failed to get into large works and offices because they were suspected of drinking. I noticed that Americans who controlled railway employees, electricians and other workmen who used delicate tools, and bank clerks, were particularly relentless in closing the doors of their works and offices to persons who drank, no matter how moderately.

A man who might, by any chance, have been drinking, the railway companies declared, ought not to be trusted with the lives of hundreds of men, women, and children. The bank directorates felt that they could not depend upon the honesty of a drinking man, who might at any time be led into temptation that would make him an enemy to society. Managers of workshops knew, from actual experience, that it was a physical

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

impossibility for a man who drank to have a steady hand, and his fumbling with tools would result in actual monetary loss to them.

The women members of workers' families, I found again and again, appreciated the teetotal policy even more than the men did. This is not to be wondered at, for the men who worked under abstinence from liquor enforced by their employers returned to their homes as soon as they finished work, bringing their money with them intact, instead of hurrying off to a liquor shop to have a drink or drinks and coming home with lightened purse, and, more often than not, drunk.

The southern States of the American Union which have a large negro population, the coloured people, in some districts, outnumbering the whites by four to one, adopted prohibition because liquor led to inter-racial fights and to murders, rapes, and other crimes. The leaders of the negro community were even more anxious than the white man to protect their people from the ravages of alcohol. Thus it came to pass that far-sighted persons of both races espoused the cause of prohibition. Indeed, until quite recently most of the prohibition territory was in the south.

The prohibitionists found that they were able to gather under their banner many diverse interests, all enthusiastically contributing towards the success of the cause, as soon as they began to ask for the suppression of alcohol, because it lowered efficiency, bred crime and destroyed homes and wealth instead of continuing to carry on merely a moral crusade. Industrialists and commercialists, theologians, ethicists, moralists, men of science, and sociologists worked side by side, each giving his best to bring about the desired end.

The momentum gained from this conjoint effort galvanized the movement. By the exercise of local option and the passage of special State laws, county after county and State after State banned liquor.

Persons who painted a black picture of financial ruin resulting from the closing down of brewing and distilling establishments have been proved to be scare-mongers. In "dry" States, breweries and distilleries have, with little confusion or loss of time, been transformed into factories for the production of malted milk, vinegar, unfermented grape juice, and similar harmless articles, and, under the new regime, continue to pay large dividends. Drink shops (saloons) were rapidly turned into shops for selling harmless goods and proved successful.

One of the strongest arguments employed by the anti-prohibitionists was that the State would suffer seriously by losing the excise revenue that the liquor traffic had brought in. But these critics forgot—perhaps conveniently—that, freed from the curse of drink, the capacity of the people to bear taxation would increase, as would also their purchasing power, so that revenue from other departments would expand, and more than offset the loss of excise.

Wherever alcohol has been banished in America, poverty and dependence upon charity have been reduced, homes show signs of affluance, the deposits in banks, especially savings banks, have risen and facilities for education have increased. In every such place crime shows remarkable dimunition. Convictions for disorderly conduct, vagrancy, assault and battery, and even more serious crimes such as rape and murder, have greatly decreased. For instance, I was told sometime ago that for two weeks after Helena, Arkansas, went "dry" there was not a single arrest. The business men of Little Rock, another Arkanas city, declare that their business has benefited from prohibition, and they would not change back to the old order of things if permitted to do so.

In 1913, the prohibitionists won a tremendous victory when the Webb-Kenyon law was passed prohibiting the importation from one State into another of liquor "intended to be received, possessed, or in any manner used" in violation of any

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

law of the State into which it was imported. That measure gave the individual States a powerful instrument to make prohibition effective within their confines. But the United States Supreme Court is the final arbiter in America, and the law remained practically inoperative until three years later when that body decided that it was constitutional.

By that time (the end of 1916) 25 States had gone "dry." Putting such portions of "wet" States as had gone "dry" under local option, together with the "dry" states more than 85 per-cent of the total area of the country, containing more than 60 per cent of the people of the United States has subscribed to the principle of prohibition.

The war gave the movement an added impetus. American captains of industry saw how the consumption of liquor had been cut down in various European countries in order to increase the output of war-materials, and many of those who had refused to take any interest in the prohibition movement became its active supporters. But for such conversions to the cause it would have been difficult to secure the passage of the amendment for nation-wide prohibition passed by the United States Congress of December 17, 1917.

During the later stages of the struggle, and after the signing of the armistice, another factor came into operation that greatly helped the cause. Everyone interested in the preservation of peace and order realised that the liquor shop was the place where not only crime was born, and political corruption bred, but also that it was the hatching ground of revolutionary plots. Many powerful persons who had, in the past, sneered at prohibitionists as "cranks" but who were afraid of "Bolshevism, forgot their prejudices as soon as they realized this danger.

If the American earnestness in regard to ridding the nation of the evils of drink continues as it gives promise of doing, there is every reason to hope that the passage of the prohibition amendment to the Constitution has really sounded the death knell of the liquor traffic in the United States.

FROM VIENNA TO PARIS—1815 TO 1919

BY

MR. G. SRINIVASA AIYAR.

HISTORIANS of the Nineteenth Century preferred to date its birth at the fall of Napoleon in 1815. For about quarter of a century Europe had been shaken to the very foundations of its polity; and on the fall of Napoleon, the political architects planned the reconstruction of Europe in the Congress of Vienna. In their anxiety to repress revolutionary and republican movements, the despotic monarchs and reactionary politicians of the Vienna Congress sought to restore the old European polity of Empire and absolutism. The political history of the nineteenth century Europe has been a story of repeated efforts to remodel the political design of Vienna to satisfy the demands of democracy and nationality, and has culminated in the collapse of the continental empires and the triumph of the democracies of the West. The Peace Conference has met in Paris to record the progress and achievement of democracy during a century and to plan the political reconstruction of the world on the basis of self-determination. From the Congress of Vienna to the Paris Conference—has been the progress of the century. 'From Vienna to Paris' sums up the progress of the world from

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

despotism to democracy; from absolute empire to popular republic; from the repression of nationality to the triumph of nationality, leading to the peace of the world. The Congress of Vienna restored and perpetuated old despotic systems of Government on the continent; strengthened the empires and tightened their hold on subject peoples; and suppressed the forces of nationality which had done their work with the fall of Napoleon. The Paris Conference seals the doom of despotism and empire, stimulates and fosters democratic forces and guarantees the rights and liberties of nations. The very change in the venue of the Congress indicates the difference in character between the settlement of 1815 and that of 1919. The Capital of the oldest Imperial Dynasty in Europe, the stronghold of reactionary despotism and the seat of the Government of an empire over oppressed nationalities, Vienna was the select sacred spot dedicated to the old order; nor can a more congenial birthplace be chosen for the new order of popular liberty, national rights, and international peace, than Paris—the heart of the Republic, the capital of France and the mothercity of Western arts and civilisation.

It is interesting to note a similarity of aims in the two settlements separated by a century—correction of the offender against peace and establishment of universal peace. In 1885 France was reduced to her pre-war size; and to cure her of her violent distempers, her political regimen was prescribed by the allied powers; in 1919 the Central powers are to be reduced in size and in strength, and they are ordering their constitution at the bidding of the Associated Powers. As in 1815, the losses, the miseries and the sufferings of the war have led men to devise means and machinery to maintain permanent peace.

More striking than the similarity of arms is the difference in methods and machinery between the settlements of Vienna and of Paris. The political regimen prescribed for France in 1815 was reversion to Bourbon monarchy; and Europe was to be made safe for absolutism and empire by crushing the liberal and national movements in Italy Hungary and Poland. In 1919 the Germans are gathering materials for the construction of a socialist republic from the debris of a fallen empire; independent national states with popular governments born of self-determination rise up in Central Europe; France and Italy come by their own and get back the severed parts of their mutilated body; and the heroic soul of Belgium shines in the red glory of war to illustrate the triumph of justice, liberty and right: the world is to be made safe for peace and democracy. The international machinery devised by the political architects of a century ago for the establishment of European peace and order was the Holy Alliance—an unholy combine of the despots of the continent to kill liberty and progress; the peace of Europe was to be vested in the custody of the despots. The international machinery sought to be set up in 1919 for the preservation of the peace of the world is a League of Nations, a body of representatives of the nations; the peace of the world is to be the business of the peoples. 'From the Holy Alliance to the League of Nations' sums up the onward march of the world in the century.

DEATH IS EVERYWHERE

BY CLOUDESLEY BRERETON.

Death, death is everywhere. Where'er we tread,
We stir the dust of myriads long since dead.
Our food and drink, of life the staff and stay
Are but the finished products of decay.
Our marble halls, with all their quarried stones—
What are they but the bleached and whitened bones
Of countless generations, piled on high,
Hecatomb upon hecatomb to the sky.
Barrows the dead have built themselves?—The Earth
Is one o'erflowing cemetery,—its girth
One seamless zone of graves. There's not a rod
Upon its surface that cries not to God
For some life sacrificed. We mortals are
But mites and midges on a moss-grown star,
Frail ephemerides that breed and craw
Among the middens of this festering ball.

Science Progress.

INTERNATIONAL RECONSTRUCTION

BY

MR. S. JACKSON COLEMAN.

THE world is ripe for a new social programme. The War, with its unparalleled carnage and bloodshed, has materially altered the map of Europe, and it has similarly altered the map of men's minds. The great world-war has swept away old crusted conventions which cobwebbed the mind, and false foundations of social science upon which men laboured vainly to build Utopia. Now that a new mentality has been created, all these things must be reassessed at new values. All the great problems call for a broader view, a larger concept, and a more general action with the dawn of this newer social consciousness. We are coming to realise, indeed, that we cannot severally play our part as citizens of our respective countries if we forget that we are also citizens of the world. This new spirit is arising everywhere, founding a New Era of international relationship, and the thrills of international goodwill are even now stealing across a war-weary world.

Never before, however, has there been such hopefulness. The world may seem in disruption, and be hungry and sick, burdened with debt, and afflicted by the weight of its new problems. Nevertheless, the power of organised human resources has been amazingly shown, both for the arts of war and peace. The uprisings of the European peoples, and the political advances of organised democracy, open up an entirely new prospect for the employment of these illimitable resources. The cynic, of course, will say that the better world to come lacks nothing for its construction except the better men. The spirit of the masses, with all its faults, however, is a more fraternal spirit than any previously abroad on the earth, and undoubtedly this spirit is almost daily making history for itself.

For four years the evil shadow of War has spoiled our outlook. Now that peace has dawned, we look with faith to the future, trusting that the terrible lessons of the catastrophe will not have been learned in vain. If the result of the terrible carnage and desolation is the birth of a real League of Nations—not one built on words, but on the desire to do what is right and just to all, irrespective of race or creed—then the War will not have proved ineffectual. For helpful co-operation in the task of making this world safe for the common people by whom it is inhabited is, after all, the all-important duty.

This great crisis, therefore, seems to be the great opportunity for which we have prayed. The old world is a ruin; a new world must be built. In former days, our home was indeed our world; in these days the world must be our home. Co-operation alone offers to the world a complete philosophy of life and a working model of a noble and enduring civilisation. The peace of the world entirely depends upon the universal application of these principles. For there is no choice except that which lies between co-operation and chaos, between associated freedom and Imperial despotism.

If Wordsworth could write one hundred years ago, as he saw the beginning of a new day of hope and liberty

> "Bliss were it in that dawn to be alive,
> But to be young, 'twere very heaven"

with what added meaning may we quote these words as we herald the New Age! Let us not forget, however, that the foundations of the New World have been well and truly laid by myriads of heroic men and women, and that this task must be approached with the spirit of sincerity. Peace has her tasks not less arduous than those of War, and this present occasion is a time for the casting away of all those sordid desires which

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

are incompatible with the grand purpose of rebuilding human society on a stable foundation of mutual aid and wholesome rivalry.

Let us welcome the disappearance of racial, class and sex distinctions. For there are battles other than inter-racial. There are wars in social, mental and religious realms. In the religious world, few things have been more pitiful, more humiliating than sectarian squabbles and differences over long-drawn-out controversies. Men will become more and more impatient in the future over the relatively frivolous issues which have distressed and divided the religious world; the core of the world's new creed will be:

"For the love of God is broader
Than the measure of man's mind."

The work of reconstruction calls for a continuance of the spirit of self-sacrifice, self-restraint, and a realisation of a great end, which have tilled the cries of faction during the war and inspired all with a common aim. We shall certainly miss the central spiritual lesson of Germany's downfall if in our schemes of reconstruction we fail to realise that religion and morality, faith and idealism, are the only foundations on which national stability and progress can endure.

The fortunes of mankind, as never before, are now in the hands of the democracy. The select classes of mankind, in fact, are no longer its governors. For the real strain of four year's unparalleled slaughter and bloodshed, as President Wilson has so ably reminded us, has come where the eye of Government could not reach, but where nevertheless the heart of humanity beats. We are bidden by these people to see that this strain does not come again.

BISMARK

BY MR. K M. PANIKKAR

MR. GRANT ROBERTSON has produced a timely book.* The present is a time when as a result of the prejudices generated by the War, the world in general has lost the right perspective concerning the German Empire. The utter disgust and repugnance with which civilized humanity has viewed the barbarous conduct of the German War-Lords has had the effect of war retrospectively distorting historic judgments. The opinion has often been expressed of late, even in quarters which ought to have known better, that the real source of the European conflagration was the refoundation of the German Empire in 1871. It has been widely held that the real originator of the war is not really the autocracy of the present day Germany but the man of blood and iron who founded the German Empire under the hegemony of Prussia and on the ruins of Napoleonic France. Mr. Robertson, though he claims that his is by no means a war-production, is a firm believer in this theory and has in the book under review produced a historical justification for it.

There are very few among English historians who could claim the same intimate knowledge of German character and psychology as Mr. Robertson. He shares with Sir A. Ward the honour of being the most profound student of German institution in England. The reading public in general and historical scholarship in particular should be thankful to Mr. Robertson in having so utilised his knowledge of the German people and their history in the 19th century as to produce this handy but authoritative volume on Bismark.

"The life and times of Bismark" is one of the most complicated studies in historical biographies. To a great extent from 1866 and wholly from

*Bismark: By Grant Robertson, M.A., C.U.O. Fellow of all Souls. Constable & Co., London.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

1871, the history of secular Europe is dominated by the personality of this single individual. To write the life of Bismark from the time of the Schelswig Holstein question to his dismissal in 1890 is to write the history of European Diplomacy in the latter half of the 19th century. The proper grouping of historical facts, the correct analysis of the interplay of complicated factors, the close study of the sensitiveness of national opinion in every country, during a period of 30 years, cannot be lightly undertaken or easily realised. This difficult task Mr. Grant Robertson has successfully fulfilled.

It is impossible to go into detail, but Mr. Robertson comes to a conclusion different from that held by most historians on one of the most critical events in the German history of the 19th century. The Frankfurt Parliament of 1848—the great convention on which the hopes of the liberals in Germany rested—ended in an absolute failure. The opinion generally held which seems to us to be entirely wrong, is that the Frankfurt Parliament failed because of the academic amateurism of its authors who wasted their time in threshing out fundamental rights. Mr. Robertson holds the view that such criticism is really amateur and ignorant of what revolution by liberal methods from an old to a new system implies. 'The scheme of 1848' was, as Mr. Robertson remarks, 'a noble and imaginative effort in constructive statesmanship which bore the stamp of an inspiring belief in the capacity of the race for achieving salvation when men build upon the uplands and not the lowlands of human endeavour. Had the unification of 1848 been given a fair trial, it would have moulded the German mind and directed German destinies and ambition into paths of self-development of incalculable benefits to Germany and the world. Its failure was a tragedy for German and European civilisation.'

The remarkable feature of the solution of 1848 was, he says, 'the rapidity with which in the smoke and dust of bewildering revolution, the liberal majority hammered out by argument and under conditions of Government by public meeting a scheme of unification that probed deeper and was more complete than the constitution of 1867.' Historical hypothetics is perhaps the most useless form of speculation, and it may be permitted for us to doubt if the historical evolution of Europe in general and Germany in particular would have followed any very different course had the scheme of 1848 been worked out and a unification of Germany based on it achieved.

Mr. Robertson's object in this book has been to study the effect of Bismark's achievement on the history of the 19th century rather than to write a biography of the great chancellor. Therefore, naturally enough, the picture of Bismark is very incomplete, and we see very little of that disease peculiar to biographers which Macaulay has called *Lexus Boswilliana*. All the same, Mr. Robertson is one who appreciates the great merits of the Iron-Chancellor. Indeed, it is impossible for any one to withhold a great amount of genuine appreciation for this Brandenbrug junker. For after all, from the historical point of view, a man can be judged only from his achievement and the amount of dynamic force that his personality generates in its relation to the general current of events. In this sense, post-Napoleonic 19th century cannot boast of a greater man than Otto Von Bismark who raised Prussia from the humiliation of Olmutz to the hegemony of the continent, upset the time-honoured balance of power which lay in an *entente* between England and Austria against France, humbled the pride of Napoleon and was the virtual dictator of European affairs for nigh 20 years. The age of which he was the founder has closed with the collapse of Imperial Germany; but his historical greatness remains embodied in the policy of Europe during the last 50 years.

THE ROWLATT BILLS AND SATYAGRAHA

The passing of the Rowlatt Bills in the teeth of the opposition of an overwhelming public opinion is yet another proof of the persistent obstinacy of the bureaucracy. Never was public opinion in India more unanimous and pronounced than in the unequivocal denunciation of what is popularly known as the "Black Bills." Men of all shades of political opinion all over the country have protested against the measure with a warmth of feeling that is not likely to subside till it is rescinded. The indecent haste in which it was rushed through the House at a midnight sitting should have almost exasperated the non-official members who have with one voice condemned the obstinacy of the Government in terms as eloquent as convincing. While sympathising with the Government in their anxiety to give no quarter to anarchists and to nip revolutionary plots in the bud, the wisdom of enacting such a drastic measure especially at a time when public opinion in India is focussed on the best means of successfully working out the Montagu-Chelmsford reforms is questionable in the extreme. In this matter the non-official members of the Viceregal Council have left no stone unturned. They have with remarkable ability and conscientiousness voiced the just resentment and indignation of the people at the way their will has been flouted by the bureaucracy. This only strengthens the need for a reform of the constitution in such a way that the will of the people may prevail. But that is another story. After all the 150 amendments with which non-official members tried to improve the Bill and the ultimate modifications it has undergone it still remains as vicious and objectionable as ever. No wonder that finding all manner of opposition fruitless, Mr. Gandhi has as a last recourse resorted to Satyagraha as the only remedy for such bureaucratic obstinacy. We have too bitter memories of the way in which the Press Act and the Seditious Meetings Act have been put into force to believe that the new legislation will not be taken advantage of by the Executive to give vent to petty acts of despotism. And a man of Mr. Gandhi's judgment and experience will not lightly undertake this extreme measure unless he has been convinced of its compelling need. With the greatest respect for his sincerity, his saintly disposition and his lofty sense of public duty we still believe that all means of remedy are not exhausted and that there are yet other courses open which should be tried before resorting to Satyagraha. It is unfortunate that the grace associated with the reform proposals should thus be nullified by the deepening shadows of the Rowlatt Acts. We still hope that wiser counsels will prevail and that something will yet be done to avert an unnecessary exasperation of public feeling at a time when more than ever there is an urgent need for co-operation and harmony between the people and the Government.—*Ed. I. R.*

i. Mr. Gandhi's Manifesto.

In commending the Satyagraha pledge Mr. Gandhi wrote to the press:—The step taken is probably the most momentous in the history of India. I give my assurance that it has not been hastily taken. Personally I have passed many sleepless nights over it. I have endeavoured duly to appreciate Government's position, but I have been unable to find any justification for the extraordinary Bills. I have read the Rowlatt Committee's report. I have gone through the narrative with admiration. Its reading has driven me to conclusions just the opposite of the Committee's. I should conclude from the report that secret violence is confined to isolated and very small parts of India, and to a microscopic body of people. The existence of such men is truly a danger to society. But the passing of the Bills, designed to affect the whole of India and its people and arming the Government with powers out of all proportion to the situation sought to be dealt with, is a greater danger. The Committee utterly ignore the historical fact that the millions in India are by nature the gentlest on earth.

Now look at the setting of the Bills. Their introduction is accompanied by certain assurances given by the Viceroy regarding the Civil Service and the British commercial interests. Many of us are filled with the greatest misgivings about the Viceregal utterance. I frankly confess I do not understand its full scope and intention. If it means that the Civil Service and the British commercial interests are to be held superior to those of India and its political and commercial requirements, no Indian can accept the doctrine. It can but end in a fratricidal struggle within the Empire. Reforms may or may not come. The need of the moment is a proper and just understanding upon this vital issue. No tinkering with it will produce real satisfaction. Let the great Civil Service corporation understand that it can remain in India only as its trustee and servant, not in name, but in deed, and let the British commercial houses understand that they can remain in India only to supplement her requirements, and not to destroy indigenous art, trade and manufacture, and you have two measures to replace the Rowlatt Bills.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It will be now easy to see why I consider the Bills to be an unmistakable symptom of a deep-seated disease in the governing body. It needs, therefore, to be drastically treated. Subterranean violence will be the remedy applied by impetuous, hot-headed youths who will have grown impatient of the spirit underlying the Bills and the circumstances attending their introduction. The Bills must intensify the hatred and ill-will against the State of which the deeds of violence are undoubtedly an evidence. The Indian covenanters, by their determination to undergo every form of suffering make an irresistible appeal to the Government, towards which they bear no ill-will, and provide to the believers in the efficacy of violence, as a means of securing redress of grievances with an infallible remedy, and withal a remedy that blesses those that use it and also those against whom it is used. If the covenanters know the use of this remedy, I fear no ill from it, I have no business to doubt their ability. They must ascertain whether the disease is sufficiently great to justify the strong remedy and whether all milder ones have been tried. They have convinced themselves that the disease is serious enough, and that milder measures have utterly failed. The rest lies in the lap of the gods.

The Pledge.

Being conscientiously of opinion that the Bills known as the Indian Criminal Law (Amendment) Bill No. I of 1919, *and the Criminal Law (Emergency Powers) Bill No. II of* 1919, *are unjust, subversive of the principle of liberty and justice, and destructive of the elementary rights of individuals on which the safety of the community as a whole and the State itself is based, we solemnly affirm that in the event of these Bills becoming law and until they are withdrawn, we shall refuse civilly to obey these laws and such other laws as a committee to be hereafter appointed may think fit and further affirm that in this struggle we will faithfully follow truth and refrain from violence to life, person or property.*

ii. Mr. Gandhi's Message at Allahabad.

There is no conception of defeat in Satyagraha. A Satyagrahi fights even unto death. It is thus not an easy thing for everybody to enter upon it. It therefore behoves a Satyagrahi to be tolerant of those who do not join him. In reading reports of Satyagraha meetings I often notice that ridicule is poured upon those who do not join our movement. This is entirely against the spirit of the pledge. In Satyagraha we expect to win over our opponents by self-suffering *i. e.*, by love. The process whereby we hope to reach our goal is by so conducting ourselves as gradually and in an unperceived manner to disarm all opposition. Opponents as a rule expect irritation even violence from one another when both parties are equally matched. But when Satyagraha comes into play the expectation is transformed into agreeable surprise in the mind of the party towards whom Satyagraha is addressed till at last he relents and recalls the act which necessitated Satyagraha. I venture to promise that if we act up to our pledge day after day, the atmosphere around us will be purified and those who differ from us from honest motives, as I verily believe they do, will perceive that their alarm was unjustified. The violationists wherever they may be, will realize that they have in Satyagraha a far more potent instrument for achieving reform than violence whether secret or open, and that it gives them enough work for their inexhaustible energy. And the Government will have no case left in defence of their measures if as a result of our activity the cult of violence is notably on the wane if it has not entirely died out. I hope therefore that at Satyagraha meetings we shall have no cries of shame, and no language betraying irritation or impatience either against the Government or our countrymen who differ from us and some of whom have for years been devoting themselves to the country's cause according to the best of their ability.

iii. The Moderartes' Manifesto.

The Hon. Sir Dinshaw Wacha, the Hon. Babu Surendranath Banerjea, the Hon. Mr. V. S. Srinivasa Sastri and other prominent Moderate leaders have issued the following Manifesto:

"While strongly condemning the Rowlatt Bills as drastic and unnecessary, and while we think we must oppose them to the end, we disapprove of the passive resistance movement started as a protest against them and dissociate ourselves from it in the best interests of the country, especially in view of the Reforms Proposals which are about to be laid before Parliament in the form of a bill.'

iv. A Madras Manifesto.

Sir P. S. Sivaswami Aiyar and twenty seven leading men of Madras issued the following manifesto on the 18th March :—

The only course immediately open to us to get rid of the legislation is to secure, if possible, its disallowance by the Crown. In this view we are sending to the Secretary of State the following cable, praying the Crown to disallow the legislation.

"Rowlatt legislation hurried through Council without adequate opportunity for public criticism against unanimous opposition Indian Members. Country absolutely peaceful. No need for legislation. Present powers ample for all unexpected emergencies. Country greatly agitated. Atmosphere crated prejudicial to successful working reforms and to effective co-operation between people and Government."

Whilst, however, strongly disapproving of the Rowlatt legislation and the manner of its passage through the Imperial Legislative Council, and whilst recognising the need for continuous agitation to secure its repeal, we consider the movement in favour of Passive Resistance highly inexpedient and injurious to the best interests of the country.

LORD WILLINGDON ON BRITAIN & INDIA

The following is a summary of Lord Willingdon's recent speech in London :—

Debates in Parliament in past years had been marked by sparse attendance and apathetic interest. This had a very bad effect on public opinion in India. It was extremely difficult for those who were administering or endeavouring to administer that country to assure Indians that the Mother of Parliaments was alive to its responsibilities in regard to the affairs of the Indian Empire. He expressed the earnest hope that in the new Parliament this sense of responsibility towards India would develop, and that honourable Members would appreciate to the full the fact that political reform of a very serious kind was absolutely necessary in India at the present time. He thought that those of them who had administered India had in the past made too much of "efficiency"; they had been too keen about keeping the administration efficient and had not sufficiently realised that they must give Indians some responsibility in their local affairs. He hoped very much that before many weeks were over his right hon'ble friend would be in a position to introduce a Bill in conformity with the 1917 declaration of policy and which would utterly overthrow all refuge for the extreme politicians who were always affirming that the brutal bureaucrat was keeping all good things to himself and not giving anything to the aspiring Indian.

For many years a great many people in this country were anxious in respect to Indian unrest. The Germans thought, five years ago, that India would be an extremely fruitful field for their nefarious operations. He was thankful and delighted to say that they were extremely disappointed at the result. It should never be forgotten that India had stood staunch and steadfast to the British Empire for long years, and never so staunch and steadfast as during more than four years of grave peril (Cheers). They might fairly say that India had done her part right well throughout the war and had assisted in winning the great victory of the Allies, "I

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

would trust India," he went on to say, "I would treat her generously, I would show her that we believe in her high destiny and look upon her as a sister nation amongst the great dominions under the Crown, I would take risks in legislation for India—a progressive policy must mean taking some risks—and above all things I would give up what has seemed like our policy in the past—the policy of doing as little as we possibly could, except as a concession to agitation."

By way of explaining this point, Lord Willingdon said in 1915 some of the authorities in India were very strongly of opinion that some declaration of the goal of our policy in India as that of responsible government, should be made, partly that they might be in a position to deal adequately with, and answer, any political agitation that might arise. They were informed, however, that any proclamation of that sort was impossible and undesirable in the circumstances. What happened? The Home Rule League started, very well organised, very well run and very active. So strenuous were its labours that it gained many adherents. At last, on the 20th August, 1917, the declaration of policy came, and, subsequently his Right Hon'ble friend went out to India and took the most tremendous trouble to find out the true facts of the political situation. But the Extremists argued that these concessions had been dragged out of an unwilling Government by their political agitation. We needed to show, and he felt sure we should show in the future that we were really willing and anxious to help forward India for India's good, and to get out of the minds of Indians once for all that the country was being regulated for the benefit and advantage of these islands. (Cheers.)

"There is one reform about which I feel very strongly indeed which, I think, would make an enormous difference in the general position between Briton and Indian in India. I refer to the social relations between the two races in that country. I know that this is a very difficult subject to talk about—a thorny, prickly subject not very suitable for an after-dinner speech. But after nearly six years in India, I feel so strongly that 50 per cent. of the bitterness and ill-feeling would disappear altogether if we could improve our social relations with Indians, that I am bound to say one or two words on the topic. In my experience (and I think gentlemen who have lived in India will agree with me) the Indian is the quickest person in realising the English gentlemen when he meets him that I know of. I would like to urge in the strongest possible fashion on any young Englishman proceeding to India, whether for the civilian services, the army, or business, that he should always deal with the same courtesy and the same good feeling with the Indian as I am glad to know he treats the Indian when he comes on a visit to our country." (Cheers).

After remarking that though Governor-designate of Madras, he was prepared to take the risk of speaking frankly on the reform question, Lord Willingdon laid down the proposition that no attention should be paid to the noisy clamour of agitators and extremists. He thought there had been too great a tendency to try to make terms with the extremist in the past. (Hear, hear.) They, who lived in the centres of political thought, knew very well that the Extremist agitator wished to get rid of British control. He might, he often did, by specious camouflage begin his speech by saying "God Save the King" and end it in the same way, but there was generally some very undesirable stuff in the middle. (Laughter.) What he wanted was democracy of his particular pattern without any control which was quite impossible if India was to make real progress. It was our duty in India to give every encouragement to reasonable men and also to those ruling Princes who had shown such splendid loyalty for many long years past (cheers) and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

their subjects; but we should have nothing to do with the extremist agitation going on India at the present time. *We should give the warmest encouragement and support to the Moderate Indian.* Many of these, he knew, were very anxious to get responsible government as soon as they could, and in that sense most of them were Home Rulers—as he himself would be if he were in India—but they wished to remain in the British Empire and under the guidance of that Empire. They realised to the full that they needed a considerable amount of training before they achieved the great end in view. He had been captain of good many cricket elevens in his day; and he had always found that in order to win a match it was best to have a team which was absolutely united and playing entirely together in order to achieve the end that they wished for. It was his earnest hope that, when this Reform Bill was passed, he would find a team in Madras that was united and not divided.

THE URGENCY OF DECENTRALISATION

Coming to another point, Lord Willingdon declared that a bed rock principle of the reforms must be decentralisation (Hear, hear). They must have provincial autonomy, as far as it could be, extended both in their administration and in finance. He did not think it was sufficiently understood in England that there was scarcely a province of India proper under a local Government that did not contain a population of some 20,000,000 persons, and that some provinces had populations equal to that of the United Kingdom; and yet they lived under an extremely centralised administration. The Local Governments had to make references to Simla or Delhi on most trivial matters. This was a fruitful cause of friction, and handicapped to a very considerable degree the development of the provinces. He felt that a Governor should run his province in his own way in regard to local affairs, subject only to an annual audit by the Government of India and the Secretary of State. His own ultimate outlook, though he perhaps cast his vision too far ahead, would be a federation of States in the Indian Empire that were self-governed in local affairs, and responsible in Imperial matters through the agency of the Government of India to the Secretary of State, and, above them all, an Imperial Council dealing with Imperial matters.

Finally, Lord Willingdon spoke of the relation of the great services to reform. He had had peculiar opportunities of learning to appreciate most warmly the zeal and devotion of the services in Bombay. But he wanted to be perfectly honest in his views with regard to the future. There were many, too many people, who were inclined to look upon the question of reform from the point of view of how it was going to affect the great services. After all they were part of the machine and the real question was that of securing the greatest benefit for the great country of India. If they found that certain alterations had to be made in the machine, alterations affecting the services, they must not allow this to prevent the onward march. It was a fact recognised by the great service in very large degree that India had arrived at such a stage of development that she was ready for a considerable grant of responsible government at the present time. When she arrived finally at her goal of responsible government, this would be the consummation of the work of one of the most magnificent services by which any country had been administered, or which had ever been conceived. That was the way he would look at the question. He was perfectly certain that no Government would allow any member of any of those great services to be a loser if by any chance his services were curtailed owing to India having arrived at responsible government.

The views I give are those of one who takes the deepest possible interest in India and has a real affection for her people. I would deal generously with India; and I believe from the bottom of my heart that, if we do this, India will repay the British Empire a hundred fold.

SIR JAMES MESTON'S TASK

BY

MR. R. W. BROCK

(*Editor, Madras Times.*)

A financial statement occupying thirty pages of the Gazette of India, representing many months' work and study, and forming the combined effort of the entire staff of the Finance Department of the Government of India, with its specially trained personnel and unique sources of information, is not easy to criticise. That is, perhaps, a singular admission; it, nevertheless, is the plain fact. And experience indicates that, in practice, outside criticism exerts very little effect on official financial policy. Whether that be due to mere bureaucratic obstinacy; whether Press criticisms are usually ill-informed; whether the non-official criticisms in the Viceroy's Council are as futile, is little to the point. In his first financial statement, Sir James Meston has challenged non-official opinion at every turn. He certainly flouted commercial opinion, British and Indian, in taxing excess profits, for a more thoroughly unanimous and whole-hearted condemnation of any measure of taxation has not been known in this country in recent years. But Sir James Meston has gone his own road, ignoring opposition almost completely. He has made minor concessions, but his main proposals remain intact. I am bound to admit, too, that he has flouted popular opinion in minimising outlay on education and sanitation, etc. He has done so, no doubt, to permit of the more urgent outlay on railway improvement, but undoubtedly on this side he has disappointed public expectations. Similarly, regarding irrigation. And by so acting, the finance member has unfortunately made railway improvement politically unpopular. It is regrettable that so many Indian politicians and publicists decry outlay on railways. They possibly realise its necessity, but deem other outlay more urgent. That is an understandable position, and, when normal conditions return, will probably find expression, quite rightly, in demands that revenue allotments for railway purposes should cease; in other words, railway outlay should rely wholly on loan income, preferably on rupee loans raised either direct by the State, or by the Railway Co.'s or by utilising both methods of finance concurrently. Adoption of this plan would incidentally lead to considerable increases in 'social reform' outlay, and for political reasons, as well as on the merits of the issue, it is the right policy for the commercial community to support such outlay, and, even to take the lead in urging its necessity. On the other hand, it is but fair that Indian politicians and publicists should be ready to recognise frankly these two important points: (a) railways, while needing considerable outlay, are yielding constantly higher revenues thus helping to keep down taxation (*b*) no real economic development can occur, unless railway improvement is liberally financed. These two facts are irrefutable, yet a denial of them runs through, and invalidates, a very large portion, especially of newspaper criticism of railway outlay.

After all, what are we aiming at? Primarily, at increased revenues. These larger revenues, however, cannot come to any extent from existing wealth; they must therefore be levied from new wealth; in other words, they can come only as the sequel to a vigorous policy of economic development. And what, in practice, does economic development mean? It means, as regards agriculture, heavier and more profitable crops, causing increased outward traffic, and swelling exports; it means, again, larger imports, in response to the increased purchasing power to which agricultural

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

improvement must give rise. Or again, it means movement of the heavy new traffic associated with industries, such as those now arising at Sakchi. It means, once again, new ports. It means, perhaps, sooner or later, the growth of an Indian mercantile marine. In any event, you get increased railway traffic. Surely this is incontestable. And then as regards the heavy grant this year, let us not overlook its origin. For my sins, I spent 5½ years as assistant editor of "Capital", admittedly a business journal in close contact with commercial interests. The point I wish to make is, that in all those years, I do not recollect a single month, I do not recollect a single industry, without its complaint of inadequate transport. With that fact constantly forced on my attention, it is inevitable I should deem Sir James Meston's financial arrangement not merely unavoidable but intensely desirable. Many Indian critics, I am aware, take a different view, but they are rarely business men. So, with Mr. Sarma's resolution. It was condemned most vehemently, not by the officials, but by Indian commercial representatives, such as Sir D. E. Wacha, (Bombay) and Mr. Sita Nath Roy (Calcutta). It is idle to assert that these two astute politicians were merely "playing up" to official prejudices or to British commercial interests. They see, on the contrary, that to overtake the enormous arrears of railway outlay is, in Indian commercial interests, essential, a plain business need, in short, a sound and necessary investment. Not only is it necessary to overtake arrears, prices have risen, and this is a source of large outlay in itself.

It is not a wholly happy arrangement, perhaps, that railway directorates are situated out of the country. The objection to this arrangement is not wholly sentimental, and there are tentative indications of a gradual change of policy. I put it thus guardedly, because it would be unwise to hold out expectations unlikely of early fulfilment. The procedure, I think, will probably be:—issue of railway loans in rupee form; gradual increase in local shareholders in the main railway lines; their rise to predominance; finally, their insistence on local directorates. But this will take time. Meanwhile, no advantage is lost and many advantages are gained, by sinking further sums in an extraordinarily profitable property.

Sir James Meston is too keenly conscious of the imperative need of educational advancement, and of bold measures of health conservation, of industrial development, and of banking extension, to permit of the belief that he is indifferent to or unconcious of the need for long steps forward in these directions, and I take it, he is "keeping something in hand" for next year. His first budget is, indeed quite evidently a transitional measure, and hardly a fair test. As he points out, he could not avoid large grants to railways; military outlay, at this stage, inevitably remains abnormal and uncertain; the currency situation offers points for anxiety; much temporary debt is maturing for discharge, and until the decks are cleared of these impediment a peace programme offers difficulties so great as to be temporarily insuperable. That, I take to be the real essence of his message. It is a position, necessarily conducive to impatience. There is so much scope for beneficial outlay; so little money to allot. But first things first. The paraphernalia of war cannot be cast aside in a day; Sir James Meston has consequently only been able to present a Demobilisation Budget. His personal outlook is indicated in the sentences:—"We shall, during the years ahead, have irresistable claims upon us to raise capital for internal development, railways, industries, forests and the like. And again, during the same period we shall have to launch into very heavy expenditure for the education and well-being of the people, without which our political progress would be largely

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

negatory." This is a situation offering scope for all the constructive criticism available in the country, and let it be forthcoming in full measure, but idle carping at outlay on railway improvement will serve no useful purpose, and, in any event, will not divert the course of official policy, now directed at last on the economic side, to the programme "Full steam ahead."

It is wise, as the finance member observes, to face the facts. "We have heavy liabilities hanging over us in several directions; debt of an unproductive character which we ought to dispose of in order to facilitate a remunerative borrowing programme in the near future; a currency position which requires careful handling and at least some withdrawal of our recent emergency issues of paper; and a general consolidation of our position with a view to the development of our national intelligence and earning power. If this teaches us anything, it is that our watchword must be rigid economy, both in the Government and in the lives of individual citizens". Economy, I admit, is a sound principle, rightly interpreted, but in some directions there can be too much economy. Recent financial operations, so out of proportion to previous figures, have somewhat scared the Finance Department, but a return to the old pettifogging ways would be fatal. We do not want economy concerning railways, or education or public health, or economic development, because such parsimony would be not economy, except, of efficiency and intelligence. In most directions the country needs not economy, but lavish outlay which will repay itself tenfold in the higher standard of individual well-being, of economic prosperity, and of political contentment, which such a policy would bring about. It is wise counsel, if you want to get at the root of half India's troubles, to study finance—especially as interpreted at Simla. Unfortunately very few Indian politicians study finance. An exception was Gokhale.

I am loth to add to the immense volume of criticism put forward concerning the Government of India's decision to tax excess profits. It is, to-day, a *fait accompli*, incapable of reversal. It is a pity it did not come sooner, and on a graduated scale, say 20 % in 1916, 30 % in 1917, and 50 % last year. This would have kept share values at moderate levels, whereas by the sudden change of policy—this is the real grievance—share values suffered disastrous collapse after soaring to heights never previously paralleled. The jute mills are well able to pay, their profits were enormous, while their relative competitive position, *Vis a Vis* foreign jute mills, has been strengthened beyond all comparison. I believe they will all "pay up" cheerfully despite a vigorous effort to cajole or bully Sir James Meston into abandoning his scheme. The Finance Member, be it remembered, is an Aberdonian, and looks on his Calcutta-cum-Dundee compatriots as fair game. And as it was largely or at least partly from low prices for raw jute that mill profits were derived, it is not unfair that a percentage of these accumulations should be retained in the country. Calcutta need not complain, nor need Bombay. Madras is paying excess land revenue tax, and will go on doing so, I fear, to avert higher taxation in the two wealthier provinces named. There was an interesting debate on the *pros* and *cons* of this subject the other day, in the local Legislative Council, the upshot of which was that Madras continues to pay.

"All About the War—The Indian Review War Book." A comprehensive and authentic account of the War with numerous portraits and illustrations. Edited by G. A. Natesan with an introduction by Lord Pentland and an appreciation by Lord Hardinge. Price Rs. 4. To Subscribers of the *I.R.* Rs. 3.

HIS LATE MAJESTY THE AMIR
Of Afghanistan.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

THE LATE AMIR OF AFGHANISTAN

THE news of the death of H. M. the Amir of Afghanistan has been received in India with feelings of profound regret. For the Amir's unswerving loyalty to the British Raj was an asset of considerable value during the four years' crisis that closed only the other day with the conclusion of the armistice with the Central Powers. The circumstances of his death, however, gave occasion to anxious thought. A Delhi communique issued on the 24th of February announced that he was killed by shots and stabbed in his tent at Jullunder near Kabul on the morning of the 20th by an "unknown assassin." "The body," said Lord Curzon in reply to a question in the House of Lords, "was taken to Kabul by members of his family. It was not known whether the assassination was due to religious or fanatical reasons, or reasons of politics or domestic intrigue." The Delhi communique also announced that Naib-us-Sultannah Nasrullah Khan, brother of the late Amir, has been acknowledged by the Amir's sons and representatives of the people as the Amir of Afghanistan and that he has written to H. E. the Viceroy "expressing his hope for the continuance and strengthening of friendly relations between the Afghan and British Governments." But mid-Asian politics is a vague, uncertain and dangerous thing and no one can say exactly if there is anything behind the latest news that Sirdar Nasrulla Khan Naib-us-Sultannah has renounced his claims to the throne of Afghanistan and has sworn allegiance, with all the civil, military and religious representatives, to Sirdar Amanulla Khan Ain-ud-Daula, who has been proclaimed Amir. Sirdar Amanulla Khan is the third son of His late Majesty Habibulla Khan.

Still amidst all the change of rulers or domestic intrigues, there is no reason to suppose, said Lord Curzon reminded the Lords, that there would be any interruption of the friendly relations between Great Britain and Afghanistan whose independence the British Government have always desired to maintain.

It is notorious how the Central Powers were making continued endeavours to wean the Amir to their side so as to provoke a disturbance on the Indian frontiers. In this, the Germans counted without their host. For the Amir was a staunch ally of the British and would not be persuaded into a false step. H. E. the viceroy made a happy reference to His Majesty's fidelity to the British cause, in the course of his opening address to the Delhi Conference in April last: —

'In the north there is a bulwark against German intrigue and German machinations. I refer to our staunch friend and ally, his Majesty the Amir of Afghanistan. As you are aware, at the outbreak of the war, his Majesty gave his royal word that, so long as the independence and integrity of his kingdom were not threatened, he would maintain neutrality. He has kept his royal word unswervingly in spite of every attempt of our enemies to seduce him from his purpose and to embarrass his position, and I do not believe that in the history of this country the relations between any Amir of Afghanistan and any Viceroy of India have been more cordial or mutually confident than they are to-day. But in Afghanistan as in India there are many ignorant people, credulous people, fanatical people, such as at a time of world excitement may be coerced away by any wind of vain doctrine. Such persons may at any moment become a serious enbarrassment to wise and level-headed statesmanship.' A German official mission having visited Kabul in furtherance of the nefarious designs on India, the Amir disposed of them thus shrewdly: 'I don't propose to speak to you (his Majesty is reported to have said) 'until I have a Turkish and a German army on my western frontier. You cannot expect me to begin talking about an alliance with you while I have the Russian army in the north and the British army in the south and you are still many hundreds of miles away.'

In rejecting the German offer in this fashion, the late Amir strictly followed the lead of his father, Abdur Rahman, who throughout his strenuous career continued to act up to the terms of the Anglo-Afghan agreement. But then little was known in those days either of the personal character of the Amir or of his government beyond the fact that Abdur Rahman was a masterful ruler and that the Indian representative at his court, a Mahomedan official, had hardly anything to complain of his intentions towards the British Govern-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ment. Everything was vague and mysterious. And when, on the death of Amir Abdur Rahman, Habibullah ascended the throne, little was known of the new ruler and his sympathies while much anxiety was felt if he should prove a weak tool at the hands of the unscrupulous elements in the Afghan court. But Habibullah was no such weakling, and we have the testimony of his father that he showed marked aptitude for political authority even so early as 1881 when the Amir had to march against Ayub Khan, his dangerous rival, and to quell the rebellion in Herat. Habibullah was scarcely eleven years old at the time. Later on, the heir-apparent acted as regent in Kabul during the campaign of his father against his rebellious cousin, Ishak Khan. Abdur Rahman records in his autobiography:

> On my return to Kabul on July 24, I found that during my two years' absence my son, Habibullah Khan, had governed the country so wisely, cleverly, and so entirely in accordance with my wishes, that I conferred two orders upon him, one for his distinguished services in the administration of the Kingdom; the second for having very bravely put a stop to a mutiny which was caused by my own soldiers of the Kandahar Hazara-battalion. He acted most bravely on this occasion riding alone in the midst of the rebellious soldiers without showing any fear of their injuring him.

In fact, for over eight years, the prince was practically associated with the Amir in the task of Government. A Mussalman scholar in close touch with Afghan affairs wrote in 1904 that, on his death-bed, Abdur Rahman had nominated Habibullah Khan as his successor, and this nomination was accepted by all the members of the family, the nobles, the functionaries, and the "mullahs" present. On the day following his death the ceremony of "baist" was performed and the oath of allegiance was formally taken by the people.

We have said that "mid-Asian politics" was a sealed book and the British Government was naturally anxious to come to some definite understanding with the new Amir whose intentions towards his neighbours it was the pith of British policy to decipher. Lord Curzon throughout his regime constantly endeavoured to bring about the adjustment of many minor points of dispute between "Calcutta and Kabul," which threatened sometimes to aggravate the issues of more important questions. But no good followed till in the autumn of 1904 the Imperial Government decided to despatch a mission headed by Sir Louis Dane. The negotiation lasted over four months and the upshot of it was that the Amir outmatched the mission in diplomacy. The treaty finally settled in March 1905 confirmed the old agreement regarding the Amir's subsidy and powers in respect of the importation of arms while the Amir obtained a distinct advantage by securing an agreement that he should be styled "His Majesty"—a mark of distinction affirming his independence. A further step to facilitate and strengthen the amity between the Amir and the British Government was sought after by an invitation to the Amir to visit the Viceroy in India in January 1907. The Amir was prepared to accept the invitation of the Government of India provided that no discussion of political matters was entered into and that, after the Viceregal Durbar at Agra from January 9 to 16, the Amir should be free to adopt to his own wishes the programme arranged for his entertainment. The stipulation was agreed to. The story of the historic visit of the Amir is well within the recollection of our readers. The Amir reached Landi-Kotal on January 2, and Calcutta on January 23, after witnessing a grand review of some 30,000 troops at Agra, with which he is said to have been much impressed. From Calcutta he proceeded to Bombay, where he arrived on February 12. He left by sea on February 25 for Karachi, landing on the 27th, and left Peshawar on his return home on March 7.

The *Indian Review* published at the time a narrative of the tour together with a record of his more important utterances.* It is impossible to

quote at length, but we should draw attention to His Majesty's appeal to his co-religionists in India to abstain from cow-slaughter on the Bakrid-day, his appreciation of western learning and his unfailing cordiality to the British. "In Afghanistan," said His Majesty at Aligarh, "I have among my subjects Sunnis, Shiahs, Hindus and Jews, and I have given to all of them full religious liberty."

Speaking at Patiala he said :—

'If God be willing, we hope to be at Delhi on id-i-Qurban this year. It is our religious duty to perform sacrifice on that day. Though cows, in common with other animals, are sacrificed, *our religion does not compel us that the sacrifice must be of cows.* On the contrary we may sacrifice camels, goats, etc., instead. *We intend not to sacrifice cows on this occasion in consideration of the feeling of the Hindus* of India in general and of Delhi in particular. Our visit to India should be an occasion of joy to Hindus and Mussalmans alike, not a cause of pain to the hearts of any. I wish that this intention of ours be made known to the Hindus of Delhi.

No wonder that His Majesty's courteous and generous spirit won for him the appreciation of Hindus all over India.

Many stories were told of the Amir's amiable traits, his shrewdness, his soldierly simplicity, his extraordinary love of adventure and his fondness for children. Of his generous catholicity the following from his own speech will bear eloquent testimony :

'I protect the interests of my Hindu subjects equally with those of Mussalmans. On my way back from the shrine, I just saw a Gurudwara. There are several Gurudwaras in Afghanistan where Fakirs and poor people live. I don't know, but I believe there are poor and needy people in this Gurudwara also. I have therefore ordered, for Rs. 200 to be distributed among them.'

On the eve of his departure, His Majesty passed Bombay where he was accorded a fitting welcome. Replying to the toast of his health proposed by H. E. Lord Lamington, His Majesty spoke with enthusiasm :—

"Let me say that at no time will Afghanistan pass from the friendship of India. So long as the Indian Empire desires to keep our friendship, so long will Afghanistan and Britain remain friends.

That was the keynote of the late Amir's policy, and he kept his royal word down to the last day of his death.

"A VINDICATION OF AURANGAZEB": A REPLY BY DR. SADIQ ALI

RAM PRASAD TRIPATHI, M.A., S.B., M.R.S., University of Allahabad, has reviewed my book, "A Vindication of Aurangzeb," in the "Indian Review," October, 1918. Several Indian journals have noticed my book briefly and very favourably, so I feel grateful to these kind reviewers. But I was looking forward to such criticism as might throw some light on additional truths unknown to me and to the general readers and so to correct my errors, and make up any deficiencies found in my book. The aforesaid review occupies about seven columns of the periodical named above, and is scholarly, free from vituperation, and of kindly tone. But the learned critic raises the same objections as have been fully replied to in my book. He does not find fault with any of the evidences set forth in support of my views, nor does he confute any of my arguments. He simply disagrees with the conclusions and denies them. My kind critic must know that simple negation cannot overthrow a view unless the view is disproved or the antagonistic truth is established. The object of my book was to remove and remedy one of the causes which have been maintaining discord between Hindus and Muslims in India. Living in the same country and under the same benign and liberal government, their interests have become so much interwoven and interdependent that neither community can build its fortune upon the ruins of the other nor can the one retrograde without dragging the other with it. The old-time

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

order has now entirely changed. Formerly, might solely constituted right, hence despotism, inequality between the rulers and the ruled, and religious and social rancour. The ideals of to-day are liberality, democracy, equality, and brotherly love even among persons of different persuasions. Our forefathers, whether they wronged each other or not, have all gone, long ago, to render their account before the Supreme Judge. Their acts should be considered as things of the past, and we should take the present as it is, and make the best of it. I hope that the leaders and patriots, among both Hindus and Muslims, would join hands with me in the movement that I initiated. If all the sensible people among Hindus and Muslims tried to suppress the religious animosities of the masses, such riots as recently occurred in Calcutta and Katarpur, and have frequently occured at other times and places, could never occur.

Aurangazeb's history is not viewed from its historical standpoint but from its religious standpoint and it is the latter which produces disorder and animosity among the fellow-citizens of the same country.

I do not like to continue this kind of controversy which I myself wish to put a stop to. The time and energy wasted in performing this work which is useless and even injurious to the public interest, can be turned to very good account if employed in promoting the cause of our national prosperity.

Modern facilities for the swift expression and inter-communication of thought between people, however widely separated by time, space, scale of education, grade of civilisation and form of religion, have rendered it impossible to remain ignorant of what is going on in the outside world, of the possibilities in store for man, and still continue to be satisfied with the old mode of life with its ancient social and political conditions. Now, seeing that the western nations are progressing in civilisation and prosperity by leaps and bounds, our Indian brethren naturally aspire to similar advance. The liberal and democratic policy of the British Government is instilling liberal ideas in our minds, inspiring us with the hope of success, and encouraging us to follow the example of advancing nations. In such a happy state, it is impossible for us not to yearn after the advantages that others are reaping so plentifully from their well-intentioned and well-directed endeavours. But there is a very heavy and strong chain that not only drags us down but is continually pulling us backwards as well and hindering our advance. This chain is our internal feuds, discord and apathy. Unless we first break this chain, we cannot move a single inch forward. It is for this reason that I beg my readers and such leaders of the nation as my learned critic seems to be, to entirely forget the old disputes and errors which may have existed among our predecessors, and to strive that the masses likewise forget them. Thus we shall make friends with one another and can direct our combined forces and endeavours towards the promotion of the common cause, progress. Both Hindus and Muslims should be careful not to speak, write, or behave in such a way as to hurt each other's feelings. Unless we act upon this rule (one well recognised and followed in the west), we shall never be fit to ameliorate or better our condition. I beg, in conclusion, to bring to the notice of my readers a providential universal and unchangeable rule.

God is good and gracious, He supplies the wants of His creatures and satisfies their desires. As we are too selfish, and every one of us wishes to gain some personal advantage at the expense of his brethren, God knowing all, dispenses both the good and evil things of the world, to all of us that both, our good-will and ill-will, may be equally satisfied. If we love one another and always wish for others what we wish for ourselves, then God, wishing to satisfy our desires will have to do good to all, because He will not find any ill-will demanding satisfaction through the misfortunes of others. The proportion of prosperity of every community, therefore, depends upon the proportion of altruistic ideas and good-will which prevail in that community. For this reason, we should strive to inculcate altruism and promote brotherly love in our community.

SIR P. C. RAY'S ESSAYS & DISCOURSES

BY

PROF. SURYANARAYANA, M.A.

MESSRS. Natesan are noted for their biographical sketches, also for their various collections of essays and addresses by eminent Indians. But it was a happy idea which prompted them to combine in this case* a collection of addresses and a biographical sketch in the same volume. Like other sketches from the same publishers, this one also does full justice to the eminent man whose life is studied. Big names are sometimes to us nothing but abstractions. So and so is a great poet; how many people understand anything definite by it? And yet, here at least is a chance of the man being appreciated, for Poetry is never a sealed book. But the sense of our own unworthiness weighs heavily on us, when the great man happens to be a scientist, for that gateway of knowledge is certainly not open to all. The life of a Scientist is perhaps the most difficult to write, for one has to remove from the minds of the reader the innate prejudice that a scientist is a musty, cranky creature, and show the living man, with the same hopes, passion and ideals as the rest of humanity. Both the biographer and the person who selected the essays seem to have had in view the element of success and we must admit they have both succeeded admirably.

Perhaps; the task was lightened in this case by the remarkable versatility of the subject. That a man of eminence in Chemical Science should at the same time have been an ardent student of History and have produced valuable works in both departments of knowledge must remain a matter for wonder. And yet, perhaps, there is little to wonder at, when one comes to think of it; for both are concrete sciences. A combination of Pure Mathematics and History would have puzzled us more.

The scope of the book would not allow of any reproduction from the historical works of Dr. Ray. But there are at least three essays "Ancient India," "British India," and "Antiquity of Hindu Chemistry" which exemplify the historical acumen of the Doctor. One of these, "British India," contains some excerpts from "India before and after the Mutiny," a book published by Dr. Ray when a student at Edinburgh.

Dr. Ray's views on Social Reform are brought out in his presidential address at the Indian National Social Conference of 1917. He delivers himself strongly against empty forms and conventions which serve only to clog the wheels of onward-marching Society. Human ingenuity and inventiveness get mis-directed and occupy themselves with laying down precise and unjust rules for meaningless ceremonies. The real and the only object worthy of the human intellect was relegated to the background, forms were multiplied endlessly, and Society stood still or began a downward march. In this connection, we would specially recommend to the reader the essay entitled "The Bengali Brain and its Misuse."

The book under review gives an exhaustive list of the contributions to Chemical Science from Dr. Ray and his pupils. The list is formidable and is followed by something more interesting, an Anglo-Indian's appreciation of the Bengal Chemical and Pharmaceutical Works. Messrs. Natesan have spared no pains in making the book as comprehensive as possible, in its small volume and have had all through in view the object of bringing out the many-sidedness of Dr. Ray's talents and activities. They have achieved this object with no little degree of success.

* *Essays and Discourses* by Dr. Prafulla Chandra Ray with a Biographical Sketch and Portrait—G. A. Natesan & Co., Madras, Price Rs. 3.

THE LAND OF BURNS

BY

THE LATE PROF. MICHAEL MACMILLAN.

"The lad that was born in Kyle will be remembered to-day in Cologne, in Bagdad, in Jerusalem; wherever there are Scottish troops the immortal memory will be honoured," wrote the 'Glasgow Herald,' on the 25th January, the anniversary of Robert Burns. "At home, the return to old interest, dislocated by four years of war, is being marked by the revival of the custom, now a century old, of celebrating the poet's birthday. If Scott's 'Marmion' and the 'Lady of the Lake' were read in the British lines during the Peninsular War, the poems of Burns have been freely quoted in the trenches in France and in Flanders, and his songs have been sung in the gatherings behind the lines. The hold which Robert Burns possesses over the emotion and the affection of his countrymen rests on too sure a foundation to be disturbed even by the mighty events through which we have passed. The appeal which he makes is an appeal to the things that cannot be shaken even by the convulsions of a new world in the making; while men live and love, they will read and quote the living words which tell of life and of love."

CIRCUMSTANCES compelled me to visit the home-land of Burns in the wrong order, so that I went first to Dumfries, the scene of his declining years and death and afterwards to the region of Ayrshire where he was born and bred. This arrangement of my tour, although it may be called, in the literal sense of the word, preposterous, was not without its advantages, as it left the best to the last and led me from scenes associated with the poet's decay and death to the, region of Scotland that he celebrated in his glorious prime.

Dumfries is a flourishing town beautifully situated on the broad river Nith and well deserves its proud title of Queen of the South. When Burns settled in Dumfries in 1792 as an excise-man on a salary of £ 50, his first home was in a flat in Bank Street above a stamp office and below another flat occupied by a blacksmith. It was a wretched tenement in itself, but a few steps from it would lead the poet to the banks of the Nith where the stream rolls over the dam below the new bridge in an amber flood incrusted with masses of white foam. Thence the poet often strolled a mile or two up the river to Lincluden Abbey, the red sandstone ruin of which crowned with clusters of rowan berries was one of his favourite haunts. In 1793, he moved to another house where there was more room for his family and there he died in 1796. This is now the chief show place in the town and is occupied by the poet's grand daughter, Mrs. Thos. Brown and his great grand-daughter, Jean Armour Burns Brown. It was the latter who showed us over the house, when through a narrow crooked street we had found our way to the door. In her face could be traced a strong likeness to Nasmyth's portrait of the poet. The resemblance was most striking in the eye, which was the most remarkable feature in the countenance of Burns. The house was plain and prosaic, but appeared commodious and comfortable enough to show that during his last years the poet must have been fairly well off. We were shown a few relics in the upper rooms, but they were not of great interest as compared with the fact that we were in the very house in which Burns died conversing with his direct descendant. Close by is St. Michael's Churchyard with a Mausoleum in the form of a Greek Temple, in which Burns is represented by a sculpture of Turnerelli as driving the plough and visited by Coila, the Muse of his native land. In the High St. is an old inn where are shown his punch bowl and ladle and the chair in which he sat carousing with his cronies.

Leaving Dunfries by the Pitpathick railway, we found ourselves, after passing castle-Douglas, in the lonely Moorland of Galloway. It was in this region that Burns composed his immortal war lyric, while riding through a tempest from Kenmure Castle to Gatehouse. "I took him," writes his companion, "to the moor road, where savage and desolate regions extended wide around. The sky was sympathetic with the wretchedness of the soil; it became lowering and dark. The hollow winds sighed, the lightning gleamed, the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

thunder rolled. The poet enjoyed the awful scene—he spoke not a word, but seemed rapt in meditation." The result of his meditation was

"Scots wha hae wi' Wallace bled."

The shades of night were falling by the time we reached Ayr, but it was also by the moon-beam's misty light that Burns had his vision of the dusky spectres of the two bridges. So we thought we could not do better than go like him to the river side, when

"The tide-swol'n firth, with sullen sounding roar,
Through the still night dash'd hoarse along the shore:
All else was hushed as Nature's closing e'e,
The silent moon shone high o'er tower and tree."

Burns in prophetic vision heard how the spirit of the Auld Brig taunted that of the New Bridge foretelling the day when with all its "whirls and whirlygigums" it would be swept away by the flooded river. Proud of its antiquity of more than six hundred years, it cried out to its new fangled rival

"This mony a year I've stood the flood an' tide;
And tho' in crazy eild I'm sair for fairn,
I'll be a brig when ye're a shapeless cairn!"

This prophecy was fulfilled just thirty years ago when the new bridge collapsed and had to be pulled down. It has since been rebuilt and now in its turn the Auld Brig is threatened with destruction. We found it propped up with wood work and closed except for pedestrians. Unless patriotic Scotsmen can subscribe enough money for putting it in a thorough state of repair, the ruthless town council of Ayr has resolved to pull it down. Naturally indignant meetings are being held all over the country to protest against the threatened insult to an ancient monument so closely connected with the national bard.

On the following morning, we started along the road traversed by Tam O' Shanta on his famous ride. On the left of the High Street still stands the inn where he drank and cracked jokes with Souter Johnny. The tramcar at first follow-ed the footsteps of Tam's mare, but presently the new road diverged from the path of the old one so that we went to the left instead of the right of Burns' birth place and Alloway Kirk. In the kirkyard, an old man with a wooden leg was lying in wait for us. He knew all *Tam O'Shanter* by heart and recited fragments of the poem with great gusto and a fine broad Doric accent. He knew all the places passed by Tam on this famous tride and showed us the exact spots

Where in the snaw the chapman smoord.'
And past the birks and meikle stane,
Where drunken Charlie brak's neck-bane,
And thro' the whins and by the cairn.
The hunters fand the murder'd bairn,
And near the burn aboon the well,
Where Mungo's mither hang'd hersel,"

Then he stumped before us to the window, through which Tam glowr'd into the blazing kirk. Thence he pointed out the very "winnock bunker in the east" where the Devil sat in the shape of a "tousie tyke, black, grim, and large" and

"Screw'd the pipes and gart them skirl,
Till roof and rafters a' did dirl"

that the witches and warlocks might dance to the music. There too before us was the holy table on which were spread out "a murderers' banes in gibbet-airns" and other gruesome horrors. From the kirk Tam fled to the old bridge over the Doon with the witches in hot pursuit. The Scottish superstition (I do not know whether it is the same in India) was that witches could not cross running water.

"Now do thy speedy utmost, Meg,
And win the keystane o'the brig;
There, at them thou thy tail may toss,
A running stream they dare na cross,
But ere the key-stane she could make,
The fient a tail she had to shake,"

for the foremost of the witches got hold of it, and though Meg carried her master safe over the bridge, she did it at the expense of her gray tail. When all this happened, a tempest was raging and the river was swollen with heavy rain. We saw the river in very different circumstances on a beautiful summer's day. The birds were wantoning through the flowering thorn and the banks and braes o'bonie Doon were blooming fresh and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

fair as they appeared to the eyes of the deserted lover in the sweetest and saddest of Burns's love lyrics. Close by rose the lofty monument of the poet surrounded by a garden adorned with many flowers, the scent of which was fresh and fragrant as his memory is in the hearts of his countrymen.

A walk of about half a mile back from the monument in the direction of Ayr brought us to the birth place of Burns. So great is the spirit of heroship and idolatry in the *fervidum ingenium Scotorum* that it is estimated that this literary shrine of the poet of Scotland is visited yearly by about twice as many men and women as go to Stratford-on-Avon to see the birth place of the great dramatist of England and the world. The cottage which was built of clay by the poet's father's own hands has now been restored as nearly as possible to its original condition. It consists of a kitchen, a sitting room, and a byre under the same thatched roof. In the kitchen is a bed built into the wall, probably the very bed in which the poet was born. In the grounds behind is a museum containing M.S.S. and original editions of his poems, the family bible with entries made in his own hand, and other valuable and interesting mementoes.

From the home of Burns' childhood and boyhood we took the train to the central region of Ayrshire, where he spent the years of his early manhood. We had the advantage of staying at the hospitable mansion of Barskimming. Burns himself was a frequent visitor there and must often have wandered over the beautiful grounds alone or with Sir Thomas Miller

"Thro' many a wild romantic grove
Near many a hermit-fancied cove
Fit homes for friendships or for love
In musing mood."

Just in front of the house the Aye flows under a picturesque bridge through a deep gorge of red sandstone overshadowed by the many coloured foliage of the trees growing on either bank. Altogether it is the most lovely river scene that has ever met my eyes in the course of my wanderings over two continents. In a meadow by the side of the river a mile higher up Burns composed the poem entitled "Man was made to Mourn" and a mile lower down, also in the grounds of Barskimming, is the hallowed grove where under the fragrant birch and hawthorn hoar he bade his last farewell to his Highland Mary. My kind hostess drove me in succession to most of the places connected with Burns in the neighbourhood, as for instance to the town of Manchline the scene of the Holy Fair and the home of bonnie Jean. Here too is still to be seen Poosie Nancy's Hostelry where the Jolly Beggars "a mery core o'randie, gangrel bodies held the splore" and indulged in wild revelry that rivalled that of the witches in Alloway Kirk. At a mile and a half from Manchline on a hill commanding a wide prospect over land and over sea with the mountains of Arran in the back ground stands Mossgiel farm, Burns's home from 1784 to 1786, the most prolific period of his literary life. It was in a field of this farm that his plough share turned up the nest of the field mouse and crushed among the stone the slender stem of the mountain daisy. Close by the farm is the National Monument to Burns, a high and unsightly sower which disfigures the beautiful landscape.

All through his poetry and his prose correspondence Burns shows how dearly he loved his native land. He is not by any means cosmopolitan in his sentiments like Byron, and Shelley, or Browning.

Burns never visited the continent and never went farther into England than to Carlisle and Newcastle. His patriotism burned with a warmer glow because it was focussed on one small portion of the earth's surface. He might well have said of his the descriptions of scenery in his poems, as Allan Ramsay writes of the Scotch poems collected in his *Evergreen*, that "the groves rise in our own valleys, the rivers flow from our own fountains, and the winds blow upon our own hills."

TOPICS FROM PERIODICALS

The Future of Industrial India

Sir P. C. Ray, writing in the current number of *The Modern Review*, offers a searching criticism of the Report of the Indian Industrial Commission. The special object of the Commission was to suggest methods for the building up of indigenous industries.

The development of Indian industries would not mean that "the manufacturer who now competes with you from a distance would transfer his activities to India and compete with you within your own boundaries." "We do not want mere Indian Capital," said H. E. the Viceroy recently, "we want Indian men and not Indian men only as labour but as leaders who will turn their attention to industrial enterprise and equip themselves for a great Industrial regeneration in India." The declared policy of the Government of India is decidely against the *exploitation* of Indian minerals and her almost inexhaustible resources of raw materials by foreigners, be they British, American, or German. Here Sir P. C. Ray pauses to think of some of the potent causes that brought about the ruin of the staple Industries in India.

The East has been immobile, overt and conservative to the core for centuries. In a manner she was living in peace and repose dreaming dreams or absorbed in meditations on the essence of the Supreme Being. Every village with the graduated hierarchy of the caste regulations was an ideal republic. There was the village artisan and the smith—the barber, the washerman, the priest—the landlord, the tenant—cultivator—the weaver and the small trader and so forth—each doing his allotted duty. But west changed all that. At barely a moment's notice contact with the mobile, progressive and energetic India found herself confronted with a formidable rival. She must run at railway speed or be lost for ever, and thus came a tremendous crash and the collapse of her industries. Here again, Nemesis overtook unhappy India. What was once an apparent source of strength now became the weak point in her armour—I mean the pernicious caste system.

The ruin and downfall of Indian Industries, Sir P. C. Ray remarks, was hastened by the selfish policy of British statesman, who, by the imposition of prohibitive duties, protected the British manufacturer and began to look upon the vast continent as a field for the supply of raw material required by them. The most fatal mistake has been the hostile attitude of the Government towards elementary mass education. Though we have got an Agricultural Institute at Pusa with all its expensive machinery, it is of no avail to the agricultural population who, steeped in ignorance, are not able "to take advantage or utilise the elaborate scientific researches which lie entombed in the bulletins and transactions of these Institutes". An ignorant people and a costly machinery of scientific experts go ill together.

For the recruitment of the Scientific Services, the Commissioners propose the wholesale importing of experienced men from England. Even when the choice lies between the best brains of India and the mediocres of England in the filling up of the posts of so-called experts, the former get but scanty justice.

Dr. Ray then writes of the serious obstacle that Swadeshi concerns ought to encounter in the matter of marketing the products on the output of their factories.

The damaging evidence of Mr. Adamjee Peerbhoy of Bombay, which for obvious reasons the President of the Commission wanted to be heard in camera, but which has leaked out, goes to prove, what is, however, notorious, that the Heads of the big purchasing departments show but scant consideration to the claims of Indians when there are British competitors in the field—it is but natural that they should fraternise with their own countrymen. The excellent intentions of the Government as embodied in Resolutions with sonorous periods get whittled down to precious little in filtering through the official strata.

In a Postscript, Dr. Ray refers with sorrow to the winding up of principal Swadeshi concerns in Calcutta which have been purchased by powerful British companies, partly with threats of overwhelming competition and partly with the offer of a rich bait.

If this is an earnest of what bids fair to become of "a self-contained India," she will soon be reduced to the position of a "human cattle-farm" and a plantation, with her people as coolie and "Babu" labourers; and the "Industrial Commission" had better be called "Foreign Exploitation Commission."

Lord Morley on History

Professor A. F. Pollard, writing in the current number of *History*, the quarterly journal of the Historical Association, says that Lord Morley's characterisation of some of his colleagues is worth more to the historian than reams of laudatory or vituperative journalism. Gradually Lord Morley's absorption in letters gave way to affairs and his interest in politics became more practical and more insular. The *Fortnightly* led on to the *Pall Mall Gazette*; the studies of eighteenth century philosphers were followed by an official biography of Cobden; and first Chamberlain and then Gladstone took the place of Mill and Mazzini, Gambetta and Victor Hugo. 'The Englishmen of Letters' yielded to 'Twelve English Statesmen' and the author of 'compromise' produced an excellent plea for Walpole. Lord Morley does not regret his own progress to politics; and if he had the choice, he would not retrace his political steps and start once more from the point at which he abandoned the single-minded pursuit of letters.

About History he writes in the course of his *Recollections*: "History has advanced with a powerful stride to a commanding place within the last forty or fifty years, and a vigorous contest now stimulates and entertains us as to the true genius of the Historic Muse, or whether she be a Muse at all or only a kitchen drudge; whether a Science reducing great bodies of detail to concentrated and illuminating law, or that very different things, an Epic Art, a source of bright and living popular influence." His antithesis implies the exclusion of either science or art from History, whereas both are indispensable. Latter on he has an excellent remark that 'true history is the art of *rapprochement*—bridging distances of place and circumstance." This is the comparative method which alone can raise history to the level of literature or philosophy. This is the highest function of history but it is not the only one. Even the comparative method is worthless unless the comparison is between real phenomena; and we need the most vigorous and scientific research to establish that truth in detail without which our general impressions are invalid and quite fallacious. The specialist bent on contributing to accurate knowledge of detail is making true history, no less than the profoundest dealer in generalisations, though the relative value of his labour may be less. Paleography, diplomatic sigillography, numismatics and other scientific equipments are essential to the discovery of historical truth; but they do not make their votaries historians in the highest sense of the word. But neither does mere literary art make the historian; the sense of how things happen and what men mean is the supreme qualification for the historian.

Lord Morley's opinions on historians form very interesting reading. According to him Froude has no historic sense—no depth of faith in any principle—cynical at bottom and misleading. His 'Notes on Politics and History' gives better his thoughts on history and historians. "The controversies about the artistic, scientific and other possible characteristics of the Historic Muse leave no doubt that she is something of a sphinx and her riddles do not admit of mathematical solutions."

The New Age of Industry and Peace

The Current History (New york) for January publishes Mr. Frederick Harrison's very interesting and thoughtful article on "the Dawn of a New Era," wherein he draws a fascinating picture of a New World, free from barbarism and all these fierce weapons of destruction which Germany forged within her own walls for nearly half a century to imprison humanity at large. Mr. Harrison wonders whether one has realised the enormous changes which this Earth-War has brought about, what a new world we are entering, and what a new epoch of civilisation we have to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

make. These years of war, without example in range and in horror, have caused a new, a loftier civilisation to appear, in which militarism and national hostility may be transferred into an age of Industry and Peace. "Take it in all its aspects and its consequences, this new era of which we see the dawn is greater and more blessed than the epoch which Europe began to settle after barbarism, more pure than the advent of the New Learning and the New thought, more wise than the spasmodic revolutions in the times of Danton or Napoleon." Mr. Harrison reviews the progress of civilisation made within his own lifetime and, after making a brief reference to the political history of England, Russia, America, China, Japan, Germany, India, etc., speaks of the weighty task before his people, that of keeping to the ideal of a common faith, of a common spirit, of chivalry, loyalty and honour steadfastly and making it live and grow to Peace among men.

This awful time of bloodshed, ranging from the Arctic circle to the furthest Pacific, has given new meaning to all the forces that have been gathering up for a century, and it has discovered many new forces and brought together former enemies. Only twenty years ago Britain and America, Britain and France, were at arm's length. Can Britain, France, the United states, Italy, ever be parted again? Will not the races of Russia, Turkey, of the Central Empires, owe their free life to us—now together the vanguard of civilisation?

Four years of superhuman strain have transformed the world. East and West, North and South, have come together as brothers, in ways that they never knew. Humanity has come into its own in Peace and Union! Inventions to use and control the material earth, which were dreamed of for generations, have suddenly become realities.

The barborous blood tax must cease. Nevermore shall the nations have to offer up their sons to Moloch. The hideous waste of labour in engines of destruction —more than half the entire cost of Government— must cease. And with the waste of labour for destruction there must be ended also the waste of labour in debasing luxuries and wanton extravagance.

It will be a new world in this twentieth century. Shall we be new men, new women, worthy to use it rightly?

Education of Indian Labour

In the February number of *East and West*, Mr. R. Suryanarayana Rao writes an interesting article on the education of Indian labour in connection with the findings of the Indian Industrial Commission. He states that the Industrial Commission has gone into the question of the resources of the generating power necessary for the growth of industry. "The harvesting of water-power appears, however, to afford a more reliable source of energy." The conditions of labour in India are unsatisfactory and if they want to keep pace with the times, they need training and education. Various recommendations have been made by the Commission and great stress is laid on the extension of universal primary education. This reform, together with others suggested by the Commission will increase the intellectual capacity of Indian workmen, and hence his ability to adjust himself to the altered conditions for which the developments of science, etc., are largely responsible. That the large employers of labour, though conscious of the usefulness of education, have done nothing to provide for the education of labourers is really unfortunate. The real point at issue is whether the State or the organisers of industry should undertake this task. The Industrial Commission solves the problem by suggesting that "it would be unfair and unjust to impose upon employers this duty, which devolves rather upon the State and the local authorities."

The people in the country must be made to understand the importance of education in the industrial life of India. In addition to worldly success and material progress, wide diffusion of education provides that intellectual, moral, and spiritual equipment which enables the workmen to appreciate and take part in the higher activities of life. Every child has a right to claim for an opportunity to develop its latent powers, to enable it to take an 'intelligent and reasoning' interest in things with which it is familiar.

Is it too much to hope for the inauguration of an education policy which adopts a system of education that turns out the children that come under it, 'models of propriety and efficiency'?

The Ideal of Unity in Hindu Philosophy

Mahamahopadhyaya Dr. Ganganatha Jha, M.A., D. Litt., writing in the January number of *The Hindustan Review*, discusses in detail the fundamental unity of the entire philosophical and *political* life of India. The writer begins :—

Paradoxical as it may sound, India has, since the very beginnings of history, been the land of unification. In every department of knowledge and practice it has been the aim of our best men at any rate, to trace harmony amidst disharmony, agreement amidst disagreement, and unity in the midst of diversity. As early as the Rigveda, which, notwithstanding the great difference of opinion that there is in regard to its exact age, is acknowledged to be the oldest systematic record that has been handed down to us by antiquity,—we find the pregnant declaration—*ekam sad vipra bahudha vadanti*, the one real being the learned describe in manifold ways. In this short aphoristic sentence we find what has been rightly called the grandest and boldest stretch of philosophic generalisation. Coming down to the Upanishads, we find this same idea presented to us in diverse ways; and sought to be brought home to us by means of a series of metaphors and parables.

The advent of the great Shankaracharya, he proceeds to observe, witnessed a radical change in the philosophic outlook inasmuch as he asserted the "unreality" of all things in this world. The one result of this preaching of the negative side of the great Philosophy is an interminable struggle which we find going on in India among the advocates of various faiths and convictions. With a view to help the really earnest student who finds himself puzzled in the whirl of conflicting theories and attractive but evading ideas, Dr. Ganganatha Jha begins to prove that "the unity of the Vedantin is not only purely *spiritual*, but also strictly logical aud scientific." It is pointed out that there is real difference among the theistic philosophers as regards the oft-proved theory of *one* indivisible real essence pervading through all that is, that was, or ever will be, but the difference arises when they come to analyse the nature of the encasements of the underlying reality. To this all-pervading something, the Indian philosophers have given the name of 'Being', a word that best appeals to the humanistic tendencies of man, and "nothing can appeal to our higher nature which has not a personal or human touch."

After making a passing reference to telepathy, researches in chemistry and physics which definitely prove the unity of all things, he attempts to answer the question—"If it is true that the same consciousness is functioning in all phenomenal existences, whence the diversity"? The answer is :—

At this stage of enquiry the question that suggests itself is—If it is one and the same consciousness functioning in all phenomenal existences, whence the diversity? The presence of diversity cannot be denied what then is it that causes the diversity in the manifestation when that which manifests itself is even one? This diversity we are told is due to the limitations taken by the Consciousness upon itself, for the purposes of manifestation; it needs the limitations, as without these its manifestation would not be possible. For instance, for the purpose of manifesting in the mineral kingdom, the Consciousness has to take upon itself a coating of mineral matter; and so forth in every phase of manifestation: without a vegetable encasement, Consciousness could not manifest itself and function in the vegetable world; and without the animal body it could not be manifested in the animal world. For what, after all, is the 'manifestation of Consciousness' in any phase of phenomenal existence? It is only its appearance in some form in which the distinctive matter of that particular phase constitutes the predominating element; hence the need of the several kinds of forms, the mineral, the vegetable and the animal; in fact, formless manifestation would be a contradiction in terms; there can be no manifestation without some form, however subtle this may be. Metaphysically speaking, Consciousness *per se* is undifferentiable; and yet, without differentiation, no manifestation is possible; and differentiation implies diversity. Consequently, if it has to manifest itself, Consciousness must consent to be crabbed and cabined within limitations, and thereby lead to that diversity which thenceforth becomes the ruling principle in all phenomena.

Co-operative Representation

Professor J. C. Coyajee, in a recent issue of *The Bengal Bihar and Orissa Co-operative Journal* puts forward a strong plea for the representation of Co-operative Societies on local and district boards and other bodies. He observes that Co-operative Societies will supply a new motive power to create an interest in the rural population in the management of their own affairs. He says :—

I would first point out certain inconveniences which have resulted in the conduct of the present system of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

district administration which point to the necessity of such Co-operative Representation. The Hon'ble Sir S. P. Sinha in his admirable speech on the village Self-Government Bill has emphasized these inconveniences. He has pointed out "the need of a new motive power in the country—the interests and influence of the rural population in and on the management of their own affairs". In order "to evoke that interest and engage that influence in the system of Government and to tap the enormous reserves of energy, common-sense and natural shrewdness", we submit that the representation of Co-operative Societies is absolutely necessary since they alone have so far shown a living interest in economic matters and manifested markedly in their work that shrewdness and common sense. Sir S. P. Sinha has noted that villagers have shown in the past their reluctance to serve on the village *Panchayets* and to take a part in the labours of such uninviting character. Here also we can urge that the members of Co-operative Societies have been drilled to the work of management of common business and interests. Sir S. P. Sinha has further discussed the financial difficulty of the work of communal administration; and then again Co-operative Societies are the only bodies in the district who have learnt to look at matters from the correct economic point of view and to solve financial problems. He would leave jurisdiction in petty cases to village Committees; and we find that by common consent our Co-operative *Panchayets* have been settling disputes between members even before legislation conferred such jurisdiction on them formally. Sir S. P. Sinha would reserve for members of his contemplated Circle Boards the work of supervising the function of Village Committees. The members of our Supervisional Unions and the Directors of our Central Banks have already been trained in the performance of similar supervision in the case of primary societies. In a word, every requisite which the Hon'ble Sir S. P. Sinha demands from the members of his Village Committees, Circle Boards and District Boards, is already to be found in the *Panchayets* of our primary societies and in the Boards of Directors of our Central Banks.

A certain proportion of seats on the local bodies might be reserved for candidates chosen by Co-operative Societies-such proportion to depend upon the numerical strength of Co-operators comprised in the local units in question. The reservation of special seats for Co-operative Members is in no measure contravening the true ideal and spirit of democracy. The Co-operative Societies are the most intelligent and organised portion of the agricultural population and Co-operative Representation will only weigh the vote of the best and most organised section of the agriculturists. With the growth of the influence of Legislative Councils, it is necessary that agriculture and co-operation should have representatives therein.

War Indemnity for India

The Editor of *The Wealth of India* (January number) discusses the all important question of indemnity in the War and puts forth a very strong plea for India's share in it inasmuch as she stood shoulder to shoulder with European Nations, pouring forth her blood and money in the cause of righteousness. If distribution of indemnity is to be on the basis of the sacrifices made in winning the war, he asserts that India's claim to a share in it is indisputable. In defence of this plea, ample references are made to the utterances of responsible British statesmen, including Messrs. Asquith, Bonar Law, Lord Haldane, Lord Curzon, Lylod George, who all acknowledged in handsome language the material help that India gave in winning the war, her unflinching loyalty, her great sacrifices in men and money. Even the *Times* had a sympathetic note on India's enormous material assistance in securing the Allies' victory.

The value of the Indian export exceeded one hundred million sterling yearly. The State controlled prices at considerably less than the prevailing price and the rates secured considerable savings in the War bill of the Allies. As India's material recources were organised to supply the equipment of Indian troops and provide the Allies essential requisites for prosecuting the war, the extra equipment supplied reached the value of eighty million pounds. Of essential munition exports, wolfram, (one-third of the world's supply,) manganese ores, mica jute, shellac, saltpetre and hides were purchased by Government at controlled prices, considerably less, three to five times less, than those prevailing in neutral countries. For its own use and that of the Allies, rice, maize, barley, gram, oilseeds, oils and medicinal stuff were exported at controlled prices. Indian hides provided one third of the army boots. Skins were purchased at controlled prices considerably less than elsewhere, Three million tons of wheat were supplied to the Allies, the shipments being made available at considerably less prices than those ruling in the world markets. To meet one year's requirements, forty-one million yards of khaki and hundred and eighty and two million pounds of wool were exported to England. The Tata Iron Works supplied eighteen hundred miles of railway track and two hundred engines. India supplied over six hundred thousand vehicles for various theatres of war. She supplied 883 vessels to Mesopotamia, over 500 anchor boats and electric plants for Basra and Bagdad, worked by Indian operatives and ten million cubic feet of timber.

India's Part in the War

Sir Valentine Chirol writing in a recent issue of the *Journal of the Overseas Club* points out that in any reckoning up of the credit and debit sides of the great war one of the most important assets will be the appreciation of what India means to the Empire and of what the Empire means to India. From the mere military and material point of view, writes Sir Valentine, we shall have to bear in mind "not only the actual part that India has played in the war, but the much larger part she might and would have played if her resources had been more fully developed and more intelligently employed." As it was, he continues :—

Not only did the expeditionary forces she despatched to France in the autumn of 1914 fill a vital gap which, owing to our unpreparedness for a conflict of such magnitude, could not at that time be filled either from the United Kingdom or from the Dominions, but she alone was able to supply and did supply from her much larger reserves, guns and rifles and ammunition and war material of all sorts, without which it would have been difficult for our Army to carry on until British industry had been entirely reorganised for war purposes. At the same time India provided considerable forces for other expeditions to Mesopotamia East Africa, Egypt and Gallipoli, which it is now rather the fashion to depreciate as mere side-shows, though, in spite of many blunders they helped substantially to accomplish great ends in relieving the Empire from the meance which Turkey's co-operation with the Central Powers involved for the Suez Canal and the Persian Gulf, *i.e.*, for the safety of all our Eastern possessions. Recruiting, which has, of late especially, increased by leaps and bounds till it has now exceeded a million men since the beginning of the War, shows how much more effectively we might have drawn on the immense reserves of Indian man-power, had we made an earlier and larger appeal to Indian loyalty. Indian industries of which Agricultures must always remain the greatest, have made no mean contribution to the War, but it might have been infinitely greater had the British rulers of India realised in this respect, as perhaps Lord Dalhousie and Lord Curzon alone seem to have done, the immense potentialities of India, or had they not been hampered by the narrow and often selfish conception of the home interests which prevailed in this country until the Great War came to open our eyes.

But the spirit in which India made all the sacrifices for the cause of the Empire in this war was even more remarkable. Says Sir Valentine :—

More important, however, for the future than any of the material contributions made by India to the War has been the willingness with which they have been made. The great wave of enthusiasm which swept over India at the outbreak of hostilities was a splendid testimony to the value of the British connection in the eyes of Indians of all creeds and classes and communities. * * * * * * *

India rallied to the British cause because she learnt to know it was a cause worth fighting for. How did the Empire respond in turn ?

For the first time Indian representatives were admitted into the innermost Councils of the Empire. At the War Conferences in London they took their place beside the Ministers of the Crown and of the self-governing Dominions, just as the Indian troops have fought shoulder to shoulder with British and Dominions troops. In both cases better acquaintance has produced a sounder appreciation of common interests and common devotion to the great ideals for which the Empire stands; on the part of Indians a growing desire for the admission of India to full and equal partnership in the Empire; on the part of the Dominions a growing willingness to accept them into partnership ; on the part of the British people a growing desire to help India forward on the path of progressive and orderly progress towards the ultimate goal of self-government as an integral part of the British Empire.

Sir Valentine concludes with an appeal to Indians and Britons to show the same capacity to co-operate heartily and courageously in Council as they have shown on many a stricken field of Europe and Asia.

The Settlement of Turkey

One of the most important questions to come up before the Peace Conference is the fate of the Ottoman Empire. It is already probable that the outlying sections of the Empire will be detached from Turkish sovereignty and granted independence. Thus Arabia is practically recognised as an independent Kingdom. Palestine, Syria, Mesopotamia and Armenia will also become independent of the Turkish Empire. In the current number of the *Asiatic Review* there is a discussion as to the fate of Thrace in Asia Minor. In a secret treaty which was concluded in April 1915 between England, France, Russia, and Italy, it was agreed that Adalia and the southern half of Asia Minor should be the Italian share of the spoils, and that Russia should take Thrace. Constantinople and the northern half of Asia Minor, and that France and England should be rewarded

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

with Syria and Mesopotamia. The subsequent collapse of Russia and Armenian's entry into the war may be considered to have rendered this treaty null and void. President Wilson is prepared to support Turkish rule only in so far as it permits of the *unmolested autonomous development* of the other nationalities.

In Asia Minor even according to the Greek census the Turks form seven tenths of the total population, and they outnumber the Greeks alone by four to one and the Greeks and the Armenians together by three to one. But this preponderance of the Turks is smaller in some provinces than in others. The *villiyets* may be divided into two classes—those where the Turks form 75 per cent. or more of the population and those where they form less than 75 per cent. If the law of self-determination is to be applied to Asia Minor, of course, the large Turkish majority would vote for Turkish rule. But what about the $2\frac{1}{2}$ million Indians of Asia Minor? Can Turkish rule be transformed to the extent of bringing it into harmony with modern ideas of popular government? Some propose that outside Powers should establish some sort of control over this reformed Turkish Empire, and then conflicting interests, mutual jealousies, and mazy intrigues will inevitably follow. The maintenance of Turkish rule is by no means a solution which will eliminate future trouble. The only alternative is partition or dismemberment of the Empire. Thrace and Asia Minor might be partitioned between The Greeks and the Turks; to the Greeks the provinces where the Greek element is strongest and *vice versa*. There must be an interchange and inter-migration as to render this partition more acceptable to both sides. Constantinople should not be left under the Turkish rule; the straits must remain a free and neutral international waterway. It cannot be safely put under the control of anyone European power, and it must be for sometime under the protection of the League of Nations.

Materialism or Spirituality?

"Let the critic compare the noble and spiritual life of the ancient Hindus with the meaningless hurry and short-lived evanescence of modern times, and he will find that the history of mankind has been a history of progressive degeneration" writes Mr. Muthukumaru, M. A. in the course of an interesting article on "The Spirit of Hindu Institutions" in the January number of *The Young Hindu* of Jaffna (Ceylon). The writer thinks that the advocates of the modern theories of evolution and progress may pretend to be scientific in their ways of thinking. But they can never hide the fact that there is greater misery, vice, and suffering in the world now than in the days when man tried to find the true goal of his life not in the vanity of external things, but in inward realisation of his capacities. The present condition of Indian life divorced from all spiritual ideals sapped the purity of ancient institutions, and the result was decay of all that was best and most sublime in our National life. There are very few Hindus who can understand the spirit of their ancient institutions.

The founders of Hindu institutions were great men who studied life as a whole and understood things in their true perspective. They knew the great secret of life and growth and made the unfoldment of life the chief aim of their institutions. The two chief features of Hindu institutions seem to be (1) the conditions so well devised and arranged as to facilitate the growth of a synthetic mind, and (2) the emphasis laid on the principle of unconscious growth by indirect suggestions and communion of minds with institutions.

After explaining fully what the above principles meant in practice, Mr. V. Muthukumaru concludes:

The present state of things in our midst is very discouraging. Most of the people who are entrusted with the work of guiding our destinies do not in the least work for the purity of our institutions. They go with the current and do not have that clarity and depth of vision necessary for leaders of thought and action. All of us are every day being unconsciously vulgarised by coming in contact with the institutions of modern civilisation. Who among us will consecrate his life to cleanse our temples, our schools, and our homes of the existing evils, and defend them against the inroads of alien ideas and ways? Great is our heritage and let us grow to be worthy of it.

Primary Education in India

A writer who signs himself "Q. R." in the *Sind Students' Magazine* gives some interesting figures regarding the progress of Education in this country. The history of the movement for English Education in nineteenth century India is briefly told:—

India saw in the first half of the nineteenth century the extension and consolidation of British Rule, and in the second half two attempts made towards the cause of education. The first was the famous Wood's Despatch in 1854 and the second was the appointment of a Commission to enquire how far the policy laid down in the despatch of 1854 in regard to elementary education had been carried. The Commission made careful inquiries and found that in 1882 there were about 85,000 primary schools in the country recognised by the Department, and there were about 21½ lakhs of pupils attending these schools. In addition to these there were about 3½ lakhs attending unrecognised schools. That means 1.2 per cent of the whole population of India at that time.

Then follows an instructive comparison between different countries of the world and a native state in India itself. The writer's conclusions deserve to be noted:—

Now it has been universally recognised that a certain minimum of general instruction is an obligation which a Government owes to all its subjects. And thus it is that, led by German States, country after country in Europe and America and Japan in the East have adopted the system of free and compulsory education; and we find to-day all the countries in Europe, excepting Russia and Turkey, and the United States of America and Canada and Australia and Japan and several even of the smaller Republics in South America—all having this system in operation. And even within the borders of India, the enlightened and far-seeing Ruler of Baroda, after an experiment of 15 years carried out in one of the Talukas of his state, namely, the Amreli Taluka, has since 1909 extended this system to the whole of his State.

But here in British India education occupies a secondary place. Up to 1910 it had no separate department of its own. In the course of 34 years from 1882 to 1916, the progress in this country is represented by an advance from 1.2 per cent, to nearly 2 per cent of the total population. The expenditure on elementary education per head of the population is highest in the United States of America, being no less than 16 *s*; while in India it is barely one penny. Many are the objections which have been raised against primary compulsory education. Some say that there is plenty of room yet for our voluntary bases and others say that it would cost much. But where there is the will, there is the way.

Canada and India

Writers on constitutional problems have frequently referred to the historic Report prepared by Lord Durham in connection with the grant of self-governing powers to the Dominion of Canada. There are many points of comparison between Canada and India and it is interesting to read Mr. Bernard Houghton's article in *India* on the above subject.

Two differences there are but they are differences entirely in favour of Indian aspirations. Loyalty to England burns with a strong flame in most Indian hearts; in the hearts of the French Canadians of the 'thirties its very ashes were non-existent. Amongst leaders of Indian thought there is a hundred-fold more enlightenment and real statesmanship than were to be found with the French of those days. We have all heard Lord Morley's metaphor on wearing a Canadian fur coat in India. But even Lord Morley has his limitations. As his policy on the Bengal Partition and more than one of his speeches show, in Indian affairs, he has suffered the nobility of his ideals to be warped by the instilled poison of Anglo-Indian sophisms. . . What the debasing system of tutelage denies to its victims has been very aptly expressed by Lord Elgin in one of his letters. "One thing is, however, indispensable," he wrote, "to the success of this or of any other system of Colonial Government. You must renounce the habit of telling the Colonies that the Colonial is a provisional existence. *You must allow them to believe that, without severing the bonds which unite them to Great Britain, they may attain the degree of perfection and of social and political development to which organised communities of free men have a right to aspire.*" Change "Colonial" for "Indian" and you have the policy which India demands. It is the deprivation of this right which gives birth to the ferment in India, a ferment which will never quiet or slacken until India sees her way clear to the open ground of political freedom. This right to Self-Government is bound up in the minds of all thinking men with the spirit of nationality, as the living body with its beating heart. Events in Europe tell us that it is that spirit which to-day dominates the world and that it will surely break the fettering forces which oppose it.

Education in India.

We take the following from the Report on Indian Education in 1917-18 :—

In the four years of the war there has been an increase in educational expenditure amounting to 180 lakhs a year, the last year's total being about 12 crores of rupees. The number of schools has increased by 4,164 to 196,919, public institutes show a decrease by 4,558 to 159,510, private institutions, a decrease of 394 to 37,409, but pupils have increased by about 969,000. The percentage of those under instruction to the whole population has risen from 3·2 to 4·26. As to the provinces, Bengal has the largest number of school going children and the largest increase in the year. There has been a decrease in the number of pupils in the provinces of the Punjab, Burma and the North-West Frontier Province. Among general matters which occupied the attention of the Department of Public Instruction, the most important were the training and pay of teachers, reforms in which were made possible by the new Imperial grant of Rs. 30 lakhs. A second feature of the year has been the introduction of important changes in the system of the secondary school final examinations. Owing to the war and the consequent dearth of medical men, no great progress was possible in school hygiene. The most fruitful field of advance has been in first-aid classes in several provinces. Nearly the whole of the first-aid class at the Training College at Allahabad passed the examinations and its members rendered valuable aid at the Kumbha Mela to bathers rescued from drowning.

THE YEAR'S PROGRESS

As regards the Universities and colleges the principal event has been the sitting of the Calcutta University Commission. Meanwhile certain developments have taken place in the organisation of instruction for the degrees of M. A. and M.Sc. Assistance was given during the year to Sir J. C. Bose's Research Institute in Calcutta, and the Government of Bengal sanctioned a lakh towards the acquisition of the land required. The two new Universities at Benares and Patna commenced operation,—that of Mysore had already come into being in 1916. The colleges and their students increased by 6 and 4,297 respectively. As regards secondary education the principal feature has been the institution of school-leaving certificate examinations. The number of pupils rose by 12,225 to 1,198,586. Primary education has expanded on the whole. The average annual increase in pupils during the last 5 years has been 166,117 and during the last year the increase in schools was 5,672 and in pupils 114,011. There was some retardation of progress caused by the difficulties of the year. The remarkable point about the figures under primary education is the increase of schools. Expenditure on primary schools rose by Rs. 17,28,969 to Rs. 3,10,42,514. The principal feature of the year has been the movement in favour of compulsory elementary education. The second important point is the continuance of elementary education. As regards professional and special education, progress was made in the matter of Sanskrit education in Bombay. In the United Provinces, the number of students who presented themselves at the Sanskrit examinations was the largest on record. Efforts have been made in the direction of technical and industrial education. The governing body of the Civil Engineering College, Sibpur, submitted a scheme, with a view to improving and increasing the output of mechanical engineers and mechanics. Further, the profession of teaching has risen by 480 to 19,876. The total number of teachers in public institutions of all kinds in India is now 292,739 and these trained 95,542 against 280,738 and 88,169 last year.

UTTERANCES OF THE DAY

Mr. Swinny on the Reforms.

In the course of his annual address, Mr. S. H. Swinny, the President of the Positivist Society, says:—

In a world organised for peace, complete sovereignty is the simplest mode of self-determination, but in that great Confederation or Alliance, the British Empire, or, as it might more truly be described, the British Commonwealth of Nations, it has been found possible to grant large and in some cases practically full powers of self-development in the parts, while preserving a general though vague unity in the whole; and the good results of that policy are plain to see in the ready and voluntary help extended to the mother-country in her hour of need, not only by Canada, Australia, and New Zealand, which had no grievance against her, but by South Africa, eighteen years ago the scene of war and rebellion. And now it is proposed to make in India a further step in the self-government of that great dependency. I am very far from thinking the reform scheme put forward by Mr. Montagu and Lord Chelmsford perfect in all its parts, least of all in its treatment of the central government; yet there are very strong reasons why India, while seeking to amend, should be careful not to reject. In the first place, it makes no professions of finality—on the contrary, it expressly gives opportunity for future expansion. Secondly, the moment is favourable, general gratitude is felt for India's aid in the war, and this feeling will never be stronger than at present when the dangers we have shared together are still fresh in all minds. Thirdly, constitutional reform in India has many enemies; Parliament and the public will be much occupied with the reorganisation necessitated by the war; Mr. Montagu's successor is not likely to follow the same path, if this attempt fails. The present is an opportunity which, if it be rejected, may not return for years.

India and the Philippines: A Parallel

Mr. Gregoria Nieva, Editor of the *Philippine Review*, speaking at a meeting held in honour of Sir William Meyer's visit to the Island, said:—

To a certain extent, there is actually some parallel between Indian and Philippine affairs, particularly as regards the destinies of the two peoples in the Far East. India and the Philippines cannot feel themselves as different peoples because of the place they hold on earth, and because both come under the common term of "Oriental peoples." Their aspirations are very much similar, and, however different one country may physically seem from the other, such dissimilarity dwindles to insignificance in the broadening horizon of the Orient. On the other hand, India has been, during the last century and half, under the *dependency* of a Power that has unfailingly been the mother of small nationalities in Europe, while the Philippines has had the very great fortune of being, during the last two decades, under the *guidance* of that power, now at the head, effectively and whole-heartedly, of world Democracy, and of the new Idea of binding the World together with the bonds of sympathy and friendship—America. Thus you see that there is really some parallel between India and the Philippines as well as between America and Great Britain. And while it is not yet all the parallel we wish it should be, we feel confident their purposes, and their aims, and their motives will at last become all one and the same at one time. * * * During the three distinct stages of our existence under the glorious flag of America that is so nobly leading us to full independent nationhood one under purely American administration, one with the co-operation of the former Philippine Assembly, and one, lastly, under our almost exclusive legislative and administrative responsibility—all three in less than two decades—the commerce and revenues of the Islands have steadily grown up fully in proportion to the growth of our political institutions.

The Travancore Durbar.

The Travancore Dewan's address to the Shri Mulam Popular Assembly indicates the progressive nature of the administration in certain respects. The Durbar has been assisting the backward classes with plots of land for habitation and cultivation. The number of members in the Co-operative Societies increased from about 2,000 to about 2,800, and the paid-up capital of the Societies also rose from Rs. 24,710 to over Rs. 30,000, and the promoters of the Societies are reported to have been willing to supply funds out of the resources at their disposal. "Government are glad to note that the encouragement of small loans, the enforcement of punctuality in repayments and the readiness on the part of the members to a strict adherence to the provisions of the bye-laws were the prominent characteristics" of non-agricultural societies during the year. The first Co-operative Conference was held during the year. One of the progressive features of the year was the thorough reorganisation of the Ayurveda Department.

Passive Resistance in Udaipur.

The *Pratap* publishes accounts of a very appalling nature about Vijoulia, a small jagir in Udaipur State (Rajputana). The people of this jagir, it is said, are subjected to about a hundred taxes over and above the taxes levied on the general population of Udaipur State and the local authorities use all sorts of coercive measures to realize these. Recently on account of conditions caused by high prices the poor people of the jagir found it impossible to pay up the taxes and applied to the authorities to be relieved from them. Instead of giving any heed to their entreaties the authorities doubled the force of their extortion. The consequence was that some 500 arrests were made. His Highness the Maharana was appealed to, and he very generously directed that the matter should be enquired into.

The Mysore University.

The Mysore University, says a writer in the *Hindustan Review*, is the highest and most valuable achievement of the present administration which will endure to the end of Mysore histroy and tend to alter its phase for its betterment as no other institution would. But we must wait for full results as the Presidency Universities have done for at least half a century.

The next great move is the introduction of the compulsory education in the State, the encouragement of technical education in various ways, the development of female education and the special concessions granted to the education of the backward classes. The results are bound to be slow and the usual complaints about want of openings for the men and women trained will become louder and louder. But the working and the thinking capacity, and even the agitating power of the people will increase when they take full advantage of the facilities now offered.

New Dewan of Cochin.

Rao Bahadur T. Vijiaraghava Chari, who has been appointed Dewan of Cochin, took charge of his office on the 3rd instant.

Mr. Vijiaraghava Chari is one of the senior members of the Madras Provincial Civil Service and has had a varied and successful career. Among numerous appointments he has held successively are those of Revenue officer of the Madras Corporation, Secretary to the Board of Revenue in the Settlement Department, Secretary to the Indian Officers' Association, Vice-President of the Madras Government Servants' Co-operative Society and Vice-President of the Madras Social Service League. He has been twice Secretary to the Madras Industrial Exhibition, and was selected for special duty in the Department of Industries in 1918 where he continued up to November.

The Transvaal Indians.

Mr. Gandhi has addressed the following letter to the Press:

"The cable received by me from Mr. Aswant, Chairman of the Transvaal British Indian Association, shows that a revival of "Satyagraha" with all the attendant suffering, is imminent in South Africa. Unless the danger that threatens to overwhelm the Indians of the Transvaal is averted by prompt and effective action by the Government of India, and, if necessary, by the public also, the situation warrants a repetition of Lord Hardinge's action and the immediate despatch to South Africa of a mission consisting of a distinguished civilian and an equally distinguished Indian publicist. What is that situation? The Precious and Brass Metal Act referred to in the cable affects the gold area of the Transvaal in the largest part of its Indian population. Krugersdrop is an important town near Johannesburg and contains many Indian merchants, some of them owning stock probably worth three lakhs of rupees. If no relief is provided, it means ruin for the merchants and for those residing in the whole of the gold area. The goal of the Union Government seems to be, as has been openly declared by several Union statesmen, to reduce its Indian settlers to the position of hewers of wood and drawers of water. It is possible that the Court's interpretation is correct. If so, the Act itself must be changed, and the Indian community must be saved, not merely because of their status as British subjects, but also because of the Passive Resistance Settlement of 1914, which protects vested or existing rights. The judgment is a direct attack upon Indian liberty. In pursuance of the policy referred to by me the Government want further to harass the community throughout the Union by refusing facilities for the conservation of its present Indian population. They cannot remain in it if they may not receive occasional visitors, if on the death of a propertied man his trusted relatives may not enter the Union in order to administer his affairs. I can understand the dominant community in South Africa not wishing to have an unlimited influx of people alien to them in civilisation, but it is impossible to understand a policy of ruthless extermination side by side with a profession of loyalty to a common Empire. Moreover, this refusal to issue temporary permits is a breach of the Settlement. It has been all along understood that temporary permits would be granted whenever necessity arose. Surely, nobody could question it in the late Mr. Mahomed Isac's case, quoted by Mr. Aswant in the cablegram. Reference to the late Mr. Gokhale in this connection is a libel on a sacred name. After the termination of the interview, Mr. Gokhale came directly to the hotel where we were staying. I had the privilege of being his Secretary and he related to me the whole of the conversation between the Ministers and himself, and there was not a word about his having consented to a stoppage of temporary permits under any circumstances whatsoever. He had no authority to enter into any agreement. He went only to learn and to plead. Your readers will recall that at the historic meeting held in Bombay upon his return from South Africa, he declared publicly that he had no authority to negotiate a settlement and that he had agreed to nothing. As representing the Indian community I was a party to the settlement of 1914. If any such agreement had been made surely, it would at least have formed part of the many discussions between General Smuts and myself. It is worthy of note that General Smuts is not now in South Africa. If he was asked I doubt not that he would repudiate Col. Shawe's allegation. The cablegram adds that there are many other harassments going on throughout the Union. We are supposed to be on the eve of embarkation upon Reforms that are to eventuate in the near future full responsible government. What answer has India to give to Mr. Aswant's pathetic appeal? The hundred thousand Indians of the Union have a right to look up to the Government of India and the people for protection of their elementary rights.

Tata Industrial Bank.

At the first general meeting of the Tata Industrial Bank held at Bombay on Feb. 30, the reply of the Directors up to 31st December last was presented. The profits of the bank in the first few months working on that date amounted to four lakhs sixty thousand rupees on a paid up capital of seventy lakhs and the working capital amounted to over four crores thirty seven lakhs. The chairman of the bank, Sir Dorab Tata, in his speech, said the greater part of the bank's business so far had been ordinary banking business as done by ordinary banks. If the bank has not been able to act up to its name as an industrial bank, it was due to want of necessary men and machinery to scrutinise and report upon industrial propositions as much as to lack of really sound propositions. Now with the end of the war and the return of more normal times he hoped propositions of a more natural and permanent character would be submitted to the bank. He assured shareholders in this connection that the bank on its own part would not merely wait for propositions to turn up, but would also take the initiative itself and find out profitable channels for employment of its resources in industrial investment.

The Trade of India.

The report published by the Department of Statistics, reviewing India's trade in 1917-18, roughly points out future developments and lines on which progress in trade is likely to take. The report says: Three years ago few of us dreamt that India being far distant from the Titanic struggle in Europe would have experienced great changes that have taken place in her commerce and industry. In commerce continuous demands on the part of the Allies stimulated the export of commodities of vital national importance and at the same time altered the direction of trade in the industry. * * * * In the direction of India's trade the effect of the war has been to increase the trade of India with other parts of the British Empire. A most interesting feature in regard to the direction of trade is the large increase in trade with Japan and United States. When the long list of imports at the present time is examined, the progress in our trade with Japan cannot be termed other than phenomenal. In 1917-18 the total trade with Japan exceeded that with other countries except United Kingdom and was valued at Rs. 52 crores. This was an increase of 400 per cent. in imports and 103 percent. in exports over pre-war average. The value of trade with United States had grown to twice what it was in the pre-war period, being second only to that with Japan. Half of the import trade with United States was made up of iron steel and mineral oil, while the trade with Japan was chiefly in the import of cotton manufactures, matches, silk manufactures and glassware and in the export of raw cotton.

Import of Pulses.

The Director of Civil Supplies, Madras, writes:

The Director of Civil Supplies, Bengal, informs me that dal and pulses are imported into Calcutta from up-country markets in Bengal, for re-export to this presidency. If you can get into touch with these up-country markets in Bengal and draw supplies direct from them instead of *via* Calcutta, it would mean considerable saving of railway wagons. I shall in future give preference to applications for priority certificates for pulses direct from up-country markets in Bengal, over applications for pulses from Calcutta.

Cocoanut Industry.

Work in connection with the establishment of the cocoanut industry at Ernakulam is being pushed on with great rapidity. There is some delay in setting up the machinery as nearly 4,000 to 5,000 tons of materials have to arrive from America. The industry is to be mainly built with machinery from America and managed chiefly by Americans.

AGRICULTURAL SECTION

Indian Agriculture.

Much of the work turned out by the Agricultural Departments in India consists of the prevention of diseases and of scientific research, the results of which are not immediately apparent. Two striking statements relating to the increased money yield of particular crops may, however, be cited from Mr. MacKenna's comprehensive report on the progress of agriculture in India in 1917-18 which has just been published. Most of the Indian wheats, the Agricultural Adviser points out, are of low quality and consequently fetch low prices in the markets of the world. The straw is also weak. The object aimed at in the experiments in wheat-breeding accordingly is to combine high grain quality with increased yielding power and a strong straw. In regard to the introduction of the American variety of cotton seed known as 4 in the canal colonies of the Punjab we are told that at a very moderate valuation the extra gain to the Punjab cultivators of this cotton in the present year is at least Rs. 60 lakhs. Work on the evolution of better types still goes on and it is possible that a better variety than 4 will be forthcoming. Results such as these must demonstrate even to the unimaginative what the application of science to agriculture may ultimately mean to India.

Cinemas and Agriculture.

Realising the value of moving pictures as a publicity medium for illustrating the natural resources of the Dominions and the national value of industrial development, the Canadian Government and the Industrial Reconstruction Association are undertaking a comprehensive scheme of moving-picture propaganda. The latter body is issuing an initial half-a-dozen pictures, to be followed by others, as the activities of the Association develop. The first series of pictures will include:—

(*a*) The Woollen Industry—showing flocks and grazing lands in Western Canada, and tracing various processes of manufacture to the finished woollen and knitted products.

(*b*) The Pulp and Paper Industry-depicting first the timber resources of British Columbia and working through various stages of lumbering activity to paper making, book binding, printing, etc.

(*c*) Grain and Milling—illustrating successive stages of wheat production, sowing, harvesting to elevators. Other pictures will show successive stages of manufacture through the flour mills and shipping for export.

(*d*) The Iron and Steel Industry—showing the mineral resources of the country and mining process, with shipments of raw material and stages of manufacture.

(*e*) The Packing Industry—depicting Western stockyards, the raising, etc., of hogs and cattle.

(*f*) Agricultural Implements—illustrating manufacture, shipment, and operation.

Agricultural Education.

At the Imperial Council the Hon'ble Rao Bahadur B. N. Sarma asked:—"Was a supplementary grant of £200,000 made for technical and agricultural education during 1918-19? If so, how has this grant been utilised?"

The Hon'ble Sir Claude Hill replied:—"The answer is in the affirmative. Out of the total grant of £200,000, £ 60,000 have been allotted for technical education and £140,000 for agricultural education. The latter amount has also been supplemented by a sum of £120,000 representing the balance available from the profits which accrued from the scheme for the purchase and export of wheat on Government account. The grant for technical education has this year been given for non-recurring objects only and the distribution has been made with reference to schemes which were ready or appeared feasible. The grant for agricultural education was made with the object of starting some of the most urgent schemes for the improvement of agricultural education.

NOTICES OF BOOKS

[SHORT NOTICES ONLY APPEAR IN THIS SECTION.]

The aims of Labour. By the Rt. Hon. Arthur Henderson, M. P., Headley Bros, London.

Labour in Great Britain as elsewhere is no longer a negligible factor but one to be reckoned with as a great and compelling force in the polity of the future. Already the ideals of Labour are transcending the merely patriotic and national standpoint. Labour is becoming an international Brotherhood, thanks to the genius of its leaders heralding the advent of a league of peace. In this pamphlet Mr. Henderson, Secretary of the British Labour Party, has touched on some of the most vital problems of labour and the social and political ideals which inspire British labour in particular with the deft and unerring vision of a practical statesman. He writes delightfully of the coming together of a "powerfully organised movement to achieve a new freedom and to establish on this earth, drenched with men's blood, torn with men's struggle wet with human tears, a fairer ideal of life."

Shri Rupkala. By A. B. Narayan Sinha, translator, Patna High Court.

This is a short sketch of the life and activities of His Holiness Shri Vaishnavaratna Swami Shri Sita Ram Sharan Bhagwan Prasadji Rupkala of Ayodhya, by one of his ardent disciples, Mr. Sinha. The book deals with the various stages in the Swamiji's life, such as Vidyarthi, the householder, the Bhakta, the author, etc., and Mr. Sinha also mentions some of his personal reminiscences which form interesting reading.

Indian Directory—Delhi. Edited and compiled by Harnarayan Prasad, B. A. Published by the Encylopaedic Indian Directory and Co., Allahabad. Price Rupee one.

The publishers of this useful book have collected together in this one volume all information of general interest regarding Delhi. The tourist as well as the student of history and archaeology will find this book immensely helpful.

The Indian Year Book: 1919. Edited by Sir Stanley Reed, Bennett Coleman and Co., Lt., (can he had of G. A. Natesan and Co., Madras) Rs. 6.

The wide popularity of this useful book of reference is evidenced by the fact that it is sold out every year within a few months of its publication. And the demand is deservedly increasing. The current number is a distinct improvement on the previous editions. Special attention has been given to questions arising out of the war and the chapter on "India and the War" is an instructive record of our war efforts. Prominence has also been given to leading political questions like the Montagu-Chelmsford proposals, the Industrial Commission's reports, and proceedings of the Congress, Moslem League and the Moderate Conference. Another admirable feature is the inclusion of a "Who's Who" which however is rather meagre. There are surprising omissions but we trust subsequent editions will be more full and copious.

The History of a Village Panchayat. By Mr. E. V. Sundara Reddi, M.A., B.L., The Kanara Press, Madras.

Mr. Sundara Reddi describes the constitution of a small village to illustrate the working basis of the Panchayat System and the facts and figures he has collected are so marshalled that a student of politics will find ample food for thought. The Panchayat has withstood the shock of falling dynasties and has preserved the integrity of the village from time immemorial from the fate of more pretentious cities which have shared the vicissitudes of proud capitals. Mr. Reddy's study of this vital unit of the Indian polity is at once thorough and scholarly and is fruitful of many a sound and helpful suggestion for the active politician.

DIARY OF THE MONTH

Feb. 20. His Majesty the Amir Habibullah of Afghanistan was assassinated at Laghman.

Feb. 21. The Ninth All-India Vedic and Unani Tebbi Conference opens to-day in Karachi.

Feb. 22. Lady Chelmsford lunches to-day with Their Majesties the King and Queen at the Buckingham Palace.

Feb. 23. Public meeting at Bombay to protest against the Rowlatt Bills.

A Reuter's message announces that Mr. Tilak has lost his case.

Feb. 24. Lord Sinha presides to-day at the Rhodes Lecture by Sir J. D. Rees.

President Wilson arrived at Boston.

Feb. 25. Lord Ronaldshay presided at the Annual convocation of the East Bengal Saraswat Samaj at Dacca.

Lord Sinha takes his seat in the House of Lords.

Feb. 26. Professor Limaye of Fergusson College died to-day at Bandra.

Feb. 27. H. E. Lord Ronaldshay opened the Social Service Exhibition at Dacca.

The Government of Madras forfeited to-day the security of the *Desabhaktan*, a Tamil daily of Madras.

Feb. 28. Mahatma Gandhi's letter to the Press condemning the Rowlatt Bills.

The Inter-Allied Mission of Poland meets the German Representatives to-day to discuss the future of Poland.

Mar. 1. Sir James Meston presents the Financial Statement for the year 1918–19.

Mar. 2. A mass meeting is held to-day at Benares to protest against the Rowlatt Bills.

Mar. 3. H. H. the Maharaja of Bikanir lunched with Their Majesties the King and Queen.

Mr. H. N. Apte, ex-President of the Poona Municipality, died to-day.

Mar. 4. Lord Sinha delivers his maiden speech in the House of Lords.

Mr. Gandhi arrives at Delhi to-day to see the Viceroy in connection with the Black Bills.

Mar. 5. Mr. Johnson apologises in Court with reference to the case brought against him for throwing the Saraswati image into the dustbin.

Mar. 6. H. E. Sir George Lloyd, Governor of Bombay, addresses the students at the Wilson College Annual Day.

Mar. 7. The Calcutta High Court Vakils' Association holds a protest meeting against the Rowlatt Bills.

Mar. 8. Sir William Vincent presents to-day the report of the Select Committee on the Criminal Law Amendment Bill.

Mar. 9. H. E. the Governor of Bombay opens the Naval Exhibition in Bombay to-day.

Mar. 10 A public meeting was held under the presidency of Lord Ronaldshay at Calcutta for the purpose of considering steps to be taken to perpetuate the memory of the late Lord Bishop of Calcutta.

Mar. 11. A public meeting of Bombay ladies held to-day at Chinabagh to protest against the Rowlatt Bills.

Mar. 12. A garden party was given at Metcalfe House, Delhi, by the Maharaja of Darbhanga on behalf of the Landholder's Association in honour of the Viceroy.

Mar. 13. The All-India Zamindars' Conference meets to-day under the presidentship of the Maharaja of Darbhanga.

Mar. 14. Admiral and Lady Jellicoe landed at Apollo Bander at 5 this evening.

March 15. The Madras Teachers' Guild Conference was opened to-day by His Excellency the Governor.

March 16. The Calcutta Provincial Congress Committee held a Conference to-day and approved of the policy of Passive Resistance.

March 17. A public meeting was held at Madras to protest against the Rowlatt Bills.

March 18. Madras Moderates have issued a manifesto against Passive Resistance.

The Rowlatt Bill has been passed into law.

The Hon. Mr. B. N. Sarma resigns his membership of the Viceregal Council.

Literary

Gandhi's Message to the "Independent."

Mr. Gandhi addressed the following words to the conductors of the new daily organ at Allahabad, *The Independent* :—

"In wishing you success in your new enterprise, I would like to say how I hope your writings would be worthy of the title you have chosen for your journal, and may I further hope that to a robust independence you will add an equal measure of self-restraint and the strictest adherence to truth? Too often in our journals, as in others, do we get fiction instead of fact, and declamation in place of sober reasoning. You would make "The Independent" a power in the land and a means of education for the people by avoiding the errors I have drawn attention to."

The World's Press.

The following shows that the Press in all the civilized countries is free but in India :—

England.—Complete Freedom of the Press.

Scotland.—Press is Free.

Ireland.—Seizure of a newspaper is provided for, but there is nothing like depositing security at the inception of a paper.

U. S. A.—The Constitution of 1867 secures liberty of the Press.

British Colonies.—Press is Free.

Hungary.—The Constitution of 1867 secures liberty of the Press.

Belgium.—By the Belgian Constitution of 7th Feb. 1831 it is declared that the Press is free.

Brazil.—By Art. 179 of 1824 every one is entitled to publish his thoughts.

Argentine Republic.—Liberty of the Press is one of the rights secured by the Constitution.

Chili.—Liberty of the Press is secured by the Constitution.

Denmark.—In 1849 the Press was declared free.

France.—With the republic, the Press has been made free.

Germany.—The Law affirms liberty of the Press.

Greece.—Press is Free.

Holland.—Press has been free for very long.

Italy.—By Art. 27 of the Political Code of Sardinia, granted by Charles Robert, on 4th March, 1848, and still in force, the Press is free.

Mexico.—Liberty of writing and publishing is inviolable.

Norway.—Liberty of Press is secured by the Constitution.

Ottoman Empire.—By Art. 12 of the Constitution of 23rd December, 1876, the Press was recognised as free.

Portugal.—Liberty is secured to the Press.

Rumania.—Liberty is secured by the Constitution.

Spain.—Press is free.

Sweeden.—Liberty of the Press is declared to be the privilege of every Swede.

Switzerland.—Liberty of the Press is secured by the Constitution.

Editor of the "Times"

Mr. Geoffrey Dawson has resigned the editorship of *Times* and is succeeded by Mr. Henry Wickham Steed. Mr. Dawson, in a letter to Mr. John Walter, Chairman of the *Times* Company, says, he has been awaiting his arrival from Spain in order to tender his resignation, which he had been considering for some weeks ever since it became clear that Lord Northcliffe was constantly dissatisfied with the policy of the *Times* because it deferred from his own expressions of opinion in the other newspapers.

The "Panchama."

We welcome the *Panchama*, a new monthly Journal, published from Hyderabad (Deccan) by Mr. J. Muthayya. The journal is devoted to the uplift of the depressed classes of India. The subscription is only Rs. 1-8-0 a year.

Educational

Sir Rabindranath on Education.

In the February number of *The Mysore Economic Journal*, Mr. V. Subramania Aiyar, B. A., gives a succinct summary of the views of Sir Rabindranath Tagore on some educational problems, which he jotted down at private conversations with him :—

Universities

While the Assistant Professors for the routine work of the University classes may be appointed in consideration of their academical titles and diplomas, Professors for higher work must be selected on the basis of unique merit—men who have to be leaders and directors of thought and given unquestionable proof of their genius and originality. The best method of selection is by sending for best men available, asking them to deliver courses of lectures and selecting the best among them. Those who are so selected must be bound by a condition that within three years they should produce some original work. The system of exchanging Professors for short periods must be adopted. Good salaries must also be paid.

As regards selection of men for Specialisation, it is only when young men have been in close touch with professors with originality of thought, that their merits and aptitudes for original work can be known. And this can be judged best not by ordinary lecturers, usually known as Professors ; but by those who have done original or research work. There should be travelling scholarships to enable research students to visit different provinces of India. The subjects of study ought to be selected according to the special taste of students where he can have free scope for manifesting originality. The medium of instruction should be, as far as possible, the vernaculars of India and the adoption of this principle should be gradual. Instruction in fine arts is an urgent necessity. The study of the Buddhistic and the Pali literature should be combined with a study of Sanskrit literature.

Women's Education.

Woman has a right to learn the sciences and arts that man learns, and to enter, as far as practicable, the walks of life that man usually seeks. The work of preservation and development of individuality of man can best be done only by woman, and she must, therefore, be trained for discharging this great duty of rearing up the real man of the future. The courses should be given in the vernacular.

Primary and Secondary Education

The teacher and the parents may give the child talks on various topics or subjects *incidentally* in the garden, on the road, at the dinner or elsewhere. Task work must be confined to only one subject. The mother tongue should be the medium of instruction.

Education in General

All educational development must proceed from within outwards. The aim must be to develop not only the *individual* aspect of the mind but also the *universal* or the *spiritual*. A sound educational system should provide for the development of variety without losing the hold or the basis of spiritual unity.

A Real Indian University

" There must be a place, if not in every province, at least in one centre in this vast country, to which the best intellects of India and even of the world outside, could be induced to resort, where they could meet, stay temporarily or permanently and impart their knowledge to the public. It will help to kill racial, sectarian, caste and other prejudices and be a real fountain of universal light. It is only Hindu States, whose rulers have in their veins flowing the ancient Aryan spiritual culture, based on 'unity' and universality that can realise its importance and organise a real university of this type, which will be India's educational contribution to the world's progress."

Legal

The Tilak-Chirol Case.

The *Mahratta*, while regretting the recent decision in the Tilak-Chirol case, publishes the following:

There is, however, an appeal or two provided by law against this judgment, and those who know Mr. Tilak need not be assured that he will not rest till he has exhausted all the remedies still open to him for getting a judgment in his favour. The possibility of an appeal, which, we believe, must be already in course of presentation, requires that those who disapprove of it must observe reticence if not absolute silence.

The Rowlatt Bills.

Sir Narayan Chandavarkar, in the course of an article in the *Indian Social Reformer*, discusses the question as to what should be the attitude of the non-official members of the Imperial Legislative Council towards the Rowlatt Bills. He says that the *temporary* character of the measure is a "concession" to public opinion, but he also admits that the concession is "only partial and does not satisfy the conditions of the constitution to justify at least the Indian non-official members of the Council in resting satisfied with the concession made and according their support to the law as a temporary measure". The Indian non-officials are, he says, "exponents of the general will of the country" and they should refuse support to the measures.

"That is the test for them; and they are entitled, on the ground of recognised constitutional principles, to urge that the constitution of the Government should be popularised first in the direction of Responsible Government before they can share the responsibility of such laws with the Executive in a time of peace. If, under the present system of Government, and before Mr. Montagu's Reforms take effect and admit the people *into* the administration and make them responsible for it, the Legislative Council passes the Rowlatt Bills, whether with the support of the Indian members or by an official majority without that support, the Legislature will be passing the law under the guise of authority from public opinion, when that opinion is really opposed to the measure. The charge has been brought against the Indian members of the Council by some that those members have opposed the Bills because they fear that if they support the measures they will lose their popularity. The *Pioneer* makes much of that. Even assuming it is so, what does that argument come to? It means that these measures are *unpopular*. And if they are, the Indian members as representatives of the people, will be going against public opinion should they support the measures."

Women and Hindu Law.

The *Calcutta Weekly Notes* writes:—

The denial of civil rights to women in India has never been so rigid as it was in England half a century ago when John Stuart Mill wrote his famous essay on the Subjection of Women. The Hindu law hardly attached any disqualification in respect of civil rights of women in India. It is also well-known that large properties are managed by Hindu widows as life-owners. Hindu women are also absolute owners of their *stridhan* properties. They are ordinarily the absolute mistresses of their own household and possess business capacity to a remarkable degree. In point of intelligence and in their knowledge of men and affairs, they are in no way inferior to their European sisters and they often possess stronger common sense than men. It would be a shame to say that they are incapable of exercising their right of vote. We hope therefore that none of the Commissioners will bring upon himself the odium of opposing this proposal for the conferment of a very elementary civic right on the women rate-payers of Calcutta.

Medical

A Ministry of Health.

At a recent meeting of the Council of the Royal Sanitary Institute, England, the following resolution was passed :—

"The health of the people being of paramount importance in the progress of the nation, the Council of the Royal Sanitary Institute have noted with great satisfaction the progress that has been made and the valuable work accomplished during the past fifty years by the various departments dealing with public health.

"The rapid development under present conditions of the many subsidiary factors affecting the question, and the complexity of the interests involved, make it essential, for the effective continuance and development of the work, that so far as possible all matters relating to public health should be co-ordinated in one department as a Ministry of Health.

"The Council therefore desire to urge that the matter is one of pressing public importance, and trust that it may receive the early attention of His Majesty's Government."

Lung Operations.

The remarkable operations upon the lungs carried out by Col. Pierre Duval, of the French Reserve Medical Corps, are claimed to have been followed by complete recovery in two-thirds of the patients. A six-inch opening through the ribs being made, the injured lung is drawn through the aperture with forceps, and is then manipulated like a sponge with one hand, while the other hand ties severed blood-vessels, cleanses the surface, and swabs out the inner tracts with gauze. By feeling over the whole organ, bullets and bits of shell are found and removed. Portions of the lung that have been torn are cut away, and the wounds are sutured.

The Ayurvaidik Conference.

The Ayurvaidik and Unani Tibbi Conference was held this year at Karachi under the presidentship of the well-known Unani Practitioner, Hakim Muhammad Ajmal Khan of Delhi. The President said in the course of his address that the Ayurvaidik and Unani systems were based on scientific principles and laws and that their component parts were governed by a regulated system. After referring to the main branches into which the Indian systems have been divided, he proceeded :—

If eastern or Indian systems of medicines are called unscientific because, for example, they do not possess a detailed information about bacteriology as is to be found in the Western system, I should like to enquire of my narrow-minded and prejudiced friends, that if this or any other changes of the same kind, entitle the Western system to be termed scientific to-day, are they prepared to acknowledge that before the introduction of these changes and new discoveries, their own systems were unscientific. More than this, they will be compelled to admit that according to this principle they cannot call the Western system scientific even to-day, because they see that the constant efforts of the nations of the world are adding some new facts to the existing stock of the world's knowledge in which is included the knowledge of the medical science also. Changes and improvements are taking place daily and therefore every science, which has been subject to them, will appear to be unscientific until such change or improvement. My answer to these critics will be that the shortcomings mentioned above are not sufficient to debar any branch of knowledge from admission into the Court of Science. Otherwise without doubt we shall hesitate in pinning the medal of science on the chest of the Western system of medicine, in the same way as we shall hesitate to put the garland of praise and honour round the neck of the Eastern systems.

Science

Is The Earth Drying Up ?

Many authorities recognise the fact that the earth is slowly losing its moisture. How this can occur is partially explained by Professor C. F. von Herrmann, by the action of electrical discharges in decomposing water vapour. One of the component gases, hydrogen, is very light and rises to the upper limits of the earth's atmosphere, where it is ultimately thrown off. This loss of hydrogen means in the long run a loss of water. The decomposition of the earth's moisture, with final loss, is also brought about by other agencies, notably the effect of the light-rays of the upper part of the spectrum.

Dr. Karl Stoeckel says :—" It is believed that the ultra-violet rays of sunlight which fall upon the water vapour suspended in the lower strata of the earth's atmosphere, decomposed a small part of it to produce hydrogen, which rises to great heights."

On this Prof. von Herrmann comments as follows :—" I do not think it has been pointed out before that the earth's surface must be continuously losing hydrogen through the decomposition of water vapour by every flash of lightning. Pickering and others have recognised the hydrogen lines in the spectrum of lightning, and the larger works on meterology mention the fact that lightning flashes decompose some water. . . . . The hydrogen formed by every lightning flash rises rapidly to the upper atmosphere and is lost to the earth.

" Considering the frequency of thunder storms during the summer seasons in both hemispheres, and at all times in the equatorial regions, the loss of hydrogen in this way cannot be considered as insignificant. As long as conditions upon the earth remain such as to render thunderstorms possible, the slow desiccation of the earth must continue. "—*Popular Science Siftings.*

A most Uncanny Clock.

A most uncanny clock is in the possession of an Indian prince. It has no dial, only a round dice, to which numerous little bells are attached. Its mere sight at every full hour is sufficient to strike awe into nervous persons. For this uncanny clock indicates the hour by uniting, as with a magic hand, into a skeleton a number of bones heaped about it. This skeleton then seizes a bone and strikes with it at the bells as often as are hours to be indicated. This done, the skeleton falls again to pieces. £1,000 was recently offered for the clock, but the owner could not be induced to sell it.

Wireless and the Cable Service.

The War has developed wireless commercially as well as scientifically. The normal load on the cables during the War has been about 200,000 words a day between Europe and America, and the radio stations have been able to relieve the cables of much official routine.

Rapid communication with America was a matter of supreme importance for General Pershing and for sometime the absence of proper communications considerably hampered him. It was owing to his urgent representations that the " Lafayettee " station at Bordeaux, the largest and most powerful wireless station in the world, was erected by the American navy. The power of the station is twelve hundred kilwoatts, and it provides absolutely trustworthy communication at any period of the year.

Of other features in the advancement of this fascinating science that of wireless telephony will most astonish the public when the results become known. One informant described a conversation with an aeroplane some fifty miles distant, in which the human voice was loud and distinguishable, even to the smallest inflection, as if the speaker had been in a room with his listener. For instance, it was clear that he had not learnt English west of the Atlantic or south of the Tweed.

Personal

"Moderate" Deputation to England.

The following is the personnel of the deputation to England on behalf of the Moderate party :—

The Hon. Mr. Surendranath Banerjea, Sir Narayan Ganesh Chandavarkar, Sir Benoda Chandra Mitter, Sir Chimanlal H. Setalvad, the Hon. Mr. V. S. Srinivasa Sastri, the Hon. Dr. Tej Bahadur Sapru, Mr. N. M. Samarth, the Hon. Mr. C. Y. Chintamani, the Hon. Provash Chandra Mitter, the Hon. Rai Bahadur Krishna Sahay, the Hon. Khan Bahadur Mian Muhammad Shafi, the Hon. Dr. A. Suhrawardy, Sir Vitthaldas D. Thackersey, Mr. M. V. Joshi, Mr. W. A. Chambers, Pandit Hirday Nath Kunzru, and Mr. K. C. Roy.

To assist this deputation and to promote the cause of Indian constitutional Reform, arrangements are being made to form in England an influential committee consisting of prominent British statesmen.

The following additional names, to form the second batch, have also been announced :—The Hon'ble the Maharaja of Kassimbazar, Rao Bahadur R. N. Mudholkar, Dr. Sir Nilratan Sarkar, Sir Fazulbhoy Currimbhoy, Nawab Syed Allafal of Bogra, Mr. D. C. Ghose, Mr. J. N. Roy, Prithvis Chandra Roy, Rev. Mr. Nag of London Baptist Mission, Rai Sahib A. P. Patro and Dewan Bahadur C. Karunakara Menon.

The Late Mr. H. N. Apte.

Mr. H. N. Apte, ex-President of the Poona Municipality and a famous Marathi novelist, died of dropsy on March 3, at Anandashram, Poona. He was an intimate friend and devoted follower of the late Mr. Ranade and Mr. Gokhale. He was the Secretary of the Deccan Sabha for a long time and took a prominent part in politics. He was a Fellow of the Bombay University and for several years Examiner in Marathi.

The Late Prof. Limaye.

We are deeply grieved to record the death of Prof. Limaye of the Fergusson College. He died suddenly at Bandra during a brief sojourn to Bombay in connection with the proposed college in Salsette of which he was to have been the Principal. Readers of the *Indian Review* will remember his scholarly criticism of Prof. Kincaid's "History of the Maratha People" in our December number. Prof. Limaye was a scholar in the best sense of the term, equipped with a vast and varied knowledge coupled with a temper of singular amiability and remarkable powers of persuasion. In his death the Deccan Education Society loses one of the most devoted and successful of its members.

Sir Dinsha Wacha's Retirement.

We regret to observe that Sir Dinsha Wacha is retiring from the Bombay Corporation and is not seeking re-election from the Ford Ward, says the *Times of India*. While, as a man who is completing his three quarters of a century, he might well sing his *Nunc dimittis* and seek to shift to younger shoulders the burden of municipal life he has borne so long and so well, he will be a great loss to the Corporation which has owed much to him in these latter years owing to his long and intimate experience of civic life. Whatever might be said of his early career in the Corporation, during his old age, especially since the death of Sir P. M. Mehta, he has been its *praesidium et dulce decus*, and his disappearance from it will be felt as a distinct loss for a considerable time. This withdrawal from the Corporation does not mean, we hope, Sir Dinsha's retirement from public life. In Indian politics just now, a leading man of his moderation and political sanity is much required, and it is to be hoped that he will continue his political activities. Probably when relieved of his municipal duties, he will find greater leisure for politics.

Political

Under-Secretaries for India.

The following list of parliamentary under-Secretaries for India from 1858 to day will be found interesting at this moment :—

1. Mr. Henry James Baillie : 1858-59.
2. Mr. T. G. Baring (afterwards Lord Northbrook, Viceroy) : 1859-61.
3. Earl de Grey and Ripon (afterwards the Marquis of Ripon, Viceroy) ; 1861.
4. Mr. T. G. Baring (afterwards Lord Northbrook), *second time* : 1861-64.
5. Lord Wodehouse (afterwards the Earl of Kimberley, Secretary of State) : 1864.
6. Lord Dufferin and Clandeboye (afterwards the Marquis of Dufferin, Viceroy) : 1864-66.
7. Mr. James Stansfield : 1866.
8. Sir James Fergusson (afterwards Governor of Bombay) : 1866-67.
9. Lord Clinton : 1867-68.
10. Mr. (afterwards Sir) M. E. Grant Duff (afterwards Governor of Madras) : 1868-74.
11. Lord George Hamilton (afterwards Secretary of State) : 1874-78.
12. The Hon. Edward Stanhope : 1878-80.
13. The Marquis of Lansdowne (afterwards Viceroy) : 1880.
14. Viscount Enfield (afterwards the Earl of Strafford) : 1880-83.
15. Mr. John Kynaston Cross : 1883-85.
16. Lord Harris (afterwards Governor of Bombay) : 1885-86.
17. Sir Ughtred Kay (afterwards Lord) Shuttleworth : 1886
18. Mr. Edward Stafford Howard : 1886.
19. Sir John Eldon Gorst : 1886-91.
20. The Hon. George Nathaniel (now Earl) (Curzon afterwards Viceroy) ; 1891-92.
21. Mr. George W. E. Russell : 1892-94.
22. Lord Reay (earlier, Governor of Bombay) ; 1894-95.
23. The Earl of Onslow : 1895-1901.
24. The Earl of Hardwicke : 1901-02.
25. Earl Percy : 1902-03.
26. The Earl of Hardwicke (second time) : 1903-04.
27. The Marquis of Bath : 1904-05.
28. Mr. John Edward Ellis ; 1905-07.
29. Mr. (now Sir) Charles Edward Henry Hobhouse : 1907-08.
30. Mr. Thomas Ryburn Buchanan : 1908-09.
31. The Master of Elibank (now Lord Murray of Elibank) : 1909-10.
32. Mr. Edwin Samuel Montagu (now Secretary of State) : 1910-14.
33. Mr. Charles Henry Roberts : 1914-15.
34. Lord Islington : 1915-17.
35. *The Right Hon. Sir Satyendra Prasanna Sinha : 1919—*

Mr. Asquith and the Speakership.

The parliamentary correspondent of the "Daily Chronicle" states that there is a strongly expressed desire among Labour members that Mr. Asquith should be invited to accept the Speakership, on Mr. Lowther's retirement at Easter.

I do not think, adds the correspondent, he is at all likely to view the suggestion with favour ; but there is little doubt that he would have a unanimous invitation from all parties in the House if he expressed his willingness to accept the post. Should Mr. Asquith entertain the suggestion, there would be no difficulty about providing him with seat.

Judicial and Executive Functions.

The separation of executive and judicial functions, writes the *Calcutta Weekly Notes*, has long been demanded by public opinion in India with the support of weighty legal and judicial opinion both in this country and in England. With the advent of constitutional reforms, this demand is bound to become persistent, and we have little doubt that this question will have to be taken up before long.

General

Mr. Gandhi on Patel's Bill.

Writing to the *Indian Social Reformer*, Mr. Gandhi observes:—In my opinion, the question specially as between Brahmins and Dheds does not arise in this connection at all. Dheds stand in the same relation to Brahmins as Kshatriyas, Vaishyas or Shoodras. Their peculiar disability is not affected either one way or the other by the Bill. If the Bill constitutes an attack upon *Varnashram*, as a believer in *Varnashram-dharma* I should oppose it. I am told by my orthodox friends that it does constitute such an attack. I am told by the supporters of the Bill that not only does it not interfere with *Varnashram*, but it merely seeks to restore the pre-British State of Hindu Law, which was wrongly interpreted by judges, who, being ignorant of it, were guided by biassed or corrupt Pandits. Both sides have very able lawyers. Without deciding one way or the other, I have suggested that the effect of the Bill should be restricted to intermarriages among sub-castes. This might satisfy the most ardent reformer at least as a first step, and would enable men like the Hon. Pandit Malaviya to support it.

War Memorial.

The "Matin" states that a Bill providing for a national war memorial has been laid before M. Clemenceau, who has given it his approval. The memorial is to consist of an immense series of galleries, halls, vestibules, and amphitheatres, with a total floor space of 4,500 square metres. These rooms will be hung with 1,040,000 portraits of men who have died for France grouped according to their regiments. The scheme provides for a Chair of History in connection with the war, as well as for a war museum and library. Busts of the great generals and one of M. Clemenceau himself will be conspicuous, and there will be stained-glass window and frescoes illustrating the famous battles of the great conflict.

The Satyagrahi.

An interesting article on "The Satyagrahi" appeared in a recent issue of the *Times of India*, and we take the following passages:

The Satyagrahi not only hates falsehood, sham and unfaithfulness, he seeks to learn the Truth and in his search for it as well as in his testimony to it he is ever careful to maintain a fervent charity. While he is prepared to sacrifice all for truth, he believes that bigotry is the betrayal of it. Truth should be tender, resembling a surgeon's instrument rather than a highwayman's bludgeon. Its chief purpose is to heal and not to wound. Sometimes in opposition to falsehood and error, it may have a painful operation to perform, but the Satyagrahi like the surgeon will be careful to prevent the least chance of poisoning during or after the operation. As the surgeon washes his instrument in an antiseptic, so the Satyagrahi will bathe truth in love to keep it from rankling in the heart of anyone. If we have a cause to plead or a truth to propagate, we must not falsify our cause or discredit our truth by clumsiness of our methods and the bitterness of our speech. No good cause requires such advocacy and in the long run it cannot benefit much from it. Therefore in religion and in politics and in all else it is our duty to "deal truly, in love."

A Great Archaeologist.

To the Travancore Archaeological Department in particular and to South Indian Epigraphy in general, the death of Mr. Gopinath Rao, Superintendent of Archaeology in Travancore, must be irreparable. Mr. Gopinath Rao devoted the best portion of his life to the unravelling of the obsure history of Southern India and to the correct interpretation of the Architecture and kindred arts of ancient India. Mr. Gopinath enjoyed in a considerable measure the confidence and esteem of many scholars both Indian and European to whom the news of his death will be something of a deep personal bereavement.

THE INDIAN REVIEW

A MONTHLY PERIODICAL DEVOTED TO THE DISCUSSION OF ALL TOPICS OF INTEREST.
PUBLISHED ABOUT THE THIRD WEEK OF EVERY MONTH.
EDITED BY G. A. NATESAN.

Vol. XVIII. JANUARY, 1917. No. 1.

POST-WAR REFORMS: A SYMPOSIUM.

are publishing in this issue the second instalment of the Symposium on Post-War Reforms mmenced in the December Number of *The Indian Review*. Owing to pressure of space, we regret we e obliged to hold over a few more contributions on the subject to the succeeding number.—Ed. *I.R.*]

Sir Sidney Lee, LL.D.

I lack that personal knowledge of India which ould justify me in expressing an opinion on the tailed Scheme of Post-War Reforms submitted H. E. the Viceroy by nineteen elected non-ficial members of the Imperial Legislative Coun-l. I can only assure you that I earnestly hope ter the war to see adopted every measure which prudently calculated at one and the same time increase the prosperity and happiness of my dian fellow-subjects of the British Crown, and make for the additional security of the British mpire. *I am especially anxious that in any eme of Imperial Federation, India should be ard, through her chosen representatives, a place milar to that of the Self-Governing Dominions.* I trust after the war that I may be in a posi-n to accept an invitation, which has been given to lecture on literary themes in one or more the Universities of India, and thereby to come re closer touch than has yet been possible for e with the enlightenment of the Indian peoples.

Sir M. M. Bhownaggree.

In my opinion, nothing short of the privileges d rights enjoyed by other parts of the British pire will do for India, with every distinction race and colour at present in vogue eliminated. . . . . I look forward to the people of dia "taking their proper place in the comity nations side by side with the other children the British Empire." That, in brief, comprises at British citizenship means for the people India, adapted to their special circumstances interests.

It is likely that some scheme of an Imperial nature will be evolved as a result of the War. should make it perfectly plain that she es to have adequate representation on such y, and that matters touching her peculiar and interests must be controlled by her representatives there.

Mr. Amar Singh, Pleader, Punjab.

Apart from the intrinsic merits of the "Memorandum of Nineteen," the wholesome effect it will have on the Indian politicians is worth notice. The retrograde, the puppet, and the ornamental required a good deal of pulling up. With one masterly move the Nineteen have shown them their place. The Nineteen have proved that Indian politics can better do without them. The very bold decision of the Muslim League at Lucknow, in bidding "exit" to the reactionary spirits, has intensified the deterrent effect of the silent action of the Nineteen on the official-made leaders and those whose foremost aim is to grind their own axe.

Matters raising impressions of mistrust in the people by the Government, invidious distinctions which make people feel themselves foreigners in their own country: with a comparatively few honorable exceptions, the overbearing attitude of Europeans and those who pass as such towards the sons of the soil: indifference as to the safeguarding of the Indian interests abroad, are the four main factors which, I think, are the head and front of unrest in India. The Indian political movements are but a protest, not only against the form of government, but against the whole mental attitude of Anglo-India as well. Tardiness in eliminating these factors of discontentment has cast doubt on the *bonâ fides* of British Rule in India. The doubt has led to desperation which, in turn, set fire to the fuel of discontentment emblazening it into anarchical outrages.

The Memorandum places before the Government the real situation in a nutshell. Malady is no longer a secret—unrest is there, and there is the political crime. The Nineteen have suggested the remedy. The treatment rests with the Government. It is fortunate both for the people and Government to avail themselves of the suggestion.

Mrs. Annie Besant.

The memorandum of the nineteen members of the Supreme Legislative Council, and the scheme passed by the National Congress and the All-India Muslim League, mark out the road of reforms which the Nation is determined to tread. The latter affords a workable scheme for a peaceable and easy transition from the present entirely irresponsible but partially representative Government to a Government responsible to the almost wholly representative Legislative Council. As the President of the National Congress pointed out, it is a transition scheme and should be regarded as such. The third clause of the Congress resolution marks the end of the transition, the entry of India into the proposed Imperial Council, as a Self-Governing Nation, equal in status to the Self-Governing Dominions.

The objection raised in the columns of this "Review" last December by Sir Valentine Chirol, in the words of Lord Hardinge, betrays a want of knowledge of the evolution of government in India, and I may say in passing, that those who worked out the scheme accepted last Christmas, had carefully studied the so-called "patient and steady evolution" of the Colonies, varied by revolts, mob agitation, and continual law suits against the Central Government. Patience was, perhaps, hardly a dominating factor. While revolts and mob agitation have been singularly absent in India, save for the Sepoy Rebellion of 1857, it is unreasonable to ignore the successive reforms which have led up to the present demands; these cannot be regarded as requiring a "sudden stroke of statesmanship," but are, as in the Colonies, the inevitable sequence of past changes. The Colonies began as Crown Colonies with or without Executive Councils; then a nominated Legislative Chamber; then elected and nominated Chamber; then wholly elected, save for nominated Ministers. Refusal of supply led to responsible government, but without statutory basis. A "sudden stroke of statesmanship" gave an Act. In India, the process started with a trading charter in 1600. In 1669 a charter changed the trading company "to a territorial sovereign" (Ilbert): from 1765 to 1858, power was divided between Company and Crown, executive and legislative powers being in the hands of a Governor-General and Council; in 1833 an "additional member" of Council was added, only for legislation; in 1853, six members were added for legislation only, a germinal Legislative Council, and the original additional member was made ordinary, in 1858, the Crown took over Government, and in 1861 the Council was enlarged, half the additional members were to be non-official, and the Presidency Councils were given legislative powers: in 1892 the Councils were enlarged but were nominated: in 1909 they became partly elective, partly nominated. The process has been more "patient and steady" and much longer than in the Colonies; the new—asked for—four-fifths elected, one-fifth nominated"—is hardly "a sudden stroke of statesmanship," but rather a very modest demand, less than the step taken by the Colonies; yet this, accompanied by control of supply, as in the Colonies, will compel responsible government, as in the Colonies, without statutory action, for refusal of supply means a dead lock till the "irresponsible" government submits, and becomes responsible. The Act, as in the Colonies, will shortly follow the Reconstruction of the Empire, in order that India may take her place in the Imperial Council.

Hence the *vital* Post-War Reforms are: making the Councils four-fifths elective, and giving to these Councils the power of supply. All else is subsidiary. But unless these are gained, nothing of value is gained, and they must be gained in a form with which no Regulations made here can interfere.

We must, of course, stand by and agitate for the whole scheme, especially for the Muhammadan proportion in the electorates, for on this the union was made. Nothing less than the whole scheme should be accepted, for it forms the first step, and anything less would be marking time. The talk of "revolutionary changes" made shows ignorance of Indian constitutional history, and I humbly recommend to those who speak and write in this way the reading of Ilbert's *The Government of India*.

It seems to me unnecessary to put forward any Post-War Reforms except the United Scheme. Obtaining that, we obtain power to repeal all the obnoxious and repressive laws which disgrace our Statute-Book, and to place on it the beneficent legislation necessary for Indian prosperity. We can then adjust taxation, regulate expenditure, educate our people, foster our industries, improve our agriculture. It is unwise to dissipate energy over many reforms when one reform, that of legislatures, will give us power. Let us concentrate on the Congress-League Scheme and carry it to a triumphant conclusion.

Dewan Bahadur C. Karunakara Menon.

(*Editor, "The Indian Patriot," Madras.*)

The proposals formulated by the Indian National Congress are more or less on the lines sketched in the Memorandum submitted by the 19 elected members of the Imperial Legislative Council, which has been vigorously and even sarcastically attacked by Lord Sydenham. Indian politicians have wondered at the attitude and temper of Lord Sydenham, who belongs not to the Civil Service, but to a class of statesmen preferred by Indians for their liberal views and larger ideas, for freedom from local prejudices, and for their ability to take a detached view of Indian affairs. That such a man should come forward to declare opinions which are so reactionary in their character and so despotic in their tendency, would surprise Indians. We fail to see what it is that has shocked him so much, whether it is the claim to enlarge the Legislative Councils or to the proposal to enlarge the Executive Councils so as to enable Indians to influence in a larger and more effective manner the policy of the Government. The question is, whether it is desirable and expedient to allow due power to Indians to increasingly influence the policy of the Government. It is not proposed to make the decision of either body final. It may be vetoed by the Governor or Viceroy, as the case may be, and finally by the Secretary of State. There is no danger of the Empire being imperilled by allowing Indians to participate in the government of the country with some certainty of the prevalence of their opinion, if the head of Government agrees with them. Indians and Europeans being equally divided, it is the opinion of the head of the Government that will decide any issue in regard to which there is a difference of opinion between the two wings of the Executive Council. It is the latter that initiates and shapes policy; and in initiating and shaping policy, Indian opinion should have as much weight as European. When if the two are antagonistic, the head of the Government will be able to determine which side he should support. Lord Sydenham seems to be startled by the number of members proposed for the Legislative Councils. That Indian opinion should prevail is the policy of Lord Morley's Reform Act, so far as Provincial Legislative Councils are concerned. Such opinion should be obtained on a broad basis, namely out of larger electorates, but also of wider representation. Perhaps it may be well to recall the constitution of the Council, as proposed by Charles Bradlaugh. Bradlaugh's proposal far exceeded the number that is now proposed. For a Council to be constituted on behalf of about 40 millions, the number proposed is too small. For the Imperial Council the strength proposed is not excessive, remembering that it is to act on behalf of the whole of British India. Mere numbers would not effect the powers of the Council, but only the proportion of official and non-official strength. If all interests and all shades of opinion are to be represented, it is essential to substantially enlarge the Council. In view of the extensive area and population, even a strength of 500 would not at all be too large. What Indians claim and feel that they are justified in claiming is that their opionion must be capable of being effectively asserted. That is in accordance with the policy which Lord Hardinge claimed to have followed, namely, of governing in India in accordance with the wishes of the people. Lord Sydenham belongs to the opposite school, which maintains that in the government of India, the British, and not Indian, view ought to prevail. He maintains that India should ever remain dependent, that Indians should be, not equal subjects of the King, but subjects of those who rule India. On such a question, it is not to be expected that Indians will surrender their claim. They may be thwarted by the efforts of men like Lord Sydenham. But they will persist in pressing their claim until it is granted.

Lord Sydenham is against even granting them the right of volunteering and the right of getting commissions in the army. On what intelligible ground can he justify such denial, except that Indians are unworthy to be admitted to those privileges. From the way in which the ex-Governor writes, it is evident that he is not prepared to place trust in the people of India. He puts forth the time-honoured theory that the educated classes, by reason of their education, have become a class apart from the masses. He probably believes in it. It is the English officials that fill that rôle, and they will do it for ever. Not a single fact has been cited to illustrate this either in the matter of administration or in the matter of legislation. What we regret most is, that a man in the position of Lord Sydenham, who has the prestige of having occupied the high position of Governor of Bombay, should indentify himself with the extreme school of English politicians. Such men can hardly find fault with the extreme school of Indian politicians, who on the opposite side follow their example.

Dewan Bahadur P. Kesava Pillai.

The memorandum of the nineteen non-official elected members gives articulate expression to the reasonable and modest aspirations and expectations of our countrymen. As regards the main demands stated therein for securing effective voice to the representatives of the people, in the internal administration of the country, there can be no difference of opinion; and any differences that may arise with reference to the details of the scheme, I think can be easily remedied when the regulations are framed. Timely reforms will surely strengthen and ensure the goodwill and the loyal attachment of India to England, while advancing at the same time the prosperity and the welfare of the masses of this country, and adding to the glory of the British Isles and the British race.

The Hon. Mr. Yakub Hasan.

It is the greatest compliment to Great Britain that within a century of her rule India considers herself advanced enough to claim the boon of Self-Government. If the British nation after all that she claims to have done for India does not consider her fit for this privilege, she deliberately undervalues her own capacity of elevating nations whose fate it is to be under her rule. Great Britain has been, deservedly or undeservedly, credited with the possession of a genius for benevolent governance of alien races for their greatest good. In this art of government she claims to have succeeded to a phenominal extent. None can bear better witness to this claim than the nations that have borne the brunt of the experiment. This world war has put all the nations on the face of the globe on their mettle and every one has to give an account of her charge at the bar of the world's judgment. The affairs of all nations are being subjected to the fierce searchlight of scrutiny both from without and from within. The component parts of the British Empire have awakened to the defects of the Imperial machinery, and they rightly demand readjustment of inter-state relationships and effective voice in international matters. The truth is, that Great Britain has so long controlled an empire through the time-worn institution of the British Parliament that was designed only for the administration of a small kingdom of England and Scotland, and which was out of joint even for the neighbouring isle of Ireland. A system of Imperial Government suited to the modern times—in fact an Imperial Democracy as distinct from a rule of one nation by another—has yet to be evolved. Great Britain owes it to herself as the controlling partner of the only world-wide empire of the day as much as she owes it to the humanity at large to so reconstruct the Empire as would equally satisfy all its parts. In spite of their serious pre-occupation, Great Britain and her so-called Dominions have become keenly alive to this necessity. Preliminaries are already being arranged for the settlement of this momentous question, and at this juncture India considers it her duty to declare what part she should have in the councils of the Empire and what form of government would suit her best.

This she does now in the most unmistakable language. It is a matter of great satisfaction that the demand for substantial reforms in the administration, and for the grant of self-government at an early date, is put forth for the first time in the name of United India. There can be no better proof of our political sagacity and fitness for self-government than the manner in which the two great peoples of India have composed their differences and come to an understanding that will undoubtedly insure—nay it has already insured—their perfect solidarity.

The Hon. Rai Bahadur Bakhshi Sohan Lal.

I am entirely in favour of the Memorandum with regard to Post-War Reforms signed by nineteen non-official members of the Imperial Legislative Council and submitted to His Excellency the Viceroy.

The Hon. Syed Ali Nabi.

I agree with the proposals of the Joint Committee of Hindus and Muhammadans, as set out in the matter of "Post-War Reforms." At present I can add nothing to what I have expressed as my opinion in that Committee at Calcutta.

WARFARE IN ANCIENT INDIA.

BY MR. P. JAGANNADHASWAMI, B.A. L.T.

In this book the author gives a vivid picture of warfare in Ancient India, the causes, methods and principles that should guide the belligerents in times of war. He has drawn largely from the ancient literature extant on the subject in Sanskrit Sukraniti and Kamandaka, Manu, the Vedas, the Smrithis; and the Epics are quoted *in extenso* to give a real picture of warfare understood and practised in ancient India.

Self-Government for India under the British Flag

BY THE HON. MR. V. S. SRINIVASA SASTRI.

[The Hon Mr. V. S. Srinivasa Sastri, President of the Servants of India Society, deserves the warmest thanks of the country for having brought out, at an opportune moment, his remarkable brochure on "Self-Government for India under the British Flag" one of the ablest expositions of India's case for Self-Government Following the example of his illustrious master, Mr. Sastri has stated all the objections that have been urged against India's demand and shown conclusively how unreal and unjust they are. To Britishers and Indians alike, the book must appeal as an honest and earnest attempt to plead the cause of India. It is hoped the following paragraphs selected from the book, will give the reader an idea of the method and manner in which Mr. Sastri has tackled the great problem of the hour. We commend a careful study of the book to every true well-wisher of India.—*Ed. I.R.*]

THE demand of Indians to be allowed to govern themselves is countered by the assertion that they are unfit for so high a task. It is alleged that when the English Colonies were granted responsible Government, they had reached a higher standard of fitness than we have now attained. This is not historically true. The present prosperity and enterprise of the Dominions should be entirely forgotten when we try to picture the Colonies as they were in the forties and fifties of the last century. Fifty years of political and economic independence, as the example of Japan shows us, can make wonderful changes in the condition of a people. Let it also be remembered that fifty years of the modern time are really much longer than the like period in any former century. Canada was the first of British colonies to be made self-governing, and it is in Canada that British political institutions are believed to have shown their happiest results. Luckily, we possess in the report of Lord Durham a graphic and in general a faithful description of the condition of the colony and its people at the time when the concession of responsible government was made.

The report that he drew up, describing the condition of the country and making recommendations for its improvement, is considered to be one of the ablest State documents ever submitted to Parliament. Constitution-makers go to it for inspiration. Its perusal is a tonic to those whose faith in the healing and ennobling power of popular institutions is weak. The chief lesson it conveys to us in India is, that responsible government is remedy and the only sure remedy for the evils arising from imperfect understanding between the government and the people. Existing defects in India are pointed to by opponents of progress as barring the way to a fuller measure of popular government. Whereas, if a second Lord Durham could now come out to report on Indian affairs, he would in all likelihood advocate the immediate grant of responsible government *as a cure* for the ills of the body politic. . . . . .

The grant of responsible governmeht, wherever it has been made, has only strengthened the bond between the suzerain power and the subordinate but autonomous governments—a lesson which may well be borne in mind by those prophets of evil who prognosticate that in India political generosity will be met with ingratitude. . . .

In spite of the vicissitudes of fortune through which our country has passed, the great Dravidian, Aryan and Mahomedan civilizations are found in vigour, if not in their pristine purity. Each one of these civilizations has developed forms of government and systems of administration which have been productive of beneficent results to the people. Judged by modern standards, they might be pronounced to lack the elements of strength and thoroughness. Nor do they appear to have given rise to democratic or popular forms of organization of the kind that we are familiar with to-day. Self-government,* then, in the sense of the power to develop an indigenous polity and find an indigenous agency to maintain it, has always been with us. It may have been overborne at times and not had free play, it may have degenerated under stress of adversity, it may have left the people weak, disorganised and helpless before external force; but it has always been there. The numerous Indian States carry on before our eyes the ancient traditions, transformed, it is true, in great measure and adapted to the special needs of the British pattern, but still kept alive by age-long aptitudes. In our own time, the work done in these territories by some diwans and administrators within the limitations to which they are subject can bear comparison with the great deeds of Western statesmen in British India.

* Self-Government for India under the British Flag, by the Hon. Mr. V. S. Srinivasa Sastri, Servants of India Society, Poona. Price 8 As.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Whenever opportunity has been afforded, Indians have shown that they can work modern institutions in the modern spirit. In the executive, no less than in the judicial department, officers of the Provincial Civil Service recruited by competition have proved themselves, man for man, the peers of their brethren in the Indian Civil Service. The Indians, who were first appointed to the Council of the Secretary of State for India, have elicited warm appreciation from no less a judge of men than Lord Morley. Lord Minto and Lord Hardinge have in turn borne generous testimony to the assistance they derived from the advice and co-operation of their Indian Ministers. The late Mr. Krishnaswamy Aiyar, of Madras, the first Indian on that side of the country to whom a statue was erected by public subscription in which Europeans and Indians joined, has been the recipient of posthumous tributes from his European colleagues, which are remarkable as much for the admiration which they convey as for the note of personal attachment which they strike. To Mr. Gokhale, who struck the imagination of the English people in many ways, was reserved the unique honour of discussing affairs of high international moment, albeit in an informal way, with the Government of South Africa. This difficult and delicate task he performed with such ability, fairness and statesmanlike grasp of the issues involved that he earned the gratitude and admiration of all parties concerned.

. . . . . .

In the Legislative Councils the people's representatives have conducted themselves with moderation and self-restraint, and although they have chafed at the restrictions placed upon their activity and usefulness, their resentment has on no occasion broken out in any of those disorderly or violent forms which disfigure the annals of the legislatures of England and of the Dominions. Lord Hardinge has more than once borne high testimony to their work. Their criticism and advice have not been without effect on the policy and administration of the country. But so high is the expectation which the public entertain nowadays of the Legislative Councils, and so keen is their sense of the impotence of their representatives from a constitutional point of view, that nothing can satisfy them hereafter short of the power of regulating the policy, disposing of the finances and controlling the executive.

. . . . . .

The theory of unfitness appears in another shape, not so uncompromising, but not less dangerous. The unfitness, say some critics, is not incurable; in course of time, under careful and benevolent political education, such as our slowly-broadening institutions afford, it is possible, though prophecy in such matters is proverbially foolish, that the people of India may become fit for self-rule. But that day is not yet. Wait, wait in patience. Then our mentors resort to metaphor. The way is long and weary, full of peril and adventure. Do you know how they toiled and travailed who went before you, what trials and tribulations they had to bear? Metaphor and proverb, fable and parable, history and epic, teach us a good deal; they give us warning and guidance. But they are not actual life, they cannot replace direct experience either for individuals or communities. The best training is obtained when you grapple with your difficulties by yourself, the highest and most useful part of education is self-education. The people of India will become fit for self-rule only by practising self-rule. There is no other way for it. They must conceive their aims and ideals, they must lay their plans and execute them, make mistakes and rectify them, incur losses and recoup them, encounter perils and overcome them. Mr. L. Curtis, in his book, *The Problem of the Commonwealth*, writes:

> In the first place, the exercise of responsibility tends to increase fitness for exercising it. As every one finds in his own experience, it is in having to do things that a man learns how to do them and develops a sense of duty in regard to them. And that is why political power is and ought to be extended to whole classes of citizens, even when their knowledge and sense of responsibility is still imperfectly developed.

True, this process should not begin too early; there must be a period of preliminary training. What is the period required? The answer is, till the necessary general, intellectual and moral equipment is acquired, till the necessary political experience has been gained. Our contention is, that we have this necessary equipment and experience. In so far as such comparison is possible, we cannot see that India is less fitted to-day than the Philippines for self-rule, nor that her general condition is much behind the condition of Canada or the other Dominions when they had the gift of responsible government, and we go further and say that England and Japan appear to have had nearly as many shortcomings as India now has when they adopted a fully popular constitution. The Emperor of Japan took the great Charter oath in 1869; in 1881, he promised to grant a constitution in ten years;

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and, in 1890, the first Imperial Diet was summoned. The Filipinos have had less than twenty years schooling in civilized administration. Are Indians so much worse than the Filipinos, or is the school of British political institutions so much slower than that of American political institutions that it takes a century, and how much longer one cannot say, to complete the process of education in the one case which in the other is completed in twenty years? The first Legislative Council met in Canada in 1792. In fifty years full responsible government was granted. In New South Wales the first Parliament met in 1843. The first responsible ministry took office in 1856. Indians were first admitted to the Legislative Council in 1861, though it had been in existence for many years. It is not generally known, but it is a remarkable fact that, during this first period, when Europeans enjoyed the exclusive right of legislation for India, they conducted business in regular parliamentary style, with their own standing orders, calling the Acts of the Executive in question and carrying on debates which, in their range and breezy freedom, contrast markedly with the prudish and correct respectability of present-day proceedings. Beginning in 1861 on a scale which was caution itself, the non-official Indians admitted to the Council being few and nominated, and the Council itself never meeting except when there was a legislative measure to be placed before it, we did not take a second step till more than thirty years had passed. In 1892, after a good deal of popular agitation, the number of non-officials was increased slightly, they were still nominated in form, but practically elected by delegates of local bodies, a limited power of interpellation was given them, and the annual budget was placed before them for discussion, but it was not to be voted upon. Seventeen years passed and strong agitation had to be made before the third step was taken in 1909. This time local legislatures were to have non-official majorities, members in the Councils could put supplementary questions and move resolutions on subjects of public interest, subject however to too many exceptions and to the further proviso that, even if accepted by the Council, they were not to be binding on the Executive. Those reforms were introduced with a great fanfare of liberal sentiment, and generally hailed by the people as a substantial improvement. But the seven years that have passed since have been marked by an enormous advance of political thought and political ambition in the people, and the Councils are spoken of by the advanced school as glorified debating clubs. In fact, the executive government is still practically master of the situation and carries measures in the teeth of public opposition. After fifty-five years people's representatives have still nothing like constitutional power in the land. Surely our progress is none too hurried. The foundations have had ample time to settle down and can now carry the full weight of the structure of self-government.

. . . . . .

The next objection to be noticed is that, if the scheme came into operation, it would establish the reign of the few who are educated over the many who are uneducated; we should have an oligarchy of a few hundred thousands controlling the destinies of vast millions. You reply that, taking numbers only into consideration, the change will be a big step towards popular government, as the present ruling class does not exceed a few thousands. "But we have knowledge," say they, "of rural life and of the dumb millions, which you, educated gentry dwelling in towns, cannot and do not care to acquire." "It is not so," we rejoin; "the gulf of antipathy and contempt between educated and uneducated is a fable by which you deceive yourselves. The educated come mostly from villages and keep in constant touch with village life. In fact, the most notorious evil of the present administration is, that it is run by people who come from over the sea, never learn the vernaculars sufficiently well for ordinary conversation and depend throughout their service on interpreters. Besides, they maintain an attitude of proud exclusiveness which differs in kind and manner of display from the ancient arrogance of the Brahman, but is a far more effectual barrier to sympathy and mutual trust; in fact, it is now an article of creed with them that India and Indians are unfathomable mysteries and that, the longer one remains in the country, the more convinced one becomes of the impossibility of ever understanding its people and their nature and modes of thought and life." "But the lower classes look to us for protection, they remember the old misrule and tyranny from which we rescued them, and will not consent to the transfer of power from us to you, their social oppressors for ages." "Our history, like the history of other peoples, shows periods of good rule and bad rule, of social well-being and social misery, of progress and decay. When you came, you found us in one of our unfortunate phases, disorder and the break-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ing up of an empire met your eyes and helped the establishment of your dominion. The oppression of the lower by the upper classes is nothing peculiar to the East. Before the dawn of the modern humanitarian age, the annals of Europe were disfigured by similar abuses and tyranny. Plato long ago said that in every city there were two cities, that of the rich and that of the poor. To-day, even in the most liberally governed countries, the peasants and the labourers may be heard to denounce the learned folly and the selfishness of those that make the laws and work them for their own benefit, while all the time professing to help and relieve the masses. Ideas of social amelioration and service and higher standards of government have been learned by the educated men in India, and as they have incomparably greater interest in the prosperity of the country and far more knowledge and sympathy to inspire their efforts, there is no danger of a revival of the old days of caste domination and heartless tyranny. The new oligarchy then will be at least as good as the present." One doubts whether this ancient fiction about the protection of the masses is believed any more even by those in whose interest it is kept alive. Is it the indigenous Short or the oversea Codlin who opposes the spread of education among the people and uses their illiteracy as an argument for opposing political advance? Is it the indigenous Short or the oversea Codlin who defends the pernicious excise policy of the Government on the ground that every man must have his tastes, and likewise approves of the raising of the State demand on land at every resettlement on the ground among others that money left in the ryot's hands goes to the drink shop? Who allows the country to be flooded with cheap free trade goods and refuses to foster the industries of the people in the only way in which other countries, including Great Britain and her colonies, have fostered theirs? Who was responsible for the currency legislation of a few years ago, which, but for some fortuitous happenings which told in his favour, might have hit the poor agriculturist hard, while relieving the Government of the exchange difficulty in paying off the heavy Home Charges? Who at the same time gave the European services the exchange compensation allowance in cynical disregard of the taxpayer's interests? Who to-day, when extravagance is treason and luxuries of every kind are denounced as crimes, keeps up the exodus to the hills for half the year and sanctions extra allowances to Civilian Officers for promotion delayed, while at the same time cutting down expenditure on education? Who is going to defend the interests of the voiceless and voteless taxpayer, when in consequence of the report of the Public Services Commission, the organised and well-paid Services will drive the Government of India mad with all sorts of claims for increased emoluments? The unfortunate Indian Short, in a hopeless minority in the Council, must set up a piteous wail, which, however, will be drowned in the noise of Codlin's trumpet announcing to an astounded world his protection of the Indian masses against their own heartless countrymen.

. . . . . .

The last objection that we shall deal with in this section is, that the martial races, believing that the government of the land has passed into weak hands when it passed into Indian hands, will raise the standard of revolt and shake the new regime at the very start. In the first place, this cannot be true of either the Mahomedans, the Sikhs, or the Marathas, who have drunk deep from the fountain of patriotism. In the second place, when service in the army is thrown open to all who are physically fit and promotion is within the reach of all who are worthy, irrespective of race or colour, the distinction between martial and unmartial people will disappear in the course of a generation. But the real answer to this objection is, that it would apply only to a scheme which sought to take India out of the British Empire and completely eliminated the strong arm of the British from Indian affairs. Our critics may choose for their own alarmist purposes to misrepresent the effect of our proposals or the motive that underlies them. But, as a great man once said, "You may fool some of the people all the time and all the people some of the time, but not all the people all the time." Our scheme has for its aim and purpose the continued maintenance of British supremacy in India and the reconciliation of her peoples to the suzerainty of the British Empire, which has done them incalculable good, giving them hope of a nationhood that they had lost or never possessed, and admitting them to a share of the noblest inheritance of modern civilization, *viz.*, democratic freedom.

THE PUBLIC SERVICES COMMISSION

BY MR. HIRDAY NATH KUNZRU, B.A., B.Sc.

(*Of the Servants of India Society.*)

THE report of the Public Services Commission has, at last, been published. Had its contents been made public, as officially announced in September last, it would have enabled the Congress to consider its recommendations and given the members of the Imperial Legislative Council an opportunity of studying it before the cold weather session of the Council. The delay in its appearance, however, has prevented the former from giving authoritative expression to the views of educated India on the subject for a year, and it is improbable that many members of the Council will be able to study it in all its bearings before the close of the present session.

The report will be a bitter pill for India to swallow. In the history of Indian political agitation, no subject has engaged the attention of our leading men longer than the employment of Indians in the high branches of the Public Services. For thirty years we have been protesting loudly against a system which virtually debars Indians from occupying positions of trust and responsibility in their own country. And when the Public Services Commission was appointed, we expected that some justice would be done to Indian claims, and that our countrymen would no longer be treated as the pariahs of the Indian administration. But the report of the Commission, while recommending many changes favourable to indigenous talent, is in essence a complete denial of the principle that Indians have a prior claim upon every appointment in the public services of their country and is a justification of the system which is draining it morally and materially. It is a melancholy satisfaction, however, to note that Mr. Justice Abdur Rahim has refrained from signing this reactionary document and written a minute of dissent—it may well be called a minority report which deals with the problem, which the Commission was appointed to consider from the Indian point of view and vindicates the moral rights of the people of this country to control the course of administration by having an agency, which possesses their confidence, to carry out the laws under which they have to live. Mr. Sahibzada's minute of dissent also deserves warm praise. The fact that he has signed the report ought not to detract from the intrinsic merit of his minute.

The Commission took evidence in regard to twenty-four services. Of these, leaving out of account a few specialist appointments, the post-office, telegraph (traffic), railway (stores), Northern India salt revenue, salt and excise, registration, land records (Burma), and survey (Madras) departments, are recruited for India. The other departments, recruitment for which takes place either wholly or partly in Europe, are divided into three main groups. "In the first," say the Commissioners, "we place the Indian Civil Service and the police department, in both of which the nature of British responsibility for the good governance of India requires the employment, in the higher ranks, of a preponderating proportion of British officers. To the second group belong those services in which, on grounds of policy and efficiency, it is desirable that there should be an admixture—in the *personnel* of both Western and Eastern elements. Such are the education, military finance, medical, telegraph (engineering), public works, railway (engineering and traffic), and survey of India departments. In the third group come certain scientific and technical services, such as the agricultural, civil veterinary, factory and boiler inspection, forest, geological survey, mines, mint and assay, pilots (Bengal), and railway (locomotive and carriage and wagon) departments. In these there are no grounds of policy for any considerable admixture of officers imported from Europe, and all that limits recruitment in India is the lack of facilities in that country for technical instruction and the consequent deficiency of properly qualified teachers." The recommendation in regard to the two remaining departments, viz., the Indian finance and customs departments, is similar to that made in the case of the third group. Thirty years ago Indian demands for admission into the higher ranks of the Public Services were strenuously opposed on the ground that Indians were lacking in character, which being left undefined, could easily be claimed to be a British monopoly, and that a minimum of Europeans was necessary in order to maintain British methods of administration, and the validity of these grounds was endorsed by the Commission of 1886. The same cry was raised again a quarter century later before the Commission of 1912, but the Commissioners have

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

wisely refrained from repeating these worn out objections. They have preferred to rest their case on political grounds. The nature of the British connection, they say, implies that the Indian Civil Service and the police should be continued to be staffed, in the main, by men who are ignorant of our history and our language, our manners and our customs. So long as the reins of power are in the hands of Great Britain, Indians must yield the first place, as a matter of course, to Britishers. Declarations of responsible British statesmen are ignored, royal proclamations are disregarded, and even the Act of 1833 is thrown to the winds. Henceforth, not merit but race is to be the test of fitness.

It is difficult to understand on what principle the departments mentioned in the second group are treated differently from those belonging to the third group. The line which separates the first from the second is natural and obvious. But the distinction sought to be made between the second and third group is a distinction without a difference. For instance, what are the "grounds of policy and efficiency," which necessitate that the education department should contain a substantial—nay, for years to come a preponderant—British element? No doubt the structure of the Universities Act would topple down at once if Indian agency were substituted for British agency, but one would fain hope that it does not embody a cardinal principle of British policy. As for efficiency, present or prospective, the less said about it the better. "The evidence," says Mr. Ramsay Macdonald, "which the Commission received from both official and non-official witnesses, shows that the staffing of the education service, especially in its higher branches, is inefficient, and though it may have been the best that could have been done on the whole or up to now, its inefficiency will become more and more marked as the standards of Indian education are raised." Under these circumstances it is futile to expect that the arrangement proposed by the Commission will inspire confidence in the public.

The policy enunciated by the Commission in respect of the services included in the third group is as gratifying as it is just. The Commission desires that eventually they should be recruited wholly in India and recommends that "immediate and determined" efforts should be made to provide suitable educational facilities for this purpose. But the value of these recommendations will be greatly discounted if the transitional stage is not shortened as far as possible. Unfortunately, as Mr. Chaubal points out, the proposals made by the Commission to increase the salaries and better the proespects of the European officers in the scientific and technical departments will tend to prolong this period indefinitely. These changes have been proposed in order to secure and retain the services of qualified men and to ensure that the conditions of employment will be such as to induce them to remain in India "for a full term of service." This implies that the superior posts will continue to be occupied at least for a generation to come by Europeans, and it is not unreasonable to fear that in the end the policy, which the Commission has laid down, may be forgotten and never given effect to.

It has already been mentioned that recruitment for the post office, telegraph (traffic), railway (stores), Northern India salt revenue, salt and excise, registration, land records, (Burma), and survey (Madras), departments takes place almost entirely in India. The Commission approves of this arrangement and recommends its continuance in future. One might think that these services, being recruited in India, would contain a large number of Indians in the higher ranks. But nothing is further from the truth. Out of the 1,887 posts in these departments monthly carrying salaries of Rs. 200 and over, only 448 or 23 per cent. are occupied by Indians; the rest are occupied by Europeans and Anglo-Indians, whose total population is a little over two lakhs. The inequality is even more marked if we take into account only the higher posts. Out of 536 posts, to which salaries of Rs. 500 and over are attached, only 44 or 7·2 per cent. are held by Indians, while of the 298 posts of the monthly emoluments, of which are not less than Rs. 800, only 19 or 6·4 per cent. fall to the share of Indians. Thus, the higher ranks in these departments are as much the monopoly of non-Indians as in those which are recruited wholly or partly in Europe. But the Commission not only ignores this fact, but aggravates the evil by proposing that wherever the possession of a university degree is required of Indians, "an examination of a corresponding standard in European schools" should be regarded as sufficient in the case of Anglo-Indians. This point is brought out with the greatest clearness in Mr. Chaubal's minute of dissent which, for its grasp and vigour, is well worth perusal.

The twenty-four services, with which the Commission deals, affect 9,949 officers, of whom 4,140, or about 42 per cent. are recruited in Europe. Again, the total number of posts in these depart-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cents, to which monthly salaries of not less than Rs. 200 are attached is 11,064. Of these, only 42 per cent. or less than one-half are held by Indians. If we take only salaries of not less than Rs. 500 and Rs. 800 per mensem into consideration, we find that the number of posts is 4,984 and 2,501 respectively, and the share of Indians is represented by 19 per cent. in the first case and 10 per cent. in the latter. Can anything furnish a more eloquent and convincing proof of the utter inadequacy of the steps hitherto taken to give Indians their rightful share in the Public Services and of the urgent necessity for the adoption of radical measures to accomplish this object? But the Commission has failed to grasp the importance of the problem, which it was called upon to grapple, and there is nothing in its recommendations to show that it regards the present system, which condemns Indians to be hewers of wood and drawers of water, as essentially unjust. There are two principal methods of ensuring that Indians should have adequate opportunities of entering the superior grades of the various departments. In the first place, examinations should be held simultaneously in England and India for services which are at present recruited by means of competitive examinations held in England alone; and, in the second place, the artifical division of some of the most important services into Imperial and Provincial, carried out at the instance of the Public Service Commission of 1886, should be done away with. But neither of these methods has commended itself to the Commission. With the important exception of the Public Works Department (including the engineering branches of the railway and telegraph departments), the existing division of the services into Imperial and Provincial is maintained, as the Commission is satisfied that it corresponds to a real difference in the duties, which officers belonging to the two sections are expected to perform. Simultaneous examinations are rejected, because they will have an adverse influence on Indian education and impair the British character of the administration which, by the way, consists in practice in the adoption of methods and principles foreign to the spirit of the British constitution. The attempt at argument is too feeble to be seriously considered. It seems to me that the conclusion, at which the Commission has arrived, is less the result of an impartial examination of facts than of a desire to justify the *status quo*. A more conservative or liberal system, if prevalent, would have been as easily approved as the one which happens to be in force now.

In the limited time at my disposal, it is impossible for me to discuss the recommendations of the Commission in detail or even to consider their effect on some of the more important departments. I shall content myself, therefore, with a brief examination of the proposals relating to the Indian Civil Service, which is the premier service in India and which controls the entire civil government of the country.

Public opinion in India has demanded nothing more insistently than that the examination, which qualifies for admission into the Indian Civil Service, should be held simultaneously in England and India, and the rejection of this demand will cause the keenest dissatisfaction throughout the country. If there were a large proportion of Indians in the Indian Civil Service, it would not only gratify the legitimate ambition of Indians to occupy the higher and more honourable positions in the public services of their own country, but in all likelihood facilitate the solution of many a question of policy and administration. The pace of political progress would probably be rendered much quicker, and the separation of judicial and executive functions made easier of accomplishment, as there would no longer be any consideration of prestige to bar the way to these reforms. The admission of Indians into the higher ranks of the other services, also, will become easier, for the officers of the Imperial Services are regarded as the coadjutors of the Indian Civil Service in the proper governance of India, and this alliance may be expected to cease when there is a substantial Indian element in the Indian Civil Service. Educated India has, therefore, rightly regarded admission into this Service as the thing to be chiefly aimed at, and I am afraid that until it succeeds in this object, or wins the right to control the internal affairs of India, no satisfactory solution of the general question of the wider employment of Indians in the superior grades of the public services is practicable.

While disapproving of simultaneous examinations, the Commission recommends the institution of a separate examination in India open to statutary natives of India only. The age-limits for the examination are to be 20–22. Nine posts are to be recruited for in India. Of these, seven are to be filled in accordance with the result of the examination, and the other two by candidates to be termed, "King Emperor's Cadets," and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nominated each year by the Secretary of State, on the advice of the Government of India, from amongst graduates of the various universities, and of an age similar to that of the competitors at the examination." All the nine candidates are to be sent to England for three years, and are to receive the same training as those successful at the examination held in England. The candidates appointed in India are to be on equal footing in every respect to those appointed in England.

The proportion of posts reserved for statutary natives of India will excite no enthusiasm. According to the rules framed in 1879, one-sixth of the appointments to be recruited for every year were to be given to Indians. Forty years have elapsed since then, during which India has made great progress in education and witnessed the birth of a new national consciousness, but the Commission does not feel itself justified in going much beyond the proportion fixed in 1879.

But the most objectionable feature of the new arrangement proposed by the Commission, to which Indians can never reconcile themselves, is that the age-limits for the English examination should be reduced from 22-24 to 17-19, and that every candidate should furnish a certificate from the headmaster of a secondary school recognised by the Civil Service Commissioners, that he had attended the school for three years "up to a time within six months of the examination itself," or had passed an academic year at a university. This would make it practically impossible for any Indian to succeed at the English examination, and in effect, is a violation of the Act of 1833. When the Statutary Civil Service was formed in 1879, the age-limits for the competitive examination held in London were lowered to 17–19, and were again raised when it was abolished in 1892. During this period the percentage of Indian successes at the examination was only 2·5, while during 1892-1912, the figure rose to 5·6 per cent. The Commission is aware of this fact, and generally speaking recognizes that Indians will not be able to compete at the English examination. And if, in spite of this, it recommends the lowering of the age-limits, one is forced to conclude that the proposal is only a device, while remaining within the four corners of the law, to prevent Indians from entering the Indian Civil Service through the door of the examination in England.

The Commission, while slow to recognize the claims of Indians is not at all backward in urging the grant of further concessions to Europeans. The cadre of the Indian Civil Service has considerably increased since 1886, but the Commission proposes that it should be enlarged still further, and even recommends the division of districts in which the work is heavy.

Concessions have also been recommended in regard to the salaries of the officers of the Indian Civil Service, while, as Mr. Justice Abdur Rahim points out, in England and Ceylon the maximum salary, which members of the Home and Colonial Civil Services can hope to draw, is Rs. 30,000 per annum.

This represents the average pay of an officer of the Indian Civil Service in the higher grades, and the maximum is more than three times this figure. In the matter of pensions also, the Indian Civil Service enjoys valuable privileges, but the Commission does not hesitate to recommend that the salaries should be raised, the exchange compensation merged in the salaries, and the four per cent. contribution to their pensions made by the members of the Indian Civil Service, abolished. These recommendations will throw an additional burden of 20 lakhs upon the State, although the evidence received by the Commission establishes that there has been no falling off in the number or quality of recruits to the Indian Civil Service.

India is pulsating to-day with a new life. She demands that she should soon be made master of her destiny and given a place, compatible with her self-respect and dignity in the British Empire. She asks to be released from leading strings and allowed to manage her own affairs. The Public Services Commission has failed to grasp the situation and thinks that she is hankering after a few more posts. It has approached the question from a wrong standpoint. The question it has asked itself, says Mr. Justice Abdur Rahim, is, "What are the means to be adopted for extending the employment of Indians? But the proper standpoint, which alone furnishes a satisfactory basis to work upon, is that the importation of officials should be limited to cases of clear necessity, and the question, therefore, to be asked is, In which services and to what extent should appointments be made from England." The report will be received with intense dissatisfaction throughout the country, and should strengthen our determination to win Self-Government for India at an early date, for in that alone lies our salvation.

THE SPIRIT OF THE NIGHT

BY

MISS REGINA GUHA

[illegible] The moon was at the new;
[illegible] and [illegible]med
[illegible]bought I had cast off my earth-worn clothes
[illegible] clad in aery lightness wing'd my way
[illegible] the empyrean. Behind, the air
[illegible] close around, a soft and clinging mass;
[illegible] broke into a spray of thousand lights
[illegible]re. Joy enfolded me and love
[illegible]ffable. Sweet tuneful voices rang
[illegible]pon my ears. Ah me! I said
[illegible]hy should I stay behind and suffer there
[illegible]nd ever mourn among the human crowd?
[illegible]hy listen to the groans that never cease?
[illegible]hy witness pain that will not lessen? Why?
[illegible]hy? And speaking thus I cleft the air
[illegible]nd the darkness loomed in front of me but soon
[illegible] broke and then upon my wildered gaze
[illegible]rision dawned—an opalescent light
[illegible]god-like form—I stopped with awe inspired.
[illegible] was a woman more than common tall
[illegible]ho wrapt her round in silken sable cloak
[illegible]hich fell in long and straightened lines unto
[illegible]er feet. Her face was fair and eyes
[illegible]ike unto stars that burn and burn but yet
[illegible]ith all their burning do not fade. Her hair
[illegible] raven stream and lips like blood or worse
[illegible]hey shone so red into the night. One hand
[illegible]ne pressed upon her heart, the other to
[illegible]er forehead held and formed an arch her brow
[illegible]bove: and below them peered afar as though
[illegible]he saw strange things which we of earth see not
[illegible]ow dare to see. Spell-bound I stood and looked
[illegible]nd then as tho' with eager worship seized
[illegible]e love so wonderful, I know not how,
[illegible]uickly hastened forward with a bound
[illegible]nd springing fell upon my face, my head
[illegible]pon her feet. She stirred and moving threw
[illegible]e wrap between a ray of silv'ry sheen
[illegible]ke unto the twilight gleams that shoot
[illegible]nd wander in the Indian sky—their life
[illegible]s span too brief—and bending put her hand
[illegible]pon my head, her touch mysterious, sad;
[illegible]hich caught my heart with a sharp and sting-
ing pain
And made me sob aloud. "What ails thee,
child?"
She whispered low, her voice like to the soft
And sighing summer breezes which in sweet
And saddened murmurs tell of life,
And death which soon must follow life and love
That too must cease. And then it seemed I heard
A woman wail who'd lost her only child
And a maiden weep whose lover long had left
And ne'er returned, while still all night she prays
And in the day. I gently answer made
"I know not why I am so sad."
At this she lifted me and clasped her arms
Around me close. I leaned upon her breast
And then was comforted. Again she spoke;
"Art sad and know not? Many are sad and know
But cannot be consoled." I raised my head
And saw the sorrow on her face. Her cheeks
Were lined and drawn as tho' the tears had chased
A many furrows in their coursing down.
Her eyes, they were no longer bright: a shade
O'er them was drawn. And thro' the films, deep
pools
Of sadness showed and pain unending
As if the sorrows of the world below
Were mirror'd there—as if that heart had borne
And still did bear such loads as never lift.
Her teeth had caught at her under lip and drops
Of blood oozed forth. What is my grief, I thought,
Compared to hers. And stepping closer kissed
Her on the cheek. She smiled—a sob had been
More glad. I murmured low "Thou too art sad,
Wherefore?" "I moan my children's fates; alone
And desolate there's none to comfort them
Or love: and I so far they know me not."
She said and then again in answer to
Th' unspoken question of my eyes: "Know thou
The weary ones of earth? My children they
And I am Night their mother. Behold
The Day brings many griefs, my children pray
The Day but laughs and passes on or yet
A moment stays and fiercer light doth throw
Upon those wrongs would always fain be hid,

All in despite and haply mocks at them
And then I come and see and weep and throw
My darken'd mantle over them and touch
Their down-dropt lids with blessed sleep and teach

Them to forget. But all in vain for now
Perchance bad dreams afflict or soon anew
The morn remembrance brings of all that passed
And I must yield my partial sway and here
Return. This all I do, but all's too little.
And from this point of vantage I can view
The doings of the world and th' agony
Hath pierced me through and slowly I have changed

And yet doth change my immortal nature.
My strength is humanised and soon I feel
I shall descend to the earth below and live
A woman there—a god no more.
And as she spoke a grey and pearly light
Awoke: the east grew bright and brighter still
And in her rose-flushed beauty morn looked down
And darting beams of golden haze before
Announc'd her coming back. Grey night, her

Up gathered, fled but in her flight th[illegible]
And loving looks behind. I struggled to pursue
And starting up with eyes a-dazzled saw
A stream of golden light pour on my face.

The Congress and the Muslim League

BY

MR. SHAMNATH MUSHRAN, M.A., *Bar.-at.-Law*

WRITING this time last year to the *Indian Review* about the sessions of the Congress and the League just then held at Bombay, I ventured to express a hope that "the current which had deflected the League for a time from the Congress would be lost in the sweep of the flood when the younger generation came a little more into its own." I would have characterised as visionary the suggestion that barely a year would pass before the younger generation would come into its own, and sweep the League into the channels along which the younger members of the Congress would have her life-streams flow. And yet this is the phenomenon which has been accomplished within the space of one short year. The causes have been multifarious and for our purposes not very material. We are concerned with the scheme of reforms which has been formulated by the Committees of the Congress and the League, and the unity and clearness with which both have lent their voice to its support. There is no charm in words or phrases, and to us Self-Government by any other name would sound as sweet. A gradually increasing association of the people in the government of the people, with some provision for the responsibility of the Executive portion of the Government to those who stand for the people is the aim of Young India, irrespective of the agency through which the reform is effected or worked. The *personnel* of the Government, whether it is Indian or European, is a question of no primary importance. It is this desire jointly expressed, and a clear and definite recognition of this by the more intelligent sections of the two communities, that marks the last Session of the Congress and the League as so momentous in the history of India's political evolution, and would keep the national week of 1916 fresh in the minds of so many. How united both were, a comparison of the resolutions moved and adopted by the two bodies would clearly show.

It would be idle to pretend or to suggest that all those who favoured the line adopted by the Congress and the League did so after a mature consideration of the nature of the change and the responsibilities it would entail, or that there were none who lent their voice to the movement simply because it was popular. But any candid observer would admit that there were many—and not a minority either—who did so with a steadiness of feeling and a clearness of exposition that would at once acquit them of all charge of drifting with the current. It is not the demand but the method of its formation that holds the promise of a better day. The silent steady effort, the mutual recognition of goodwill and good intentions, and, above all, the spirit of compromise, the strong and deliberate subordination of views, to which their adherents had been wedded for years in order that a larger purpose may be served, it was this and the manner in which this was effected that ushers in a new hope. We trust that men who could effect

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...would not lapse into the impatience of ideal-...or succumb to the lethargy that overtakes so ...y of our resolutions in the process of trans-...ion into practical work.

People gathered to the Congress in record ...mbers, and not only was the assemblage greater ...than ever before, but its composition was more ...ried and more representative than in any of the ...ceeding years. In addition to the men who ...t year after year to discuss the questions that ...ry the future of the country with them, there ...me those who had seceded from its fold eight ...ars ago, and also the representatives of the ...League, who had been holding aloof for fear of ...sing their identity in the multitudinous voice of ...e major community. And no one could say ...at any one of these had been manœuvered into ...e Congress, or that beyond a recognition of an ...sistent necessity of union, any one had a tactical ...otive in coming together. None of these main ...ctions represented in the Congress could be said ...o have captured the other or to have capitulated ...o them. There was some advance—legitimately ...lled for by the spirit of the day—on the side of ...e "Orthodox" Congressmen, and a good deal of ...odification in the creed of those who had hitherto ...lled themselves Nationalists in contradistinc-...on to the Moderates. Both of these again held ...t the hand to the League, whose members came ...orward to grasp it impelled by the same sense of ...ecessity which seemed both to shadow and to ...timulate the proceedings all through. What this ...mpending sense was would take us far out, nor ...as an idea of it so clearly present in relief as to ...ield itself to analysis without a study of other ...hings in the background. World waves pass over ...ontinents, giving to movements the colour of ...nationality, and you cannot live without receiving ...something of its tone. The world clash in Europe ...has deepened the respective colourings of nations, ...and under the pressure of these ideas, ...things are becoming more homogeneous, or ...rather the movement is towards a more intense ...homogeneity to the elimination of all jarring ...notes. Events are lashing the surface of life else-...where, and ripples come into the backwater of our ...existence, and possibly this would explain the ...eagerness of outlook with which everyone seemed ...to approach the consideration of questions. ...Possibly also a sense of sharing in the responsibi-...lities of a reconstructed Empire—or at least being ...concerned in the difficulties incident on such ...reconstruction—in the burden of upholding which ...they were sharing, gave them a sober and a larger ...outlook. All differences seemed not only tempo-rarily sunk, but an honest endeavour was apparent all round to permanently remove all occasion for them in future.

The Congress reveals only the face of the community, and after the discussion and deliberations which precede the passage of resolutions, it wears a placidity of expression which might deceive a casual eye as to the temperature of the political body. You can only get at the pulse in the meetings of the subjects committee. The complexion of affairs there is an accurate index of the feeling of the country. A meeting of the subjects committee is symbolic of the sense and capacity of its constituents. Two things stood out clearly in the deliberations, (1) a growing and an almost passionate feeling to take a larger share in the management of our affairs, so that the country should proceed in government, education, or military training along lines approved by the leaders of the country; and (2) an intense nervous apprehension that the Colonies were to be given a hand in the management of those very affairs. Everything else was not merely given a secondary place but sank into it, it did not arrest the attention of the meeting—it seemed an intruder claiming the time which every one wished dedicated to the consideration of the two large problems. Both of these were only the two facts of a single impulse, the desire to keep free of colonial domination being largely due to the insistence on the self-management of our own affairs. The Colonies—or the Dominions as they are called—may have no wish to have anything to do with India, but a strong and organised attempt seems to be on foot to so bring about the reconstruction of the Empire as to bear India under the control of the new Imperial federation. All this is without counting with the wishes of the people in general in England or of the collective wish of the Dominions, but apparently the increased responsibilities and burdens of the Empire, which the Dominions will have to shoulder, will be compensated by the enlargement of the sphere of colonial power and dominion, so as to bring India under their sway. How far young democratic countries emerging from their struggle with the elements of Nature, and just touching the fringe of modern civilisation, will be able to "train" India for her work of self-government, as it is euphemistically put, is not very clear. What is clear is, that both the Congress and the League have declared in uncompromising accents that they will have none of this arrangement, unless reciprocal rights and privileges are reserved for the people of this country in the management of affairs in the colonies.

Digitized by Arya Samaj Foundation Chennai and eGangotri

How far the Colonies were "fit" for self-government, when representative institutions were granted to them, was delineated by the Chairman of the Reception Committee in his masterly Address of Welcome. Common-sense would join hands with experience in holding that the only thing which could fit a people for self-government was the gradual introduction of a system of self-government. The much-vaunted fitness is nothing but the experience of having done the thing before, and efficiency is another name for experience. The best training a person can have is to be made to do the thing, and it is sailing too close to disingenuousness to say that India can have no self-government because she is not fit, knowing all the time that fitness can come only by self-government.

Self-Government is the ideal to which the Congress and the League have been committed by the growing sense of the larger masses whom they represent. The claim, as it was repeatedly expressed on the two platforms, is neither a slight to the intentions of those who are now responsible for the government of the country, nor an instance of ungratefulness on the part of the people. Constituted as we are, a desire for Self-Government is a biological necessity—and nothing in the shape of a smooth runing machinery on the quiet and peace of having your house looked after by another can compensate for the deleterious effect of leading strings persisted in after the time for them has gone by. An ampler mould is necessary for the expanding energies of younger India, and for a loyal co-operation of the Indians it is necessary that ampler mould should be provided. Petty minds in great positions tell us that this demand is made by a minor faction trading on the support given to the Government by the martial races and the princes of India. If it were worth while disabusing men who seem to have made misrepresentation a mission of their life, I would tell them that the growing want of the country has nothing to do with the part played by Indians in the war. We ask for no return for the sharing of the burden of the Empire—nor is the loyalty of India determined by considertions of any material recognition. It is no favour we beg. India looks on Self-Government as advocated by the Congress and the League as her right. She is persuaded to voice the demand clearly in the hope that after what she has done in the war, there will be no room for any misunderstanding or misrepresentation. A larger association of the people is becoming a pre-requisite of the loyalty of India. Not that the persons who speak for the country mean it as a threat of a refusal to co-operate, but for the mainstay of constitutional speakers it is necessary that they should be in a position to point to a progressive policy of the Government keeping pace with the needs of the country. Who makes headway, the constitutional and loyal citizen or the revolutionary who disdains the path of a graduated development and whose impatience is innocent of the logic of facts, is a question that will soon be pressing for an answer. We know the deliberate attempt to confuse the two, and punish the one for the unwisdom of the other. Then who blame us for the existence of anarchy would be the first to build on its absence as a guarantee of contentment with the existing state of affairs, and warn us against meddling with a scheme which was working in so peaceful and smooth a manner. The effort to bear with persons, who would fain provoke us into impatience, is one of the steps in the training for Self-Government.

The path will be neither easy nor smooth. The work to be performed steadily will have to be in hands that will neither flag in their efforts nor chafe at control. If the Subjects Committee of the Congress be a true index of the temper of the country, the Congress has passed away from the older to the younger men. The reign of men like the old workers still spared to the Congress is over, and they can rest in the hope that younger and more nervous hands are carrying on their work. They are then to guide and to restrain, and the credit of their good work is an asset for the young Indians to cherish. But the work lies for other hands than theirs. The scheme of an Organised Committee to work the propaganda of the Congress, hemmed in as it was by safeguards, will assume shape even though temporarily rejected, and the earnest enthusiasm of young men in the Committee, and the bold virile addresses in the League, carry assurances that the ideals of old have the energy and the earnestness of youth behind them. Men will doubtless work with the patient and cautious enthusiasm of those to whom the greatness of the work is a sacred trust, and in such hands the work will prosper. A consciousness of the enormity of the work, and an appreciation of the difficulties in the way, will chasten their mood; a sense of the world-forces at their back will nerve them, the wishes of a country will lend them support, and her prayers will bring them light; they will work in the shadow of a hope, and the maintenance of their work will be their reward.

THE DECEMBER GATHERINGS

[The closing week of December 1916 was marked by the sittings of the Indian National Congress, the Moslem League, the Industrial and Social Conferences and various other gatherings held at Lucknow. To enable the busy reader to get a bird's-eye view of the Congress, the Conferences, the Conventions and the Leagues held not only at Lucknow but in different parts of the Indian Empire, we give below a brief account of their deliberations. One happy feature of the numerous December gatherings was that, notwithstanding the multiplicity of sectional conferences, the unity of purpose and the identity of interests they disclosed were markedly pronounced. Never was the Hindu Moslem *Entente* more cordial and decisive. Indeed, the keynote of the season's gatherings was struck by the Hon. Mr. M. S. Das, in his presidential address to the All-India Christian Conference at Madras, when he pointed out: "National life begins with birth. With its birth, the Nationality of the child is determined. On its birth, the child incurs obligations to the country of his birth, and he establishes his right to a share in the invaluable treasures which his ancestors have bequeathed as legacy to future generations. Religion cannot change a man's Nationality. Faith cannot deprive a man of his National heritage. Faith does not work forfeiture before the National tribunal. There is no law of escheat in God's Kingdom."—Ed. *I. R.*]

The Indian National Congress.

THE Thirty-first Session of the Indian National Congress commenced its sittings on the 26th December in the historic city of Lucknow under the presidency of the Hon. Babu Ambika Charan Mazumdar, the Grand Old Man of Bengal. It had a record attendance as there were no less than 2,350 delegates and about 4,000 visitors, including 500 ladies. The Lucknow session will besides be memorable in the annals of this great National Institution for more than one reason. It has brought together under one fold all those who parted company some ten years ago at the Surat Session; it has confirmed and emphasised the unity of the Hindus and Mohammadans in their devotion to the ideals of the Congress and above all, it has given unanimous and definite expression to the ideal of Self-Government for India as the goal of the united Indian nation. On the dais were seen leaders of all classes and creeds and parties in India, Hindu, Muslim, Christian, and Parsi leaders of the moderate and nationalist groups of Indian politicians. It was, therefore, in every way a historic session.

The Hon. Pandit Jagat Narain, Chairman of the Reception Committee, then read his Welcome Address, in the course of which he referred at some length to the re-union of the Congress and to the part played by India in the cause of the Allies in this great war. He spoke feelingly of the loss sustained by the country by the death in quick succession of such well-known patriots as Ganga Prasad Varma, Pandit Bishan Narayan Dhar, Mr. Subrahmania Iyer and Daji Abaji Khare, and recounted the difficulties which the Reception Committee experienced at the hands of the enemies of the Congress, when it met last at Lucknow, in 1899. The anti-Moslem feeling for the Congress of seventeen years ago has now become a thing of the past, and Lucknow re-asserted again the union of Hindu and Muslim interests more emphatically than ever. He then made out a splendid case for India being granted Self-Government.

The President, the Hon. Babu Ambika Charan Mazumdar, having been formally elected, then delivered his address. The address was a remarkably candid and bold exposition of Indian aspirations and was received with great enthusiasm. It was primarily devoted to the discussion of the subject of Self-Government for India and a plea for India's representatives to be heard in the Councils of the Empire after the War, on terms of perfect equality with the representatives of the Self-Governing Dominions. It criticised the existing form of administration and depicted the evolution of the new progressive spirit among the people. It urged that the bureaucracy having established order had outgrown itself and that the time had come for the grant of an adequate measure of Self-rule for India. It dealt also with education, administration, immigration, industrial development and such other topics of immediate concern and suggested several important reforms somewhat in the manner of the Memorandum on Post-War Scheme submitted by the non-official members of the Imperial Legislative Council. In conclusion, the President referred to the work of the British Committee in London, and ended with an appeal for the exercise of loyal patriotism.

Considerable time was then taken up by the proceedings of the Subjects Committee and the meetings in connection with the *rapprochement* of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Moslem League and National Congress. In fact, the primary importance of this Congress Session may be attributed to the great work of reconciliation that has been brought about among the divergent elements of patriotic workers.

The proceedings of the second day opened again with the singing of patriotic songs, after which resolutions mourning the deaths of the three Congress leaders during the year and of Lord Kitchener, as also a resolution of loyalty, were moved from the chair. In the meantime His Honour Sir James Meston and party arrived at the Congress Pandal and were received with great eclat, the whole assembly standing. They were welcomed on behalf of the Congress by the President in a graceful speech, in which he recalled a chapter of the early history of the movement.

In 1885, said the President, when the Congress was first started in Bombay, Sir William Wedderburn, Professor Wordsworth and a number of other high officials attended to listen and to advise. At the second Congress, Lord Dufferin received a deputation headed by Mr. Dadabhoy Naoroji. In another Congress, Lord Connemara received all the delegates. But the curtain of official sympathy was dropped. Happily it had now been raised. In 1914, Lord Pentland attended the Congress, and on that day Sir James Meston had done them the honour to attend. They took it that His Honour sympathised with the rising aspirations of the people. His Honour's Government had signalised itself by introducing measures regarding the industrial development of the province, and they hoped and trusted his administration would be further signalised by measures leading to the growth and rise of people.

Sir James Meston, who received an ovation, said in reply :—

Mr. President and Members of the Indian National Congress,—There has been between the Indian National Congress and myself from the day of its inception a curious link both in time and in sympathy. The Congress, as you, sir, have just reminded, first saw the light in 1885, and that was the year in which I first began my endeavours to serve India.

Throughout these intervening thirty-one years, I had thus a unique opportunity of watching the development of this great movement, and I have watched it with interest and, believe me, not without deep sympathy. It is, therefore, a great pleasure to me to be for the first time a guest and a visitor at this great meeting. I thank you from the bottom of my heart for your hearty and unexpected welcome.

The Hon. Mr. Radha Kishen Das, whose speech we reproduce in another page, speaking on the Resolution on Arms Act urged its repeal at once and for ever. Mrs. Sarojini Naidu, in the course of a brief but effective speech, which is printed in another column, said that she came from a city where there was no restriction to possess arms. British India, she urged, could well take a lesson from Hyderabad.

The resolution relating to the question of volunteering and the granting of commissions in the army to Indians was then duly moved and carried.

In the next three resolutions, the Congress urged, (1) the repeal of the Press Act of 1910; (2) the abolition of indentured emigration; and (3) the adoption by the statesmen and people of Greater Britain of a more liberal and imperial view of the status of the Indian settlers in the Self-Governing Dominions and the Crown Colonies of the Empire. In pleading for the abolition of the Press Act, Mr. Horniman (whose speech will be found elsewhere) protested against the unjust and invidious use made of the Act. In pleading for the proper treatment of Indians in the Colonies, Mr. H. S. L. Polak referred to the discovery of Mr. Curtis' letter marked "private," and addressed to the round table groups all over the world, and "in which Mr. Curtis had, with the connivance of highly placed officials in this country, laid a plot to bring India under the domination of the Self-Governing Dominions of the Empire." (Mr. Polak's stirring speech will be found elsewhere.) Mr. G. A. Natesan, in seconding the resolution, observed that India would resist to a man any attempt on the part of the Dominions to domineer over her. She must be treated as an equal and admitted into the Councils of the Empire on terms of perfect equality.

But the most important work of the Congress was with reference to the resolution on Self-Government for India. This resolution, the text of which is given in another page in this issue, was the outcome of the deliberations of many bodies, including the Congress and the League Committees. It was moved by the Hon. Mr. Surendranath Banerjea, who has pleaded for a large and effective control of Indians in the Councils of the Empire ever since the commencement of the Congress. He made a notable speech on the resolution which was ably seconded by Mrs. Annie Besant, who was followed by several other speakers, including Messrs. B. G. Tilak, B. C. Pal, Joseph Baptista, Sir Dinshaw Petit, the Hon Mr. Haque, Dewan Bahadur L. A. Govindaraghava Iyer, the Hon. Mr. B. N. Sarma, Mrs. Sarojini Naidu, the Hon. Dr. Tej Bahadur Sapru and Mr. Jehangir Petit, extracts from whose addresses will be found elsewhere in this issue.

The resolution was carried unanimously, and the President was authorised to send a copy of it

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to His Majesty's Government through H. E. the Viceroy.

This was followed by a resolution moved by Mr. C. P. Ramasami Aiyer, urging on Congress Committees, Home Rule Leagues and other politi- al bodies to carry on propagandist work on the lines laid down in the Congress Resolution.

The Hon. Mr. C. H. Setalvad, of Bombay, moved a resolution placing on record appreciation of the sentiments conveyed in the message of the Prime Minister to the Princes of India and fully sharing in the determination of the British people to bring the war to triumphant issue, and regretting that larger use had not been made of the man-power of India, and urging the raising of an army immediately in India from the civil population under Indian commissioned officers for that purpose.

The proceedings of the next day commenced with the Hon. Principal Paranjpye's resolution protesting against the Patna University Bill. Then came the discussion on the Defence of India Act and the resolution on National Education moved by Mr. G. S. Arundale. (Extracts from the speeches of Mr. Paranjpye and Mr. Arundale are reproduced elsewhere in this issue). After passing a resolution on India's representation in the Imperial Conference, the Congress considered questions relating to the creation of a Governor in Council for the United Provinces, the Congress Deputation to England, the Trial of Indians by Jury and such other topics of interest. The Hon. Bhupendranath Basu, in an eloquent speech, proposed a vote of thanks to the Reception Committee. The Hon. Pundit Madan Mohan Malaviya then thanked the President of the Congress and in a luminous speech surveyed the present conditions and the future prospects of the country. The Hon. Mr. Samiulla Beg, in seconding the vote of thanks, rejoiced over the successful manner in which Hindus and Mohammadans had worked together for the common welfare of their mother-land. The Session concluded with the President's parting words to the Congress delegates and volunteers. He thanked all who had laboured to make the Session such a complete success and ended with an inspiring call for active work on behalf of India and the Empire.

A banquet was given that night to the leading Members of the Congress and the Moslem League by the Hon'ble the Raja of Mohammadabad. After the loyal toast was heartily responded to, Mr. Jinnah proposed the toast of the Congress, and Mr. Banerjea responded by proposing the toast of the Moslem League.

The All-India Muslim League.

An unusually large attendance marked the Ninth Session of the All-India Muslim League, which held its sittings on the 30th December at Lucknow. The Congress leaders reciprocated the honour done to them by the members of the League at their meetings by attending in large numbers. The Hon. Syed Nabiullah, Chairman of the Reception Committee, welcomed the delegates in an able speech, after which the Hon. Mr. Mahomed Ali Jinnah took the chair and delivered the presidential address.

In the course of his Welcome Address, the Hon. Mr. Nabiullah referred at some length to the various problems now agitating the country, such as those relating to the War and Indian loyalty to the cause of the Allies. He criticised the Press Act and the Defence of India Act and protested against their unnecessary application in the case of the *Comrade* and the *Hamdard*. He urged, however, that the tumults of controversy should be hushed when the war is on, but

> this does not, however, mean that we are to remain in a state of suspended animation while the hammer blows of Fate are fashioning the framework of a new and, we trust, a better and a freer world. The organisation of peace after the war is, in the opinion of most thinking men, a more complex and anxious problem than the winning of the war itself. In Great Britain and the countries of her Allies, no less than among the peoples of the Central Alliance, strenuous thought and energies are being applied to the discovery of a stable foundation for a new political, economic, and social order. Is India alone to stand still and take no thought for the morrow, when that morrow is to usher in a new era in the history of the world and nations saved from the perils of militarism are to undertake the replanning of their lives with the freedom and joy of a new resurrection ?

The Hon. Mr. Jinnah's Presidential Address was marked by much thoughtfulness and earnestness, and his especial reference to India's demand for Self-Government and the Hindu Muslim unity were received with great enthusiasm. He gave a crushing answer to the cry of unfitness so often levelled against Indians and urged the Government to enunciate a definite policy. Referring to the Scheme of Reforms submitted by the non-official members of the Viceroy's Council, he said :

> We have not been favoured either by our critics or by the Government as to what is the alternative scheme. We are not taken into the confidence of the secret chambers of the Government, where the Government of India, it is said, have been deliberating upon, and preparing a despatch containing their proposals of reform to be submitted to the Secretary of State for India. In England, the representatives of the Colonies and the Press and the people and Ministers are freely discussing reconstruction of the constitution of the Empire after

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the War, nay even before the War is over it is suggested to set up an Imperial Council, whereas in India we are denied the opportunity of knowing even what the Government are contemplating. It will be a great misfortune if any decisions are arrived at with regard to the future of India by the Government and the Secretary of State for India without the proposals being published and placed before the country at large for public criticism and opinion. I most earnestly urge upon the Government that before any final decision is arrived at, the proposed reforms should be published and the people should be given an opportunity to express their views and that they should be taken into their confidence. I feel that if the people are bitterly disappointed at this juncture, it will mean the greatest disaster to the future progress of this country.

Resolutions of Muslim loyalty were then passed, which closed the deliberations for the day.

The League resumed its sittings on the following morning when Mr. Wazir Hussain, the Secretary, presented the report of the Reform Committee appointed in Bombay. The report was on the same lines as the Congress report. The Raja of Jehangirabad, in moving the adoption of the scheme, said that it satisfied the minimum demands of India. He also rejoiced in the complete union of Hindu and Muslim interests. The Hon. Mr. A. Rasul then moved that the All-India Muslim League, while adopting the scheme of reforms prepared by the Reform Committee of the League and approved by its Council, submits it in conjunction with the Indian National Congress to the Government for its introduction after the war as the first step towards the establishment of complete Self-Government in India. The Hon. Moulvi Fazlul Huq seconded the resolution in Urdu. At the request of the President, Mrs. Sarojini Naidu addressed the gathering on Hindu-Moslem unity. The Hon. Mr. Yakub Hasan, Mr. Mahomed Umar, Nawab Zafer Ali Khan and the Hon. Syed Ali Nabi supported the resolution which was carried unanimously. (Most of the speeches were delivered in Urdu; but a selection of the important English speeches on the Self-Government Resolution will be found in another column.) While Mr. Rasul was speaking, H. H. Sir James Meston accompanied by Sir V. Lovat and Mr. L. Curtis arrived at the meeting and were appropriately received with a speech from the chair. Mr. Jinnah addressing His Honor, said :—

I consider it my duty as President of the Ninth Session of the All-India Moslem League to accord to you a most cordial welcome amongst us. Your Honour's presence amongst us as the head of the Local Government is a clear mark and indication on the part of Government of a desire to understand our opinions and our feelings. I once again cordially welcome your Honour.

His Honour Sir James Meston replied :—

Mr. President and Members of the All-India Moslem League,—There are in this interesting gathering too many old friends to make it necessary that I should labour my acknowledgment and the great pleasure with which I have received your invitation to be present to-day and the still greater pleasure at the welcome which you have accorded Sir Verney Lovat and myself. It is not possible for me to discuss, or even to express an opinion on, the subjects which you have gathered together to discuss this morning. But it is possible for me as the head of these Provinces, in which the Mussalmans occupy a large and important place, also as, I may say, I am an old and sincere friend of the Mussalmans (loud applause), it is possible for me in these capacities to offer you a welcome to Lucknow and to express a fervent hope that on the subjects which now come before you for consideration, your deliberation will be guided by wisdom, and you will not overlook and will not subordinate it to any meaner aim and will not overlook the primary duty of the advancement of the increasing welfare and happiness of the great community which you represent. I sincerely thank you all. (Loud applause)

On the third day, the Raja of Jehangirabad moved that their Council should be authorised to send a deputation to England, in co-operation with the Congress Deputation, to urge the united demands of India. Mr. Gandhi, who spoke next on the Indians in the Colonies, urged them to conduct their proceedings in Urdu and to take more interest in Hindu literature than hitherto, as a means for a permanent *rapprochement* between the two communities. The resolution demanding the repeal of the Arms Act was moved by the Hon. Mirza Samiullah Beg, and seconded by Mr. Khunaja. As in the Congress, the repeal of the Press Act was insisted on and a resolution recommending the appointment of an advisory committee in every province, with reference to the working of the Defence of India Act, was also adopted. This was followed by the adoption of another resolution expressing deep regret and pain at the internment of Messrs Mohamed Ali, Shaukat Ali, Zafar Ali Khan, and Moulana Abdul Kalam Azad.

This over, various other resolutions expressing satisfaction at the passing of the United Provinces Municipalities Act, which accepted the principle of separate representation for Moslems on public bodies, demanding amendment of the Patna University Bill, and the immediate establishment of a university at Dacca, advocating the separation of judicial and executive functions at an early date, and the appointments of Governors in all Indian provinces with executive councils, and on other subjects, were then discussed and carried amidst great acclamation.

THE CONFERENCES AND CONVENTIONS

The Indian Industrial Conference.

IN the afternoon of the 30th December, after the Congress sitting for the day was over, the Indian Industrial Conference assembled at the Congress Pandal at Lucknow. There a melancholy interest in the address of welcome to be delivered by the Hon. Pandit Gokaran Nath Misra. As it was originally prepared by the late Rai Bahadur Prag Narain Bharghava Bahadur, whose untimely demise at Calcutta, on December 23rd, created a void the transference of the responsible duty to the Hon. Pandit Gokaran Nath Misra. The address began with a comparison between Bombay and Lucknow, traced the various small industries now carried on in the city and in its environs, referred briefly to its historic antiquity and importance, and passed on to a discussion of other important problems of commerce and industry relating to all India. It surveyed the prevailing economic wants of India, touched on the inevitable consequences of the war on Indian trade and urged :—

All the important countries in the world have come to the present industrial eminence by a well organized system of State-aid and protection in the earlier stages. Why should India alone be an exception? Unless, therefore, the Government helps our industries by financial assistance, expert advice, the diffusion of secular, technical and industrial education, internally and by imposing prohibitive duties on foreign articles which can be manufactured in India, externally, I, for one, have no hope of seeing Indian industries developing properly. Even Sir Thomas Holland's Commission has been precluded by the Government of England from discussing the tariff problem. The reason is obvious ; the Government in England is in this respect, as in many other respects, unable to go against the wishes of the people. Lancashire is stronger than the Cabinet. What is the remedy? Fiscal autonomy in India alone. Sir Valentine Chirol, (even he!) cannot justify the refusal to India of the fiscal autonomy for which there is a far more widespread and general demand than for political autonomy. I hope this Conference will urge on the Government to take immediate steps to get the fiscal policy modified to suit the conditions of India. And I dare say this is the most proper time to agitate for this change as the British statesmanship has realized the danger of unrestricted free trade views in England and is on the eve of giving it up in favour of State-aid.

The address then touched on the problems of banking and currency and finished with an enumeration of the inherent defects and disadvantages of the belated Industrial Commission. It urged:—

It is, therefore, essential that without waiting for the implementation of the recommendations of the Commission, the Indian Government should come to our help at once and lay the foundations of industries for which this is the most suitable moment.

3

The Hon. Rai Sitanath Bahadur the President of the conference in the course of his address, spoke at some length on the immensity of India's natural resources and the inadequacy of the people's endeavours to take full advantage of them. He then urged on the necessity for State-aid for our infant industries and appealed to the people to take advantage of the principles of co-operative credit societies. He concluded with the following brilliant peroration :—

For over a century we have been in a state of industrial paralysis and helpless dependence. It is a long descent from providing the luxuries for the ancient empires of Asia and Europe to become the mere purveyors of food and raw materials for the more enterprizing nations of to-day. The whole world is being stirred with new aspirations, and India feels the throb of the new life pulsating through her veins. To realise this new life is to be industrially great. And India feels it. It is not going to be a fleeting sensation, a temporary stimulus. Questions of vital importance, of the readjustment of our social, political and educational positions in view of a larger industrial life are engaging the serious attention of our countrymen, and I feel confident that the narrow views, prejudices if you please, which hampered the growth of our industrial life, are rapidly giving way under the stress of the new conditions which are confronting us on all sides. And not the people alone but the Government of India have grasped the essential needs of the situation, and we hope we shall strive together in perfect accord towards the attainment of the ideal before us. And in this connection the labours of the Industrial Conference, through a long series of years, have not been altogether thrown away. We have appealed to and awakened the national consciousness of our people. I see signs on all sides of its being thoroughly roused. I see before me the picture of an awakened India.

The annual report, which was read by the general secretary, Rao Bahadur R. M. Mudholkar, was then adopted. Several papers on economic and industrial questions were then submitted which were taken as read. Sir Vithaldas Damodar Thackersey then moved an important Resolution, in which he urged the necessity of the people taking over the management of Railways, now in the hands of the State, when a suitable opportunity should occur. A committee was also appointed to draw up a memorandum dealing with questions referred to the Indian Industrial Conference for circulation to the standing committee. After re-affirming the resolutions adopted last year, the draft constitution was circulated among the members, their opinions being invited before March 31 next. Rao Bahadur Mudholkar and the Hon. Mr. Manmohan Das Ramji were elected joint secretaries, and Mr. J. K. Mehta, assistant secretary. The office of the Conference will be in Bombay.

The Indian National Social Conference.

The Thirtieth Indian National Conference met, on December 27th, in the Congress Pandal at Lucknow. A number of ladies were also present. Pundit Manohar Lal Zutshi, Chairman of the Reception Committee, in welcoming the delegates said, that national efficiency should be the central idea of the Social Reform propaganda, and the victory of social feeling over personal and sectional selfishness should be the keynote of all social work. He urged the raising of the depressed classes, and the abolition of early marriage and enforced widowhood. Touching the question of caste and national efficiency, he observed :—

National efficiency, then, should be the central idea of the Social Reform propaganda, and the victory of social feeling over personal and sectional selfishness should be the keynote of all Social Reform work. For, a study of Indian History shows that while the Hindus have not lacked individual virtues, while they have been second to no other community in, for instsnce, integrity, courage, generosity and personal devotion, they have been lacking woefully in social virtues, in public spirit and national cohesion, and in my humble opinion, their downfall may be ascribed in no small measure to this great national defect.

And the chief cause of this great national defect is, I have no doubt, the institution of Caste and the exclusive and centrifugal spirit which it fosters. Whatever its origin in primitive human society may have been and whatever benefits it might have conferred on Hindu Society in the past, Caste, as we see it to-day, is the greatest monster which we have to kill. And when I say this I do not merely mean the outward forms of Caste, though these are bad enough in all conscience, but even more than these, its inner spirit, which makes every Hindu, sometimes in spite of himself, *think* in terms of Caste. It is this anti-national spirit of pride and exclusiveness which we must destroy and replace with the sense of man's duty to man irrespective of birth and rank.

Babu Jyotish Swarup, of Dhera Dun, an ardent Social Reformer and a staunch Arya Samajist, was elected President. He said that to make the organization a real, living one, they should appoint a small working committee and a journal to record the workings of the committee. He fixed the marriageable age for men at 25, and for women at 16. In conclusion, he advocated economy in ceremonies, foreign travel, temperance and social purity, female education, widow marriage and such other reforms.

Our object is to base our reforms on all that is good in our own and to move onwards to find anything elsewhere also good, which we might absorb for the purpose of our advancement. It is not a secret that, on several instances, those who were very emphatic and earnest on the platform in their denunciation of some of the existing social practices, forgot all about their views and resolutions recorded when occasion arose for them to act upon lines agreed to. Such failures have been the great obstacles in the way of progress of social reform. Unless one is brave enough to stand the opposition to practical life together with that moral courage, has tact enough to win over his own near and dear ones to his views, the result will be generally disappointing, because people ordinarily say that when those who have these views fail in courage to put them in practice, there must be something uncertain, something wanting.

The Conference adopted various Resolutions with reference to these subjects and concluded with a request to the Government to introduce a Bill to declare the validity of intermarriages among Hindus.

Sir N. G. Chandavarkar was re-elected General Secretary, Mr. G. K. Devdhar, of the Servants of India Society and Mr. D. G. Delvi were elected Assistant Secretaries for the next year.

The All-India Theistic Conference.

Her Highness the Dowager Maharanee of Cooch Behar, daughter of the great Brahmo leader, Keshab Chander Sen, presided over the last Session of the All-India Theistic Conference, which held its sittings at Lucknow in the Christmas week. Mr. Nilmony Dhar, of Asra, welcomed the delegates in a graceful speech and suggested that the name of the Conference might be changed into the Brahmo Conference as Mahomedans, Christians and Arya theists were not represented. The President, in the course of her address, said :—

I thank you with all my heart for the honour you have bestowed upon me by electing me President of the All-India Theistic Conference this year. I feel very proud, indeed, to think that I should be the first woman to preside. I am here to-day as my great father's daughter. My response is feeble. It is my own life which I know speaks for itself.

I hope here at this meeting at least one thing will be decided and, that is, no members of this Conference shall ever speak disrespectfully of any religion or prophets. Our motherland India has presented us with its most precious gifts, Yoga and Bhakti, Dharma and Satya. Let us try to be worthy of it.

We are all one family and worshippers of one True God. Look yonder brothers and sisters, I can see a vision and in this vision I see all denominations have met, all creeds and castes are assembled, all religions are embracing each other. When we shall all become one universal Brotherhood, and Sisterhood we shall then know the golden age the Satya-Yoga has returned. May God grant this All-India Theistic Conference a success. May there be no discord or misunderstanding amongst the members of this Conference.

The Maharanee of Mourbhung then addressed the Conference on the activities of the ladies of the Brahmo Samaj. A number of other ladies also delivered addresses on the educational and other missionary activities of the Brahmo Samaj.

The Muslim Educational Conference.

The All-India Muslim Educational Conference met on the morning of the 27th December at the Stratchey Hall, Aligarh. Khan Bahadur Nawab Mahammad Mozamalullah Khan Saheb, President of the Reception Committee, delivered the welcome address in Urdu, in which, delivered the welcome address in Urdu, in the course of which he gave a short history of the aims and objects of the Conference. He concluded with the observation that the object with which the great Sir Syed Ahmed Khan started the Conference now thirty years ago was being fulfilled. The President, the Hon. Mian Muhammad Shafi, then delivered his address.

He spoke at some length on the necessity of the expansion of elementary education among Indian Mussalmans, on the strengthening of the bonds of union between Hindus and Mussalmans by a more vigilant study of Urdu, the *Lingua Franca* of India, and on the need for more scholarships and funds for Muslim educational advancement and finally wound up with an appeal alike to the Government and to his co-religionists to co-operate in bringing about the long longed for Muslim University. Touching the low percentage of Muslim literates, he pointed out :

> What, then, are the existing conditions obtaining in this country in the three stages of education and what are the problems arising therefrom which the Government and ourselves have to face? On the 31st March, 1915, there were 50,579 scholars on the rolls of the various Colleges in this country, of whom only 5,426 were Mahomedans. The total number of students in Secondary Schools on the same date was 1,097,922 of which 203,306 belonged to the Moslem community. And of 5,447,850 scholars reading in Primary Schools, our co-religionists numbered 1,136,156. It may here be noted that these figures include both boys and girls and do not include scholars reading in special schools or private institutions." It will, thus, be seen that while Moslem scholars constitute less than one-ninth of the entire body of students receiving University education, their number in Secondary and Primary Department is approximately one-fifth of the total school-going portion of our population. Bearing in mind the fact that the Moslem community constitutes, roughly speaking, a little over one-fifth of the entire population of India, these figures obviously disclose so far as Moslem education is concerned a highly unsatisfactory state of things in the higher rungs of our educational ladder.

He then paid a warm tribute to the educational activities of H. H. the Nizam and H. H. the Begum of Bhopal.

A number of resolutions were then passed, among which was one expressing the hope that there would be a real educational advancement during the regime of H. E. Lord Chelmsford.

Burma Muslim Educational Conference.

While the Christmas season in India was busy with Conferences, Burma was by no means idle. The Burma Muslim Educational Conference opened on the 27th December at Moiktila, Hajee Esuf Bhymeah, of Rangoon, presiding. Delegates were present from Rangoon, Moulmein and several other parts of the Burmese province. A resolution on Muslim loyalty was unanimously passed. In the course of the presidential address, Haji Esuf Bhymeah dwelt on the educational state of Burma so far as his community was concerned, pointing out that 70 per cent. were illiterate, and that only a few thousands out of five lakhs of Muhammadans in Burma were receiving education. Another lamentable feature, to which the President alluded, was that the Mussalmans of the province had not yet realised the necessity of having a college of their own. The speaker also dwelt upon the necessity of teaching Urdu in higher schools and colleges without which, he thought, the Mussalmans of Burma would go astray from the right track of national progress.

Other important matters touched upon were the appointment of a Muslim Deputy Inspector of Schools and Deputy Inspectress, and the Burma University. Dealing with the latter, he advocated the election by the Government of two members from Upper and Lower Burma separately for the Senate and Syndicate, and provisions for an Oriental Faculty on the model of the Oriental section of the Punjab University.

The Urdu Conference.

The Urdu Conference met at Lucknow on the 29th December under the chairmanship of Nawab Prayal of Patna and concluded its sittings on the third day. Donations were promised for the preparation of an Urdu Encyclopædia.

A Hindu Editor of a Hindustani paper, at Lucknow, suggested to the Conference the desirability of creating a special platform for the discussion of Urdu literature, in order that Hindu lovers of Urdu might also co-operate with the Mahomedan advocates. As it was, the Conference was considered more or less an offshoot of the Mahomedan Educational Conference, and the speaker urged that there should be a separate organization for the discussion of a common subject like the advancement of Urdu literature. The Conference accordingly appointed a committee to enquire and report on the suggestion.

The Anglo-Indian Empire League.

The Eighth Annual Conference of the Anglo-Indian Empire League met at Jhansi, on December 28th, with the Hon. Mr. J. H. Abbott, President of the League in the Chair. In the course of his presidential address, he pointed out after welcoming the delegates :—

The past year has been an epoch-making period in the history of the Anglo-Indians, because it saw the raising of an Anglo-Indian force. The fact that the given number of recruits had not yet been raised did not militate against the success of the scheme or prestige of the community, as the sanction came at a time when thousands had already responded by enlisting in British lists. The fact that the railways and the Government departments did not find it convenient to spare men should not deter the League from making special efforts to secure the number still required. A concrete example of success attending their efforts was, that the first Anglo-Indian battery is now in Mesopotamia.

Mr. Abbott then dealt with the question of volunteering and invited the Conference to pay special attention to that question. He then referred at some length to the community's representation in the Imperial and other Councils. And, lastly, he strongly advocated the scheme for an Anglo-Indian hostel at Allahabad. The scheme was not one, he said, that concerned the League and the Association only : it was a matter of much concern to the Anglo-Indians in general throughout the Indian Empire. In conclusion, he expressed his pleasure at the presence of several representatives of Anglo-Indian Associations from Calcutta and Allahabad with a view to bring about their amalgamation, as they were all alike moved by common interests and common aims.

The second day's proceedings began with the passing of an important Resolution amidst much enthusiasm and cheering. After considerable debate, the following Resolution was passed :—

That the Conference strongly urges the immediate amalgamation of the League with all other existing Anglo-Indian organizations throughout India and Burmah, and that practical steps be taken forthwith to give effect to this resolution.

This was followed by a number of speeches touching the social and educational improvement of the Anglo-Indian community. Among the subjects that engaged the attention of the Conference were : free and compulsory primary education, technical education, scholarships for the deserving, the establishment of hostels, and the proper utilization and improvement of the charity fund for educational purposes. It was also resolved to institute a Death Benefit Fund. Finally, a committee consisting of members from various centres was formed to prepare a scheme to encourage, increase, and maintain the League membership.

The Conference continued its deliberations on the 30th also, when Mr. J. H. Abbott was re-elected President of the League for the sixth year. Mr. Abbott then spoke on the necessity for a change in the present volunteer system. Other speakers also severely criticised the inadequate manner in which recruiting is being done in India, and after a debate on the compulsory service question, it was resolved to adopt the following Resolutions, which were duly wired to H. E. the Viceroy :—

(1) That, in the opinion of this Conference, it is desirable that compulsory military service be introduced for Anglo-Indians and domiciled Europeans with as little delay as possible. (2) That, in the opinion of this Conference, the present volunteer system is inefficient and inadequate to the military needs of the State and the Anglo-Indian and domiciled European communities, and it is desirable that a system of compulsory military training be submitted for it.

The main objects of the League were then fully discussed, and it was agreed that among the wants of the Anglo-Indians were : adequate representations in the various councils ; primary and technical education for the poor ; the introduction of the boy scout movement among the community, and greater facilities for social brotherhood among the members.

The Indian Christian Conference.

The All-India Conference of Indian Christians began its sittings at Madras on the 27th December. There were delegates representing the Catholic and Protestant Christians. The Hon. Mr. M. S. Das, C.I.E., of Orissa, the President of the Session, made an exhaustive speech, in the course of which he appealed to non-Christian friends for unity, and assured them that the Services of the Indian Christians would always be at their command in any movement which sought the political progress of India within the British Empire. He also insisted on the identity of interests among His Majesty's Indian subjects irrespective of their colour or creeds. He urged on the Indian Christians' specific pride in being first and foremost Indian. Touching this question of nationality, he said :—

We are Indians. Indian blood runs in our veins; Indian history, Indian traditions, are the springs from which we draw our inspirations, our hopes for the future greatness of India are built on the glorious achievements of ancient India. Ostracism is only a form of national emasculation. We shall continue to work as we have done in the past. We shall grow in numerical strength by admitting the depressed classes, and thus form

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

a body politic national in its character. We shall do our best to give the fair sex her exalted position as the mother of the nation. We shall continue to afford every facility for intermarriage between the several portions of the Indian population, and thereby fuse the different races into one powerful nation. The offsprings of these intermarriages will not be known as Bengalees Mahrattas, Punjabis or as Brahmins and Kayasthas, but they will be known as Indians. Thus, the Indian Christian community, which at present counts among its members 4 millions, will prove the nucleus, around which will gather one-fifth of the world's population, and form one nation—a nation which had a glorious past and is destined to have a more glorious future. Let me assure our non-Christian brethren our humble services will always be at their command in any movement which seeks the political progress of India within the British Empire. The guiding principle of our communal life has hitherto been and will alway be "peace on earth and goodwill towards mankind."

The present Session was also notable in one important respect, viz., the union of the Catholics and Protestants of India as Indian Christians. The Bishop of Mylapore urged that the proceedings of the Conference should by no means be given a religious aspect and that there should be no prayers during the Session lest there should arise any feeling likely to mar the identity of the interests of all Christians irrespective of minor doctrinal differences. Dewan Bahadur L. D. Swamikannu Pillai spoke at some length on the importance of the Indian Christians acting together, as a whole, in the protection and promotion of their temporal interests. He said that for Catholics, this decision of the All-India Council was an event of far-reaching importance.

Reports of the secretaries and the treasurer having been adopted, the question of the practicability of an All-India Christian daily paper was then mooted. It was, however, claimed as impracticable for the present.

Dewan Bahadur Swamikannu Pillai spoke also on the value of co-operative societies for Indian Christians and urged that at a very moderate estimate, they should have at least 5,000 societies. The Lord Bishop of Madras and Mrs. Whitehead also spoke on the need of co-operative unions for the benefit of the depressed classes and suggested some practical methods of redemption from economic distress.

Papers were then read on the law regarding Indian Christians and their present legal disabilities by Professor S. C. Mukerji of Bengal; technical and industrial education of Indian Christian youths by Dr. L. L. Joshi of Bombay; and Indian Christian nationality, by Mr. David of the United Provinces.

The Rajput Conference.

The Twentieth Session of the Rajput Conference was held in the grand shamiana specially erected in the precincts of the Hon. Mr. Haque's residence, at Bankipore, on the 27th December. The Maharaja Bahadur of Dumraon, Chairman of the Reception Committee, delivered an instructive address, in the course of which His Highness emphasised the value of higher English education in India and primarily for the Kshattriyas. He welcomed the delegates in a graceful speech and alluded to the war in the following words :—

> There is a soul of goodness in things evil, and the war has thus given the people of this country in general and the Kshattriyas in particular one more occasion to manifest their innate and enthusiastic loyalty to the person and throne of the King-Emperor. I therefore fervently appeal to the Rajputs of Behar to offer themselves in large numbers for enlistment in His Majesty's army. I also appeal to the Government to give the Beharee Rajputs greater facilities in enlistment.

This was followed by the Presidential Address delivered by Lieutenant-General H. H. Maharaja Sir Pratap Singh Bahadur, G.C.S.I., G.C.I.E., Maharaja of Jammu and Kashmir, who reciprocated the sentiments contained in the welcome address. His Highness referred to India's devotion to the cause of the Allies, and urged that Rajput chivalry should be dedicated to the cause of the Emperor. He deplored the lack of educational facilities for Rajputs and urged that with sufficient culture they could lead the masses aright. The aim of the Conference, said His Highness, was by no means political but essentially social and educational. To this end he urged his fellow-religionists to work and labour with unceasing devotion to King and country. His Highness urged that the Ruling Princes should be invited to participate in the affairs of the Maha Sabha :

> If the Rajput Ruling Chiefs at this juncture hold aloof and do not extend a helping hand to their poorer brethren, how can they expect that when the community has advanced, as it undoubtedly must and will advance, the same respect, honour, reverence and esteem will be shewn to them as at present? I make, therefore, an earnest appeal to them to aid us by their countenance and support in the efforts we are making for the betterment of our community by educational and other means, in order that the Rajput community may not lose irretrievably that which it formerly held, but has to a great extent now lost—I mean its position in the front rank of civilisation.

His Highness concluded with a reference to the work of His Honor Sir James Meston in connection with his satisfactory compromise about the course of the Ganges at Hardwar.

The All-India Khatri Conference.

In the course of the address delivered by Dewan Bahadur Amar Nath, Minister of the Kashmir and Jammu State, as President of the All-India Khatri Conference at Lucknow, he said after an expression of loyalty to the King-Emperor and to the cause of the Allies, that the Conference was organised and inaugurated in 1900 under the auspices of the late Sir Baba Khem Singh Bedi and the late Rai Madan Gopal. The President regretted that only ten sessions had been held altogether and urged his compatriots to renew the life of the Conference from this the eleventh session. Touching the aims and scope of the Conferences, he pointed out :—

No definite pronouncement appears to have been made so far as to the aims and objects which this Conference has in view. These can, of course, be gathered from the various resolutions adopted by the Conference in previous sessions, but a clear knowledge on this point is absolutely necessary to avoid the possibility of misconception which is prejudicial to united efforts. I would, therefore, suggest that the amelioration of the social, material and educational condition of the Khatris, which would appear to have been implicitly accepted as the primary aim and object of the Conference, may now be clearly and authoritatively laid down as such for general acceptance.

He then enumerated the various reforms needed for the betterment of the community and suggested intercommunal dealings among the many subdivisions of that caste. He then referred at some length to the education of boys and girls, suggested the establishment of a widows' Home in the manner of Prof. Karve's Home and appealed for funds for organizing such schemes for their amelioration. In conclusion, he objected on behalf of his community to the restrictions and prohibitions that bar their admission into the Indian army. He recalled the military glory of the ancient Khatris and urged the Government to allow his compatriots the privilege of service and sacrifice in the cause of the Empire. He concluded :—

We cannot do a greater service to our community than by compiling an authentic historical record of its past. The best way to do this will be to engage a scholar of repute, who has already published, or is engaged upon, original work on some period of Indian history, preferably during the last two centuries. He may be offered a handsome salary, and if the right man could be found, the work would, I have not the least doubt, be extremely useful, for nothing makes a stronger appeal to the imagination of a race or community or exert greater influence on its practical life than a history of its glorious past, of which we Khatris can, I think, be justly proud.

The Bhatia Conference.

The Third Session of this Conference was held on the 24th December at Lahore. There were about forty delegates from Bombay, including Sir Damodar Thackersey, about fifty from Sind, fifteen from the Frontier Provinces with a sprinkling of Bhatias from the United Provinces and Bengal. The Proceedings began with prayer and an address of welcome from Rai Saheb Dr. Heeralal, when H. H. the Lieutenant-Governor of the Punjab was also present. On the motion of Sir Vitaldas Damodar, Rao Bahadur Dewan Assardas Gotaraj, of Shikarpur, took the chair and addressed the Conference. He urged that there must be an adequate safeguard for the Hindu Religion against the assaults of other competing creeds. He said :—

It cannot be denied by anyone that there is a very great desire on the part of non-Indians, especially the Christians, to spread their religion in India. We have all been complaining of the evils of such an arrangement, but, with the exception of the Arya Samaj, so far as I know, no other community has taken any appreciable steps to fight a battle and resist the invasion. There is no doubt that we have got learned individuals in our community, but it is essentially necessary that there should be specialists—Doctors of Divinity—to face the criticisms of preachers of other religions. By this arrangement, not only shall we be spared time and worry to follow the economic requirements of our life, but keep our religion and community safe from outside assaults and invasions.

Telegrams of sympathy from H. H. the Maharaja of Kashmir and other notables were read.

In the two succeeding days various Resolutions pertaining to the welfare of the community were passed, notably several touching the social and educational advancement of the Bhatias. The Conference advocated the establishment of scholarships for boys and girls and the continuation of classes for women. It also expressed its appreciation of the gift of Rs. 6½ lakhs by Seth Curchondas Nath, for founding a school for Bhatias at Bombay, and the Law and Medical Fund founded by the late Seth Gokaldas Tejpal, and emphasised the need of placing the management of these endowments in the hands of Bhatias themselves as far as possible. Other resolutions referred to the need for founding technical scholarships for Bhatia young men. A resolution was passed, praying for the modification of the Punjab Land Alienation Act, and another suggesting the compilation of a history of Bhatias. With thanks to the Lieutenant-Governor for his kind interest and presence, the Conference came to a close.

The All-India Hindu Conference.

The third All-India Hindu Conference met at Lucknow, on December 25, under the presidency of Mr. V. P. Madhava Rao, C.I.E. In welcoming the delegates to the third Session, the Hon'ble Raja Sir Rampal Singh, K.C.I.E., Chairman of the Reception Committee, began with an explanation of the scope and aim of the Hindu Sabha movement. He said :—

Self-preservation is the first function and foremost duty of everything that breathes. Nay, further, every particle of even inanimate matter resists all efforts to break it. How much more it is then the paramount duty of the great and important Hindu community to preserve its solidarity and to resist all attempts made against its hard-earned growth and progress.

This over, the President spoke on the necessity for such a Sabha and enunciated the work that lay before it. He denounced the principle of separate electorates in the Legislative Councils or Municipalities and urged that no franchise should be regulated by racial or religious considerations. He then referred to the apathy of the Government towards social and religious reforms and said :—

On social and religious questions, the Government take little or no interest. This is of course proper from their point of view. But when the Government becomes truly national, socio-religious questions will become recognized fields of activity for Government as may be seen from the legislation adopted in Mysore and Baroda on the question of infant marriage. But the fact of our having an alien Government now throws additional burden on the community as it will have to look after its social evolution and the adjustment of social institutions to changing conditions. These functions the Hindu sabha will have to exercise even on a larger scale when self-rule has been given to India composed as it is of different races and creeds. It is thus that the question of having a Hindu Sabha becomes all important.

The Conference then decided to pass certain resolutions regarding the position of Hindus in the Imperial and Provincial Legislative Councils, District and Local Boards and in the Post-War Reforms, and particularly with reference to separate electorates given to the Muslims. The President wrote to the Congress Secretary :—

I think we will be failing in our duty to the Indian National Congress if we were not to inform you that if you consult only the Muslim League representatives and not the Hindu Sabha representatives in your deliberations on the above questions, you will not be doing justice to the great Hindu community. We do feel that our views and sentiment, are not and cannot be fully represented by those Hindus alone who happen to be there as members of the All-India Congress Committee.

On the 26th morning, the Hon. Mr. Surendra Nath Banerjea, as Chairman of the Joint-Committee of the Congress and the League invited the representatives of the Sabha, who sent fourteen delegates to attend the joint Conference deliberations on the 27th evening. Mr. V. P. Madhava Rao explained the position of the Sabha and requested the Congress Committee to arrange for a Conference between the Moslem League and the Hindu Sabha. As no such interview could be arranged at once, it was decided to postpone the consideration of the question, and the Deputation withdrew with the assurance that they did not press the point then and there and that their object was merely to explain their situation to the Congress and the League and that the two bodies should recognize their position.

The Theosophical Convention.

The forty-first anniversary of the Theosophical Society was held at Lucknow, on December 28, when Mrs. Annie Besant, the President, gave a comprehensive review of the Society's activities in the various parts of the world. She complained about the serious attacks on the religious liberty of the Theosophical Society and "the consequent suffering of its members from official persecution." Referring to the world-wide organization of the Society, she said :—

Forty-four new Lodges have been chartered, as against thirty-one last year. We have, of course, no reports from the belligerent enemy countries; nothing from devastated Belgium; for the second time there is no report from Finland, except from one independent Lodge. The Australian mail is so irregular that we hope for reports from Australia and New Zealand before we go to press; the Netherlands report has not yet arrived, nor those of Cuba and Norway. I am leaving out this year the enemy countries as the figures we have probably bear no relation to the realities, thus we omit Germany, Austria-Hungary, Bohemia, reducing the national societies to 19. The numbers in Australia, New Zealand, the Netherlands, Cuba, Finland, Belgium and Norway are given as in last year, for, though we know the number of new members, we do not know how many have died or have resigned; these will all be understated. Altogether in the 19 national societies, there will be something over 28,000 members.

But the educational activity of the Society, she pointed out, was even more significant than its work in the direction of religious advocacy. The Theosophical Educational Trust has a college for boys and one for girls, and no less than twenty-five schools are under its immediate management. Four more, we are told, are in the making. In all there are 4,577 students—3,463 boys and 1,114 girls, with a staff of 237 teachers. Mrs. Besant also delivered other lectures on various aspects of theosophical work in India.

The Kayastha Conference.

The Twenty-sixth All-India Kayastha Conference was held at Allahabad, on the 24th December and was attended by a large number of delegates and visitors. Mr. Gulzari Lal, Chairman of the Reception Committee, welcomed the delegates and outlined the work before them. Dr. Sir Rash Behari Ghose, the President, drew attention to the decline in the number of Kayasthas and reminded the community of the necessity for devising ways and means for arresting such decadence. He then exhorted them to take to industrial and commercial pursuits and said :

You must overcome your aversion to these pursuits and recognise the dignity of labour. We must move forward with the advancing tide of progress, casting aside all our traditional prejudices. We must reform the present system of education and give it a practical turn which can alone enable us to play our part in the ever-growing struggle for existence. If we want to solve the bread problem, we must pay greater attention to scientific and technical education, which will eventually lead to the industrial regeneration of India.

He then touched upon the various questions of Social Reform for the advancement of the community and rightly concluded with a word of warning against the breeding of communal jealousy and hatred in these days of sectional conferences :—

You will pardon me if I venture to give you one word of warning. While we must steadily proceed on the path of reform, we cannot be too careful in avoiding unnecessary friction and unpleasantness. We must expect honest difference of opinion and learn to tolerate, nay, respect them. Care must also be taken that the feelings of other communities are not embittered by arrogant assertions of superiority or by raking up controversies which will not add an inch to our stature. We must have noticed with interest the growing self-respect amongst all castes and classes in India, and I tell you frankly I would not have taken any part in this Conference if I thought that it would stand in the way of that upward movement. Mutual hatred and jealousy must give place to mutual sympathy and regard, and we must all work in the cause of social regeneration in a spirit of friendly co operation. The great danger of all sectional movements lies in the breeding of jealousy and strife, and we must steer clear of these rocks in our career of useful reform.

The following are among the more important Resolutions that were passed at the Conference :—

(1) "That in order to encourage commerce and industary among members of the community, this Conference urges the establishment of a Technical Class in the Kayastha Pathsala to impart instruction in those subjects." (2) "That this Conference urges upon the community the importance and necessity of female education and abolition of Purdah system as the foundation of all social reforms."

The All-India Temperance Conference.

The thirteenth Session of the All-India Temperance Conference was held on the morning of the 27th December in the Congress pavilion at Lucknow. It was presided over by the Hon. Rao Bahadur B. N. Sarma of Madras. There was a large attendance of delegates and visitors. In the course of his speech, the President pointed out that the ideal of the temperance reformer should be abstinence. He then referred to the policy of Government in regard to the drink problem and showed that that policy was based on a fundamental misconception of facts. He pointed out how the drink habit is not only injurious to the physical, moral, and intellectual stamina of the people but is in absolute conflict with the injunctions of the great religious tenets of the Indian people. He appealed to the Government to take up remedial measures to wean the people from the clutches of drink. He also exhorted the people to realise the danger of drink and abstain from the obnoxious habit. In conclusion, the President formulated a number of suggestions to minimise the consumption of alcohol, among which may be mentioned the following :—

That licensing boards should be immediately constituted in the capital cities and other large centres of population.

That the number of shops should be steadily reduced; in so far as such reduction may not lead to illicit consumption or resort to other deleterious drugs.

That the Bengal rule should be strictly adhered to, and that the experiment of removing shops to sites outside municipal areas be tried on a large scale.

That the fixed fee system be given a larger trial in select areas. That preachers be appointed to preach in the vernacular to the classes affected.

That the opening hours of shops should be advanced so as to render it difficult to indulge in drink before starting work for the day, and that shops be closed at sunset, at any rate, in all rural areas in the beginning.

That no drink should be sold to Indian women, or minors.

That duty on foreign liquor be raised.

That the sale of drink under Municipal or governmental control on the ticket or analogous systems may be tried in select areas, where public sentiment is not opposed to it.

The Conference ended with the passing of various resolutions, embodying suggestions similar to those enunciated by the President.

SELF-GOVERNMENT FOR INDIA.

[EXTRACTS FROM ADDRESSES AND SPEECHES AT THE CONGRESS AND THE MOSLEM LEAGUE.]

The Hon. Pandit Jagat Narain.

In my opinion, statesmanship demands that Great Britain should announce to the people of this country that a Self-Governing India is the goal of her policy and grant us a substantial instalment of reform after the war, as a step towards that goal. Representative Government should be made a reality by the fullest control over civil affairs being given to the elected representatives of the people whose decisions should be binding on the Executive. Indians should no longer be debared from an honourable participation in the defence of their hearths and homes, but should be given every opportunity developing their martial spirit. The slow deterioration which is taking place in the manhood of the race is one of the saddest results of British rule in India, and steps should be taken to repair the injury as early as possible. It is also essential that in any scheme of Imperial Federation, India should occupy the same position as the Self-Governing Dominions. The Memorandum submitted to His Excellency the Viceroy, by our elected representatives, although not a complete statement of our demands, proceeds on these lines and the same principles underlie the scheme of reform which has been prepared jointly by the All-India Congress Committee and the Muslim League Reform Committee and which will soon come before you. But these reforms, which fall far short of Colonial Self-Government, cannot satisfy India for all time to come and in any legislation undertaken to give effect to them; it should be provided that full responsible government shall be conferred on her within a generation.—*From the Welcome Address to the Congress.*

"ALL ABOUT THE WAR—THE INDIAN REVIEW WAR BOOK".—A comprehensive and authentic account of the War with numerous illustrations, portraits, cartoons, maps and diagrams contributed by officers of the Indian Civil, Military and Medical Services, Ministers of Native States, Engineers, Educationists, Journalists, Lawyers, Publicists and other Specialists. Edited by G. A. Natesan, with an introduction by His Excellency Lord Pentland. Price Rs. 4. To Subscribers of the "Indian Review," Rs. 3.

G. A. Natesan & Co., Sunkurama Chetty Street, Madras.

The Hon. Mr. A. C. Muzumdar.*

Call it Home Rule, call it Self-Rule, call it *Swaraj*, call it Self-Government, it is all one and the same thing—it is Representative Government. The idea is not a new one, nor is it the revelation of any evangelist. As far as I am aware, the idea dawned upon the people in 1882, when the agitation on the Ilbert Bill first revealed to the people the helpessness of their situation. A *National League* was then formed and a burning pamphlet called the *Star in the East* was issued, which was written in a style and language which, if employed at the present day, would have surely stranded the writer in serious difficulties. Lord Ripon fully anticipated the demand when, in his famous Resolution of January 1882, he told the people that "local self-government must precede national self-government." Although the first Indian National Congress passed no resolution directly bearing on the question, the notification under which it was called into existence clearly stated that one of the objects of the future assembly was "indirectly to form the germ of an Indian Parliament which, if properly conducted, will constitute in a few years an unanswerable reply to the assertion that India is still wholly unfit for any form of representative institution." And Mrs. Annie Besant in her admirable book, *How India Wrought for Freedom*, has pointedly referred to the utterance of the Grand Old Man of India, which clearly foreshadowed the coming demand of the Indian people for Self-Government. Ever since then the idea worked and matured itself when, in the brilliant session of the Congress in 1906, it found an emphatic and unequivocal pronouncement from the very same patriarch of the Indian political world in his trumpet-call for *swaraj*, which has since then stirred the Indian mind to its utmost depth to find the true remedy which it had so far sought in vain. A generation has passed away, but a generation has risen whose sole and whole-hearted demand is nothing short of Self-Government as the sovereign remedy for the present unsatisfactory situation. A cry has, however, been raised that we are not yet fit for Self Government. * * *

From the Congress Presidential Address.

Gentlemen, we are roundly charged with revelling in "extravagant hopes" and indulging in "unrealisable demands." But we have long refused to profit by the very friendly and eminently practical suggestions of those whose only claim to be regarded as the *Statesman* or *Englishman* consists in the proud names which they have, like the "bogus medical degrees," assumed for themselves. We do not judge the great British nation by specimens of this kind who do no honour to the English name. . . .

Let us recall to-day only a few of the many assurances that have been given to India by some of the responsible ministers and men who are now guiding the destinies of the Empire.

The *Times*, the leading organ of conservative opinion in England, has been struck with the unexpected demonstration in India and frankly admitted that the Indian problem must be henceforth looked at from a different point of view. "On our part," says the great journal, "when we have settled account with the enemy, India must be allowed a more ample place in the councils of the Empire." Both Mr. Montague and Mr. Roberts, as Under-Secretary for India, have from time to time expressed themselves in no uncertain voice as to the correct lines upon which the Indian administration requires to be revised and modified. Mr. Montague's honest interpretation of Lord Hardinge's Despatch of August 1911, is well-known, while Mr. Roberts speaking from his place in the House of Commons has frankly acknowledged that with the intellectual classes in India this outburst of loyalty is a "reasoned sentiment based upon considerations of enlightened self-interest," and has at the same time asked the British public to alter "the angle of vision" in their perspective of the Indian problem. Following the *Times*, the *Review of Reviews* has, in one of its latest numbers, fairly admitted that "India to-day occupies a higher place in the Empire than ever before and has materially advanced her claims towards Self-Government, and it is inevitable that, after the war, her outstanding demands should receive the most sympathetic considerations."

"We have," the *Review* adds, "made promises of Self-Government to Egypt, and it is inconceivable that we should deny the same privileges to India. At present India is not pressing her claim but patiently awaits her just due not as a reward but as a right which her conduct has shown her worthy of possessing."

Lord Haldane, who till recently occupied a commanding position in the Cabinet, said :—

The Indian soldiers were fighting for the liberties of humanity as much as we ourselves. India had given her lives and treasures in humanity's great cause, hence things could not be left as they were. We had been thrown together in the mighty struggle and had been made to realise our oneness, so producing relations between India and England which did not exist before. Our victory would be victory for the Empire as a whole and could not fail to raise it to a higher level.

Then at a recent meeting held at Guildhall, at the instance of the Lord Mayor, Mr. Asquith, the Premier, and Mr. Bonar Law, the erstwhile leader of the Opposition, and both now united in coalition ministry, have given a pointed pledge for the readjustment of India's position in the councils of the Empire after the war is over. But to quote the words of Mr. Bonar Law, why the thing should not be done "while the metal was still glowing red-hot from the furnace of the war" and the promised rewards of India's comradeship and co-operation should be all relegated to the indefinite future and not one of them even shadowed forth in the present programme of the Imperial Government, seems to be inexplicable. Quite recently, Lord Chelmsford is reported to have said that "the war, by giving India an opportunity to show its practical importance to the Empire, had stirred Indian aspirations for developments politically and economically. It would be his endeavour to secure a practical response to this new desire for progress." His Lordship is said to have added :—"My task is to guard India from cramping influences of undue conservatism equally with unpractical revolutionary tendencies."

Now, are these men of less authority, foresight and responsibility than the members of the Indian bureaucracy or its exponents in the Anglo-Indian Press who are ever so loud and positive in denouncing our claims? Or are these assurances all a hoax intended to delude the Indian mind? We positively refuse to accept any such view which would be a gross calumny on the great British nation. We have much greater confidence in British statesmanship which may have blundered in many places but has failed nowhere. Gentlemen, we indulge in no gloomy anticipations; but we shudder to contemplate the serious effect which the non-fulfilment of these pledges is likely to produce in the minds of the Indian public. . .

As loyal subjects of His Majesty, we, of the Congress, deem it our duty to tell all whom it may concern not to treat the Indian problem after the war as lightly as some irresponsible and mischievous critics are evidently disposed to do. Already a subdued note of the scrap of paper has been raised in certain quarters. The Charter Act of 1833, the Queen's Proclamation of 1858 and the two gracious messages of King Edward VII and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

George V still remain unredeemed, and it would be no wise statesmanship to add to the burden of unredeemed pledges. England has been drawn into the vortex of a titanic struggle for the deliverance of Belgium and Servia. God grant, she may come out with her brave Allies completely triumphant in her heroic efforts. She has, however, a much greater stake in India, and India has a much greater claim to her consideration. Let us hope she will not fail to be at least as just as she is generous.

After the war is over, a complete readjustment of the Empire will have to be made ; all its component parts will have to be co-ordinated and harmonised with one another and with the parent state. India alone cannot be left out of this programme. She must be admitted into common and equal partnership with colonies on terms of equal rights and obligations of the Empire, enjoying equal laws and equal rights of British citizenship throughout that Empire. The collar of a Dependency should be removed from her neck and the coronet of an autonomous Self-Governing State placed upon her head. What a glorious federation it would then be, more glorious than that of the Roman Empire or of any that the world has yet seen.

The Hon. Mr. M. A. Jinnah.*

Is India fit for freedom ? We, who are present here to-day, know full well that from the Indian standpoint there can be but one answer. Our critics would probably challenge our conviction. Our only reply to them would be to go forward and put the matter to the proof. After all, what is the test of fitness ? If we turn to history, we find that in the past, only such people have been declared to have been fit for freedom who fought for it and attained it. We are living in different times. Peace has its victories. We are fighting and can only fight constitutional battles. This peaceful struggle is not and will not be wanting in the quality of vigour and sacrifice, and we are determined to convince the British Empire that we are fit for the place of a partner within the Empire, and nothing less will satisfy India. . . .

The first and the foremost question that requires to be put at rest is, that the position of India in the Empire should be defined in the most unequivocal terms. It should be made clear by the Government in an authoritative manner that Self-Government is not a mere distant goal that may be attained at some future indefinite time, but that Self-Government for India is the definite aim and object of the Government to be given to the people within a reasonable time. That should be the aim and object of the reconstruction and reformation of the present constitution of the Government of India, and immediate steps should be taken after the War to introduce the reforms towards that end in view both by the Government and the people.

Reading the signs of the time it appears that the claims of the Overseas Dominions, such as Canada, Australia, and even South Africa, *viz.*, to allow them a voice in the declaration of war and the making of peace and the Imperial Foreign policy if they are to bear the responsibilities of the Empire cannot well be resisted and it might follow that an Imperial Parliament may be constructed and established. England, Scotland and Ireland have their separate Parliaments for the purpose of managing their internal and domestic affairs such as the Dominions already have. Sir Joseph Ward, addressing the meeting of the Insurance Institute at Gresham College only last month, said that :—

> **In the future reconstruction of the Empire, there could not be any interference with local authority and though an Imperial Parliament was a long way off, they might now work for some effective Imperial Council and that before an organic Parliament was possible, there must be devolution in Britain to pave the way for a federal legislature overseas. The Dominions had no right even to a minority voice as to whether the nation should go to war or what the peace terms should be.**

He quoted Mr. Asquith's speech at the 1911 Imperial Conference, in which the Prime Minister stated that "an Imperial Parliament scheme would impair the authority of the British Parliament." Sir Joseph added:

> **Since then, there had been a great evolution of opinion on the subject. Mr. Bonar Law had declared as a result of the war the time was coming when the Overseas Dominions would share in the Government of the Empire with Britain. He hoped that before the war ended, some *modus vivendi* would be established.**

In the political reconstruction, India, the largest part of the Empire, cannot possibly be allowed to continue a dependency as an adjunct to England, Scotland or Ireland, or to be ruled and governed by the Dominions. Hitherto the responsibility, the control and the supervision of India has been vested in Great Britain. The question naturally arises, what will be the position of India if an Imperial Parliament with full representation of the Dominions is constituted ? Is India to have new and additional masters ? Is India to be

* From the Presidential Address to the Moslem League.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ruled jointly by England, Scotland, Ireland and the Dominions? Are we to be handed over to this Imperial Parliament and to be thus ruled and to be governed by the Colonies? Are we not to have a status or *locus standi* in this Imperial Parliament? I feel sure that I am expressing the opioion of the entire educated people of this country that India will never allow herself to be relegated to such an intolerable position. Indeed, she does not want a change of masters nor additional masters. If an Imperial Parliament, such as indicated above, is established, India's right should be recognised and her voice in that Imperial Parliament must be fully and properly secured and represented by her own sons in the Councils of the Empire.

The Hon. Syed Nabi-Ullah.

The All-India Moslem League stands to-day for two principal objects, namely, for the safeguarding of the political position of Mussalmans and for co-operation with the other communities for the attainment of Self-Government or Home Rule.

It has given considerable relief to all of us to find that the responsible Hindu leaders in all parts of India realise the Moslem standpoint and are ready to offer all reasonable guarantees for the safety of the Moslem political position. With the settlement of this fundamental question involving the fate of India's future, nothing else should remain in the way of a complete Hindu-Moslem co-operation for the supreme end we both have in view. That end, I need hardly say, is United India, alive to her destiny and recoiling from no toil and sacrifice to rise to the summit of her aspiration, *i.e.*, to the position of a self-governing member of the British Empire. Is there a single Mussalman present here to day, nay, is there a single Indian in and outside of this hall, born of Indian woman, whose heart fails to warm up and whose pulse does not beat faster as he gives even a moment's thought to that glorious conception? If there is such a miserable wretch in existence, he is a freak and a monstrosity. For such ideal no effort can be spared, no sacrifice can be too great.—*From the Welcome Address to the All-India Moslem League.*

GOKHALE'S SPEECHES.—A new, up-to-date and comprehensive collection of his speeches and writings with five portraits. Over 1,200 pages, Crown 8vo. Price Rs 3. To Subscribers, Rs. 2-8.

G. A. Natesan & Co., Sunkurama Chetty Street, Madras.

The Hon. Babu Surendranath Banerjea.*

Ladies and gentlemen, we are on the eve of a great reconstruction. The world after the war will not be the same as it was before the war. England and India will participate in that reconstruction. The object of the war is to vindicate the sanctity of treaty obligations, to protect the rights of minor nationalities, to uphold the sacredness of scraps and bits of paper. In the same spirit, I submit, we are entitled to hold, that the gracious messages contained in our charters and proclamations should be redeemed and upheld; for the moral law does not work by latitudes and longitudes. It is of univeral application. The latest declaration on the subject of readjustment that we have had is the one made by Lord Chelmsford to an American correspondent. His Excellency observed that the war has stimulated the aspirations of India politically as well as industrially, that it would be his duty to give them a practical form and recognition—now mark the words—to guard them—I am quoting almost the exact language—to guard them against the cramping influences of undue conservation and also against revolutionary tendencies. A noble message nobly delivered. If His Excellency can carry out this message, he will go down to posterity as one of the greatest benefactors of

* The most important Resolution passed at the last sitting of the Congress was the one on "Self-Government for India." The terms of the Resolution were:—

(*a*) That having regard to the fact that the great communities of India are the inheritors of ancient civilisations and have shown great capacity for government and administration, and to the progress in education and public spirit made by them during a century of British Rule, and further having regard to the fact that the present system of Government does not satisfy the legitimate aspirations of the people and has become unsuited to the existing conditions and requirements, the Congress is of opinion that the time has come when His Majesty the King-Emperor should issue a Proclamation announcing that it is the aim and intention of the British policy to confer Self-Government on India at an early date.

(*b*) That this Congress demands that a definite step should be taken towards Self-Government by granting the reforms contained in the scheme prepared by the All-India Congress Committee in concert with the Reform Committee appointed by the All-India Muslim League. (For text of the Scheme, please see page 57).

(*c*) That, in the construction of the Empire, India shall be lifted from the position of a Dependency to that of an equal partner in the Empire with the Self-Governing Dominions.

The Resolution was proposed by the Hon. Babu Surendranath Banerjea, seconded by Mrs. Besant and supported by Mr. Tilak and several others, whose speeches are herein reproduced.—[Ed. *I. R.*]

the Indian people. But, brother delegates, I desire to raise a note of warning. There has been, of late, a tendency to err on the side of caution. A high authority, supposed to be a power behind the throne, speaking in Simla at a public meeting at which the question of post-war reforms was discussed, said that if Akbar had been more cautious and less imaginative, possibly the Moghul Empire in India would have endured till to-day. Prophecy in regard to matters that might have been but were not is a prefectly safe occupation. Might I not be permitted to indulge in the same pastime and say that if Akbar had not followed this bold and courageous policy, the Moghul Empire would not have taken root in the hearts of the people? I am supported by the authority of the historians of Akbar and by an overwhelming array of facts. Mark what happened before the establishment of the Moghul power in India. Dynasty after dynasty followed one another in rapid succession. There were five dynasties within the space of 300 years giving an average life of 60 years to each. Akbar grasped the situation and saw the weakness of it all and initiated a bold and statesmanlike policy, which enshrined him in the hearts of the people and laid broad and deep the foundations of the Moghul Empire. And I am sure that if Akbar had followed any other policy which failed to attract the hearts of the people, the fate which had overtaken the previous dynasties would have been his.

Ladies and gentlemen, Lord Chelmsford has observed that it would be his duty to guard the country against revolutionary tendencies. I think His Excellency may rely with absolute confidence upon the unstinted support of the educated community in this matter. We are not revolutionaries. (Cries of 'No, no.') Revolution is repugnant to our instincts and to our nature. We are the friends of reform (hear, hear), because it is the surest safeguard against revolution. All history proclaims the truth that reforms indefinitely postponed or tardily carried out, or inadequate in their scope and comprehension, prepare the ground for revolutionary propagandas. God grant that this blunder may not be committed in India. We know it was committed in Ireland. We are anxious that the same mistake may not be repeated here (hear, hear). Lord Chelmsford said to the Deputation of the Indian Association—I was a member of that deputation—that reforms would not be rapid. Well, whether they be rapid or slow, let there be no reforms by driblets with a background of mistrust and suspicion. Whatever reform is conceded, let it be whole-hearted, let it be the index of a generous trust reposed in the people, and, above all, let it be adequate to the growing aspirations of India. Any reform that fails to satisfy this test must give rise to disappointment, create discontent, frustrate the object of all reforms, which is to keep pace with an advancing public opinion. I hope and trust that it may be Lord Chelmsford's high privilege to grant us reforms which will satisfy the growing aspirations of the people and be consonant with the scheme which has been formulated and which is now before you.

Brother delegates, there is a widespread feeling all over the Empire that after the war, Self-Government should be conceded to India, or that, at any rate, a definite step should be taken towards it. The difference of opinion between Indian Nationalists and our critics is this: We say we should have Self-Government at once or in the immediate future. They say we must pass through purgatory on our way heavenwards. Mr. Lionel Curtis (cries of 'Shame')—never mind—he is a man who has written several books on the subject. He exercises considerable influence over English public opinion. He may or may not be an opponent of Indian aspirations, but let me try to meet him on his own ground. . . . . In his book "The Problem of the Commonwealth," he says, "The task of preparing for freedom the races which cannot as yet govern themselves is the supreme duty of those who can. It is the spiritual end for which the Commonwealth exists, and material order is nothing except a means to it." The preparation of the races living within the British Empire for Self-Government is, according to Mr. Lionel Curtis, a spiritual end for which the Commonwealth exists, and it is the sole justification for British rule in this country. Material order is a means to that end. All administrative measures are subordinated to this spiritual end which overshadows every other aim and purpose. So far so good; we are all in agreement with Mr. Lionel Curtis. But when he comes to the question of Self-Government for India, he cries out, 'Not yet.' That is an old cry. He says, you cannot have Self-Government now. Why not? Because you have not got suitable electorates. To that my reply is, Had you any electorates in the United Kingdom worth the name before the Reform Bill of 1832. (Hear, hear.) Is it not notorious that there were those pocket boroughs which were openly bought and sold? And yet no

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

one questioned the competency of the English people for Self-Government. Had Japan electorates suitable or otherwise when the Mikado conferred parliamentary institutions upon that country? Had the Philippinos any electorates, qualified or otherwise, when the American Republic resolved to concede national independence to the people of the Philippines? The growth and development of electorates is part of the growth and development of free institutions. They are inseparable and linked together. They act and react upon each other and strengthen each other by their mutual interaction.

It is said that we are not fit for Self-Government. We are, forsooth, unfit for self-rule. In the morning of the world, when Europe was sunk in barbarism, our ancestors had those village communities which represent the first beginnings of self-government and which survived the vicissitudes of time and fortune. We are not fit for self-government! Go back to the days of the Vedic Rishis. What do you find? The king was an elected monarch—so says Dr. Pramatha Nath Banerjea in his book. And even in the Middle Ages the memory of an elected sovereign lingers in the institutions of the land. Analyse the institution of Islam. What do you find? Islamic society and government are saturated with the spirit of democracy; and the Caliph, the spiritual head of the Moslem world, originally owed his authority, his position and dignity to the choice of the Faithful. There is no community in the world in which the spirit of equality is more visible and more active than that professing the creed of Islam. And yet we are told, we Hindus and Mussalmans are not fit for Self-Government. When shall we be so fit, may I ask? When will the bureaucracy think that we are? (Laughter). And when will that be? Doomsday. (Renewed laughter). There is yet another authority which may give us Self-Government. What is that? The Parliament of England? But it takes a long time to move Parliament. Sir Henry Fowler said on one occasion that every member of the House of Commons was a member for India; what is everybody's business is nobody's business. We have found that from our painful personal experience. Nobody cares for India. England and Englishmen are so deeply concerned in their own affairs, absorbed in their own administration and government that they find it impossible to pay any attention to India. Who then will determine the time when Self-Government is to be conceded to us? You and I. (Hear, hear, and applause.) For nations by themselves are made. (Hear, hear). Enlist on your behalf all the sympathy you can of Englishmen and Englishwomen and of the civilised world; but bear in mind you and you alone are the final arbiters of the destinies of the Motherland. (Applause). Cromwell on one occasion made a memorable remark of which I am reminded at the present moment. On the eve of the battle of Naseby, when a severe thunder storm passed over the encampment addressing his troops, he said, "Keep your powder dry and pray." Pray by all means, but keep your powder dry. Don't lose sight of the material resources which are necessary for success in this world. Spiritual agencies are a mighty factor but the material resources are not to be despised. The salvation of India is to be wrought upon Indian soil by Indian hands, by Indian brains and by Indian agency. (Applause.) Have by all means the sympathies of Englishmen and of the civilised world, but it is you who will determine the great question for yourselves.

Ladies and gentlemen, I don't know whether I have already exhausted your patience. (Cries of 'No, no.') I have a few more remarks to make. Why is it that we want Self-Government? We want Self-Government in the interests of the Empire to which we are so proud to belong. We want Self-Government in the interests of the efficiency of the administration. We want Self-Government for self-protection. And, finally, we want Self-Government for the highest ends of national existence, for the moral and spiritual elevation of our people. I say we want Self-Government in the interests of the Empire. Who knows what will happen 20 years hence? Who knows what strife, what struggle, what difficulties there may be hidden in the womb of the future? Who knows that another war more sanguinary and more devastating than the one which is now desolating Europe may not again break out with all its attendant horrors and cast its shadow upon the fortunes of humanity? Is it not the duty of statesmanship to be forewarned and to be forearmed, to take the necessary measures of precaution against a contingency of this kind? Who had ever dreamt forty years back, after the battle of Sedan, that England and Germany would stand and fight with one another? You talk of the man-power of Germany. But look nearer home. We are as multitudinous as the stars of heaven, as countless as the stars of heaven, as countless as the sands of the sea. I say to the rulers of India, Rely upon us, trust us, and Germany will quail

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

before the man-power you hold in reserve in India. (Hear, hear). Marshman says in his history of British India the grandsons of those who fought against Baber became under Akbar the governors of his provinces, the captains of his armies and the ministers of his councils. Let such trust be reposed in us, and England may pause with serenity the mightiest combination that may be formed against her Imperial sway. Self-Government is the cement of the Empire. It has knit together the Self-Governing Colonies in the bonds of an indissoluble union. It has converted hostile Boers into loyal citizens shedding their blood in suppressing a rebellion of their own countrymen against the Empire, which has conferred on them the inestimable gift of freedom. If Self-Government is conceded to us, the same results will follow in this ancient land.

We want Self-Government for the efficiency of the administration. . . . . Sir Henry Campbell Bannermann has told us that good government is no substitute for self-government. I will go a step further and add that in fairly progressive communities, self-government is the only guarantee for good government. . . . Good government is no substitute for self-government, but self-government is necessary for good government, and we claim it for the purpose of good government. . . . .

We want Self-Government for the purpose of self-protection. You might ask—what do you mean by self-protection? At the present moment there is visible on the horizon a cloud no bigger than a man's hand, which, I am afraid, unless timely precautions are taken is destined to assume formidable proportions and bursting upon us may overwhelm us. What is that cloud? It is the prospect of a federal council of the Empire from which we are to be excluded and on which there will be colonial representatives. The Self-Governing Colonies are soaked in colour prejudice. From the Federal Council of the Empire, they will determine the policy and the principles of Indian administration. We must put our own house in order and have self-rule before this dire catastrophe overwhelms us.

We want Self-Government finally for the highest needs of national existence, for the moral and spiritual elevation of our people. Political inferiority involves moral degradation. It is galling to our self-respect. The mind and the conscience of a free man are not the mind and conscience of a slave. A nation of slaves could never have produced a Patanjali, a Buddha, or a Valmiki. We want Self-Government in order that we might wipe off from our brows the badge of political inferiority and uplift our heads among the nations of the earth, so that we may fulfil the great destinies that are in store for us under the blessing of Divine Providence. We want Self-Government not only in our own interests but for the sake of humanity at large. In the morning of the world, on the banks of the Ganges and on the banks of the Jumna, the Vedic Rishis sang those hymns which represent the first yearnings of infant humanity towards the Divine ideal. In the morning of the world, before the Eternal City had been built on the seven hills, we were the spiritual preceptors of mankind. Kashi was flourishing before Babylon. Our past takes us back to the dim twilight of history. In those days, when the world was sunk in primeval barbarism, we were the guides and instructors of mankind. Has our mission been fulfilled? It has been arrested and will have to be renewed, aye, renewed and fulfilled, so that we may rescue humanity from the gross materialism and the perverse moral culture which has heaped the battlefields of Europe with the hecatombs of the dead. But we must be fully equipped before we can adequately discharge this high and exalted function. Self-Government is the indispensable equipment. These are the ideals, the hopes and the aspirations which inspire us in the demand for Self-Government. Our work is not political: it is moral, it is religious. We are therefore irresistible and invincible.

To-day is a red letter day in our history. To-day Hindus and Mahomedans and all ranks of the National party are united on this platform inspired by a common resolve and a common purpose. May the memory of this day be embalmed in the recollections of posterity by the inauguration of a new campaign for the attainment of Self-Government. It is no use our holding a session for three days and then going to sleep for the rest of the year. We must resolve in our hearts and take a vow such as we did in connection with the Swadeshi movement and enter into a solemn league and covenant before God and man that we shall not rest from these labours until we have secured for ourselves the great and inestimable blessing of Self-Government. (Hear, hear, and applause).

INDIAN NATIONAL EVOLUTION. By Amvica Charan Mazumdar. Price Rs. 2. To Subscribers of "I. R," Re. 1-8.

Mrs. Annie Besant.

You have just heard the scheme of reforms which has been passed by the All-India Congress Committee in Conference with the Reform Committee appointed by the All-India Muslim League. Those reforms are alluded to in the second clause, and you will see that they are meant for a transition period to be passed as soon as possible and to lead up to that change, which is to come with the reconstruction of the Empire after the War—that change to Self-Government of India on a footing of equality with the Self-Governing Dominions. It is to the last clause that I propose to ask your attention. The last clause says that in the reconstruction of the Empire after the War, India shall be lifted from the position of a Dependency to that of an equal partner in the Empire with the Self-Governing Dominions. With regard to that, it is said that you ought not to embarrass the British Government by raising such a question as this in the middle of the War. We are only following the example of the Self-Governing Dominions. We are only taking the advice of Mr. Bonar Law, who advised the Dominions to strike the iron while it was red hot. After the reconstruction of the Empire, the iron will be cold, and where, I ask, is the blacksmith who allows the red-hot iron to cool down before he strikes it to the shape and form he wants?

We hear at this moment much talk about the five nations who are to form a Federated Empire after the War. Where is India? Oh! She is not one of the five. She is a coloured people, and coloured people are to have the right of domination over them by colourless people. Coloured people have only the duty of submission. (Cries of 'Shame.') But that is not the doctrine that this coloured nation at least is willing to accept. We are not uncivilised natives of South Africa, that we should bow our heads beneath the yoke of the five nations. It is not lack of colour that makes clever brains. The Lord Buddha and the Christ were coloured men. All the founders of religion were coloured men. Have the colourless produced a single founder of religion? We will never bow beneath the yoke of the Colonies.

We are told not to spread bitterness against the Colonies. I think the writer of that has begun at the wrong end. Have we excluded the Colonies from India, because they could not talk or write some language of which they knew nothing? Was it this country or was it Australia that passed that Law? Have we said that no North American or Canadian should come to India unless he comes straight from port to port when there is no line of ships that carries straight from one to the other, or has Canada made that law against the Indian people? What is this talk of bitterness? Bitterness is caused by the Colonies and not by India. Let this advice be given to the Colonies and not to India. The Indian had no share in the making of that feeling.

Oh! We are not fit to govern ourselves and we are divided! Are we? We have shown some power of union during the last few years. Our Congress was split into half nine years ago. But we stand a United Congress to-day. Hindus and Muslims had a gulf between them, not in Kashmir where a Hindu Prince rules, not in the Deccan where a Muslim Prince is the Sovereign, but only in the British Raj, and that gulf has been bridged by Muslims and Hindus themselves, and we have linked our hands in love, in trust, in mutual forbearance, in mutal respect, and we stand to-day a united nation that nothing shall hereafter break asunder.

Oh! you are not fit for Self-Government. You are ignorant. Who has the right to cast that reproach at the masses of our people? It was the late Mr. Gopal Krishna Gokhale who tried to win free and compulsory education cautiously, carefully, step by step, for he was not an impatient idealist in the world, however much his heart went with impatient idealism. An Indian tried to educate his brethren but who is it that denied it? It was the Imperial Council with its perpetual majority of officials. Does it then lie in the mouths of Englishmen to reproach us with ignorance when the Government would not educate our people and would not help us to do it.

Then they say: "You cannot help yourselves." Did we pass the Arms Act? Did we take away weapons from the hands of our people? Since 1878, there has been no pure-blooded Indian, whether Hindu or Musalman, who could possess arms without a licence, to the gaining of which all sorts of difficulties are attached. Is it India's fault that it is undefended? For thirty years the Congress has asked for the repeal of the Arms Act and for permission to volunteer and to open Military Colleges, and those who have treated every demand with contempt, say that we are not fit to govern ourselves, because we cannot defend ourselves. It is only Home Rule that will enable us to defend ourselves. Until we have Home Rule, we cannot be armed as we should be.

Oh! it is said there are divisions among you. There are none in England! (Laughter). Before the Great War in 1914, which saved the Empire, the United Kingdom was on the brink of Civil War. Was England then unfit for Self-Government? How far was England educated when the Reform Bill of 1832 was passed? Has England always been so quiet under difficulties? In 1913, were there no strikes paralysing railway traffic and threatening London with starvation, because of the lack of transport, as all men engaged in transport work were on strike, and yet England is fit for Self-Government, and you, quiet and industrious, are not?

As regards the objection, that educated Indians are in a minority: the educated of every country are in a minority, but they are not in so small a minority as the God-given Rulers of to-day. The educated minority know the people, and the English do not. People come here to learn about the Indian Nation. They live in Government camps, and they go about with Government officers. They make friends of those who have murdered India. Is that the way to learn what Indians think? What idea can they get of the village life when they see it under such circumstances.

Then we are told that we are injuring the prestige of the British Nation, and the Press Act is brought down to silence criticism. Have you forgotten that one of the Panjabi papers that described the condition of London was held to have excited hatred and contempt against His Majesty's British subjects, and the security of that paper was forfeited? Sir James Meston may think my language emphatic, I am afraid, but we want emphasis in order to make both our rulers and people understand the intolerable condition of things under which India is living to-day.

India has still love for England. India does not want to break the British connection, but the England she loves is not the steel-framed England of the Press Act, the Defence of India Act, the Seditious Meetings Act and the Criminal Law Amendment Act, and all those horrible enactments of 1818 and 1827. It is not the England of those things that we love; it is the England of Cromwell, of Hampden and Pym, of Milton and Shelley. It is the England that shelfered the threatened life of Mazzini, the England that welcomed Garibaldi, by thousands in her streets as the liberator of Italy, the England that has been sheltering every political refugee, it is that England that we love. That is the England that, despite everything else, we still believe in, but she is ignorant and blinded by the people who come here on superficial knowledge and confirm her in her blunders instead of enlightening her.

England is fighting for her life, and has called India to help her with as much as India is able to give. Oh! India would have given so much more, so many more men, so many more volunteers in order to help England in the day of her need. But England at her peril calls on Indian soldiers to fight for the liberty of Belgium and the sacredness of treaties, and then sends those soldiers back home to find their people still in bondage and treaties disregarded, torn in pieces and thrown aside. That which England fights for in Europe she must admit here. There is only one thing which makes a Nation fit for freedom, and that is the heart to aspire after it, and the will which is determined to have it. England will not give you freedom, no Nation has ever been given freedom, but England will pass an Act of Parliament establishing freedom when she realises that you are in earnest, that you are tired of being played with, that you are determined to be free, and India's loyalty rests on a belief in the old England and not in the English bureaucracy, and her loyalty is the reasoned loyalty of freemen; she has asked for her place in the Empire, and until that is granted, there will be danger in the path of progress.

Mr. Balgangadhar Tilak.

I thank you sincerely for the reception that you have given me on this platform, but let me tell you I am not fool enough to think that this reception is given to me personally. It is given, if I rightly understand, for those principles for which I have been fighting. The resolution which I wish to support embodies all these principles. It is the resolution of Self-Government. It is that for which we have been fighting, for which the Congress has been fighting for the last thirty years. The first note of it was heard ten years ago on the banks of the Hughli, and it was sounded by the Grand Old Man of India, that Parsi Patriot of Bombay, Dadabhai Naoroji. Since the note was sounded, difference of opinions arose. Some said that the note ought to be carried on and ought to be followed by a detailed scheme at once, that it should be taken up and made to re-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sound all over India as soon as possible. There was another party amongst us that said that it could not be done so soon, and the tune of that note required to be a little lowered. That was the cause of the dissension ten years ago, and I am glad to say that I have lived these ten years to see that we are going to put our voices and shoulders together to push on this scheme of Self-Government. Not only have we lived to see these differences closed, but to see the differences of Hindus and Muhammadans closed as well. So, we have now united in every way in the United Provinces, and we have found that luck in Lucknow. So, I consider it the most auspicious day in the most auspicious session of this 31st Indian National Congress. There are only one or two points on which I wish to address you. It has been said by some that we, Hindus, have yielded too much to our Muhammadan brethren. I am sure I represent the sense of the Hindu community all over India when I say that we could not have yielded too much. I would not care if the rights of Self-Government are granted to the Muhammadan community only. I would not care if they are granted to Rajputs. I would not care if they are granted to the lowest classes of the Hindu population, provided the British Government considers them more fit than the educated classes of India for exercising those rights. I would not care if those rights are granted to any section of the Indian community. Then the fight will be between them and another section of the community, and not, as at present, a triangular fight. We have to gain this from a powerful bureaucracy, an unwilling bureaucracy, naturally unwilling, because the bureaucracy now feels that these rights, these privileges, this authority, will pass out of their hands. I would feel the same if I were in that position, and I am not going to blame the bureaucracy for entertaining that natural feeling, but whatever that feeling may be, it is a feeling which we have to combat against, it is a feeling that is not conducive to the growth of Self-Government in this country. We have to fight against that feeling, and when you have to fight against a third party, it is a very important thing that we stand on this platform united as regards all shades of different political opinion. This is the most important event of the day. When Dadabhai Naoroji declared that "Swaraj" should be our goal, its name was, "Swaraj"; later on, it came to be known as Self-Government and Constitutional Reform, and we, Nationalists, style it Home Rule. It is all the same in three different names. There is the objection raised that "Swaraj" has a bad odour in India and "Home Rule" had a bad odour in England, and hence we ought to call it Constitutional Reform.

I do not care to call it by any name. I do not mind the name, but I believe you have hardly realised the importance and character of that scheme of reform. Let me tell you that it is far more liberal than the Irish Home Rule Bill, and then you can understand what possibilities it carries with it. It may not be complete Home Rule, but it is more than a beginning of it. It may not be complete Self-Government, but it is far better than Local Self-Government. It may not be "Swaraj" in the wider sense of the word, but it is far better than "Swadeshi" and "Boycott." It is, in fact, a synthesis of all the Congress resolutions passed during the last 30 years, a synthesis that will help us all to proceed to work in a definite and responsible manner. We cannot now afford to spend our energy on all the resolutions on the Public Services, the Arms Act, and sundry others. All is comprehended and included within this one resolution.

I would ask every one of you to try to carry out this one resolution with all your effort, might, and enthusiasm and everything that you can command; your intelligence, money, enthusiasm, all must now be devoted for carrying out this scheme of reform. Do not think it is an easy task. Nothing can be gained by passing resolutions on this platform by the simple union of the two races, the Hindus and the Muhammadans, and the two parties, the Moderates and the Nationalists. The union is intended to create a certain power and energy amongst us, and unless that power and energy are exercised, you cannot hope to succeed, so great are the obstacles in your way. You must now prepare to fight out the scheme. In short, I do not care if the sessions of the Congress are held no longer. I believe it has done its work as a deliberative body. The next part is the Executive and that will be placed before you afterwards.

When "Swaraj" was declared to be our goal, it was a question whether it was a legal goal. The Calcutta High Court held it was a legal goal a year afterwards. Then it was a question whether it was legal. Finally, it was decided that it must be carried out, and expressed in such words as would not cast any slur on the bureaucracy which was the master at the time. That, too,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

has been decided judicially, that you can make any criticism in order to further your objects and justify your demand, and that it comes within the bounds of law. So, the goal of "Swaraj" is declared legal, and here you have a specific scheme of "Swaraj" passed by the united communities of the Hindus and Muhammadans. All the thorns in your way have been removed. It will be your own fault if you do not succeed in attaining what is now described in this scheme. This is a very serious responsibility. Do not shirk it but work for it.

The days of wonders are gone. You cannot feed now 100,000 people on a few crumbs of bread as you did in Jesus' day. The attaining of this object cannot be achieved by the wonders of Heaven. You have to do it. These are days of work and incessant labour, and I hope that, with the help of Providence, you will find that energy and those resources which are required for carrying out that scheme. I hope that by the end of 1917, when I expect that the War will be closed, or at least in 1918, we shall meet at some place in India, where we shall be able to raise up the banner of Self-Rule.

The Hon. Mr. Muzhar-ul-Haque.

All my political life I have been of this opinion that our Motherland cannot advance without the unity of Hindus and Mahomedans. Having been of this opinion, I have worked for the attainment of that union, and that has been achieved to-day in this town of Lucknow. I consider it my duty here to mention the name of one who has been the chief instrument of attaining that unity, I mean the name of my revered friend, the Rajah of Mahmudabad. I assure you that he is an asset for India. I hope there will be many like him in my country. May he live long! The time for speechifying and talk has long gone by and the time for action has come. You are talking about Self-Government and Home Rule; and do you for a moment believe that you will get it by talking? Unless and until you make your rulers believe that you are earnest and serious in your demand, you will never get anything. I am sure of it. So my advice to my countrymen is this, try to work now. You must have a propaganda throughout the country, and let our rulers see for themselves that every man, every woman and every child of India is bent on and determined to have self-government.

Sir Dinshaw Petit.

I have taken upon myself to answer the command of our leaders to address you, lest my refusal should be construed into some sort of apathy on the part of the community, to which I belong, towards the just, the righteous aspirations of the people of this country. There cannot be the slightest doubt as to what could be the views of the community which has produced a Dadabhai Naoroji and a Pherozeshah Mehta. It is said by those, who do not like the advancement of the people of this country towards the attainment of Home Rule, that the Parsees under the British Government have been enjoying too many high offices and high posts, that they do not know what they would gain by casting in their lot with the Hindus and the Mahomedans in making this demand. Do not for a moment think that the Parsees, when they are under the Government of Home Rule, will in any way suffer in that direction, but, admitting for argument's sake for a moment that they did, would it be right and sensible to expect that for the benefit of a few thousand Parsees, 320 millions of people should be denied their birthright and their privilege? It is always said that the Parsees are the most loyal community in India. They are second to none in their loyalty to the Crown, and, therefore, it is because they are loyal, they support this movement, because everybody must feel that there is nothing which would contribute more towards the permanency of the British connection in India than Home Rule under British guidance. I shall throw out one suggestion towards a speedier attainment of the objects of this Congress, and it is this—I speak with some personal experience of public life in the Presidency from which I come—that the people who do the greatest harm to our legitimate aspirations are not the people who rule us, but they are unfortunately some of our own people. I know there are people who go to Government House to carry tales. I know there are people in the Legislative Council and in the Municipal Corporation who barter away the rights and privileges of their country and city to get a Khan Bahadur or a C.I.E. It is my advice that we must ostracise such people. If we do not admit them into our clubs, let us see if they will be admitted by their English friends in their clubs. Now, on behalf of my community, I congratulate you on the union which you, Hindus and Mahomedans, have made this time by sinking into oblivion all your little differences. United you must stand, and united you must fall, whether it be for good or for evil.

Mr. Bepin Chandra Pal.

I can hardly tell you how happy I feel to meet you all, my dearly beloved members of the united National Congress, after an absence of ten long years. These ten years have not gone in vain, and the fruition of our efforts is seen in every word of the resolution that has been placed before you to-day. We divided. The result of that division has been a closer union than had been before between us, and the proof of it is seen in every word of the resolution to-day. We fought, we wrangled, but every fight is justified, not in itself, but by the closer and more organic reconciliation to which it leads, and our fight has in the Providence of God led to more organic reconciliation between all parties, all ideals and all principles that we represented and fought for during the past. Here you have in the resolution the word self-government divested of every adjectival or adverbial or any other phrase to take away its quality or quantity. Self-Government, pure and simple, is the resolution to which our leaders have spoken, to which you have already given your acceptance. It is the first article of the Congress; it is the first article of Indian Nationality; it is the first article of every self-respecting nation, every civilised nation in humanity. It is the first article of every man and woman who feels within himself or herself the call of the Divine. It is the first article of every *yogi*, of every *gnani* and of every *bhaktha*, because Self-Government is the pith and foundation, not only of the life temporal, but also of the life spiritual. Yesterday you passed a resolution from the chair, avowing sincerely and honestly your allegiance to the British connection. It seems to me that the resolution to-day follows as a necessary corollary to that resolution of yesterday, because the only condition upon which British connection with India can be perpetuated is the realisation of the resolution that has been placed before you to-day. This resolution divides itself into three parts. The first part demands that there must be a Royal Proclamation. Why do you demand a proclamation? I do not know that. I will tell you why I demand it. I know there is deep despair upon the face of India at the present time. I have talked to the young. I have met old men of my age and men older than myself, and the one thing that each one and all of them has said to me is, "What is the good of it?" Deep despair and despondency sit upon the face of India at the present time, but not in me. I believe we have a future. I am fully assured that you and I shall be and shall live in our own country, just as every other civilised people in the world are living in their own country. I have no doubt about the future. I see clearly, as I see the grey beard of the President from here, that Self-Government for India is absolutely assured, but my people do not believe it; the old men do not believe it. They say, "What is the good? Let us die in peace." The young men do not believe in it. "What is the good? Let us earn money and leave a generation behind us," and the middle-aged gentlemen say the same.

We want a message of practical hope, a message of objective hope, and, therefore we want this message from the British Crown and the British Parliament to tell us that we shall live in our own country as other people live in their own country; but that will not do. We have had declarations, and we have been disabused of being taken in by politicians' words. We want something substantial and a substantial assurance that this declaration will not go the way of similar declarations in the past. We want the reform scheme placed before the Congress, prepared by the Congress and the Muslim League, to be immediately put into action. That is the second, but that is not all. You are talking of the reconstruction of the Empire, but I want to know what this Empire is without India. Is there a British Empire without India? They talk of man power, the total man power of the British Empire all told of the age from 15 to 35 is something like 11 crores, and 1½ crores of that man power consists of white humanity and 9½ crores of brown and black humanity. What is the British Empire, then, in man power if you leave out the 9½ crores, the youth, the muscle, of India? You talk of brain power. Where is the brain power of the Empire? As it is, we have no opportunity for the exercise of our brains for the application of our intellect, to the solution of the larger world problems of the day. We have no place in the councils of the statesmen. If we had, we might have proved our power as we have already proved it in the Bar, on the Bench, in every walk of life. Where we have had an opportunity, we have proved that the Indian brain is not a negligible quality in the Empire. Why have we only one J. C. Bose, only one P. C. Ray, only one Professor Paranjpye? Not for want of brain-power, but for want of opportunities to realise to the full extent the brain power of our nation. Give us that opportunity, or rather remove the obstacles from it, and we shall take the opportu-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...y and utilise them ourselves to their fullest ...ntact, and therefore we say that we want this. The third thing is about the reconstruction of ...e Empire. We say impossible, Sir, if India is ...t out; worse than impossible; it will be the ...th of Indian national aspirations on the one ...e end the death of imperial ambitions on the ...ther if India is left out in the construction of ...e Empire. Thirty years ago it might have ...n conceivable to leave India out of the ...perial family. To keep India as a helot, as ...wers of water and hewers of wood to day with ...is new awakened national consciousness, this ...sitive patriotism, throbbing through the heart ...the old and young, the thing is unthinkable, ...nceivable, dangerous, fatal to the permanence ...the British connection. Therefore, we say ...t these three parts of the resolutions should ...ve not only your acceptance, but should com...nd the serious attention of the round table ...d the sequare table and every table on earth.

The Hon. Dr. Tej Bahadur Sapru.

If I was asked to sum up our demand in one ...rd, I would say unhesitatingly that what we ...nt is not so much of reforms as the power to ...rm ourselves. Reforms in driblets, in instal...ents, we have had in the past, and we may ex...t to have them in the future, but they will not ...tisfy the rising and growing aspirations of our ...ountrymen now. Self-respect alone demands ...at like other self-respecting nations of the world, ...e should be allowed a free hand to work out our ...n destiny and that we should not be treated as ...rpetual schoolboys in politics. (Hear, hear.) ...Gentlemen, there are just one or two points which ...I could like to touch upon if you will permit me. ...My time is limited, but I consider that they are ...orth hearing.

It has been said by a distinguished writer, ...whose name has come up before you during the ...last two days, that the real cement of the ...Empire is devotion to the Empire. Granted. ...In this land of spirituality we do not ...need a Westerner to teach us a lesson in devotion. ...(Hear, hear.) But may I be permitted to ask ...whether it is possible for any human being to be ...devoted when there is no response to that devo...tion. (Hear, hear.) Devoted to England we have ...been in the past, devoted to England we shall be ...in the future. But if by devotion to the Empire ...is meant that we should be devoted to the Colonies, ...I, for one, will have no hesitation in saying that ...we will refuse to allow the Colonies to rule over ...us. Let us not mince matters over this. Let ...us be plain and outspoken. To England we have been devoted, we are and we shall be, but India will not be so shortsighted and so foolish as to allow the Colonies to have a finger in her pie.

Gentlemen, the next point that has been urged against us is, that we have not got the capacity to rule ourselves. When was the discovery made, may I ask? Until at least 60 or 70 years ago before England took over directly the control of affairs in India into her hands who were ruling us? We ourselves. Is it really intended to be said that during the last 60 or 70 years since the control of affairs in India has passed into England's hands, that we have lost all capacity? If the answer is 'yes,' I say the discredit is to those who have deprived us of the capacity. I venture to submit with all respect and with all sincerity that we have not lost the capacity for Self-Government. Witness the Native States of Hyderabad, Baroda, and Mysore. Who is ruling them? Our own countrymen. It really comes to this, that so far as the power of initiative is concerned, so far as the scope for talent is concerned, that is denied to us here, and it is not denied to the people in the states like Hyderabad, Baroda and Mysore. Gentlemen, assuming that we have lost something of the capacity, how are we going to recover that capacity? By being denied admission to the inner circles of the Government or by being allowed to commit mistakes and to learn thereby? The answer is obvious.

Now, gentlemen, there is one more objection which I wish to notice and then I will retire. It has been said by that very writer Mr. Curtis, that the one great and supreme objection to self-government being conferred just now on this country is that we have not got sufficiently large electorates. And I may tell you in confidence that I was told personally that if we could show to England that one-fifth of the population possessed sufficient political capacity, then they would not object to our getting self-government. Now, gentlemen, you have got 315 million people in this country—I am very poor in arithmetic—I believe one-fifth of that comes to 63 million. And at the rate of progress we have been making in the matter of primary education, I should think it would take us 400 or 500 years before we get political capacity. (Laughter.) I know, gentlemen, that India is always famous for patience. But the time has come now for us to say definitely and without equivocation that self-government is no longer to us a far-off adorable dream, that we want to achieve it as soon as possible by all constitutional means open to us without mincing matters and without equivocating on that point,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Let it not be held to us as an ideal to be reached within 100 years or 200 years. Of course patience is a great virtue, but, gentlemen, outspokenness too if, I may be permitted to say so, is sometimes a greater virtue. Let us not deceive ourselves, let us not be deceived by others by saying that we are going to be content with these small driblets of reforms. The time for that has gone by. The time has come when England should call upon its statesmen to exercise their higher gifts of statesmanship, to exercise their gifts of imagination, to exercise their gifts of political judgment and feel the political temperature of this country and act accordingly. (Loud applause.)

Mrs. Sarojini Naidu.

From the very beginning of time it has always been the woman's privilege to have the last word on any subject, and though that last word is sprung on her by the tyranny of the leaders that demand Home Rule, it is to vindicate the readiness of my sex to stand by the men of India in all that concerns their national welfare and honour that I rise to obey the mandate of this tyranny. Many speakers before me, gifted and famous, full of knowledge and full of experience, have laid before you a scheme of self-government, and it is not for me to add words to their practical wisdom. I am merely a spectator from the watchtower of dreams, and I watched the swift and troubled, sometimes chequered, but nevertheless indomitable, time spirit marching on in a pageant of triumphs to the desired goal. If to-day Home Rule is no distant dream, if it is no mere fancy of Utopia, it is due to one thing more than to any other thing, and perhaps you will let me enlighten you so that you may offer your gratitude to the right sources. Less than four years ago in this very city of Lucknow, this city of memories, this city of dead kings, a new hope came to birth, because the younger generation of Mussalmans had seen a vision that made it possible for the leaders of the National Congress to realise within the scope of practicable vision, of practical work, of practical achievement, the national soul. It was my privilege to represent my great community on this occasion. It was the greatest honour of my life that I was invited to speak to this young generation of Islam that had seen this vision of Indian nationality, which succeeded in passing a constitution, whose essential creed was co-operation with the sister community. Four years later, in this very city of Lucknow, you are able to say that you shall have Home Rule. We will not ask for it, we will create it out of our own capacity, out of our inviolable unity, the unity of the Hindu and the Mussalman.

Friends, members of this Congress, citizens of India, who have come from the farthest corners in this great country, I ask you, in the name of that greater nation that is born to-day in the city of Lucknow, to offer your thanks to three men, though it might indeed seem invidious to make distinctions where so many have been earnest, so many have been loyal and co-operating, but it would be, indeed, lacking in gratitude on the part of this great assembly were it not to offer a public recognition of gratitude to three most loyal, most brilliant, most faithful, most courageous Mussalmans. The Rajah Sahib of Mahmudabad, that fearless and independent spirit; Mazharul Haque, and thirdly, Mr. M. A. Jinnah, of whom it was that the late Mr. Gokhale said to me immediately after the last Muslim League in Lucknow, that he is the best ambassador of the Hindu-Muslim community. We are united to-day by the efforts of the Muslim League. We stand united, but united with such strength that nothing from outside, not even the tyranny of colonial domination, shall withhold from us our rights and privileges, withhold from us the liberties that are due, which we claim by our united voice; nothing can prevent us from achieving the desires of our heart, for the final issues are in your hands. The ultimate decision is yours, and who will deny you the birthright of freedom if the millions of India speak with one voice and say, "Ours is the right of freedom; we claim it; we take it; you dare not deny to us the birthright of humanity." Centuries have gone by; the old divisions are healed; old wounds are covered; instead of building our regeneration on hatred and division, we stand to-day building our national future on the secure imperishable foundation of love and united service. Each of us has gained that living consciousness, that it is unity, service for the motherland that constitutes the supremest hope of to-morrow. There is no one so mean, so weak, so selfish, as not to think that in the service of the motherland, his joy is greater than all personal joys; in suffering for her comes the supremest consolation in our personal sorrow, and in her worship is the absolution of sin. To live for her is the most victorious triumph of life; to die for her is to achieve the priceless crown of immortality. Let us then offer our lives unanimously as a tribute at the feet of the Motherland; for as the great Prophet of Islam says, Under the feet of the Mother lies Paradise.

Mr. Joseph Baptista.

I can assure you that it is not without fear and trembling that I venture to support this resolution. I understand that in this Province the new commandment has been issued, thou shalt not be emphatic—(laughter)—you could be phlegmatic if you like, but not emphatic. In other words, you must not call a spade a spade. That would be too emphatic. You must call it diamonds and hearts. You cannot call Home Rule Home Rule. But if you call Home Rule Self-Government, it is all right. Whether it is all right or all wrong, I prefer to call Home Rule Home Rule. To my great surprise I find that within the past few months Home Rule has become a popular cry throughout the whole country. There are no heretics among us. All believe in the creed of Home Rule. No dissenters, no quakers or shakers. We are all militant Home Rulers. To what is this great change to be attributed and to whom must we be grateful in this great hour of trial? You must give credit to the person who deserves that credit, and I say most emphatically that credit is due to the magnetic personality and dynamic energy of our friend and sister, Mrs. Besant.

Allow me to tell you that so far as the destiny of India is concerned, it is the most momentous and the most transcendent question that can occupy the minds of educated Indians. Believe me that this destiny of India depends upon political principles that are applied to the government of this country. You may be quite sure that that destiny will not be achieved unless we combine the principles of liberty, the principles of nationalism and the principles of federation in the government of this country. The task before us is to rescue India from her present plight and place her on a pedestal upon which we can look with pride and pleasure. What is the present plight of India? Is there anyone who is satisfied with the present position of India? Go outside British India. India is a mere political cipher in the political world. Nobody cares a fig for her and nobody thinks of her. Is that a proper position for 300 millions of people to occupy in this Empire? Within the Empire what do you find? Go to the colonies, the curse of colour. In the South African War, Indians stood by Englishmen and fought beside and shed their blood for them. What is the reward? Exclusion from the country or confinement in isolated places, subjected to regulations so odious that it makes our blood boil. Such is the reward and such is the gratitude of a civilised and Christian country. Coming home, what do you find? The curse of distrust, distrust everywhere, excluded from the army, as you know, excluded from the use of arms by the Arms Act on account of distrust and thereby emasculated, subjected to the Press laws and God knows, to what other laws, as Mr. Surendranath Banerjea said. Apart from that what do you find with a fauna and flora which can produce everything to minister to the comforts of all people and with men who are skilful in production? You have 50 to 60 millions of people pledged to starvation from day to day. (Cries of "Shame.") Is this the structure of the Empire with which you are satisfied? Anglo Indian architects have had a free hand for the last 150 years, and this is the Empire they have produced. I ask you, is there any man with sense or sensibility that can look upon this and say that this is a proper thing for us? Can anyone say that this is a mansion befitting the ancient civilisation and the latent potentialities of the country? Is this not a glorified chawl? This is due not to the men that administer, but entirely to the system under which it is administered. There cannot be the slightest doubt that no improvement is possible unless the centralised system is done away with. At the present moment what are we? We are under a centralised system of government in India, which is after all a mere administrative department of government in England and no more.

Mr. Jehangir B. Petit.

The proposition before you obtains the quintessence of the desires and demands of the Indian nation, passed year after year at different sessions of the Indian National Congress. I have no faith in the so-called change of angle of vision. If the Indian nation is determined to have what is embodied in this resolution, the only way to get it is to show to the Government that the population of this great country is determined at all costs to have it. What is it that secured for South Africa immediately after its annexation its independence and self-government? What is it that secured for the other colonies their independence and self-government? By making administration impossible they obtained self-government. Once you declared your determination in unmistakable terms, Home Rule or Self-Government will not be delayed or withheld from you one day longer.

The Hon. Pundit M. M. Malaviya.*

When we started in 1885, we reposed great trust and confidence in those to whom Providence had entrusted the guidance of the affairs of India. For the time we began with appealing, with praying, with begging, with entreating. Resolution after resolution has been passed during the last 30 years; it is a written record which nobody can destroy or remove; it is a record showing the patience, the confidence the people of India had in the administrators of India. Their willingness to proceed by gradual steps, almost painfully slow steps, towards envolving a better system of administration. The record of these 30 long years tells us how we have asked not once, not twice, but repeatedly during these so many years. It is now, after an experience of 30 years, that the conviction has sunk into our hearts that those to whom Providence has entrusted the administration of the affairs of India, the members of the Indian Civil Service as well as the members of the British Parliament have failed and sadly failed to respond to the call of reason and justice. I am sorry to say it. I should have rejoiced if I could say in gratitude they had made a response worthy of the members of the great British nation. There has been some response in some small matters and for that we do feel grateful, but the response in all the most important matters has either been wanting or it has been sadly slow. The result of this is, that the conviction has come to us that unless we ourselves have a potent and determining voice in the administration of our country's affairs, there is not much hope for that progress which it is the birthright of every civilised people to achieve.

We have on our record a repetition of resolutions asking for such simple justice as the separation of judicial and executive functions; we have on our record a cry of children for bread; repeated year after year to be given some education; we have on our record the fact that while we have prayed that primary education should be made compulsory and universal, the provision that has been made for it up to this time is extremely disappointing and unsatisfactory. We have on our record that even with the enlarged Councils, when our dear brother Gokhale did make an attempt by introducing a Bill into the Council to make provision for the permissive introduction of compulsory education, that effort was baffled by the solid official majority which sits in the Council, to do no other work than simply to vote against resolutions moved by popular representatives. On the other hand, what has happened to bring home the conviction to us we know. In Russia, there was no self-government until few years ago, but after being beaten by Japan, Russia learnt wisdom and roused herself into consciousness of what the conditions of modern civilisation required. The first Duma that met, I think in 1903, resolved, being conscious that primary universal education was one of the potent causes of building up a people, upon making education universal and compulsory. It introduced a programme of 19 years, during which period it decided that elementary education shall become universal, and in the year 1916, nearly three-fourths of that programme has been carried out, and by 1922, the Russians will have provided elementary education to children of school-going age.

That was the result of power being transferred from a sovereign authority or from a bureaucracy to those who know where the shoe pinches, who feel the need and the effect of unhappy conditions, and who understand how their interest can be best promoted. I have given to you that one illustration among many already given to you as showing the urgent, pressing need of having self-government for the people in order that they may administer their own affairs. Let nobody accuse educated Indians of having put forward a proposal of reform in a light-hearted manner. That reform, so far as the Government is concerned, is supported by the entire people, though there may be some small differences, as unfortunately there are with regard to some details. But so far a Government is concerned for the transferring of the power from the Government to the people themselves, this is a united demand on behalf of India and is made in no light-hearted fashion. This conviction is born after 30 years of self-sacrificing labours in the country's cause, after having held 31 sessions of the Congress in various parts of the country, which involved no small expenditure of time and money and comfort; this conviction is born after the question had been weighed in all possible aspects. The conclusion is forced on our mind that those who have the power are unwilling to part with that power, that those who have the power are unwilling to give the time and the attention to the consideration of your affairs, as the members of the British Parliament are and that conviction once arrived at is not likely to be shaken or departed from.

* Speech made in proposing a vote of thanks to the President of the Congress.

The reforms which you have put forward do
t represent the maximum that you desire.
ey represent the minimum that is necessary.
there be no misunderstanding about it. There
some very kindly friends who caution us and
sh us to proceed slowly. We have proceeded
ntiously and slowly for 30 years. It does not
in the mouth of any member of the Indian
il Service—there are some very fine generous-
arted men amongst them—it does not lie in
e mouth of any member of the Indian Civil
rvice or any member of the British Parliament
say that Indians are asking for an unreason-
ly large measure of reform to-day, or that they
nt to take a long jump. We do not want to
e a long jump. There are certain conditions
ich determine what is necessary and what is
t. It is the right of every people to govern
emselves. No government can be so good as the
overnment of a people by their own people. That
ing accepted in England, that being accepted
the greater part of the rest of the civilised
rld, with what reason or justification can it be
anced here that we should be content to let
affairs be administered by a few men who,
thout any previous training, without any
owledge of our traditions, or our history, come
this country to enjoy a good salary and to
end a good period of their time in the sunny
mate of our land? How can we expect they will
able to administer our affairs in the way in
ich we can? Objections have been urged, but
ey have been refuted one by one. I do not
nt to detain you by recapitulating them.

I wish and hope and pray that we shall realise
ly the importance of the measures that we have
t forward to-day, and that we shall be prepared
work to bring about their accomplishment. I
pe that we will not be content with an express-
n of our gratitude to our President and ex-
essing satisfaction at the result of this Con-
ess, but that we are determined, as honest,
nourable, manly men, to carry out to do our
re of the duty of promoting these reforms and
ry them into execution. For, remember that
re is no greater duty than is cast upon us to
that these reforms are carried out and granted
an early date. Remember it is not a question
personal character with any one of us. We see
ilions of our countrymen suffering from the
effects of the administrator lacking in one
ection or another to come up to the standard
their requirements. We see that those who
ve the power have failed to do it and what is
re regrettable, do not show any willingness to
respond to their call. I will draw your attention to one other matter only. There is the question of the employment of Indians in the higher ranks of the army. You have proved by the blood our people have shed on the battlefield that you are not inferior to any other community or nationality on the face of the earth in bravery, in devotion, yet the ranks of the army have not been opened to our people. So also with regard to the Indian Civil Service. A Commission was appointed, a report has been made and it was presented to the Government. It seems to be so ugly a production that the Government have hesitated long to put it before the public. Now when that is the state of affairs, you cannot hope to bring about healthy, necessary reforms unless you get power into your own hands. That is the conviction borne in upon us by these 30 years of labour, and I hope you will do all that is necessary to carry this conviction into effect. When you do so, this great gathering of the Congress will be remembered always as the one Congress where this decision was arrived at, and you will always associate in your mind with the success of the Congress the arduous, the strenuous, the patient labours of our esteemed President, who has guided our deliberations for these four days.

The Hon. Rao Bahadur R. N. Mudholkar.

From the day of the birth of the Congress, the demand for control over our own affairs, the demand for Self-Government has been the most important, the most vital and essential demand of the Congress. When you sent deputations to England of men going from the Congress, the main thing which they had to represent, on which they had to elicit the help of the British people, was that, as we were British subjects, we ought to be given all the rights of British citizenship. Equality with the self-governing parts of the Empire has been our demand from the first. In the beginning as we had to make a beginning, we had to ask for the introduction of the principle of representation and election in our Legislative Councils and for the expansion of their rights and the enlargement of their numbers. Nobody deluded himself with the belief that a few members or even a large number of members added to the Councils and some expansion of their functions was the goal of our aspirations. That was only the first step of the ladder which we had to mount. There were immense difficulties in attaining to that extent. You know what difficulties were raised in 1890 and '91 for granting that modicum of representation which was subsequently

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

granted in 1892, but that was, as I said, the very first step which had to be taken. During all the years which followed, we had to reiterate our demands: we had to ask for further expansions of the Councils and further extensions of the principle of representation and election. Then came what are called the Morley-Minto Reforms, which gave us our existing Imperial and Provincial Councils, but even in regard to that, we were careful to mention that this is only the next step which has to be taken, and very soon after this, further steps will have to be taken. Gentlemen, in the case of individuals and of nations, every individual and every nation has to pass through three stages. The first is the stage of self-consciousness or self-realisation. We had, first of all, to focus our self-consciousness, our consciousness as a nation, and it was for that purpose that the Indian National Congress was called into existence. After that, we had to assert ourselves; we had to say what we are and what we have to be, and after that, as in the case of individuals, comes the further stage of self-control, in the case of nations there is the further stage of self-government. No self-respecting nation can carry on its existence properly unless it is able to control its destinies to be the arbiter of its own fate, and it is that for which we are now making a more articulate, a more practical, a more detailed demand. We were asking for Self-Government; we were called upon to state what it is we wanted; we were told: "There are all these differences amongst you. Even amongst you Hindus, you are not united, and between you and the Mahomedans is an impassable gulf." Well, gentlemen, this Congress has demonstrated to the world, to all our critics, that there is absolutely no difference of opinion amongst either the two large communities or amongst any sections of the Reform Party in India. (Hear, hear.) Now, this proposition, in its first paragraph, asks you to place before the Government our demand, to carry to the Crown our request that His Majesty will be pleased to issue a proclamation assuring to the people of India that they are entitled to have Self-Government given to them at a very early period. (Hear. hear.) That is the first paragraph. In the second paragraph, we put before them reforms which should be carried out immediately, in regard to which there could be no difference of opinion, because they are only legitimate extensions of the principles which have been adopted. They asked us for definite schemes, and a definite scheme has been put forward. They asked: "What will the Mahomedans say to this?" Here, the representative body of the Mahomedans and the Congress Committee have sat together, and they have brought out a scheme to which both parties are equally pledged. This is then our reply to our critics about introducing a practical scheme.

Then we come to the third part which is most vital and important at this time. That is this, that India refuses to be placed on a footing of inferiority to any other part of the Empire.

We say, "as we are an important section, as India is the most glorious jewel in the British Crown, India ought to have a place adequate to her past, adequate to her present, and of equal position in the future. This is what we ask in the third: We refuse to be dominated by any section of any portion of the so-called Self-Governing Colonies or self-governing portions of the Empire. (Hear, hear.) We say that without India, the British Empire will be of very little importance, and in consonance with that importance should be the recognition accorded to us. That is the third portion of the Resolution. But, gentlemen, we cannot carry out all these things that we want, on which our heart is set, on which our future depends, and on which our real self-realisation depends, without our working all the year round for this, not only here talking in the Congress, not only going and speechifying to a few people here and there, but working incessantly all through the year and carrying on the work in England also.

Diwan Bahadur L. A. Govindaraghava Aiyar

I propose to consider a few objections that are urged to the grant of Self-Government or any measure of it to the Indian people. Gentlemen, we are taunted with being a coloured people and as such unfit for representative institutions. I would ask which is the greater evil, to have a coloured skin or to have a coloured vision. (Hear, hear.) I am not ashamed to own that we possess coloured skins. We can, however, honestly say that so far as our vision goes, it is altogether unclouded and clear. After all, gentlemen, it was in the just dispensation of Providence that we are a coloured people. If we were otherwise, colour, as Mrs. Besant has said, the effect of that would have been that we should have been where our critics are, elbowing them out and making it difficult for them to be there. (Laughter). After all, gentlemen, is it a fact that the coloured skin unfits for representative institutions? In this connection you will notice that the Lulu, the Hottentot, the Kaffir, the Negro, the Australian

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Hindu, the Mussalman and the Parsee are all to be in one lump, and they are all coloured people. absolutely no attention is paid to their civilisa- to their culture, and to their inherited ...pment. Gentlemen, what are the facts. You ...d that even a responsible writer like Jeanneflot ...s, that the Negroes were able to develop Self- ...vernment in 50 years to the extent that the ...hite were able to do in the course of five or six ...nturies. You find that the Philippine Islands ...though they came under the domination of ...ople who are prepared to trust them with Self- ...vernment in two decades they are found fit, ...d can it be said of us with the past history ...t we possess on which many previous speakers ...re expatiated, can it be said of us that we are ... dead to all the necessary requirements of ...mocratic institutions that self-government with ...s must mean failure. The experiment which ...as been allowed to be made, the experiment ...hich has been in operation in the Native States, ...as proved an unqualified success, and after all ...en you realise that good government can never ... better than Self-Government itself, there ought ...be no reason whatever why the measure of ...lf-Government that we ask for should be denied ...s. But, gentlemen, there are certain special ...asons that are urged against us. One is, that ...form no one people or one nation but a con- ...ies of different races and different communities, ...ch having its own aims and ideals. Let us ...mine that. Those of us who have been privi- ...ged to take part in the deliberations of the joint ...committee of the All-India Congress Committee, ...d the representatives of the Muslim League ...at composed the session, were not merely to ...fe-guard their rights but to see that their rights ...ere placed upon as reasonable and permanent a ...sis as possible, provided that in doing so they did ...t determine the interest of the whole as a whole. ...w, gentlemen, there you must have noticed that ...ere was a firm determination to assent oneself ...the fullest extent, but that there was at the ...e time also the determination that in doing so ...ch sections of the people should go together and ...uld find their satisfaction not merely in being ...en opportunities to develop themselves but also ...portunities to assist in the development of the ...er section as well. (Hear, hear.) It was a spirit ...reat reasonableness that pervaded the whole of ...deliberations, and we find the result of that in ...magnificent scheme that is now put forward ...your acceptance this afternoon. It is in the ...city to differ and to make our differences heard, it is in the capacity to realise the strength and weakness of those that differ from us that there is the best security that there will be a reasonable conclusion arrived at in the end, that we can say has been the spirit by which both the communities have been actuated. May I point out this? In the physical world you notice that when anything is unstable, then you attach to it a weight which tends not merely to settle itself down but also to make that stable which otherwise has been unstable, and if once you are trusted with responsibility, the very sense of that responsibility enables us to realise our limitation, enables us to rise equal to the task that lies before us, so that we shall be in a position in discharging that task to do it to the good of all. Gentlemen, it is also stated that there is illiteracy among the people. Now before Lord Durham recommended a scheme for self-government in Canada, he found that a great proportion of the teachers can neither read nor write. If in these circumstances you can find a nation fit for self-government, we do not stand in the same predicament of whom whatever else can be said, it cannot be said that our teachers know neither to read nor write; can it be said of us that on account of illiteracy we are unable to have self-government? Then, gentlmen, it is stated that there is the war of masses and classes, that the interests of the educated community are opposed to the interests of the masses so that the educated community cannot be trusted to take care of the masses. Now with respect to this again who have been the best friends of the masses? That we are in a position to realise their needs cannot be denied. Who is it that ask for compulsory education? It is the educated classes. Who were the friends of the co-operative movement? It is the educated classes. Can we think of two levers more powerful to uplift the masses than universal compulsory education and the spread of co-operative movement among the people. Gentlemen, there is only one word more I wish to say and I shall be done. Dr. Sapru has told us how we look upon the Dominions participating in the control of our affairs. I unite my feeble voice to the emphatic expression that we made our strong and resolute determination not to allow the Dominions to take part in any concerns in which we might be involved, by every means in our power that can be open to us so long as they continue to be what they are.

The Hon'ble Rao Bahadur B. N. Sarma.

We ask for provincial autonomy in domestic matters with a central legislature armed with extensive powers and completely dominating all domestic concerns, with an executive armed with extensive powers subject to the will of the Imperial Parliament as it exists at present, and if there should be a revision, with India as a partner, as an equal partner, in every sense of the term with the Self-Governing Dominions of the Empire. A question then naturally would be, are we fit for it? Are we asking for reforms along lines, lines along which we have not experimented in the past. Turn to past history, turn to medieval history, turn to modern history, all history alike tells us that Indian peoples with rulers of their own race have been able to rule countries far more extensive than the Indian Empire of the present day; for those rulers have been holding sway over Khandahar and Ceylon and other vast colonies which the genius of our ancestors created first in times past. Was this domination only for short periods? No; for long centuries, for periods longer than that of any empire, modern or past. Then comes the question, have we still capacity? I assure you, gentlemen, that the skill and capacity, though dormant in us, are not yet completely dead. If you read history aright what does it tell us. We see a large number of autonomous States linked together by loose federal tie, paying tribute and acknowledging the supremacy of the central authority of the government to the Maharajadiraj, Sultan, or Emperor. Our Maharajadiraj, Sultan or Emperor is the British Imperial Majesty. Our autonomous States are the Native States of India and the provincial governments which we create under our scheme with self-governing powers. The central authority is the Government of India, and the Viceroy is the deputy of the Maharajadiraj. The central authority is armed exactly as the old Emperors were armed with a council of elders. They are given by our scheme advisedly vast powers over the military and over the national army, which has to be created under our scheme. Gentlemen, have we weakened the British power? If the Resident of a Native State with the British power at his back can keep government going, cannot our Governors with two Executive Councillors, nominees of his, with the British power at his back, rule a Province? We have provided for democratic institutions. The Allies say that they are now engaged in crushing Prussian military despotism, that the future safety of mankind lie in the increase of democratic institutions and we have provided for them. Gentlemen, we have not weakened the British power in any the slightest degree? We have not lost the capacity. Then comes the question, are there not various insuperable difficulties in our way, are there not barriers? They existed in the past, they existed last year in Switzerland and yet there is no difficulty. The religious difficulty is the same. Then I come to the educational test. Now remember, gentlemen, that the number of literate people in India is 18 millions, nearly the same as the total male population of England, and are we to be told that with this literate population we cannot find enough men to rule this country when only an infinitesimal fraction thereof are able to govern India in the best interests of India? Our universities are turning out graduates nearly as numerous as the British universities. Then comes the question: if we are not educationally backward, what is that stands in the way? The colour bar. I hope that the Government will not repeat the supposed mistake and land the Empire in disaster. The true difficulty seems to be that a fear is felt that in a federal commonwealth, India might in a short space of time become the paramount power. That is the real difficulty. But sufficient safeguards may be provided and the day is far off, because it is only in proportion to the contribution to national defences that any State can have representation. We are economically poor, and we cannot, therefore, contribute much, and consequently we shall take a place superior to that of the Colonies but inferior to that of England, and there is no very great danger that we will be able to swamp the rest of the Empire in the councils of the country. Revise the history of the past, review its pages and what do you find? A foreign bureaucracy is always ready to tax people for the sake of the defence of the country, for the sake of protecting its power. But the moment they come to domestic reforms, they do not know where they will be, they do not know whether the vast masses will support them and hence they say they cannot tax. What have you done? We have revised the electorate, broadened it so that no harebrained reformer may go forth with proposals for taxation which would not be supported by the country. It is said that we shall oppress the depressed classes. May I ask whether the Government, British Government, were dissuaded in self-governing South Africa, because the Kaffir and the weak Indian population were likely to be oppressed? Their conscri-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

since were not touched then. Why should it be touched now when it comes to dividing the people of this country? To me the problem is distinctly clear. We cannot afford to efface ourselves economically and from a military point of view with growing China, a growing Japan and growing Russia. Friends of to-day may be enemies of to-morrow, and we cannot have Belgium repeated here. Primary education must be spread and number of reforms must be achieved, and all this can be done only under Self-Government. Therefore it is we ask for Self-Government, and if the Britishers are true to their destiny, they will confer it at no distant date.

The Hon. Mr. Abdul Rasul.*

It is known that England is the most freedom-loving country in the world. It was pointed out in another place how all political refugees of Europe found shelter in England. When England along with other powers advocated the cause of freedom, did England think that India was not as educated as some of the other countries following? Most of you know that England along with other powers advocated Self-Government for the Balkan States. The people of India are better educated than the people of the Balkan States. Are we less educated and advanced than what Japan was fifty years ago? When Self-Government was granted to the people of Japan, we find that even the negroes in Siberia have Self-Government. The wording of our resolution is most moderate, and reforms that we now ask for are only steps to a further measure of Self-Government. That is our goal. I hope the Government will not consider our demands extravagant. It has been stated in some papers that after the War, the Colonies would have a large share in the administration of India. I do not know if that is correct or not. We have been ruled by the English people, but certainly we shall object to be ruled by the Civilians who come from the Colonies, which do not treat our people in a way that they ought to, having regard to the fact that the Indians, South Africans, Australians, etc., are all subjects of the same sovereign. We know what our people want better than the Civilians who come from South Africa, Australia, New Zealand and England. I do not mean any disparagement to the members of the Indian Civil Service when I say that in 95 cases out of 100, they do not understand our languages. There is a great deal of misunderstanding about this question of Home Rule or Self-Government. Our rulers and Anglo-Indian editors of papers say that our object is to drive the English out of India. It is not the intention either of the Hindus or the Mussalmans to drive the English out of India. If it is to be a settled fact, that the Colonies are to have control over our affairs, we must insist on having our share in the control of the affairs of the Empire. Do not think that anybody can say that ours is an unreasonable demand. Understand that Mr. L. Curtis, who is here on the dais, has written a book called *The Problem of the Commonwealth*, and that it is also his object that we, Indians, should have a place in the Empire not as Dependency, but as a dominant partner. If so, we welcome the suggestion in his book, but if it is not so, we must strongly object to the Colonies having any share in controlling the affairs of India. The Governor-General said the other day in Calcutta that he would be dishonest if he held out any hopes that our progress would be rapid. I say equally determinedly and equally respectfully that, if our rulers do not grant us reforms, which are so reasonable, yet if we go on appealing and appealing to the British people in spite of what he, Lord Chelmsford said, our progress will be rapid. The English people have been very cautious, but at the same time if we can show to them the justice of our cause, I have no doubt the British public would come forward to grant what we want within a few years. After the Boer War, the British statesmen granted Self-Government to South Africa. When we are shedding blood in the cause of the British Empire, are we to be debarred from having that measure of Self-Government which Boers, who were enemies of Britain, have attained within a few years of the annexation of South Africa? (Loud and continued applause.)

* Speech in moving the following Resolution at the All-India Muslim League:—"The All-India Muslim League, while adopting the scheme of reforms prepared by the Reform Committee of the League and approved by its Council, submits it in conjunction with the Indian National Congress to Government for its introduction after the War as a first necessary step towards the establishment of complete Self-Government in India."

INDIA AND THE IMPERIAL CONFERENCE

THE Rt. Hon. Mr. Lloyd George, speaking in the House of Commons, on December 19, on the policy of the New Government with reference to the War, made the following important announcement :—

Government felt that the time had come when the Dominions ought to be more formally consulted as to the progress and the course of the war and as to the steps that ought to be taken to secure victory and the best methods of garnering in those fruits. "We propose, therefore, at an early date to summon an Imperial Conference, to place the whole position before the Dominions and to take counsel with them as to what further action they and we should take together, in order to achieve an early and complete triumph for the ideals they and we have so superbly fought for."

It will be noticed that no mention was made in this connection of the part India has played in the struggle; and the absence of any reference to India from so important pronouncement was justly resented in this country. Following this, the Secretary of State for the Colonies telegraphed to the Dominions as follows :—

His Majesty's Government do not contemplate holding a session of the ordinary Imperial Conference, but a Special War Conference of the Empire. Therefore, Government invite your Premier to attend a series of special continuous meetings of the War Cabinet to consider urgent questions arising out of the prosecution of the War and the possible conditions under which, in agreement with the Allies, we should assent to peace and the problems arising out of that. For the purposes of these meetings, your Premier will be a Member of the War Cabinet. In view of the urgency and importance of the subjects on discussion, it is hoped that your Premier will attend not latter than the end of February, or, if he is unable to attend, appoint a substitute.

Subsequently, H. E. the Viceroy received the following *communique* :—

With reference to the announcement made by the Prime Minister in the House of Commons last Tuesday . . . . . To-day His Majesty's Government have invited the Secretary of State for India to represent India at these sittings of the War Cabinet set up for that purpose. I shall be a member.

I desire the assistance of two gentlemen specially selected for the purpose in consultation with you as foreshadowed in Lord Hardinge's speech in the Legislative Council, on September 22nd, 1915. It is hoped that the meetings may take place not later than the end of February.

Though this grudging concession was not very gratifying, public opinion in this country urged that at least the two Indian representatives should be elected by the Non-Official Members of the Imperial Legislative Council, and should, in fairness, be allowed direct representation in the Imperial Cabinet and not merely to assist the Secretary of State. Accordingly, the Lucknow Congress passed the following Resolution :—

With regard to the proposal of the Secretary of State for India, inviting two specially elected representatives from India to assist him in the forthcoming Special Imperial Conference to a series of special and continuous sittings of the War Cabinet, in order to consider war questions and to prosecute the war vigorously, the Congress urges that at least two representatives of India, to be elected by the elected members of the Imperial and various Provincial Councils, should be allowed to represent India directly and not merely to assist the Secretary of State for India.

The All-India Moslem League also submitted a similar Resolution to the Imperial Government. But in spite of the insistent demands for the impartial treatment of India and the Colonies in the Imperial Cabinet, the following *communique* was published on January 22 :—

As already announced, the Secretary of State for India, when representing India at the Special Sitting of the War Cabinet, will have the *assistance* of two gentlemen specially selected for the purpose. In accordance with this decision, the Secretary of State, with the advice of the Governor-General-in-Council, has selected Sir James Meston, Lieutenant-Governor of the United Provinces of Agra and Oudh, and Sir Satyendra Prasanna Sinha.

In accordance with a further decision of His Majesty's Government, the Secretary of State for India will also have the assistance of one of the Ruling Chiefs of India. With the advice of the Governor-General-in-Council, he has invited His Highness the Maharaja of Bikanir to accompany him, and His Highness has accepted the offer.

Now this business of *assisting* the Secretary of State for India, without the power of actual and direct representation, is rightly denounced in India as derogatory to the dignity of so important a unit in the Empire. However, the choice of Sir S. P. Sinha is unexceptionable. As *ex*-President of the Congress and *ex*-Member of the Viceroy's Executive Council, he enjoys in a great measure the confidence of the people and the Government. His Highness the Maharaja of Bikanir, representing the Ruling Chiefs of India, is an enlightened and progressive prince. Sir James Meston is reputed to be an able and sympathetic financier and administrator, and it is hoped that he will prove worthy of his high office. But India's claim for direct representation is as persistent as ever, and we yet hope that those deputed by the Government of India will be given an opportunity to sit along with the Dominion Representatives on terms of perfect equality, and not merely to assist the Secretary of State.

TAGORE'S LATEST

BY MR. K. S. RAMASWAMI SASTRI, B.A., B.L.

FRUIT-GATHERING.

THIS volume of poems is a noble sequel to *Gitanjali* and is full of the reposefulness and Godward yearning of a fulfilled life. The keynote of the book* is sounded in the second poem :

My life, when young, was like a flower—a flower that loosens a petal or two from her abundance and never feels the loss when the spring breeze comes to beg at the door.

Now at the end of youth my life is like a fruit, having nothing to spare, and waiting to offer herself completely with her full burden of sweetness.

The poet shows us the Lord's love for those who yield themselves up to Him in a spirit of glad self-surrender : "You are the wise and the great who sit by my Master, but he has taken the foolish in his arms and made me his servant for ever." The readers of the divine *Tiruvachakam* of Southern India will realise how akin this utterance is to that of him "whose words are gems." The poet seeks to realise the infinite beauty and sweetness of God in innumerable ways. He calls aloud to his heart : "The desire of the bud is for the night and dew, but the blown flower cries for the freedom of light : Burst your sheath, my heart, and come forth!" He prays to God to give him the garland of love instead of the jewelled chain of worldly success. He realises how God's message to the soul is as simple as it is sweet. He says, "Your speech is simple, my master! but not theirs who talk of you." God's grace comes like the blessed and gentle rain from heaven and cannot be commanded or forced. "Shake the bud, strike it; it is beyond your power to make it blossom. . . . . He gives it a glance and the life-sap stirs through its veins. At his breath, the flower spreads its wings and flutters in the wind." One peculiar and glorious feature of this book is its use of the sweetest stories and parables in the lives of our saints for the service of beauty and love, and for the revelation of the diviner elements in life. Noble incidents in the lives of Sanatan, Supriya, Narottam, Upagupta, Shrimathi, and Tulsidas are made to yield their full treasure of divine love and wisdom. It is a pity, however, that Tagore has missed the full beauty and sweetness of the story of Satyakama Jabala as expounded by Sri Sankaracharya. The poems about the dew-drop and the lamp have an infinity of emotional suggestiveness in them. They are full of keen and radiant vision and fulfilled faith.

* Macmillan & Co., Ltd., London.

HUNGRY STONES AND OTHER STORIES.

This consists of thirteen short stories by Tagore. (Macmillan & Co., Ltd., London.) One of the stories, *The Victory*, has been translated by Tagore himself, and seven stories have been translated by Mr. C. F. Andrews. The translations not only bring out the wonderful felicities of style and sentiment in the original but have the accent of the classics of English prose. Tagore's unique supremacy in the domain of the short story is well known, and these stories are full of beauty and power in a remarkable degree. The first story entitled, *Hungry Stones* shows, as Mr. Ernest Rhys well says, "a truly uncanny power in romance". It opens up before our vision a crowded past, full of shadowy figures which are wandering in the land of dreams and which have lived passionate lives while in the land of the living. The second story called *The Victory* takes us the realm of pure romance where a court poet, supreme in his dower of sweetness of emotion and expression, is crowned with the love and praise of the beautiful princess, though he is slighted by the king and seeks release from his sorrow in death.

The next three stories deal with Indian childhood of the old and the new types. The next story called *The Kingdom of Cards* satirises in an original and inimitable way the dull and dead routine of Indian social life. It shows how three strangers got stranded on the shores of the Kingdom of Cards and upset everything and stirred everything into a new life by their *icha* (initiative and and self-willed life). We must not look for any social gospel in a short story, and if any social gospel is intended by it, we must say that it errs by overstatement and exaggeration. *The Devotee* and *Vision* unbares to us the hearts of two noble women purified by suffering and uplifted by a lofty feeling. The *Babus of Nayanjore* is conceived in a lighter vein, and describes the scion of an once prosperous Indian nobleman's family and his simple, confiding nature in a humorous way. The story *We Crown Thee King* is worthy of a special mention. It shows how the influence of the women of India steadies the menfolk, and how in many cases it keeps alive the flame of patriotism in their hearts. In *The Renunciation*, Tagore ridicules some of the Hindu social customs. The *Cabuliwallah* describes how the same human heart beats in every breast. All the stories show wonderful insight into human nature and a never failing natural magic of style,

RECENT WAR LITERATURE*

BY MR. K. R. SITARAMAN, B.A.

IF there is one result of the war which is bound to be more far-reaching in its effects than any other of its sequelæ, direct or indirect, it is certainly the educative value of the War. It is only a trite observation that there is not a single department of human activity or thought in the remotest corners of the globe, at the present day, which has not been materially effected by the war. The prolific output of literature of all sorts induced by, or directly bearing on, the War in all its phases, to which we are getting accustomed, is only what was to be expected in the nature of things. Serious contributions explaining in precise and terse language the causes of the War and the outlooks of the various nations directly involved; philosophic discourses on the inner problems and vital aspects of human destinies as affected by the War; scientific explanations of military situations and tactics; chatty newspaper accounts of incidents supposed to be historic narratives or episodes of the War; and frothy ephemeral publications which serve no conceivable purpose of any kind; all these equally well represented in the amazing medley of current war literature. Foremost in the rank of useful publications, we would place the Oxford pamphlets, two of which, "The leading ideas of British policy," by Mr. Gerard Collier, and "How we ought to feel about the War," by Mr. A. V. Dicey, are before us. As expositions of the British point of view in regard to the war, and authoritative information regarding the actual facts, these pamphlets are just what the busy man and the man in the street require. In the same category of useful and timely publications of educative value, we would place the pamphlets on special subjects published by Messrs. Fisher Unwin, such as "The American *versus* the German view of the War," by Dr. Prince, and "Alsace under German Rule," by Mr. Helmer.

The unvarnished tale delivered by Dr. Prince, of the incidents of German 'Kultur' in Belgium, as gathered from the accounts of disinterested spectators, is of unique interest and value. The Story of Alsace under German Rule, by Mr. Helmer, himself an Alsatian, is one of the most eloquent testimonies we can have of the results of the imposition of German Kultur on an alien nationality.

The "Kaiser Unmasked," by Frank Mundell is a frank and graphic exposition of the Kaiser's views and moods as evidenced by his own speeches. The picture is one that is now familiar to all.

The "Secrets of the German War Office," by the notorious Dr. Graves, one of its spies, is really a document of great interest.

The "Nation in Arms," by Field Marshall Baron Von Der Goltz, is one of the amazing productions of German military experts, dealing with military tactics and problems in the sternest style of scientific butchery divorced from all merely moral or human aspects. It supplies a page of unwritten history which cannot be found in official bulletins or publications.

"Deeds that will never Die," by T. F. Fraser, are stories of heroism in the war, culled from newspaper accounts and letters received from the theatres of war. "In Hoc Vince," by a Red Cross Nurse, is a touching episode, detailing one of the 'deeds of heroism' in question.

Even a cursory perusal of the various types of war books cannot help leaving in one's mind an indelible impression of the total change in points of view and 'angles of vision' in all matters concerning individuals and communities, the goal of human endeavours, and the destinies of the race. Let us hope that out of the ashes of the present wreck, better mutual understanding of peoples, and in its wake, world-peace, may follow—"all the stronger and more enduring for the purging in this last great human conflict;" and that this war may, indeed, be the war that will end war.

1. Oxford pamphlets, 1914-1915: "How we ought to feel about the War," by A. V. Dicey., D.C.L. "The leading ideas of British Policy," by Gerard Collier. Oxford University Press.
2. "Alsace under German Rule," by Paul Albert Helmer. "The American *versus* the German view of the War," by Morton Prince, M.D. T. Fisher Unwin. London.
3. "The Kaiser Unmasked," by Frank Mundell. London: Tarrold and Sons.
4. "The German Doctrine of Conquest," by E. Seilliere: Manusell & Co., London.
5. "The Nation in Arms," by Baron Von Der Goltz. London: Hodder and Stoughton.
6. "The Secrets of the German War Office," by Karl Graves. T. Werner Laurie, London.

THE WORLD OF BOOKS.

[ONLY SHORT NOTICES APPEAR IN THIS SECTION.]

The Story of the Indian Mutiny. By Henry Gilbert. London: George, G. Harrap and Co., 1916. pp. 350 : 5/- net.

The publication of this book is particularly inopportune just at this time as it revives the bitter memories of the great rising of the Sepoys against the English soldiers at a time when their descendants are fighting side by side in the Mesopotamian plains and Flemish trenches, and when their mutual attachment and loyalty are probably unparalleled. Nor are the intrinsic merits of the book such as would attract the student or even the general reader, for whom it is presumably intended. We do not find a continuity in the narrative, which takes up the story of the risings in Lucknow and Cawnpore, after finishing the description of the mutiny and its suppression in Delhi and the neighbourhood. Too often the vigour and impartiality of the book are marred by an exclusive attention paid to the deeds of bravery of the revenging Europeans; and the heroic deeds of the Sikhs, who were equally serviceable in the suppression, are given scant regard to. Nana Sahib and Tantia Topi are painted in even blacker colours than usual, though, as in the cases of Omichund and the Black Hole Story, research may bring us startling surprises. General Nicholson and his famous *movable column* of loyal native troops, and General Neill of the Madras Fusiliers, receive adequate treatment, while Canning and the Lawrences, who stood out for moderation and protested against bloody measures of revenge, receive but scant notice. It might be interesting to the reader to know that some of the English soldiers were not guiltless of cruel barbarity, which is usually ascribed only to the mutineers. On page 128, we find the following :—" Next day they were brought out in batches of ten and shot by some Sikh soldiers . . . . Through inadvertance sixty-six had been locked up in a closed room, and of these forty-five were found asphyxiated. The dead bodies of all the mutineers were collected and thrown into a well by men of the lowest caste. 'There is a well at Cawnpore,' said Cooper in his report, 'but there is also a well at Ujnala.' The strong points of the book are the vigour of its description and its close attention to the topography of the battle-scenes, while the style never becomes dull.

A Vedic Grammar for Students. By A. A. Macdonnell, M.A., Ph.D. Oxford University Press. (Price Rs. 5.)

Secular scholarship in Sanskrit has been considerably handicapped for lack of suitable books, both of Readers and Grammars. Of late, however, there has been a commendable enterprise in the matter of supplying the want in regard to classical Sanskrit. Professor Macdonnell's Sanskrit Grammar takes an honoured place among recent publications in this line. The work under review attempts to supply the want in regard to Vedic Sanskrit.

Leaving the orthodox school of Vedic scholarship aside, the only accessible work bearing upon this field is the Grammar of W. D. Whitney, which was by design intended to serve the purposes of those who wish to study historical grammar, which implies a working knowledge both of the grammar of Classical Sanskrit and of that of the Vedic. This work attempts to provide that working knowledge for Vedic Sanskrit, as his other grammar does for the classical.

Having been long at work to bring out his standard work of the subject in the Encyclopædia of Indo-Aryan Research, Professor Macdonnell is eminently qualified to do the work. Naturally he took it upon himself to produce this Companion to his Sanskrit Grammar. Though based upon the larger work, it is not an abridgment of that work; but it proceeds upon lines parallel to the Sanskrit Grammar, in order to make comparisons easy. Another feature of this small work is, that it provides chapters upon Syntax, Metre, etc., which make the work complete in itself. We have little doubt that this work meets a want and is bound, with the Companion Reader projected by the author, to advance the study of Vedic Sanskrit among lay scholars at any rate.

The C. L. S. I. Books. Memorial Hall, Madras.

We have received the following useful booklets from the Christian Literature Society for India :— "Edith Cavell"; "Story of Dumban"; "The Supreme Person and the Supreme Quest"; and "Victory or Defeat" (in Tamil); Rev. Mr. Hogg's book on "Christ's Message of the Kingdom," (in English); and the Rev. Lasson's "Prayer" (in Telugu).

DIARY OF THE MONTH.

December 18. Congress Reception Committee replies to Sir James Meston's warning letter.

December 19. Greek Government issues a warrant to arrest M. Venizelos.

December 20. Lloyd George's great speech in the Commons on the German Peace Offer.

December 21. Bombay Senate condemns Patna University Bill.

December 22. Indian Colonial Society, Madras, deputes Messrs. H. S. L. Polak and G. A. Natesan to proceed to Ceylon to report on the condition of Indian Labour.

December 23. Dr. Ewing addresses the Punjab University Convocation.

December 24. All-India Kayastha Conference meets at Allahabad, Dr. Sir Rash Behari Ghose presiding.

December 25. Joint Conference, at Lucknow, of the Congress Committee and the Muslim League.

December 26. Meeting of the Thirty-first Indian National Congress at Lucknow.

December 27. Meetings of the All-India Temperance and the Social Conferences at Lucknow, and the All-India Christian Conference at Madras.

December 28. Sir James Meston attends the Congress.
The Anglo-Indian Empire League Conference meets at Jhansi.

December 29. The Urdu Conference meets at Lucknow.

December 30. The All-India Moslem League and Indian Industrial Conference meet at Lucknow.

December 31. Sir James Meston attends the Moslem League.

January 1. The Allies' Ultimatum to Greece was handed.

January 2. Turkish massacre in Armenia.
American papers comment on Allies' reply to German Peace Offer.

January 3. Sir Douglas Haig appeals to British Labourites for increasing output of munitions.

January 4. Turkish atrocities on Arabs.

January 5. Lloyd George and Lord Milner arrive in Rome and take part in the Conference of French and Italian Ministers.

January 6. The Viceroy speaks at the Calcutta University Convocation.

January 7. The Allies' Conference record complete agreement as to the prosecution of the War.

January 8. Mr. B. G. Tilak addresses a large audience of over 12,000 at Nagpur, Dr. Gour presiding.

January 9. Pro-German activity in Spain results in the resignation of the Cabinet.

January 10. H. H. The Maharaja of Mysore opens the Indian Science Congress at Bangalore.

January 11. War Loan Meeting at the Guildhall, and the Premier's inspiring speech.

January 12. Allies' replies to President Wilson. Cabinet changes in Russia.

January 13. Russian successes in Riga.

January 14. Text of Belgium's reply to U. S. is published.

January 15. Russo-Roumanian recovery.
British advance east of Loos.

January 16. Dewan Bahadur P. Rajagopala Chariar, C.I.E., succeeds Sir P. S. Sivaswami Aiyar in the Madras Council.

January 17. His Honour Sir James Meston opens the Lucknow Power Station.

January 18. The death of the Earl of Elgin, late Viceroy of India, is announced.

January 19. The Industries Commission examines the last witness at Calcutta and leaves for Madras to-day.

An Indian Trans-Asiatic Railroad.

Mr. George Mathers, Assistant Superintendent of the East Indian Railway Company, gives us some interesting figures and data which support the feasibility of a complete overland railway line connecting Paris and Pekin. Writing in the pages of *The Indian Journal of Economics* (September 1916), he gives us a short history of the project which has been in the air ever since 1872, of establishing an overland route by way of Mesopotamia to the East. The recent railway development in China coupled with the railroad schemes in Asia Minor will undoubtedly usher in a new transport era. In regard to the China side of the project, we are seeing the awakening of that nation and their demand for modern land transport facilities. The Germans and the Turks have pretty well provided in their Bagdad Railway Schemes the link between Basra and Scutari; and from Constantinople onwards to London, the railways are well equipped. The sea-route from Shanghai to London is more than 10,000 miles, via Panama more than 13,000 miles, via the United States (i.e., a rail and sea-route) nearly 12,500 miles, and through India and Constantinople to London only 9,108 miles.

The most serious disadvantage, which at present obtains in respect to the overland route, is the variance of the gauges of railways already in existence which will form part of the Trans-continental line. The policy of future construction at least should aim at uniformity of gauge, and in India the standard gauge is the one to be followed. As regards the Indian mileage forming a part of the through trans-continental route, which would require to be converted to the broad gauge, the total would be about 1,000 miles. So far as the lines connecting Baku and Bagdad with Karachi are concerned, there should not be much doubt as to the utility of adopting the Indian broad gauge. It is not perhaps too much to anticipate the early probability of through railroad connection between India and China, considering that the total mileage of those Chinese railways, which have been definitely settled or partially completed, brings Shanghai in closer overland touch with India, leaving only a span of 693 miles between Chengtu and Saidya on the Burmese frontier to be completed, and also considering the prosperity that will accrue from such a project which will tap and supply China's artery of commerce, the Yang-tse-Kiang valley.

As regards the cost of transport in calculation, respect must be paid to the fact that the prospective traffic will be additional traffic to those lines already in existence. The writer concludes that the average cost of carrying a ton over the entire distance would be Rs. 46. And allowing the carriers a profit on the transaction, as well as 40 per cent. on cost to pay interest on capital, we have Rs. 66, as compared with Rs. 61, the cost of transportation through the normal sea-route *via* Suez, and Rs. 78 that of the sea-*cum*-rail route *via* U. S. A. The United States has made and is making ambitious endeavours to establish herself as the greatest carrier in Oriental trade and to divert from the old-world routes the traffic to Europe. The Hawaiian Islands have been acquired by America, and these together with the Philippines have given them an advantage which they have not been slow to make full use of. The great trans-continental railways, as well as the allied steamship lines, built for the Oriental trade by the United States have not failed in their mission, nor have they played their last card. This should be put down, and no better means than the through railroad connecting Shanghai and Europe could be devised to outclass America in this.

After the War in India.

Dr. Sudhindra Bose, of the Iowa State University, writing in the *Modern Review* for January, deplores that while Europe, America and Japan are all busy after strengthening their own national interests both political and commercial, people in India are blind to the opportunity which, he says, has now occurred to enlarge their industrial undertakings and make themselves independent of foreign markets. He says, India must expect to be the subject of aggressive commercial invasion and must get ready for the days immediately ahead of her when peace has come back to earth and Europe resumes once more its task of commerce and industry. He thinks now is the time to get back the Swadeshi movement, and we should adopt every means to mobilise our economic resources on a basis of efficiency. But improvements in general arts, manufactures, agriculture are no longer to be neglected, because they are new, untried or foreign, and whatever is most serviceable, most useful for our purpose must be welcomed with both hands.

State-Aid for Housing.

Rao Bahadur S. S. Talmaki, writing in *The Local Self-Government Gazette* (November 1916), suggests some early and practical remedies for the housing problem which is getting more and more acute in all large towns. The State should recognise to a large extent the principle that the development of building land requires to be controlled in the interests of the individual owners as well as that of the community in general. Unless the State or the Municipalities should take up the financing work of the whole thing, the housing of the poor and middle classes could never make any headway. The facilities which the housing of people stands in need of are chiefly cheap land and capital, exemption from taxes and indirect encouragement. Land values ought to be controlled by Government, and the causes which tend to raise the price of land must be checked and gradually eliminated. German experience has shown that Municipal ownership of land has generally kept down the land-values and enabled Municipalities to encourage working-class dwellings by grants of land at concessional rates to co-operative and other public utility societies. Special concessions must be shown to persons desirous of building small buildings either individually or on co-operative lines. Government land must be made available for the smaller class of buildings without any hampering restrictions; the system of levying a higher tax on agricultural land, when used for building purposes, should be abolished; and the periodic revision of assessment of land should not be made applicable to building land. Suburbs must be opened by all possible efforts, *viz.*, the creation of cheap and speedy transit facilities and of new centres of activity there, and security from the dangers of thefts and robberies.

The Town Planning Act of Bombay, recently passed, has recognised the principle that financial aid by the State is necessary for house building schemes. The Resolution of the Bombay Government on this subject confines its activities only to the development of new urban areas, and seems to have ignored the more pressing needs of Bombay City as compared with those of the District Municipalities, and is entirely silent on the questions of the rates of interest on the Government loans and the terms of repayment. It contemplates financial aid through the Municipalities and directly to co-operative building societies.

The rise in house-rents has no small effect on the rise of prices of all the necessaries of life. The housing problem has a many-sided aspect and a far-reaching effect on the life of the people. The experience of foreign countries should teach us to encourage the formation of co-operative building societies whether on copartnership or on individual lines. If the problem should be tackled in the way in which it ought to be met, the preventible causes of death could be eliminated, the sources of numerous diseases could be removed, the dreadful wastage of child-life could be prevented, light and air could be brought into the homes of even the humblest, and a domestic condition for the people could be secured, whereby their health, morals, and character could be improved and maintained.

Sanskrit and the New Renaissance.

The current issue of *The Vedic Magazine* summarises briefly an address given by Principal Vasvani on the utility of a reflective study of Sanskrit in the present times. Sanskrit is the language of grace, of polish, which is the result not of word-pruning, but of profound emotion. It is a language which lends itself easily to music, rich in its capacities, not alone for poetic expression but also for prose interpretation. The study of comparative Aryan Mythology did much to enlighten a sceptic world concerning the unknown splendours of the ancient Aryan life. "But much more is yet to be done in the way of indicating the forms of Hindu race-consciousness; and the linguistic materials supplied by Sanskrit will enrich the world's life with a knowledge concerning the poetry, folklore phlosophy, and religion of the ancient Aryan." The writer goes on to say:

I am one of those who believe in the vital value of the type of civilization based on Nature-communion, that calm spirit which is the secret of Hindu art, that quiet vision which is the quest of Hindu philosophy, that sense of Divine Silence which is the inspiration of Hindu literature, that communion with the Eternal Joy in and through the struggles and successes of life, which is the yearning of Hindu religion—are a piteous need of the fever-smitten world to-day. Greek culture did much for Europe. Reformation was in a large measure but an expression of the New Spirit awakened in Europe by the revival of learning. A greater revival of learning has begun with the modern reflective study of Sanskrit, and this new Renaissance is destined to do more for the world than even the old Renaissance, which began with the fall of Constantinople. Emerson wrote with wondrous insight: "Europe," he said, "has always owed to Oriental genius its divine impulses." And the World-Spirit summons India, summons *the Aryan Parent-nation* to a new spiritual ministry. Therefore, I ask you India's children to turn your thoughts to this ancient language, a language which was a spoken one even in the days of Alexander and Solomon.

Financing Indian Industries.

The Editor of *The Mysore Economic Journal*, writing in the last issue of his journal, exhorts the Government to take measures to make people understand more clearly the utility of banks and to clearly grasp the patriotism of a banking account. This is the most essential problem that has to be solved now, since European capital will not at all come in appreciable quantities in the near future in order to help in the building up of the nation's industrial life.

Foreign capital was until recently available for this country for the purpose, and much of the European enterprize in the East generally has been largely dependent on it. But for a long time to come it is a question if this help will be forthcoming even for those who have so largely used it in the past. It is fairly certain that it will not in any case be as abundant as it has been in the past. The reconstruction of the industrial life of Europe itself will require so much money that it is likely to absorb all that may be available in the shape of capital in the West. The aid of the United States will probably be sought as much for some time to come in peace time as during the progress of the war by most of the nations of Europe. This being so, it is more than problematical if India will get anything like an adequate part of the savings—or rather what has been left of the savings, if any—of the West for building up her new industrial life. The position is one for very careful attention, as striking ground without sufficient capital has been the besetting sin of most industrial pioneers in India. A remedy must be sought for this, if progress is to be achieved in the industrial line in the years to come in this country.

Hoarding of the real type may still linger in out of the way places in India, but is fast dying out. The purpose of a campaign to attract the small investor in India should be to create that confidence in banks that will insure his taking his money to them and placing it there. Banks still are few and far between in this country. In all Mysore there is only one bank, and it was started only a short while ago. It has still to develop a network of branch offices. What is true of Mysore is true of every other province *mutatis mutandis*. It is impossible to attract the small investor unless you go to his very doors; unless you offer facilities to invest; and unless you demonstrate your superior security and advantages. That is the first part of the work that awaits the industrial development of this land. In Mysore, we have just offered a few facilities to the small investor, but that is not enough. We must educate the masses to a sense of the requirements of the country as well. They must be made to know that money is only a means to an end and not the end in itself. As a first step in this work, we may suggest that those interested in it should make the people understand more clearly the utility of banks and of banking facilities—in fact, of credit machinery generally. It is impossible to secure the co-operation of the people in this matter without their first knowing what you ask of them.

Recent Tendencies in Co-Operation.

Prof. J. C. Coyajee, writing in a recent issue of *The Bengal Co-Operative Journal*, says that the possible tendency in India would be towards the form of contributary unlimited liability, i.e., the system in which where there is a deficit in the engagement of a society to its creditors, this deficit should, after the full payment of the shares, be recoverable by a series of *per capital* levies upon the members up to the full extent of their property, direct proceedings by a creditor against individual members being forbidden. He says it is not advisable for legislation to show undue preference for any particular form of liability. All forms should be permitted by law, so that different parts of the country might adopt the particular form most suited to them, the adoption of any particular form being explained more by the economic situation developed in a particular district. India has hitherto loyally agreed to the system of unlimited liability, and so far that system has not caused any difficulties.

The rule of unlimited liability, which was the only recognised type of co-operation in its infancy, has the advantage of possessing a drastic rigour which appealed strongly to popular imagination. And it was not until 1896, that even a Schulze Congress could venture to pronounce that its members might safely use the path of limited liability. Unlimited liability is to be preferred in the beginning as securing the confidence of depositors and lenders. In Germany unlimited liability alone held the field till 1895. The system of unlimited liability has, however, proved far from popular in many countries, and its adoption would have militated against the growth of co-operation in many lands. And even in those few countries which have gone in for unlimited liability, it appears nowhere except among the basic units. America has opposed a sort of passive resistance to the introduction of this system. Limited liability might be so adjusted as to afford any possible extent of safety to the depositor or lender. The value of the share does not by any means circumscribe the obligation of the member, for the liability might be made a multiple of the share. Unlimited liability might, moreover, conceivably cause hardship to individuals, both debtors and creditors, having all the elements of a chaotic liquidation of debt, and burdening the creditor with successive suits against individual members.

The Native States in India.

Appearing in the December number of *The Round Table* and probably under the auspices of politicians of the type of Mr. Curtis, is an article which urges that a prominent place should be given to the Native States in the Government and Constitution of the Indian Empire, and says that they are a barometer of the progress of India which no student of its conditions can afford to ignore. The main interest of this article is in the proposal which recommends the selection of a few Chiefs of the best type to assist in the deliberations of the Legislative Councils, Imperial and Provincial. "There is no material in India as good as the best of the Native Princes. They may not possess the glibness of tongue, the forensic abilities, the demagogic virtues of the lawyers, who under existing arrangements find themselves the leaders of Indian opinion. But they know much more of the real India; they are accustomed to the responsibilities of actual personal rule; they realise the imperial position much more keenly; they have had experience of the limitations and shortcomings of the masses, and of their impassiveness and slowness to change; they are much more likely to be actuated by purely impersonal motives; they are, in fact, likely to be quite as valuable counsellors as many who now attain that position."

Another method of utilising the services of, and incorporating the Native Chiefs in the Government, is by an extension of the Conference system in respect of matters of general interest to the Native States. Until 1903, the only occasion on which the Chiefs of India had been called together was the great assemblage of 1877, which was a purely ceremonial Durbar; and the Durbars of 1903 and '11, were of a similar character. Lord Curzon had formed the councils of the Chiefs' Colleges, on which the Native Rulers were invited to meet together and to play a really practical part. In 1913, a Conference of Chiefs was arranged at Delhi to discuss the question of a University for the ruling classes throughout India. A further Conference was convened at Delhi by Lord Chelmsford in last October, and on this occasion the Government of India sought from the Chiefs free and frank advice on questions connected with their States and peoples.

The other phases of their article deal with the advantages and disadvantages of Native State rule. Its arbitrary nature, the dependence on the personality of the Chief, the possibility of a relapse to weakness and chaos with a change of ruler—these evils are counterbalanced by the innate devotion of the people to a personal ruler; and the freedom from departmentalism and the possibility, not of course always achieved, of a more rapid despatch of business. The majority of the Native States are remnants of old India, the residue now fixed and crystallised from the fluid mass of strife and anarchy which flooded the country in the 18th century. Some of them like the Rajputs trace back their history into the mists of antiquity having survived the rude Moghul shocks, only to be nearly overwhelmed by the Mahrattas. Others like Hyderabad are kingdoms carried out for themselves by successful Moghul generals. Others like Gwalior and Indore are the surviving representatives of the Mahratta power. Others like Patiala and Nabha were established on the ruins of the Sikh domination of the Punjab. A few, of which Kashmir and Mysore are examples, have been created by the British Government in accordance with the deliberate policy of the time. Although the degree of advancement of the various States varies greatly, most have by now introduced a reasonable land assessment, based on a fixed demand with fixity of tenure, are ready to organise measures for combating famine, recognise the advantages of education, have established four special colleges for Chiefs, and have approximated towards higher ideals in all departments of Government, especially Police, Medical, Public Works, Irrigation and Finance.

Indian Ladies at Work.

In the current number of *The Theosophist*, Mrs. Besant gives the following details of the work undertaken by several ladies in the newly established Women's College at Benares:—

Miss Arundale settled down in Benares as the head of the women's educational work there. Miss Browning, M.A., is Principal of the College, and Miss Palmer, B.S.C., carries on her best-loved work as head of the school. The Ashrama is in the charge of Shrimati Sitabai Devi, a widow, who has it under her complete control and is an admirable head, while Shrimati Padmabai Devi, one of our best lady workers, gives her help freely and has been very successful in gathering funds for the up-keep of the institution. Miss Arundale tells me that there is now much sympathy with girls' education in the United Provinces, and that people are very much more inclined to help it than they were some years ago.

Bishop Heber and his Indian Journal.

Mr. Dinshaw J. Kapadia, writing in a recent number of *The Hindustan Review*, brings out the value of Bishop Heber's services to the country, which include his whole-hearted work for the Indian converts of the Protestant Church, as well as his efforts to open the eyes of the East India Company to the gross abuses prevalent at that time in the administration of its servants, and also to the grave disabilities under which the Indian subjects of the Company laboured during the years that he passed in India (1823 to 1826), and he travelled over the whole of the country except the Punjab, making tours of visitation, consecrating churches, administering confirmation to the native converts, establishing schools and colleges and doing other duties connected with his high calling as the 'Lord Padre Saheb of the Feringhees.' His experiences are recorded in his diary and are written in a language at once charming, elegant, precise, and clear, where contemporary generals and statesmen like Malcolm, Elphinstone, Metcalfe and Ochterlony are portrayed in all their real grandeur and efficiency.

The Bishop's peregrinations extended to Dacca, Patna, Buxar, Benares, which struck him 'as more entirely and characteristically Eastern than any which I have yet seen,' Allahabad, Lucknow, Almora on the lower Himalayas, Moradabad, Rampur, Merat and other minor places, Delhi and Agra. The Bishop was much moved by the sight of the Taj Mahal, of which he gives such a description as might be expected by a connoisseur of art. Bhartpur, Jaipur, Ajmere, Neemuch, etc., in Central India next claimed the Bishop's attention, and he gives a brief description of the character, manners, and customs of the Jats, Bhils, and Rajputs. He then entered the province of Guzarat, visited Surat, Bombay, Elephanta, etc., the hill forts of the Deccan, and lastly Ceylon and Madras. The Bishop writes, 'Our visit to Ceylon has afforded us very great pleasure and interest from its agreeable society, the beauty of its scenery, its curiosities, and far above all, from the religious state of the native inhabitants." He did not care very much for the propagation of the Gospel. "With him the Church was before the Gospel, and he was more of a missionary than an ecclesiast." And "it had been from the first his ambition not to be the head of the Anglican Church in India, but to be the first missionary in the East." He kept his proselytising zeal within the proper bounds of moderation, and for this he was blamed by men in his profession.

Women Power.

Major Stuart Stephens, writing in the last issue of *The English Review*, deplores the enormous waste of woman-energy and regrets that the great majority of the female population of the country has not been made by strict compulsion to enter those walks of labour, from which nearly five million males have gone out to the War. And five million female auxiliaries to replace these cannot be obtained without resorting to a systematised German-like organisation, the bedrock of which is conscription for woman-power and the need of which ought to be self-evident to everyone. Conscription might be applied best and most honourably to the profession of nursing, and and this alone would give the fighting forces the proportion of nurses which is due to them, and which they are in sore need of. Again, in agricultural work though there was at first a great rush of girls from the town-centres, soon there was a thorough exit owing to the allurements of well-paid offices open to the sex in Government offices, the fascination of shop-window gazing, the fancied excitement of the munition factories, and the stories of the utterly impossible wages earned therein. In dairy work, in the care of cows, the milking and the rearing of calves, they have done well; as well as in the work on poultry farms and in the management of horses. Women's assistance will be in enormous demand very soon when nearly all the younger men will have been called away to training, and farmers find that labour conditions have become to them a matter of economic life and death. And a voluntary army of women farm-workers *en masse* is inconceivable, save under conscription. There are also many other fields of female industry which require instant systematisation by the State. In domestic service, the professional and middle classes have been delivered over to the tender mercies of an order of woman-kind, to which the setting in of the munitions boom has been a very great attraction. There exists also an urgent need for conscription in the womanising of the ever-expanding Government departments. Another most urgent reason for woman-conscription is, that such a measure would have the effect of curbing the monster wave of shameless immorality that has swept over England since the creation in it of an enormous mass of soldiery; and it would be effective in compelling them to resort to a wholesome, though hard-working, livelihood.

New Frontiers After The War.

Lieutenant-Colonel A. A. Waddell, the distinguished Indianist, writing to the last number of *The Asiatic Review*, treats us to a few ingenious attempts at recasting the map of the Balkans and Asia Minor after the War. The most authoritative among these prophesiers are, Sir Harry Johnstone, the well-known traveller and East African administrator, and Sir Thomas Holdich, a very good practical expert on the making of scientific frontiers, who in his latest book. "Political Frontiers and Boundary Making" makes a very authoritative and helpful contribution to the question. Holdich confutes the academic idealists who assume that the civilised world has already attained to a cultured eminence, which admits of a purely artificial line of separation as sufficient for the nations. He is of opinion that physical geography should rank first as the basis of political agreements where territory is concerned, and the distribution of races should be only a secondary consideration in separating hostile national interests. According to him, boundaries should follow not rivers but the ridge-divides between the rivers, and in the readjustment after the war what is wanted is not so much a wholesale alteration of frontiers as a re-distribution of the populations within political ring-fences.

Holdich believes that Britain would not gain much territorially except certain easily recognised advantages in the rectification of her African frontiers, and a dominant position in Mesopotamia. Also Hungary would become absorbed in Rumania for good ethnical reasons. In the Balkans and the Near East, non-assimilating peoples should be partially deported and separated from each other in compartments, so arranged that within the limits of any one political ring-fence there should exist one homogeneous nationality. This, he says, could be easily effected by determining the position of the ring-fence and then requesting the nationalists to retire into the dominion assigned to them, or to accept a scheme of nationalisation, which would amalgamate them with the body corporate of the nationality they adopt.

Sir Harry Johnstone has ventured to illustrate by a concrete revised map his scheme of what the map of Europe and Asia Minor is likely to be after the war. It is as follows:—

In Europe, Austria and Turkey, as has been generally presumed, disappear altogether; Austria being partitioned between Germany (which by the way gets Vienna), Hungary and the new State of West Slavia, which includes Bohemia. Poland is resurrected as a national unit, with Dantzig as its port in the Baltic, thus driving in a wedge between Germany and Prussia, to which it is suggested the Hohenzollerns should be banished. Russia takes European Turkey. Italy takes the Tyrol, the Trentino and Trieste; but the Dalmatian shore of the Adriatic is given to Southern Slavia, the glorified Serbia which will stretch also to the Ægean, with its Eastern outlet through what is now Bulgaria proper; while Bulgaria is to yield part of her remaining territory to Rumania, which by the addition of Transylvania is to become nearly double its original size. Belgium is to be given a better strategical frontier on the east at the expense of Germany, and the Grand Duchy of Luxemburg is to become a Belgian Protectorate. Only part of Alsace and Lorraine, however, would Sir Harry restore to France, according to a strict racial and linguistic line of district boundaries. In Asia Minor, Russia is given the north half of that peninsula, with a protectorate over Armenia, so that she secures control of the Black Sea and both shores of the Dardanelles and Bosphorus. The southern half of Asia Minor is generously given by him to Italy, and only Syria to France, whilst Mesopotamia is to come under British sway. Sir Harry finds no spot whatever, even in Asia, for misguided and erring Turkey, notwithstanding that its Prussian inciters, who perpetrated infinitely greater atrocities, are to be spared an independent kingdom for their Hohenzollerns.

QUESTIONS OF IMPORTANCE.

The Congress and the Moslem League's Scheme of Post-War Reforms.

The following is the scheme of the Post-War Reforms prepared by All-India Congress Committee in consultation with the Reform Committee of the All-India Muslim League and passed unanimously at the last session of those bodies held at Lucknow in December :—

I.—PROVINCIAL LEGISLATIVE COUNCILS.

1. Provincial Legislative Councils shall consist of four-fifths elected and of one-fifth nominated members.

2. Their strength shall be not less than 125 members in the major provinces, and from 50 to 75 in the minor provinces.

3. The members of Councils should be elected directly by people on as broad a franchise as possible.

4. Adequate provision should be made for the representation of important minorities by election, and that the Mahomedans should be represented through special electorates on the Provincial Legislative Councils.

Provided that Mahomedans shall not participate in any of the other elections to the Legislative Councils.

5. The head of the Provincial Government should not be the President of the Legislative Council but the Council should have the right of electing its President.

6. The right of asking supplementary questions should not be restricted to the member putting the original question, but should be allowed to be exercised by any other member.

7. (*a*) Except customs, post, telegraph, mint, salt, opium, railways, army and navy, and tributes from Indian States, all other sources of revenue should be provincial.

(*b*) There should be no divided heads of revenue. The Government of India should be provided with fixed contributions from the Provincial Governments, such fixed contributions being liable to revision when extraordinary and unforeseen contingencies render such revision necessary.

(*c*) The Provincial Council should have full authority to deal with all matters affecting the internal administration of the province, including the power to raise loans, to impose and alter taxation, and to vote on the Budget. All items of expenditure, and all proposals concerning ways and means for raising the necessary revenue should be embodied in Bills and submitted to the Provincial Council for adoption.

(*d*) Resolutions on all matters within the purview of the Provincial Government should be allowed for discussion in accordance with rules made in that behalf by the Council itself.

(*e*) A resolution passed by the Legislative Council shall be binding on the Executive Government, unless vetoed by the Governor in Council, provided however that if the resolution is again passed by the Council after an interval of not less than one year, it must be given effect to.

(*f*) A motion for adjournment may be brought forward for the discussion of a definite matter of urgent public importance if supported by not less than one-eighth of the members present.

8. Any special meeting of the Council may be summoned on a requisition by not less than one-eighth of the members.

9. A Bill, other than a Money Bill, may be introduced in Council in accordance with the rules made in that behalf by the Council itself, and the consent of the Government should not be required therefor.

10. All Bills passed by Provincial Legislatures shall have to receive the assent of the Governor before they become law, but may be vetoed by the Governor-General.

11. The term of office of the members shall be five years.

II.—PROVINCIAL GOVERNMENTS.

1. The head of every Provincial Government shall be a Governor who shall not ordinarily belong to the Indian Civil Service or any of the permanent services.

2. There shall be in every Province an Executive Council which, with the Governor, shall constitute the Executive Government of the Province.

3. Members of the Indian Civil Service shall not ordinarily be appointed to the Executive Councils.

4. Not less than one-half of the members of Executive Council shall consist of Indians to be elected by the elected members of the Provincial Legislative Council.

5. The term of office of the members shall be five years.

III.—IMPERIAL LEGISLATIVE COUNCIL.

1. The strength of the Imperial Legislative Council shall be 150.

2. Four-fifths of the members shall be elected.

3. The franchise for the Imperial Legislative Council should be widened as far as possible on the lines of the Mahomedan electorates and the elected members of the Provincial Legislative

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Councils should also form an electorate for the return of Members to the Imperial Legislative Council.

4. The President of the Council shall be elected by the Council itself.

5. The right of asking supplementary questions shall not be restricted to the member putting the original question but should be allowed to be exercised by any other member.

6. Any special meeting of the Council may be summoned on a requisition by not less than one-eighth of the members.

7. A Bill, other than a Money Bill, may be introduced in Council in accordance with rules made in that behalf by the Council itself, and the consent of the Executive Government should not be required therefor.

8. All Bills passed by the Council shall have to receive the assent of the Governor-General before they become law.

9. All financial proposals relating to sources of income and items of expenditure shall be embodied in Bills. Every such Bill and the Budget as a whole shall be submitted for the vote of the Imperial Legislative Council.

10. The term of office of members shall be five years.

11. The matters mentioned hereinbelow shall be exclusively under the control of the Imperial Legislative Council:—

(*a*) Matters in regard to which uniform legislation for the whole of India is desirable.

(*b*) Provincial legislation in so far as it may affect inter-provincial fiscal relations.

(*c*) Questions affecting purely Imperial Revenue, excepting tributes from Indian States.

(*d*) Questions affecting purely Imperial expenditure, except that no resolution of the Imperial Legislative Council shall be binding on the Governor-General in Council in respect of Military charges for the defence of the country.

(*e*) The right of revising Indian tariffs and customs-duties, of imposing, altering, or removing any tax or cess, modifying the existing system of currency and banking, and granting any aids or bounties to any or all deserving and nascent industries of the country.

(*f*) Resolutions on all matters relating to the administration of the country as a whole.

12. A Resolution passed by the Legislative Council should be binding on the Executive Government, unless vetoed by the Governor-General in Council: provided, however, that if the Resolution is again passed by the Council after an interval of not less than one year, it must be given effect to.

13. A motion for adjournment may be brought forward for the discussion of a definite matter of urgent public importance, if supported by not less than one-eighth of the members present.

14. The Crown may exercise its power of veto in regard to a Bill passed by a Provincial Legislative Council or by the Imperial Legislative Council within twelve months from the date on which it is passed, and the Bill shall cease to have effect as from the date on which the fact of such veto is made known to the Legislative Council concerned.

15. The Imperial Legislative Council shall have no power to interfere with the Government of India's direction of the military affairs and the foreign political relations of India, including the declaration of war, the making of peace and the entering into treaties.

IV.—THE GOVERNMENT OF INDIA.

1. The Governor-General of India will be the head of the Government of India.

2. He will have an Executive Council, half of whom shall be Indians.

3. The Indian members should be elected by the elected members of the Imperial Legislative Council.

4. Members of the Indian Civil Service shall not ordinarily be appointed to the Executive Council of the Governor-General.

5. The power of making all appointments in the Imperial Civil Services shall vest in the Government of India as constituted under this scheme, and subject to any laws that may be made by the Imperial Legislative Council.

6. The Government of India shall not ordinarily interfere in the local affairs of a province, and powers not specifically given to a Provincial Government shall be deemed to be vested in the former. The authority of the Government of India will ordinarily be limited to general supervision and superintendence over the Provincial Governments.

7. In legislative and administrative matters, the Government of India, as constituted under this scheme, shall, as far as possible, be independent of the Secretary of State.

8. A system of independent audit of accounts of the Government of India should be instituted.

V.—THE SECRETARY OF STATE IN COUNCIL.

1. The Council of the Secretary of State for India should be abolished:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

2. The salary of the Secretary of State should be placed on the British Estimates.

3. The Secretary of State should, as far as possible, occupy the same position in relation to the Government of India as the Secretary of State for the Colonies in relation to the Governments of the Self-Governing Dominions.

4. The Secretary of State for India should be assisted by two Permanent Under-Secretaries, one of whom should always be an Indian.

VI.—MILITARY AND OTHER MATTERS OF POLICY.

1. The military and naval services of His Majesty, both in their commissioned and non-commissioned ranks, should be thrown open to Indians and adequate provision should be made for their selection, training and instruction in India.

2. Indians should be allowed to enlist as volunteers.

3. Indians should be placed on a footing of equality in respect of status and rights of citizenship with other subjects of His Majesty the King throughout the Empire.

4. The Executive Officers in India shall have no judicial powers entrusted to them and the judiciary in every Province shall be placed under the highest Court of that Province.

N.B.—As regards communal representation in Legislative Councils, the following percentages have been agreed upon :—

Mahomedan representation for the Punjab 50 per cent. ; Bengal 40 per cent. ; Bombay 33½ per cent. ; United Provinces 30 per cent. ; Central Provinces 15 per cent. ; Madras 15 per cent. It has also been agreed to, that if in any province two-thirds of a community be against any measure or Bill, it should be dropped by both communities.

INDIANS OUTSIDE INDIA.

Mr. Polak on "Indians in the Colonies."

Mr. H. S. L. Polak, in moving the resolution on Indians in colonies in the recent Congress, said :

Mr. President, ladies and gentlemen,—the resolution that I am asked to propose reads as follows :—

That this Congress, reiterating the resolutions passed at the previous sessions of the Congress, on the subject of the treatment and status of British Indians in the Self-Governing Dominions and the Crown Colonies of the Empire, once more puts on record the ever-growing sense of dissatisfaction at the continued ill-treatment of Indian settlers in those Dominions and Colonies, and expresses the earnest hope that as a result of the growing feeling of cohesion among the constituent parts of the Empire due to the present world-wide war, the statesmen and people of Greater Britain will take a more liberal and Imperial view of the status of the Indian settlers in those parts.

Ladies and gentlemen, when, in 1910, India prohibited the further recruitment of indentured labour for the province of Natal in South Africa, a new chapter in the relations of India and the Dominions and the Crown Colonies was opened ; and the page was turned when at the Congress in Calcutta in 1911, I had the privilege of announcing Mr. Gokhale's approaching visit to South Africa. That visit had an enormous influence upon the condition of affairs. Mr. Gokhale's own wonderful personality made an immense impression upon the minds of a large number of broad-minded and public-spirited men in South Africa and even among the unlearned he was described as 'cooly king' (Laughter.) Ladies and gentlemen, you will understand that for the first time it was realized by a large number of people in South Africa that India did not produce coolies alone and that she can produce, if necessary, a king. (Cheers.) Mr. Gokhale's influence did not disappear after his departure from South Africa, for even when in the dark days of 1913 the Indian community passed through a period of trial and tribulation such as has never been hitherto known, there were still large numbers of Europeans in South Africa who deplored what was being done in the name of South Africa, and who either publicly or privately denounced it. And it was made possible by that visit that the settlement of 1914 was effected—a settlement that is to-day in existence and that laid down the lines upon which the Indian community of South Africa was to progress, and not only that but the main relations between India and the Dominions. The two principal points that were settled by that agreement of 1914 were : (1) that in a British Dominion there should not be direct racial legislation ; and (2) that in all matters vitally affecting the interests of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Indian community that community should be consulted in some way or another. Now, since the war—the settlement practically coincided with the war—since the war the South African Indian community has felt bound by a kind of self-denying ordnance not to press on the attention of the Union Government certain outstanding matters that were not made the subject of the settlement, for the settlement could not possibly settle every possible outstanding dispute, and amongst these outstanding points, for example, is the prohibition of Indians in the Transvaal to own fixed property in their own names. I mention this merely as an example. Indians have during the last $2\frac{1}{2}$ years confined themselves to making various private representations to the Government and also to offering their assistance to the State in any possible capacity. You may have learnt that they have supplied two double bearer companies for service in East Africa, and many of those bearers have devoted not only their services but their lives to the Empire. (Hear, hear.) Notwithstanding these things, I should be absolutely lacking in a sense of proportion if I were to suppose or lead you to suppose that things in South Africa are in an absolutely perfect condition. I have the assurance of the Minister of the Interior that it is the desire of the Union Government to adopt an attitude of utmost sympathy and consideration for the Indians in South Africa, and that assurance we are bound to take at its full value. But Governments, even in the Self-Governing Dominions, do not always possess the powers that they would like to possess, while they have a knack of disappearing in the melting pot—and we had recently an instance of that. Permanent officials are permanent and some of them are tactless and unsympathetic. Then again we have to reckon with another permanent element in the situation and that is the trading jealousy of a considerable proportion of the European population. For example, nothwithstanding the fact that there is a general idea of give and take in South Africa to-day, there are still Europeans in South Africa who are openly advocating the denial of trading rights to Indians. I know that in the Transvaal not only are fresh trading rights denied but even the existing rights are being refused renewal. I can give you an example of inconsistencies in a Self-Governing Dominion. It is this: the municipalities have had delegated to them power by the Government to issue or refuse to issue trading licenses in regard to the sale of food stuffs, and some municipalities have actually issued to certain Indian traders such licences for their stores in one street of a particular municipality on the ground that these traders were thought proper persons to possess that right and they have refused to the same traders the right to have similar licences for another store in the same municipality on the ground that they were undesirable persons. Inconsistency could go no further. Although I am a South African, at least by adoption, I cannot possibly defend it or explain it.

The South African influence has not been confined to South Africa. It has extended to the neighbouring Portuguese territory. Though there, I am glad to say, under the Republican regime, there has been a decided improvement, nevertheless the economic relations between the Portuguese Government of East Africa and the Union Government are so close and intimate that one never knows when the next turn of the screw is coming. That South African influence has extended still further northwards. If one goes to East Africa to-day, one goes to a country where the Indians are in an overwhelming majority—a country which owes its very existence as part of the Empire to-day to Indian enterprize and which would never have been admitted into the Empire but for the labours and development of Indians themselves, but where a certain number of European settlers have gone and have exercised their influence in a most reactionary manner upon the local administration. You will be astonished to learn that although the Indians there are in such an overwhelming majority, they have not a single representative in the local Legislative Council. I have here a cablegram from East Africa appointing me and Mr. Jiwanji of East Africa to represent them at this Congress which reads as follows:—'We empower you to move a resolution *re*: elective representation of British Indians for the East African Legislative Council in proportion of their numbers, and economic interest.' It is not possible to move and pass a resolution like this at this Congress which is so busily engaged with a large number of other matters; but the point that I want to draw your attention to is this, that the East African Indians, overwhelming in numbers and economic interests though they are, are absolutely prohibited from having any voice in the administration of the country. And what do we find? The moment martial law is proclaimed, the political organisation that they built up in order

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to deal with the grievances was destroyed by a stroke of pen. Mr. L. W. Ritch, who was serving the Indians there, was deported without trial. (Cries of 'Shame'). There are actually in the jails in East Africa to-day gentlemen who did not know really what the charges are, (cries of 'Shame') who are first of all sentenced to be shot and who by the intervention of a high judicial officer have now had their sentences commuted to imprisonment for life. And yet they did not know what the charge was. (Cries of 'Shame.') And they have been convicted by a martial law tribunal. When I myself tried to land in Mombassa when I was coming to India, I found that although my fellow passengers including aliens were permitted to land, I alone was prohibited, and when I enquired why, I was told it was not in the public interest to give an answer. I think an answer must be demanded. . .

The influence of South Africa extends still further. It extends to the neighbouring protectorate of Zanzibar. Up to now Zanzibar has enjoyed a considerable freedom. Indians who are there almost to the complete exclusion of Europeans have had a relatively easy time. But they are simply dreading the day when they will be brought into political association with East Africa and brought under the South African yoke. You will thus understand what has been the effect of the domination of certain elements in South Africa not only upon the vast majority of the people in South Africa, but also upon the people in far distant territories.

And yet we have an agitation promoted in this country to-day by a gentleman who is travelling in this country on behalf of an organization known as the 'Round Table' (cries of 'Shame') and propagating the idea, the political idea, that India should be governed not only by Great Britain but also by the self-governing dominions because they are self-governing. (Cries of 'Never, never.') I myself come from one of these self-governing dominions. I have seen with my own eyes what this self-government means in South Africa. Have I not seen during the last 10 years what has been the position of our fellow-countrymen and my fellow-subjects under a self-governing dominion? Have I not seen what is the position of the native population? Have I not seen actually during this war a widespread rebellion, not by Indians but by Europeans in South Africa? When I have seen these things, then I must admit that although there is almost perfect self-government constituted in South Africa, South Africans as a whole have not yet risen to the full height of self-government, and even supposing they had, that would not entitle them to any share in the government of this country. I must be lacking in a sense of duty if I refrain from referringto a matter that has come to my notice within the last few days since my arrival in Northern India. I mention it because I wish to dissociate myself from the sentiments therein contained very emphatically and publicly. This is a printed document marked 'Private', but I am not abusing confidence because I understand that this document is now being widely circulated. It is addressed by the same gentleman to the 'Round Table' groups all over the world, a document which I hold in my hand but which I do not propose to read. (Cries of 'Read.') No, no. I will read an extract presently. This is a document containing such statements which, as an Englishman, I am ashamed to read and from which I wish to dissociate myself publicly; for I feel the gentleman who has written this document has abused the law of hospitality, and with the connivance of highly-placed Government officials has made it plain that there is a deep laid conspiracy in this country, in which undoubtedly Government officials are taking part, to bring India under the control of the Self-GoverningDominions. I want to read this particular sentence which, I think, gives you some idea of the spirit of the whole letter:—

> We must do our best to convince them (*i.e.*, the Indian Nationalists) of the mischief to their own cause wrought by the deliberate campaign which is on foot here to embitter feeling against the Dominions. The cultivation of hate here, as in Ireland, is the greatest of all the obstacles to freedom, an *ignis fatuus* which only leads men into an ever-deepening morass. But anything we say will be futile unless we have taken the trouble to study their position at first hand. I must make the leaders scattered over India feel that I have been at pains to learn their aspirations from their own lips and to try and understand them. We shall do positive harm if they have reason to say that we offer opinions on questions vitally affecting this vast community without even discussing with Indians what Indians have to say on the subject.

So here you see the pretence of consulting Indian public opinion and then writing their book that was pre-determined. I say that this is hypocrisy of the first order. Bear in mind that this is written by the gentleman who, in the main, was responsible for driving your fellow-countrymen in South Africa into revolt and into agony for a period of eight years. He was the principal official concerned in South Africa with that evil which is called anti-Asiatic legislation. If I were an Indian myself, I should decline to reside inde-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

finitely in an imperial penumbra while my favoured brothers and sisters are basking in imperial sunshine. I have come from one of these dominions. I would certainly never do anything that would arouse any degree of hatred on the part of India against any of the dominions because I believe that such a feeling would be unjust and unwarranted, because there are permanent elements of sympathy in South Africa in favour of the aspirations and ideals of India and in favour of proper treatment being accorded to Indians in South Africa. I have during the last two years made a large number of friends there who before were enemies or at least public opponents in Indian questions. I am confident that they at least would have nothing to do with this propaganda, with any propaganda of this nature, which they would regard as in the nature of a stab in the back. That would be the real answer of the South African democracy. Do not be under any delusion that the sentiments expressed in this document are shared by the real people of South Africa. The democracies of the dominions are not in favour of this. They have not expressed, as far as I know, any desire to participate in the Government of India, because they have their own troubles to deal with. I should like to say before I resume my seat that so long as I have any breath in my body, I at least personally will devote all my energies to combat this evil so far as I possibly can. (Loud cheers.)

UTTERANCES OF THE DAY.

Mr. Horniman on "The Press Act."

Mr. B. G. Horniman, Editor of the *Bombay Chronicle*, in supporting the resolution on the Press Act in the recent Congress, said :—

I only propose to put before you as a working journalist, and as the president of the Press Association of India, a few facts in regard to the reasons or alleged reasons for which this Act is retained on the statute-book and a few facts in regard to the way in which this Act is being administered.

We know that when this Act was brought before the Imperial Legislative Council, the reason for its enactment given to the Council, given to country, was the existence, chiefly in Bengal, of a vast revolutionary activity which the Government had confessed itself unable to cope with. Ladies and gentlemen, that was the reason for the enactment of this measure. I have followed the history of this Act since its very inception, and I am one of those who maintained at the time and I maintain it now, that that reason for the enactment of this measure did not even exist at the time it was enacted. (Hear, hear.) I tell you why. Because the phase of revolutionary activity with which it was enacted to deal—the existence of a certain class of newspapers which were supposed to be and were no doubt conducting seditious agitation by veiled means—that particular class of papers had already, I think I may fairly say, ceased to exist partly by the operation of ordinary laws of human nature, by the operation of the economic factors of business by which you cannot attempt to keep up supply if there is no demand and partly because the ordinary law of the land had already extinguished the chief exponents of that particular phase of journalism in Bengal. I think the Bengal delegates here will bear me out when I say that papers like the *Bande Mataram* and others had already come to grief by the prosecution brought against them under the ordinary clauses of the Indian Penal Code. Therefore, I maintain that when this Act was passed, it was unnecessary for the purpose which was put forward as the justification of its enactment. And it was passed really for very different reasons—not to suppress real revolutionary activity in the press but in order to put into the hands of the executive a convenient weapon for repressing inconvenient criticism which they could not bring under the operation of the clauses of the Penal Code. Well then, ladies and gentlemen, if the justification that was put forward did not exist at the time, very much less does it exist now.

* * * *

Two other points that I want to put before you now are these: The first one is that the safeguards that were promised—the promises that were solemnly made in the Imperial Council—have not been kept and the safeguards did not exist. We were most solemnly assured that there were such safeguards—appeal to the High

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Court, etc.—as would effectually prevent any sort of arbitrary treatment of the press under the Act. We have the deliberate judgments of two High Courts of the country that those safeguards are really entirely illusory. One of the fears expressed by the non-official members of the Council at the time of the passing of the Act, was that it would put a fresh weapon of repression in the hands of the police, and that it must always be a matter of great care before you put any fresh weapon into their hands. In reply to that, Sir Herbert Risley on behalf of the Government of India promised us that the police would not come in at any step in the administration of the Act. Ladies and gentlemen, I say—I am prepared to justify it—I say from this platform, that the police come in at every step. (Cries of 'Shame.') The whole question of the respectability, if I may put it so, of the proprietors of a newspaper or the proprietors of a press rests in the hands of the Criminal Investigation Department. (Cries of 'Shame.') And it is unnecessary for me, speaking to an audience of this character, to elaborate what that means to the character of any man in this country. Those two solemn promises, I say emphatically and deliberately, have been broken by the administration. . .

The third point is the unfair manner in which this Act is being administered as between certain classes of journals. Anglo-Indian papers in this country, with one exception, are allowed to write as they like any sort of vilification of the people of this country. (Cries of 'Shame.') They are allowed to use any sort of language bringing the people of this country into hatred and contempt. (Cries of 'Shame.') But we know, and it is not necessary for me to enlarge upon, what happens to the Indian journals that indulge in any sort of criticism of the behaviour of either race inhabiting this country. I will just give you one instance out of hundreds I could give in order that you may realize the contrast between the treatment of these two classes of journals in India. Mrs. Besant (applause) in her paper *New India* is not allowed to agitate the case of the Indian people in regard to the question of reserved compartments for Europeans and Anglo-Indians. (Cries of 'Shame.') But an Anglo-Indian paper published in Bombay is allowed to publish an article without a word of remonstrance from the Government advocating the use of physical violence as an ordinary factor in the treatment of Indian labour. Ladies and gentlemen, that is a pretty bad example of the way in which the Act is administered, and I can assure you it is not the worst case. I have only given it to you because it came to my mind at the time.* * * There again we have a great contrast in the treatment of one kind of publication and in the treatment of another, and if I may be allowed to just detain you for a minute longer, I will give you another instance of that. (Cries of 'Go on.') In Bombay about a year or two ago, a very talented Gujarati novelist published a novel, in which in the scheme of the novel there was the character of an Indian returned from Europe who attempted—I think I am giving the correct version—to introduce into his community all sorts of Western culture which they did not want. And in the course of the novel, various characters indulged in a good deal of criticism of Western ways of living and Western ways of thinking. That novel—I do not know whether that novel is suppressed on that account—was suppressed, and I think, we may fairly presume that it was suppressed not because the writer expressed his opinions but because certain characters in his book expressed the opinion that Western culture was not desirable in an Oriental land. (Cries of 'Shame.') To-day at the present moment there is appearing in a certain Anglo-Indian journal a serial story—a novel written by an Englishman, written by a member of the educational service of Bombay, the whole tone of which from beginning to end is, if not a vilification of the people of this country, of such a nature as to imbue the readers, ignorant readers, with hatred and contempt of the people of this country. (Cries of 'Shame.') Ladies and gentlemen, the one book is suppressed and the other one is enjoying a flourishing existence in the columns of the European journal in this country.

Apart from the general principle of the freedom of the press, these are the reasons by which we ask for the repeal of the Press Act—first of all because the reasons which were put forward at the time it was passed to justify it did not and do not exist; secondly, because the promises that were made in regard to the safeguards in the Act have been broken; and, thirdly, because it is being administered in an unfair and invidious way as between one class of journals and another, as between one race and another. Ladies and gentlemen, if I have said enough to justify us in asking the Government of India to repeal this iniquitous Act, if I have done that, I am satisfied.

Hon. Radha Kishan Das on "The Arms Act."

The following is a summary of the speech which the Hon'ble Pandit Radha Kishan Das delivered, in moving the resolution on the Arms Act, on the 28th December at the Lucknow Congress. His Honour Sir James Meston was present when this resolution was moved :—

The famous Proclamation of Queen Victoria of blessed memory, which is rightly regarded by us as the Magna Charta of Indian liberty and which has been ratified by her illustrious successors and by a long line of distinguished statesmen, lays down that equally with our English fellow-subjects we shall be free citizens of the Empire, irrespective of caste, creed or colour. * * * * * *

But the Indian Legislature, in its inscrutable wisdom, thought it fit, in an unfortunate moment in the year 1878, to place on the Statute-Book a measure, which painfully impresses on us the fact that we are not free citizens of the British Empire.

And, then, there is a great anomaly. So long as you live in British India, you are subject to this serious disqualification. But if you live in a Native State in India, you are as free as any one in the rest of the world to keep arms. Does this state of things reflect any credit on British India? I think it is a serious discredit.

Under the Arms Act, no Indian may possess or carry Arms without special license, whereas, Europeans, Eurasians, Negroes, Hottentots or Fiji Islanders may bear arms unquestioned. So long as the Arms Act is in force, could you by any stretch of imagination think that we are treated as equal subjects of the Empire?

Ladies and gentlemen, the Arms Act is a gratuitous insult to the inhabitants of Hindustan, who are not prepared to yield to any other nation, aye, even to the great British Nation itself in their sincere loyalty and deep devotion to their Sovereign.

So far as I am aware, history does not present another example of the complete emasculation of an entire nation in the way in which the Arms Act has emasculated and is emasculating the descendants of the valiant heroes and soldiers of Hindustan.

It has crushed and is crushing our spirit. It has very nearly done its fatal work, and unless it is repealed, without any further delay, the situation would become simply hopeless.

* * * *

Mrs. Sarojini Naidu on "The Arms Act."

Mrs. Sarojini Naidu, in supporting the resolution on "The Arms Act" in the recent Congress, said :—

It might seem a kind of paradox, that I, a woman, should be asked to raise her voice on behalf of the disinherited manhood of the country, but it is appropriate that I, who represent the sex that form the mothers of men, whom we wish to make men and not emasculated machines, should raise my voice on behalf of the future mothers of India to demand that the birthright of their sons should be given back to them, so that the India of to-morrow may be once more worthy of its yesterday. To disarm the children of the soil, the Mussalmans of India, of their legitimate and much valued birthright of wielding arms, to disinherit the martial Rajput and the Sikh of the right and privilege—that coveted privilege and that inalienable right of carrying arms, is to insult the very core of their valiant manhood; to prevent, to-day, millions of brave young men willing to carry arms in the cause of the Empire, is to cast a slur on the very ideas of Empire, and so in your name, unarmed citizens of India, I appeal to the representative of the great Emperor of this great Indian Empire to plead for our rights, to support us in our claims to grant to the children of to-morrow the right that their forefathers of yesterday possessed, and who but a woman shall raise her voice for you, who have not been able in all these years to speak for yourselves with any effect? I come from a city where every man is privileged to carry arms, the African, the Rohilla, the Sikh, and never has it been said in my city of Hyderabad that all these various armed elements have ever been disloyal to the Sovereign Power. Shall not the greater portion of India, British India, take a lesson from that one Native State that knows how to trust the loyalty of its subjects? In the hour of need have we not in our millions, we women of India, sent our sons and our brothers to shed their blood on the battlefield of Flanders and France, Gallipoli and Mesopotamia? And when the hour comes for thanks, shall we not say to them, for whom we fought, when the terror and tumult of hate shall cease and life is refashioned, and when there is peace and when you offer memorial thanks to the comrades that fought in dauntless ranks, and you honour the deeds of the deathless, "Remember the blood of my martyred sons and, remembering, arm India and restore to India her lost manhood?"

Hon. Paranjpye on the Patna University.

In moving the Reslution of Protest against the Patna University Bill, the Hon. Mr. Paranjpye observed in the course of his exhaustive speech :—

Ladies and gentlemen, the constitution of the present universities, we know, is unsatisfactory. . . . But when we are thinking of amending the constitution of the present universities to make them more liberal, what does the present Patna University Bill contemplate? This bill contemplates starting a university which is a university only in name. It would be a mere department of Government. The present universities, for instance, have the following constituted authorities : First of all at the head of a university is the Chancellor. Under him there is the Vice-Chancellor who is the president of the senate in the absence of the Chancellor and who is to a certain extent an ornamental head of the university. Then there is the senate which is the chief governing body of the university. The senate of the three large universities have 100 fellows, out of whom 80 are nominated by the Government, 10 are elected by registered graduates, and 10 by the faculties ; so that the popular element in the senates really consists of the 10 elected by the registered graduates and to a certain extent of the 10 that are elected by the faculties. But even with that and in spite of the 80 nominations of the Government, our universities, as I have said, are susceptible to popular influence. Then, after the senate, they have got an executive body which is called the syndicate. The syndicate is really speaking a committee of the senate elected wholly by the senate except the Vice-Chancellor, who is its president and the director of public instruction, who under Lord Curzon's scheme has become an *ex officio* member of the syndicate. Before that there was no director of public instruction as *ex officio* member of the syndicate. The syndicate was wholly elected by the senate. The syndicate is then an executive body, and although it is a statutory body under the new Universities Act, it is practically responsible to the senate although, let me say in passing, it has been found to be the gradually extending tendency of the present syndicates that they are trying to usurp more and more power into their hands, and it is a tendency which popular members in the senates are always trying to combat. Well, what does the new University Bill do? The new University Bill tries to solve the old difficulty by giving the whole power to the syndicate. The senate is to be a mere debating club in the new University. The clauses in the Bill distinctly say that the senate is to be a merely deliberative body and that its decisions are not to be binding on the syndicate. The senate, therefore, may possibly be an ornamental body, but it will be a body without a soul.

The Speaker then dealt with the various objectionable provisions of the Bill one after another, and continued :—

Ladies and gentlemen, the grievance is not a provincial grievance merely, although Bihar is first in front of this danger. The future of Bihar, of course, is bound up with a proper University, is bound up with the existence of proper facilities for higher education. The whole future depends on whether they are going to get a University responsive to public ideas and capable of continuous development. But over and above that there is the wider point of view, the point of view of the whole of India. Remember that the five universities and the sixth that is now being started will not do for the whole country for all time. Even a small country like England has got 15 or 16 universities, and Germany has got over 30, and little Italy has got 20 universities. India is not going to be satisfied with 5 or 6 universites for all time to come. For the proper provision of university education, several universities—I was going to say hundreds of universities—are required. Already we are hearing of schemes for new universities for Burma, for Dacca, for the Central Provinces, and our late Governor told us that we were likely to have universities at Poona, Ahmedabad and Karachi. The Madras people are talking of a university for the Andras, a new university at Trichinopoly, etc. There are many other schemes also. Remember that all these universities that are in contemplation are bound to become matters of practical politics sooner or later ; and, therefore, if we allow a reactionary bill of this type to be once placed on the statute-book, the new universities will not contain any of the few liberal provisions that are at present existing in our older universities ; all the new universities will be modelled upon the new Patna University. It is, therefore, a question not only for Bihar and Orissa. It is a very vital question for the whole of India, and it is very important that this Congress should declare its emphatic protest. Bihar has already done its duty. Bihar has recorded its emphatie protest in a special session of the Bihar Provincial Conference. The other provinces ought to follow suit

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and ought to encourage Bihar in her protest, and do all they can to tell the Government that it is not a bill of this nature that we want. The Bihar people wanted a university, but it is as if a man wanting bread was offered a stone and asked to satisfy himself with it. It is not in this way that we want higher education to be encouraged. The Bombay Senate, as I have said, have already recorded their protest. The bill has been sent to other universities, and I hope they will do the same. But a large gathering of the whole country assembled like this ought, I say, to record its emphatic protest. My resolution says that the bill should be so amended as to make it a thoroughly liberal and progressive measure. I myself would rather have said that the bill should be withdrawn, and a new measure, a more liberal measure, introduced into the Council (applause). Remember that our education member is an Indian with thoroughly Indian sympathies, and if we only show our decisive disapproval of the provisions of this bill, I am in very great hope that our protest will be successful, and Bihar will be given a university more worthy of its name and more calculated to further its educational progress. (Loud applause).

Mr. G. S. Arundale on Education.

Mr. G. S. Arundale, in moving the Resolution on Education in the recent Congress, said :—

I think this Resolution is a step towards the final and complete control of India over the education of her children. Behind every one of the clauses of this resolution is one fundamental fact. On the question of Home Rule, you will see written up there : 'good government is no substitute for self-government.' I say with regard to education that good education is no substitute for national education. (Hear, hear.) And this undoubtedly means, so far as I think, that the training of the youth of India must be in the hands of the teachers of their own race. That is of essential importance in the development of reconstruction that is now taking place. Everywhere else but in India this is the cardinal principle. Why should it not be a cardinal principle in India too? And it is in furtherance of that that we are asking you to pass this most important resolution. India refuses any longer to be an educational dependency of Great Britain. (Hear, hear.) India refuses to be an educational dependency of a country which, as Lord Haldane has told us, lags behind many other countries in the matter of educational progress. (Hear, hear.) We want to be in the forefront as once in ancient days we were, and as we shall be in the forefront of the world's education in the near future. (Hear, hear, and applause.) The spirit of our national traditions and the spirit of our national aspirations must everywhere permeate our schools and colleges, and we shall not be satisfied until such spirit is broadcast everywhere throughout the land.

What are the defects of the present system? In the first place, as Mrs. Besant told you yesterday, we have been refused free and compulsory education. Mr. Gokhale made every effort which was possible, but his efforts were in vain. We have, therefore, to say at the outset that if the absence of education stands in our way, it is not our fault. It is the fault of the rulers of the country. That is the primary defect in the educational system, as we have it at present. Then we have that obstructive measure, Lord Curzon's Universities Act of 1904. That and the new Patna University Bill, which we have already spoken about to-day, show that reaction is rather the order of the day than reform, and, therefore, it is all the more necessary that we should lift our voice for truly national education to be spread throughout the country. Then let us take up other defects. Look at the constitution of our Indian educational service. I would rather call it the European educational service. There are so few Indians in it. There ought to be a majority of Indians in that service, not a majority of Europeans as at the present time. Then, again, we all know how young Europeans appointed by an ignorant Secretary of State are sent out to this country to take precedence over those who are far abler and far more experienced than any European at any time could possibly be. We want to abolish it. We don't want men like Prof. Jadunath Sircar and Dr. J. C. Bose to take a second place to young Europeans without the slightest Indian educational experience. Then, take the European professor at the present time. In olden days, a European professor or a European teacher was far better than he is to-day, because it was not so easy to get to England as it is at the present time. Nowadays he can take furlough every year and go to England. In those days he could not go often; he had to be here, he had to identify himself with the interests of the people here, and the result was that he was a friend of the people far more than the present professors are the friends of the Indian people to-day. What we ask of all our teachers is that they should love India above all else. . . .

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Then, we all of us know that the curriculum is entirely overloaded, and the minds of students are being shamefully ill-used. The result is, that the mind has become the master of students instead of being their servant. Everywhere the mind takes the first place and everything else besides mind take the second place or no place whatever. For example, is patriotism taught in the schools as it ought to be? Patriotism among our young men is far too much synonymous with sedition. There are no seditionists among our young men at the present time. They are all patriots, and as patriots they should be treated, and as patriots they would be treated if only Indians had the control of Indian education. Where, for example, is the training of India's youth in the defence of the motherland? We have a resolution on that. What we require is that physical development and proper military training should be given precedence over everything else, even over intellectual instruction, for that comes second as it did in the Code of Manu, to whom our European masters might very well turn for instruction.

Finally,—my time is very short—let me try to suggest to you that you must look with impatience upon the way in which our young men are repressed at the present time. Every effort at self-expression is repressed in the most reckless manner. In Great Britain, the young men at the present time are urged to leave their colleges, are urged to go to the battlefront and to fight for the defence of their motherland. It is unnecessary here that the Indian youth should so be asked; they are still in the fortunate position of being able to go on with their studies. But they ought to be allowed to take an intelligent, suitable, active share in the growth of their motherland, to help her to gain that freedom which is her birthright. I would simply paraphrase the statement of Mr. Tilak, which he made when he was proposing a vote of thanks to me when I lectured on Home Rule recently. He said, "We do not want arguments, Home Rule is our birthright, and we want it. That is all." I say, National education is our birthright, and we want it. (Loud applause.)

FEUDATORY INDIA.

Kashmir Educational Conference.

The Second Educational Conference of the Kashmir and Jammu State was held in the office of the Home Minister, at Jammu, on the 13th, 15th and 16th December. It was presided over by Rai Bahadur Major-General Dewan Bishan Das, C.I.E., Minister in charge of the State Education in Kashmir, who welcomed the delegates again to the Conference after a lapse of a year and quarter since the first Session was held. He referred briefly to the educational activities of the State since they met last, and said that of the thirty subjects on the agenda of last year's deliberations, some of the more important only had been given effect to in the year. He continued:

A number of them, I am glad to announce, have been brought into practice or action. Our second curriculum has been made simpler, the use of vernacular as the medium of instruction is being extended and an inter-school tournament has been started in Srinagar, and thanks to the exertions of my friend, the Rev. C. S. Tyndale-Biscoe, and the energetic assistant inspector for Mohammadan education, Sheikh Hamid Ullah, it has met with complete success. Steps for training lady teachers in our girls' schools by providing scholarships for widows and advanced girls have been taken.

The suggestion for limiting the strength to forty students, and the appointment of trained and better qualified teachers, have not been carried out as yet; and this was due, said the President, to the paucity of funds. He concluded with a reference to His Highness' deep interest in education.

After this, the various subjects noted in the agenda were then taken up, and resolutions were passed after considerable discussion. Various schemes for the improvement and extension of education were adopted. Some of them related to the necessity for extension of primary education, others for the diffusion of religious education. Technical and scientific education was proposed to be combined in the new system of primary education. Education up to a certain standard was to be imparted in the vernaculars. Special attention being paid to physiology and hygiene, geography and Indian history. Physical culture was duly considered. The question of female education was discussed at length. Various committees for different educational purposes were also appointed to advise and carry out the reforms adumbrated in the Conference.

The Conference dispersed with a vote of thanks to the chair.

Native States and British India.

The Hon. Mr. Ambica Charn Mazumdar, President of the recent Congress, in the course of his address made the following instructive comparison between the Native States and British India :—

India possesses an area of 1,800,000 square miles with a population of 316 millions, of which over 700,000 square miles, or more than one-third of this area, with a population of over 70 millions, or close upon one-fourth, belong to the independent Native States. Now these States are entirely managed by Indian administrators, and it has to be admitted that some of them are marching ahead of British India in certain directions, particularly in respect of education, judicial reforms and industrial development, which are the most sacred functions of a constitutional government. It must be borne in mind that not a few of these distinguished administrators, who have achieved such brilliant results in the administration of these States, are sometimes drawn from His Majesty's subjects in British India. They have shown that if commanded by their Sovereign, they were fit to hold any portfolio in the Government of India. If these distinguished administrators had their lot cast solely in British India, many of them would have in all probability ended their careers as deputy-magistrates, a few as district officers, and fewer still as officiating commissioners of divisions.

Indore Maharaja's Generosity.

It is announced, says the *Tribune*, that H. H. the Maharaja Holkar proposes to make a princely gift of rupees two lakhs out of his privy purse to be utilised in a way which his subjects consider will prove most beneficial to themselves. Last year he ordered the introduction of the scheme of compulsory and free primary vernacular education into the whole State, and in this year's Budget large sums of money have been allotted for the purpose and the services of an eminent and experienced educationist have been engaged. The old Veda Shala has been re-organised into a Sanskrit College to give impetus to the revival of the study of ancient Sanskrit literature. In almost all important towns, Municipal Government has been introduced. Improvement of city water supply has been effected at a huge cost. Legislation for the amelioration of the social conditions of his subjects has been passed, and restriction on intoxication by higher taxation of excisable commodities has also been recently resorted to, to add to the material and moral progress of the people. The present munificent gift crowns these all.

Hand-Loom Industry in Bhopal.

Among the various interesting exhibits at the Baroda Industrial and Agricultural Exhibition, the exhibits of the Ruffikia Weaving Institute of Bhopal, observes a contemporary, attract great attention. These articles were recently exhibited at the Mysore Dasara Industrial Exhibition and were awarded a gold medal. Her Highness the Begum takes great interest in the revival of hand-loom industry, and it was at her initiative that this Institute was started at Bhopal under the supervision of Mr. Brown. Mr. Brown has come to the Baroda Exhibition not only with his exhibits but also with handlooms and expert weavers, who are carying on their works in the Exhibition grounds. Naturally, this practical demonstration proves greatly attractive, and the public attention is directed to one of the old handicrafts which threaten to be forgotten.

The Travancore Government and Ayurveda.

The Government to Travancore are now encouraging the scientific study of Ayurveda in His Highness' territory. There are several Government Ayurvedic schools and colleges in Travancore now, where up-to-date studies are being fast introduced. A passed student of such a college, Mr. K. G. Gopala Pillai, has been just sent to Bengal with stipend of Rs. 40 per month for a course of post-graduate studies under Mahamahopadhyaya Kaviraj Gananath Sen Saraswati, M.A., L.M.S., of Calcutta.

About two years ago, the Government of Mysore, too, sent three passed students of the Government Ayurvedic College, Mysore, with stipends of Rs. 25 per month to each of them, to take similar post-graduate courses under the learned Kaviraj, who can be well congratulated on his all-India fame and great researches in Ayurveda.

Representative Assembly in Kaparthala.

His Highness the Maharaja of Kaparthala has, following the example of certain other Indian States, inaugurated a Representative Assembly in his State. The event, it is stated, "has roused considerable local enthusiasm." The Assembly will consist of the representatives of the three principal religious denominations of the State. The powers at present seem to be very limited; and the Assembly will discuss only such subjects as are officially laid before it. His Highness proposes to extend the privileges of the Assembly, if the results of the first session should prove satisfactory.

The Swadeshi Movement.

The Hon. Babu Ambika Charan Mazumdar said with reference to the Swadeshi Movement in his Congress Presidential Address :—

If the ill-fated Swadeshi Movement had been directed in its proper channel and not checked as an unhealthy growth, the question of the industrial development of India, which has now attracted the anxious attention of Government, might have admitted of a much easier solution. The war has disclosed that, in 1905, the Indian Nationalists declared hostilities not against Great Britain, but against Germany and Austria, and that if the authorities in India had taken a more dispassionate and far-sighted view of the situation, German and Austrian trade in India would have died ten years ago and without a naval blockade. The fault, however, did not lie wholly with the Government, but the people had also to bear a share of the responsibility. However that may be, the question of rebuilding Indian industries out of their ashes is not free from serious difficulties, and unless Government is prepared honestly and resolutely to come forward to make atonement for its past sins of commission and omission, it may never be solved. Much is said about the phenomenal progress of Japan, and Sir Thomas Holland has recently thrown a flood of light upon her industrial development. But what is the secret of her success? Amidst all the disquisitions and speculations, which have gathered round the question, there looms large one fact which can neither be overlooked nor disputed. Japan possesses a National Government, which India does not. In Japan, there is no clashing of interest between the people and the State, but in India, although the interests of the Government may not collide with those of the people, its industrial policy is to a large extent controlled by considerations independent of the interests of India. Gentlemen, I pause here for a moment to thank the Government of the United Provinces which is the only administration that has as yet taken any practical interest in the development of some of our industries.

If, however, for any reason the Government finds itself handicapped in the way of building up new industries on its own account, as in Japan, it can, at any rate, do much to help and encourage such industries. It can add a portfolio of industries to the member in charge of commerce and carry on an investigation through experts as to which industry is best suited to what part of the country, regard being had to the production of raw materials and facilities of communication and labour. Then, as Indian capital starts any business on a sound and substantial basis, the Government may come forward to purchase a portion of its shares in order to secure both an effective control over it and an abiding interest in its success. And, above all, it may guarantee to such a concern a certain rate of profit or dividend for a period sufficient to enable it to stand on its own legs, while it may render no inconsiderable help by becoming its customer for its own purposes. It may also remove all unjustifiable excise duties and grant railway concessions. If the Government will do all this, it will discharge its function as a benevolent State and remove the shyness of Indian capital in an unequal competition with its formidable foreign rivals. If this cannot be done, the Government will be well advised not to waste its money over academic conferences and commissions to serve no other purpose than that of raising false hopes and aggravating public discontent.

Mr. Gandhi on Real Economics.

Speaking under the auspices of the Allahabad University, Mr. M. K. Gandhi said :—

Under the British ægis we have learnt much, but it is my firm belief that there is little to gain from Britain in intrinsic morality, that if we are not careful, we shall introduce all the vices that she has been a prey to owing to the disease of materialism. We can profit by that connection only if we keep our civilisation and our morals straight, i.e., if, instead of boasting of the glorious past, we express the ancient moral glory in our own lives and let our lives bear witness to our past. Then we shall benefit her and ourselves. If we copy her because she provides us with rulers, both they and we shall suffer degradation. We need not be afraid of ideals or of reducing them to practice even to the uttermost. Ours will only then be a truly spiritual nation when we shall show more truth than gold, greater fearlessness than pomp of power and wealth, greater charity than love of self. If we will but clean our houses, our palaces and temples of the attributes of wealth, and show in them the attributes of morality, we can offer battle to any combinations of hostile forces without having to carry the burden of a heavy militia. Let us seek first the Kingdom of God and His righteousness, and the irrevocable promise is that everything will be added unto us. These are real economics. May you and I treasure them and enforce them in our daily life.

Bengal's Home Industries.

Lady Carmichael presided recently over a large and influentially attended meeting held at Government House, Calcutta, for the purpose of establishing an Association for the promotion of home industries in Bengal, with a view to the further development of small cottage industries. Her Excellency, in the course of the opening address, said that it had always been a regret to her that there had been no way of getting cottage industries made known to the people and of helping the workers to dispose of their goods at a fair price. She had been very keen for some time that an opportunity should be given to the people in Bengal to see the smaller or cottage industries. Reasons for encouraging local productions had become very marked since the beginning of the war, for the war had shown how the country was being flooded with foreign goods to the detriment of goods that could be produced here. The war had stopped the influx of German and Austrian goods, and it was, therefore, all the more necessary to help the production of what could be made here before other countries came forward to secure that trade, and that was a further reason for taking some steps now.

The following resolution was unanimously adopted :—

"That this meeting resolves to form an Association for the promotion of home industries in Bengal, to be named the Bengal Home Industries Association, founded by Lady Carmichael, 1916."

A strong executive committee consisting of officials and non-officials was formed, and it was also resolved that a public meeting of the people of Bengal be held at an early date to further the object of the Association.

Indian-Made Sewing Machines.

Messrs. G. M. Bahri and Co., of Ludhiana, are to be congratulated on having chalked out a new line as manufacturers of sewing machines, says the *Tribune* of Lahore. The machines are, it is stated, turned out in the company's own factory at Ludhiana, which employs about 48 men at present. Mr. G. M. Bahri was formerly agent for a German firm of sewing machines for many years, and has now started his own factory. The parts of the machines are chiefly made locally, the exceptions being rubber material, etc., which cannot be had in the country. The average outturn, we are told, is at present only sixty per month, but there is without doubt a vast field for the enterprise.

The Industrial Conference.

The following is a list of papers received for submission to the 12th Session of the Indian Industrial Conference held at Lucknow in December last :—

(1) The early history of co-operative credit, by Babu Sheo Charan Lal, Gwalior.

(2) Paper manufacture, by Mr. Ahmed Hassan, Lucknow.

(3) Paper industry, by Mr. H. D. Singh, Lucknow.

(4) Rusa oil industry, by Mr. H. R. Pitti, Akola.

(5) Glass manufacture, by Rai Saheb Lala Panna Lal, Ambala City.

(6) Importance of modern inventions and discoveries, by Mr. N. M. San, Bombay.

(7) Possibilities of perfume industry in India, by Mr. J. P. Srivastava, Cawnpore.

(8) A few suggestions for improvement in sugar productions in United Provinces, by Babu Muktar Singh, Meerut.

(9) The Swadeshi movement, by Mr. M. B. Sant, Secretary, Industrial Conference, Amraoti.

(10) Plantain fibre industry, by Mr. J. M. Banerjee, Madhupur.

(11) First three essentials of industrial development and need for a business education, by Mr. S. Gill, Auditor, Lucknow.

(12) Value of research, by Dr. Harish Chandra, Ph.D., Dehra Dun.

(13) Insurance drain on India, by Mr. W. T. Halai, Bombay.

(14) Development of minor industries in India with special reference to wood-working industries, by Mr. H. E. Kinns.

Labour and Ceylon Planters.

At a mass meeting in Colombo of proprietors and companies, on the 15th December, presided over by Mr. T. N. Christie, it was resolved, (1) that this meeting is of opinion that the proposed legislation would not effect the desired remedy and earnestly urges Ceylon planters to reconsider the position on receipt of full account of views as expressed at this meeting; (2) that, in the opinion of this meeting, it is desirable that a small Commission from Ceylon should visit Malaya to ascertain facts and enquire into the merits of the labour laws and the position there; (3) that the Ceylon Association be asked to appoint a small committee, to include planters at home to work in co-operation with Ceylon.

The Uses of Bamboo.

With reference to the bamboo in India, a correspondent sends to the *Statesman* a note mentioning the following uses to which it is put in this country :—

We eat the tender shoot of the bamboo as it first appears through the ground, it makes a most excellent vegetable and greatly improves a prawn curry. Tell your servant to ask for *bans ka role* in the bazar after the early rains.

We make the walls of our houses with bamboo mat and cover the floor with bamboo matting and roof with bamboo shingles. We fence our gardens with bamboo fencing and carry our milk in bamboo choongas. Bamboos supply us with spear, shaft, and fishing rods. The leaves are an excellent fodder for horses and cattle, both green and dry. Masts of small craft are fashioned from bamboo, also oars and punkah poles. Bamboo pulp makes first class cardboard and writing paper. Bamboo is freely used for fuel, and made into charcoal for smithy work is much valued.

The list, adds the correspondent, is by no means exhaustive.

State Aid for Industries.

The Hon. Rai Sitanath Rai, in the course of his presidential address to the recent Industrial Conference, said :—

It is now recognised everywhere that the part which the State can play in the economic development of a country is very great. The old *laissez faire* doctrine gradually lost its hold on the minds of thinkers by about the last quarter of the nineteenth century, and Germany and Japan have recently given the quietus to it. In most of the civilised countries of the modern world, the State does everything in its power to promote national industry. The economic development of Japan has been systematically fostered by the State. Besides subsidising struggling industries, the Government some years ago set up model factories and pioneered many industries which have now become the source of immense wealth to the country. In Hungary, where the conditions are in many respects similar to those of India, the State has rendered immense help to industry. In addition to the maintenance of a protective tariff and the direct support given to indigenous industries by the guarantee that all requirements of the State and public authorities should be supplied by home industries, the Government has made various legislative provisions for the encouragement of industry. The main provisions of Act III of 1907 relate to (1) exemptions from taxation and road dues ; (2) reduced rates for railway transport and concessions in respect of customs and excise duties and of expropriation ; (3) the delivery of industrial salt at a price below that normally charged ; (4) the encouragement of the building of workmen's dwellings ; (5) the development of industry by a guarantee that all public contracts should be placed with Hungarian farms ; and (6) encouragement of industry by direct grants of money. As might be expected, these measures have resulted in a great expansion of production and trade.

Indian Industries.

Replying to a question in the House of Lords, Lord Islington said that the Imperial Institute aimed at being a clearing house for information with regard to raw material produced in the Empire. He emphasised specially that steps were being taken in India to develop raw material. A large representative committee had been appointed for India, charged to enquire into the promotion of inter-imperial trade. It had appointed a special sub-committee to investigate special trades. One of the main objects of the enquiry was to find imperial outlets for products which formerely went to Germany, especially the hides from which the best leather was produced. The committee had made great progress, and was preparing a scheme which, it was hoped, would result in hides being made into leather in this country more largely than before.

Lord Islington hoped that the Government of India would largely contribute, and the Dominions make larger contributions.

Indian Trade Commissioner in London.

The London correspondent of the *Times of India* strongly urges the speedy appointment of an Indian Trade-Commissioner in London, and says :—"Sir William Clark, now head of the Intelligence Branch of the Board of Trade, who suggested the appointment of Mr. Gubbay three years ago, will surely be ready to give all possible assistance. It is understood that the Secretary of State will shortly assent to the proposals made by the Government of India for the creation of an establishment. It is especially needed in view of the re-adjustments which must follow the war, for which preparation should be made. Past failure proves not that the need does not exist, but that it has been met inadequately by the parsimonious arrangements of former years."

AGRICULTURAL SECTION

Canal Cultivation and Water-Logging.

One of the defects of irrigating lands with canal water, observes a Punjab journal, is the silting up of canals and in some cases water-logging. Various methods are suggested to prevent this, and most of them are naturally costly. In the Punjab, efforts have been made to limit the loss of water by lining the channels. During the year 1915-16, much could not be done in this direction owing to the lack of canal closures on account of the very dry season which required canal water being supplied continuously. Owing to the war and the consequent financial stringency, works of this kind, unless they were absolutely necessary, could not be undertaken even where channels could be closed for a time. In future years, however, canal-lining will, we hope, be carried on until we are in a position to judge of its effects. On the Lower Chenab Canal, measures were taken for the prevention of water-logging by the drainage of certain tracts near Hafizabad. Nearly 7,000 acres of rice lands that were swamps for many years, were, it is said, reclaimed by this process, and it is believed that this work is of a permanent character and will benefit the cultivators.

Shakespeare Gardens.

Shakespeare is above all parties or nationalities. Neutrals or enemies, all can co-operate in paying homage to the genius of so universal a man. It is, therefore, no wonder that the pretty idea of Shakespeare gardens has been taken up with enthusiasm in the United States—so much so that Dr. Edward B. Southwick, Chairman of the Shakespeare Tercentennial Garden Committee, has decided to keep his committee together as a permanent organisation. Shakespeare gardens now flourish in Bridgeport, Connecticut, Demarest, New Jersey, Far Rockaway, New York, Kingston, and last but not least Central Park, New York City, where the first and perhaps choicest of these gardens is to be found. Dr. Southwick anticipates that Shakespeare gardens will spring up all over the United States, and mentioned to an interviewer that there are already two in Bridgeport. One possible reason for the popularity of the idea in America is that it does not offend against neutrality, since Shakespeare is claimed equally by the English and by the Huns.

Sugar Cultivation in Assam.

The Chief Commissioner, of Assam, visited the Government experimental sugarcane farm at Khagrabari, near Nalbari, in the district of Kamrup, recently. It may be remembered, says a contemporary, that three years ago this experiment was initiated, it being considered that the soil in north Kamrup was suitable for the cultivation of sugarcane on a large scale which, if successful, would admit of a considerable enterprise being started in the province of Assam.

Anyone now going to the farm will see a magnificent expanse of 270 acres of sugarcane of the finest quality in full bearing. It has been said in connection with this farm by an expert that Assam is now the possessor of what every country growing sugarcane desires, but not another country possesses, that is to say, a Government experimental sugar industry station working on a commercial basis. The expert, in question, says that our great competitor Java has tried for years to attain this object, as also Mauritius, Cuba, Hawaii, Jamaica, South Africa, Brazil, etc., and that all have failed in what Assam has succeeded.

Improving Indian Cotton.

The future of American cotton, observes the *Pioneer*, is a question of such great importance that we should like to see very rigorous Government control extended to its cultivation. This would involve seed selection, an embargo on cultivation on unsuitable soils, penalties for admixture with inferior varieties and possibly restrictions on the raising of *desi* cotton, where the danger of hybridisation was serious. Such drastic measures, valuable though they would be to producers as a class are, however, impracticable at present. The most Government can do under existing conditions, and the least it should attempt, is to provide a staff strong enough to keep the situation well under control. The Punjab colonist now believes in the Agricultural Department and is willing to accept advice from quarters which a few years ago he regarded as useless. Financial considerations are, of course, the difficulty in the way of indefinite enlargement of staff, but it would not be unreasonable in view of the vast interest at stake to impose a small cotton cess on the area under American cotton from which the requisite establishment could be partly paid.

Literary.

THE ALL-INDIA ONE SCRIPT CONFERENCE.

The All-India One Script and One Language Conference was held in Lucknow on the 29th December, with Mr. M. K. Gandhi in the chair. Mrs. Besant and the Hon. Mr. Madan Mohan Malaviya took prominent part in the proceedings. All the speeches were in Hindi except those delivered by Mrs. Besant and two Madras speakers who also took part in the deliberations of the day.

The proceedings were opened by B. Shyam Sunder Das, President, Nagri Pracharni Sabha of Benares, who in a brief but eloquent speech explained the objects of the Conference, *viz.*, to spread the use of Devanagri Script and Hindi Language for national purposes, and proposed Mr. Gandhi to the chair. The proposal was seconded by Mr. Purushottam Das Tandan, M.A., LL.B., of Allahabad, chief secretary of the All-India Hindi Sahitya Sammelan. Mr. Gandhi then took the chair.

The Resolution, of which a translation is given below, was moved by Mahatma Munshi Ramji, Governor, Gurkula Kangri:

> In the opinion of this Conference, it is essential for the promotion of unity and the dissemination of national ideas in the country that a common national script and language should be adopted for use in connection with objects in which the whole country is interested and that the Nagri script and the Hindi language are the most suited for the purpose. This Conference urges the leaders in the different provinces of the country to help in the spread of the use of the Nagri script and the Hindi language in connection with such objects, and with a view to equipping the present and future generations for national work to introduce the teaching of Hindi through Nagri in schools in their provinces.

Mr. Gandhi and all the other speakers referred feelingly to the need of a common language and script, and the large audience of 10,000 people who attended, accepted the Resolution with acclamation.

THE LATE PROFESSOR RANGA CHARIAR.

We deeply regret to record the death of Rao Bahadur Ranga Chariar, M.A., retired Professor of Sanskrit and Philology in the Madras Presidency College and Registrar of Books. In him Madras has lost a scholar of considerable distinction. An account of his life and career and his services to the cause of Oriental research work has already appeared in these columns. We offer our heartfelt condolences to the bereaved family.

BENGAL LITERARY CONFERENCE.

The Tenth Bengal Literary Conference met at Bankipore, on the 24th December, under the presidency of Hon. Sir Ashutosh Mukherjea. There were three thousand delegates and visitors, among whom were about three hundred ladies.

Sir Ashutosh discoursed on "Bengali as National Literature." He believed that the Literary Conference had done much service to the cause of the mother-tongue during the last ten years. The regeneration of the country depended on the culture and improvement of the language, and he invited his countrymen, especially scientists, to write their original papers in Bengali, so that readers of other nations would be obliged to learn that language in order to read the original papers of savants. This would raise the status of the Bengali language in the estimate of the world in the same way that Russian and Greek had been raised. The President urged literary men to sink their differences and join hands for the regeneration of the language.

A Committee consisting of Sir Ashutosh Mukherjea, Principal R. S. Trevedi, Babu H. N. Dutt, Dr. Abdul Gaffur Siddique and Mr. C. R. Das was then formed to draw up articles and the memorandum of Association.

The second day's proceedings began under the presidency of Mr. C. R. Das, with a prayer for the success of the British arms in the war. Mr. C. R. Das, as president of the literature section, read his address dealing mainly with Vaishnav literature. Babu Bejoy Chandra Majumdar, of Sambalpur, president of the history section, dealt with the study of history with special reference to anthropology. Ray Yatindra Nath Chowdhury, of Baranagore, delivered his address as president of the philosophy section. In the afternoon the Conference assembled in its four sections. There were twelve papers read or taken as read. Sectional meetings were held on the third and last day of the session. It was also proposed to publish the presidential address throughout the country among the Bengali-speaking people, and Prof. Jadunath Sarkar undertook to translate the same into English.

AN INDIAN CHRISTIAN ORGAN FOR INDIA.

There is a movement on foot to start a daily newspaper which is to be the organ of the Indian Christian community throughout India. The organ is to be carried on by a business co-operation of all Christians. A co-operative scheme of two thousand shares of Rs. 50 each has been formed.

Educational.

THE EDUCATION OF THE VAISHYAS.

The proceedings of the Vaishya Conference opened on 23rd December, in Delhi, in a beautiful pandal erected in the Queen's garden. It was presided over by the Hon. Babu Moti Chand, C.I.E., of Benares. Mahamahopadhyaya Pandit Har Narain Shastri invoked Divine blessings on the Conference, and in the course of his remarks said that the second visit of the Vaishya Conference to Delhi, after a lapse of 18 years, was peculiarly appropriate and would prove auspicious. Rai Bahadur Lala Kanhaiya Lal, Superintending Engineer, offered a hearty welcome to the members and the delegates in a brief speech in the unavoidable absence of the Chairman. The President's speech was delivered in Hindi.

In the course of his address, the President emphasised the importance of education, both male and female, and showed that the backward condition of the Vaishyas was due to illiteracy. He also touched on the need for a serious and well-directed reform in the marriageable age of boys and girls together with an observance of the wholesome rule of Brahmacharya. He quoted facts and figures to show the great need for a well organized system of industrial education. Both he and the Chairman of the Reception Committee were unanimous in their belief that the cause of England and her Allies was bound to win in the end, and that it was our duty to help in the attainment of that purpose in every way, even by enlisting in the army.

Letters and telegrams of sympathy from various gentlemen from all parts of India were read, and the Updeshak and the Joint Secretary of the Maha Sabha presented their reports.

On the second day, various resolutions were passed dwelling on the necessity of curtailing unnecessary expenses on ceremonial occasions and of avoiding some pernicious customs that had crept into the social fabric of the community.

Lala Harihar Narain, of Motihari (Behar), and Lala Chandra Lal, of Naini Tal, proposed and seconded a resolution on the spread of Sanskrit and Devanagri. A clause was further adopted recording the opinion of the Conference, that it was desirable to have compulsory primary education.

THE STUDENTS' CONVENTION.

The first Session of the Madras Students' Convention commenced its sittings in the Gokhale Hall, Y. M. I. A. Buildings, Madras, on Wednesday the 27th December when a large concourse of student delegates and visitors from several Moffusal stations were present. Being the first of its kind in the Presidency, it evoked considerable enthusiasm among the student population. A few of the professors of the local colleges were also on the dais, when Mr. P. A. Subrahmanya Iyer, Head Master of the Hindu High School, read an address of welcome as Chairman of the Reception Committee. The address pointed out the necessity for such an organisation and emphasised the value of co-operation among the widely scattered units of the Madras University. Dr. Sir S. Subrahmanya Iyer, the President, in a stirring speech counselled his young hearers to use the Convention "worthily and well."

Use it, then, this Convention in a noble way, he said, and you may be able successfully to end the ugly feature of school and college strikes that we meet with in these days. You may be able also to find in it an excellent medium for rendering such service to our Motherland as you are capable of, and thus have a channel for your pent-up energy most valuable for our common regeneration. You may also through it check, if only ever so little, the spirit of unhealthy competition between school, and school, college and college. . . . Love your own college by all means, but let not your love be measured by your hatred of other colleges. Serve your own college by all means, but do not try to throw dust on the work of your brother's college. And thus united in this Convention, bound by the ties of love and comradeship, cemented by a lofty patriotism for our glorious Motherland, you may be able—I sincerely pray for it—to introduce into twentieth-century India, full of foreign influences, those ancient ideals which made India what it was—the happy land of a happy people, land of the Gods who loved her dearly and who love and serve her marvellously even to-day.

THE MAHRATTA EDUCATIONAL CONFERENCE.

The Tenth Mahratta Provincial Educational Conference met at the Old Palace, Satara, on the afternoon of the 26th December, Shrimant Sadashive Rao, brother of the Maharajah of Devas (junior) presiding. There was a large gathering of delegates from the various Mahratta States of Bombay, the Deccan and Central India. The President exhorted his fellow-castemen to avail themselves of the facilities within their reach to educate their backward brethren and to try to ameliorate their present depressed condition by doing away with many evil customs, such as the dowry and the Gosha systems, and drink.

Legal.

THE BENGAL MUKHTEARS' CONFERENCE.

Babu Purna Chandra Chatterji, of Berhampore, Bengal, presided over the fifth Session of the All-Bengal Mukhtears' Conference, which met at Midnapore on the 26th December. The meeting was attended by delegates representing almost all the districts of Bengal. In the course of his speech, the President said :—

A mukhtear is not the creature of the whims of the modern legislature; he is associated with the legal history of the country from the days of the Moghul Emperors of India. I cannot but admit that mukhtears are classed, as the matter stands at present, not with the recognised legal practitioners but with the ordinary layman who can defend a case simply on the sufferance of the Court. Clause R. of Section 4 of the Criminal Penal Code is really objectionable, as it implies a negation of our professional status even in the face of distinct recognition by the Hon. High Courts of all provinces. My first question is, why should we be placed in the category of "other persons" mentioned in the Code? Do we come to this profession as undefined other persons? Are we not duly qualified? Do we not pass the strictest examination in law? Is not the profession of a mukhtear as honourable as that of the pleaders and vakils? The permissive status of a mukhtear, as defined in the Statute-Book, is, I think, not only an anomaly, but a contradiction in terms—a queer self-contradiction. The legislature requires that a mukhtear must have the permission of the Court to plead for his client. I respectfully make submission that mukhtears should have the privileges of pleaders in conducting cases on behalf of the parties in all Criminal Courts. Also the property of Section 10 of the Legal Practitioners Act must be so amended as to authorize the Revenue agents passed and certificated after the year 1880 to be enrolled in a Munsiff's Court. Under the old Civil Procedure Code, they actually enjoyed the privilege of appearing in the Civil Courts. I find no reason why these powers have been put down.

The following telegraphic appeal was then sent to the President of the Indian National Congress at Lucknow :—

The mukhtears assembled at a Conference, at Midnapore, request the favour of National Congress to take up the mukhtears' cause in removing the permissive nature of Section 4, Clause R. Criminal Procedure Code, enabling poor litigants of the country to engage independent lawyers at a moderate cost.

The Subjects Committee then discusssed various matters appertaining to the well-being of the community, and at the two succeeding days' conferences, Resolutions embodying matters of interest to the mukhtears were also passed.

THE DEFENCE OF INDIA ACT.

The Lucknow Congress passed the following Resolution protesting against the application of the Defence of India Act :—

That this Congress views with alarm the extensive use made of the Defence of India Act and Bengal Regulation 3 of 1818, and urges that in the application of the Defence of India Act which is an emergency measure, the same principle should be followed as under the Defence of the Realm Act of the United Kingdom and the same procedure adopted in dealing with persons sought to be proceeded against under the Act; that after arrest a statement in writing of the charges on which the arrest is made or an order of internment is intended to be passed should be handed to the person arrested; that a statement by way of explanation should be taken from an arrested person in writing if he so desires but that statements in the nature of a confession should not be taken except under the safeguards provided in the case of accused persons under the Code of the Criminal Procedure; that as soon as possible and before an order for internment is made after arrest, all papers and statements in connection with the case should be laid before a committee consisting of a lawyer judge of the High Court, a non-official practising lawyer and a judge belonging to the Indian Civil Service for consideration and that proper facilities for legal assistance be afforded to persons arrested under the Defence of India Act; that in the case of proceedings under the Bengal Regulations 3 of 1818, and similar regulations in other provinces, the same procedure may be followed so far as practicable.

That this Congress strongly protests against the unjust orders passed by the Government of Bombay and the Central Provinces and Berar, prohibiting Mrs. Besant from entering the said provinces, and earnestly urges the Government of India to allay public feeling by advising the Governments concerned to cancel the orders in question.

In moving the above, Mr. I. B. Sen pointed out that the Congress was in complete agreement with the avowed objects of the Act which was intended for the prevention of political crimes.

But the difference was about the method by which the Government was trying to achieve the object. Was it needed, he asked, to apply against a gifted lady like Mrs. Besant? She visited Bengal and was now at Lucknow. Had the Governments of Bengal and the United Provinces lost anything by allowing her to come to Calcutta and Lucknow?

In the Conference of All-India Moslem League also a similar Resolution was passed. The Resolution viewed with dismay the present administration of the Defence of India Act and recommended the appointment of an Advisory Committee in every province to consider the case of every person intended to be dealt with under the Act. The Hon. Moulvi Abdul Kasim, who moved the proposition, was very ably supported by Mr. Bepin Chandra Pal.

Medical.

VACCINATION ACT IN ENGLAND.

Compulsory vaccination as a measure of protection against small-pox is being extended to Indian towns. Its effect is believed to be on the whole beneficial. But certain people object to vaccination, and conscientious objectors, it is suggested, should be allowed exemption. In England and Wales, the percentage of children who are successfully vaccinated gradually decreased from 75·8 in 1905 to 48·8 in 1913, and it is stated that more than half the children escape vaccination, and the greater proportion of such children are exempted by a declaration of conscientious objection.

THE INDIAN MEDICAL SERVICE.

The Secretary of State for India has decided that any officer appointed by nomination to the Indian Medical Service, during the present suspension of appointments by competitive examination, shall be allowed to count:—(1) As service for pension, any service rendered by him during the present war as a medical or combatant officer or in a position usually filled by an officer. (2) As service for promotion, any service rendered after 16th July 1915, which counts for pension under (1). The reason for confining the service specially counting for promotion to service rendered after 16th July 1915, is that this condition is necessary in order to prevent officers appointed by nomination during the suspension of appointments by competitive examination from obtaining seniority over those previously appointed by competitive examination.

PLAGUE INOCULATIONS.

A Bombay contemporary suggests that, although a bad plague season is believed to be ahead, the efforts—in large part voluntary—to prevent the spread of the disease will surpass anything hitherto made. The long campaign against prejudice has done much, and the people at important centres of plague infection are flocking in to be inoculated. The laboratory at Parel is hard pressed to keep pace with the demands for inoculation doses. During August, applications were received for 135,000 doses, and during September for 151,000. The rush in October was even greater. One of the cities singled out for mention is Nagpur, where the mill hands appear to be crowding to the inoculation station.

SUB-ASSISTANT SURGEONS' CONFERENCE.

The Eleventh Annual Conference of the All-India Sub-Assistant Surgeons' Association opened at Madras, on the 21st December. It was attended by representatives from Bombay, Poona, Baroda, Ahmedabad, Indore, Gwalior, Agra, Meerut, Lucknow, Calcutta and Burma, in addition to the Madras members. Rao Saheb U. Rama Rao welcomed the delegates on behalf of the Reception Committee, and the Hon. Surgeon-General Bannerman presided.

The Chairman, in his presidential address, said that during his long years of service in India, he had learned to respect and esteem the sub-assistant surgeon as a man who had, in most cases, achieved his present honourable position by hard work in adverse circumstances and who could be relied upon to help in time of need.

He then said that they should be grateful to the Board for the slight increase of pay. "This may not seem a large concession," said the Surgeon-General, "but I counsel you to live in hope of better things to come."

In connection with this Conference, a Sanitary and Scientific Exhibition was organised by the Committee in the grounds of the South Indian Athletic Association. This was the first of its kind organised by the Conference. On the 21st evening, the Exhibition was opened by the Hon. Sir Alexander Cardew, K.C.S.I. Sir Alexander, before declaring it opened, said that Exhibitions of this sort afforded opportunities for meeting their fellows who were working in up-countries and refreshing their memories and studying new things. He said in no subject was he more interested than in medical aid and that though, owing to the war, nothing could be done at present, he assured that they would receive some material benefit in the course of a few years. He then congratulated the Committee for organising the Exhibition which he then formally opened.

On the second and third days, various papers on medical subjects were submitted, while the Exhibition remained open till the 1st of January 1917.

PILLOWS TOO HIGH FOR SLEEP.

"Of all the thousands of patients I have seen in bed, I have never met with one who arranged his pillows hygienically," says an eminent doctor. "All too high, far too high. High pillows curve the spine, bend the neck, and thus prevent the free circulation of blood in the brain. You can never get the full value out of a night's sleep unless you fix your pillow so low that the head and neck are just on a level line with the spine."

Science.

THE INDIAN MATHEMATICAL SOCIETY.

The first Conference of the Indian Mathematical Society opened on the 27th December at the premises of the Madras Presidency College. H. E. Lord Pentland, Governor of Madras, attended the Conference. Dewan Bahadur R. Ramachandra Rao, the President, said in opening the proceedings, that the Society was started in 1907 with 20 members on the roll. The present strength of the Club, he said, was 165 with its headquarters in Poona, and the objects of the Society are the promotion of mathematical study and research in India. His Excellency, in declaring the Conference open, paid a warm tribute to the members on their efforts to stimulate research work and create a favourable atmosphere for such investigations. His Excellency also spoke of the strong appeal that the Science has always made to the Indian intellect and instanced the discovery of S. Ramanujam, of Madras, who is now a Government scholar in Cambridge. He said :—

It is, at any rate, a science which has always made a strong appeal to Indian intellects, and has received from them important contributions. It is, for example, I suppose probable that to India we owe the decimal notation and the invention of algebra, and India can point to at least one epoch in which it produced a number of brilliant mathematicians and astronomers. Is there any reason why such an epoch should not recur? None that I can see! At the present time a young Indian student Mr. S. Ramanujam (cheers) is studying at Cambridge, whose career, we in Southern India, are watching with keen interest and high anticipations. You know the story of the discovery of his unusual talent, and all here will be glad to hear how entirely he is justifying the efforts, which were made to give it full scope. I shall quote merely one sentence from a letter written from Cambridge by one of the most distinguished mathematicians of the present day : "In him," he says, "India now possesses a pure mathematician of the first order, whose achievements suggest the brightest hopes for its scientific future."

Gentlemen, not a few Indians have earned high distinctions in the Cambridge school. Some of them, I believe, are members of this Society, and they will be able to realise what is required to earn an encomium of this nature. We may be sure, however, that if India is to make permanent contributions to this the most international of all sciences, the creation of a favourable environment is essential. By the provision of post-graduate scholarships and of opportunities for post-graduate research, Madras University is, I am glad to say, doing something to secure this, and will, I hope, when more favourable times come, do more. Your Society, too, can do much, and I heartily wish success to your efforts to foster interest and increase the number of workers in mathematical research.

CLEARING FOG BY ELECTRICITY.

The fact was long ago scientifically established that all dust and fog particles in the open atmosphere are electrified and subject to dispersion or precipitation, but how to clear fog from a street, along a railway, or from the neighbourhood of a ship at sea, and to do it in a manner commercially feasible, has been a matter of serious study for many years. Dr. F. G. Cottrell, who has done so much towards the practical precipitation of dust, smoke, and chemical fumes at large industrial works, says the *Popular Science Siftings*, is now engaged, at the behest of the Smithsonian Institution, in making some important investigations on the subject.

BULBS EXUDE POISON GAS.

Some time ago two stevedores died as a result of unloading a vessel laden with nothing but bulbs, says *Popular Science Siftings*. They were asphyxiated by the carbonic acid gas generated by the bulbs in the hold. That led afterwards to the building of lattice work pillars reaching from the floor of the hold to the deck, these acting as ventilators. A doctor, writing in the *Lancet*, tells of an experience of his in trying to resuscitate two Chinamen, who had gone down into the hold of a vessel laden with oranges, garlic, soya beans, sugar, and rice, and says the respiration of the oranges and garlic, in the absence of ventilation, had replaced the oxygen with carbon dioxide.

EDISON'S WAGER.

It was a wager that set Thomas Alva Edison on the road to fame and fortune. When he was a telegraph operator, much annoyance was caused by cockroaches getting into the tin cans in which the boys carried their lunches. Various methods of getting rid of them were tried but without success, and then Edison made a bet that he would exterminate the foe.

The next day the dinner-cans were piled in a heap, and the wizard surrounded them with a circle of tin-foil ribbon about an inch wide. About a quarter of an inch away he placed a similar circle, both ribbons being upright and then connected them with a battery. Along came the cockroaches. To surmount the obstacles, they had to place their hind legs on the outer ribbon and their forelegs on the inner one. The moment they did so, the circuit was completed, and they toppled over dead. Edison's success made him talked about, and was his real start as an inventor.

THE MORALS OF THE INDENTURED LABOURERS.

Writing in a recent issue of *East and West*, a writer makes the following observations on the morality of the labouring population in the colonies and on the necessary improvement that should be effected.

"The most potent causes of the high rate of suicides among Indian labourers in the colonies are the hardships to which the labourers are exposed, their ill-treatment by employers and quarrels about women. . . . . In the opinion of Messrs. McNeill and Chimman Lal, 'there is no doubt that the mortality of an estate population compares very unfavourably with that of an Indian village, and that the trouble originates in the class of women who emigrate.'"

As H. E. the Viceroy said, a proper sex ratio ought to be maintained among the emigrants. The existing rule requires that for every 100 men 40 women of over ten years of age must be shipped; and Messrs. McNeill and Chimman Lal recommend that this ratio should be raised to 50. It is admitted, however, that a mere modification of the sex ratio will not improve the morals of the emigrants. It may ensure more concubines and perhaps fewer suicides. Indeed, even if a ratio of 100 per cent. or an equal number of men and women, be insisted on, the morality of the population may not come up to the standard prevailing in India, if the women who go out from here are not respectable and do not care to live as wives, though some of the evils that now exist may disappear. Many of the young emigrants may prefer to return home after saving a decent amount of money and to marry in India, instead of living with undesirable concubines, or even wives, in the colonies. How to secure the emigration of respectable women only is a difficult problem to solve. It seems that the system of restricting the industrial service of women to three years out of the five years of indentured residence was intended for this purpose, but it has not fulfilled expectations. Moreover, when the system of indentures is itself abolished, the device intended under it to induce respectable women to emigrate will disappear. Messrs. McNeill and Chimman Lal recommend, in the first place, that no minimum limit of age should be fixed for the emigrating women. If small girls are included in the percentage, efforts will not be made to recruit grown up single women of the undesirable sort. It is probable that the girls will find husbands and thus the percentage of married couples will rise. Secondly, there is no reason why known prostitutes should be allowed to migrate at all. It is scarcely probable that they will turn over a new leaf in the colonies. Thirdly, some special inducements may be offered to married women who emigrate, or a certain percentage of such women may be insisted upon. Lastly, Messrs. McNeill and Chimman Lal recommend that married quarters should be fenced off and be out of bounds for single men on the estates.

MR. S. RAMANUJAM OF MADRAS.

In another section will be found an interesting appreciation of Mr. Ramanujam's mathematical genius by H. E. Lord Pentland in a recent meeting of the Madras Mathematical Conference.

The following are extracts from the report of Mr. G. H. Hardy, M.A., F.R.S., of Cambridge, to the University of Madras:—

I shall confine myself in this report to the work which Mr. Ramanujam has done since his arrival in England in April 1914, and to work which has been published, or is completed and on the point of publication. I need hardly say that he has in his possession, as he had before he came to England, a mass of unpublished material containing hundreds of most curious and interesting formulas, some definitely proved and others only conjectured. Many of the most remarkable of these results will no doubt be published in due course, as the process of sifting them continues.

It is already safe to say that Mr. Ramanujam has justified abundantly all the hopes that were based upon his work in India, and has shown that he possesses powers as remarkable in their way as those of any living mathematician. His work is only the more valuable, because his abilities and methods are of so unusual a kind, and so unlike those of a European mathematician trained in the orthodox school.

This paper embodies the results of a great delay of Mr. Ramanujam's Indian work. This work was done when he had very little knowledge of the progress made in Europe during the latter half of the nineteenth century, and it was inevitable that many of his results should have been anticipated by European mathematicians, in particular by Hermite, Kronecker, Weber, and Greenhill. None the less, the paper is of the greatest interest and contains a large number of new results.

Mr. Ramanujam's elaborate memoir on 'Highly composite numbers' contains an account of the longest and perhaps the most important connected piece of work which he had done since his arrival in England.

Mr. Ramanujam shows how, by reasoning of an elementary but highly ingenious character, we can obtain surprisingly accurate information as to the structure of highly composite numbers.

Mr. Ramanujam has, since this paper was published, obtained a number of further results of the same kind. The problem is a very peculiar one, standing somewhat apart from the main channels of mathematical research. But there can be no question as to the extraordinary insight and ingenuity which he has shown in treating it, nor any doubt that his memoir is one of the most remarkable published in England for many years.

My account of Mr. Ramanujam's work has been necessarily fragmentary and incomplete. I have said enough, I hope, to give some idea of its astonishing individuality and power. India has produced many talented mathematicians in recent years, a number of whom have come to Cambridge and attained high academical distinction. They will be the first to recognise that Mr. Ramanujam's work is of a different category. In him, India now possesses a pure mathematician of the first order, whose achievements suggest the brightest hopes for its scientific future.

Political.

THE HOME RULE LEAGUE CONFERENCE.

The first Conference of the Home Rule Leagues was held, on the 30th December, at the Theosphical Convention Pandal, Lucknow, Mrs. Besant, Founder and President of the Madras League, presiding. Among the visitors there were Messrs. Tilak, Khaparde, Belvi, and Karandikar of the Bombay League. The attendance was as large as ever a gathering of young men and old had ever met together before in any important public cause. Mrs. Besant opened the proceedings with a brief statement regarding Home Rule and what it stood for. She made a special reference to the resolution that was adopted the previous day by the Congress on Self-Government for India and the scheme it embraced. Mrs. Besant brought out very clearly and succinctly the four important points which that resolution embodied, namely, elective majorities in the Provincial and Imperial Legislative Councils, the control of the Councils over the purse, elected Presidents, and the widening of the electorates. She spoke of the Hindu-Moslem unity that was established at this the Lucknow Session of the Congress and observed that unity was the beginning of liberty.

She then requested Mr. Tilak to speak a few words. Mr. Tilak, who was given a very hearty ovation, spoke at some length about one aspect of Indian politics, namely, the Hindu-Moslem problem which has now been solved. The concession which had been made to our Mahomedan brethren in regard to the proportion of Hindus and Mahomedans in the Legislative Council, he said, was nothing too much. In proportion to the concession that had been made to the Moslems, their enthusiasm and warm-hearted support would be greater. He, like Mrs. Besant, before him, urged the audience to active effort to give effect to the resolution which had been adopted by the Congress.

Mr. C. J. Jinarajadasa gave an account of the work of the English branch of the Home Rule for India League, which was established within a week of his arrival in London about June 7,1916. The branch consisted of many Englishmen and women and was taking a keen interest in the work of the League. As part of a propaganda work, they had so far issued six pamphlets regarding India's case for Home Rule. The first of them was circulated widely among the Press in England, and the London *Times* had done them the greatest honor by attacking the League in its columns and giving the widest publicity to India's case. During his stay in England, he had done a lot of lecturing work, visiting important cities in England, Scotland and Wales.

Mr. G. S. Arundale, the Organizing Secretary (Madras League), spoke about the work that had been already done. Since the founding of the League in Madras, on September 2, 1916, the number of members had risen to over 5,000, of whom 1,000 were to be found in the City of Madras alone. There were 300 students as Associates in that city, and he hoped that in other cities also students would join the League in large numbers. The Publication Department had already issued over a lakh and a half of publications. The Home Rule shop in Madras had not only paid its way but left a small margin of profit. There were branches in various centres of India which were doing good work. The Bombay branch contemplated the starting of a Home Rule Reading Room and Library, and the Karachi branch had, in addition, a Home Rule shop. He hoped that by the time we would meet in December next, we would have a hundred thousand Home Rulers. He spoke of the cordial relations that existed between the League and the Poona League, of which Mr. Tilak seemed to be the life and soul, and said that as a guarantee of friendly co-operation, they had a branch of their League in Poona.

Mr. C. P. Ramasamy Iyer, General Secretary (Madras League), said that he looked to the Home Rule League and its branches acting as conciliation boards, which would smooth over the difficulties and differences which might exist between any communities and bring about among them cordial and brotherly relations. However much they might wrangle among themselves at home, it was not desirable that they should bring it into the street.

Mrs. Besant, in winding up the meeting, made some observations and urged those who were willing to join the League, but had not done so, to become members.—*Young India.*

RE: DISALLOWED RESOLUTIONS.

A question from the Hon. Mr. Patel in the Bombay Legislative Council elicited the reply that H. E. the President regarded the publication, by a member of the Legislative Council, of any question or resolution not admitted by him, as a breach of etiquette.

General.

THE GOANESE CONGRESS.

The Second Goanese Congress was held on the 26th December at Bombay, and was attended by delegates from various Muffasal towns of the Bombay Presidency. Dr. B. Pais, Chairman of the Reception Committee, gave an account of the history of the Goan Union since its inception, welcomed the delegates on its behalf and concluded with a motion that Dr. Dias should be elected President. Dr. Dias delivered an interesting speech, in the course of which he emphasised the value of domestic economy and urged the members of his community to realise the value of unity and co-operation in commercial life. The subjects that engaged the special attention of the Congress were those relating to the social, moral and intellectual advancement of the community.

THE LOHANA CONFERENCE.

At the fourth Lohana Conference held at Bhavnagar, on the 27th December, the following Resolutions were passed :—

That this Conference humbly and respectfully gives sincere expression to its unfailing and unswerving loyalty and its deep attachment to the person and the throne of His Majesty the King-Emperor, under whose benevolent rule disorder and anarchy have been replaced by abiding peace and prosperity and under which we have made brilliant progress, social, industrial, commercial, political and educational; that the Conference offers its hearty prayer to the Almighty for the complete fulfilment of the lofty principles of morality and freedom which have prompted the British Empire to join hands with the Allies in the present titanic world-war, and for the prompt and brilliant success to the British and Allied arms, and it further resolves that their community, which has shared along with others the burdens imposed by the war, is ever ready to offer such further sacrifices as the exigencies of the war may necessitate in the future.

THE UTKAL CONFERENCE.

The twelfth session of the Utkal Conference was held at Balasore, on December 29th and 30th 1916, under the presidency of Raja Srinivas Rajmoni Raj Deo of Mudasa. Resolutions praying for the revival of salt manufacture on the sea coasts of Orissa, the establishment of an engneering college at Cuttack, the amalgamation of the Ooriya speaking people, an Ooriya member on the Imperial Council, the amendment of the Patna University Bill and the advancement of Ayurvedic instruction in Orissa, were adopted.

THE JAIN CONFERENCE.

The Jain Conference opened at Lucknow, on December 27, at the Ajitashram. All local Jains, 150 mofussil delegates and many non-Jains attended. The presidential address by Babu Manick Chand, of Khandwa, discussed several important questions affecting the Jain community. At a general meeting on the 30th, a number of resolutions were passed. Babu Ugar Sen, Vakil, Hissar, offered Rs. 10,000 for education, and Mr. Latthe, of Belgaum, his services. A committee was formed to carry out the scheme. On the 25th, the Jivadaya department of the All-India Jain Association and the Bombay Humanitarian fund held a joint meeting, Mr. Horniman, Editor of the *Bombay Chronicle*, presiding. Mr. M. K. Gandhi, Messrs. Vibhakar, Nanavati and Dayachandra Jaini delivered lectures on *Ahimsa*, Humanitarianism and Vegetarianism respectively.

ALL-INDIA ARYA KUMAR CONFERENCE.

The All-India Arya Kumar Conference commenced its sittings at Lucknow, on the 26th December, Professor Bal Krishna presiding. There was a large gathering of delegates and visitors from about fifty different cities in the Province.

Resolutions expressing high admiration of the heroism of Indian soldiers, exhorting young men to help the British Government to take up social service work, to study the Vedic Dharma, to maintain social purity, to open *desi akharas* and gymnasiums, to develop the commercial and industrial interests of the country, and to work on co-operative lines, etc., were unanimously passed.

THE PARSI CONFERENCE.

The Sixth Annual Zoroastrian Conference opened in Bombay, on the 16th December, for discussing and focusing attention on important questions relating to the advancement of the Parsi community. The Hon. Mr. Pheroze C. Sethna, the Chairman of the Reception Committee, in welcoming the delegates outlined the aims and objects of the Conference. Dr. Sir Temulji Nariman, the President of the Conference, then delivered an interesting speech dealing with many questions of vital interest to the stability and progress of the Zoroastrians. He animadverted on social and educational problems and pointed out that their greatest need at the present moment was to preserve the vitality of the community and guard against physical deterioration. He spoke at some length on the sanitary and housing problem, deprecated overcrowding and pleaded for a more scientific system of education for Parsi children.

JANUARY, 1916. No. 1

Vol. XVII.

The Congress Presidential Address.

BY THE HON'BLE MR. V. S. SRINIVASA SASTRI.

SIR Satyendra Sinha's address was marked by the earnest and passionate patriotism which we have learned to associate with officials as well as non-officials in Bengal. When he referred to the throbbing pain in the soul of awakening India, or spoke of hope coming where despair held sway and faith where doubt spread its darkening shadow, one not only heard the poetical language of the Bengali, but saw in his eye the fire of the patriot. He touched the hearts of his audience when he affirmed that the government of the people, for the people, and *by the people* was the only form of self-government which would satisfy the aspirations of India. In fact, so complete was the accord between him and the thousands who eagerly listened that every one must have felt that his own thoughts were finding clear and warm expression in such a passage as this:—"Does any reasonable man imagine that it is possible to satisfy the palpitating hearts of the thousands of young men who, to use the classic words of Lord Morley, leave our universities intoxicated with the ideas of freedom, nationality and self-government with the comfortless assurance that free institutions are the special privilege of the West? Can any one wonder that many of these young men, who have not the same robust faith in the integrity and benevolence of England as the members of this Congress, should lose heart at the mere suspicion of such a policy and, driven to despair, conclude that the roar and scream of confusion and carnage is better than peace and order without even the distant prospect of freedom?" When again Sir Satyendra, in manly and deliberate tones concluded with the sentence: "I say with all the earnestness and emphasis that I can command that, if the noble policy of Malcolm and Elphinstone, Canning and Ripon, Bright and Morley, is not steadily, consistently and unflinchingly adhered to, the moderate party amongst us will soon be depleted of all that is fine and noble in human character," the thunder of applause that greeted the last words seemed the symphony of ten thousand eager voices echoing the solemn warning so that it may be heard by all who are concerned.

The part of the address which commanded universal approbation was the one in which the rights of Indians to bear arms and to positions of command in the army were advocated. The Indian case in this respect was put forth with telling conciseness and unanswerable cogency. It was the keen dexterity of a lawyer which found a handy argument in the risks and perils that Indian officers of the Criminal Intelligence Department have to face. Sir Satyendra justly rebuked the maligners of our nation who assert that in the absence of the English neither a rupee nor a virgin would be left in some parts of the country as being, albeit unconsciously, maligners of the British nation as well. He said he could conceive of "no more scathing indictment of British Rule. A superman might gloat over the spectacle of the conquest of might over justice and righteousness, but I am much mistaken if the British nation, fighters now as ever for the cause of justice and freedom and liberty, will consider it as other than discreditable to itself that after nearly two centuries of British Rule, India has been brought to-day to the same emasculated condition as the Britons were in the beginning of the 5th century when the Roman legions left the English shores in order to defend their own country against the Huns, Goths and other barbarian hordes."

It was but natural, and the President of the Indian National Congress should have expected, that his pronouncement on self-government for India would be received with different feelings by different sections of his countrymen. The cautious politicians welcomed it as an attempt to reconcile what is best in the great aspirations of the hour with what is most generous and responsive in the counsels of British statesmanship made by one whose inherent authority to speak on the subject has been enhanced by his having seen the affairs of the Empire, though only for a brief period, from the inside. The more eager spirits, on the other hand, regarded it with mixed feelings. They could not but be thankful that he established on an unassailable basis the claim of the people of India to full autonomy within the Empire both as a birthright and as derived from

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

repeated pledges and declarations of Imperial policy. They cheered him to the echo when he interpreted His Imperial Majesty's message of sympathy and of hope as a message of sympathy for political aspirations and hope for their ultimate fulfilment. They were thrilled by his declaration that he believed with the fervour of religious conviction that that wise and righteous policy was still the policy of the great English nation. Such robust and undying faith has inspired the labours of our greatest patriots and is an indispensable quality in those who lead a constitutional struggle. Unfortunately, however, in a great majority of cases it does not survive the first inevitable failures, and it is difficult to say which are the stronger feelings in the country at the present moment—the hopes of a liberal measure of self-rule that have been roused, or the fears that our political status will not improve after the war through the voluntary action of the Imperial Government. If this expression of belief in the righteousness of Britain's policy towards India appeared somewhat romantic to the more eager spirits, his plea for patience and slow and cautious growth came as a bitter disappointment. The parable of the man whose broken bones have been put in a steel frame was a particularly unsavoury pill to them. If we must talk in parables, they sk, is it not possible to conceive of a case in ich the surgeon, for purposes of his own, unduly prolongs the period of enforced rest for his patient?

In what ways exactly Indians are to-day not fit to govern themselves, how the peoples of the various colonies demonstrated their fitness when responsible government was granted them, and what proofs we shall have to adduce in our own time, Sir Satyendra did not say. He took our unfitness for granted. This opinion of his was concurred in, he said, by prominent leaders of the Congress. It is noteworthy that he did not quote, as others did, the language of the first article of the Congress Constitution: "These objects are to be achieved by constitutional means by bringing about a *steady* reform of the existing system of administration* * *." The argument apparently is that Congressmen are precluded, so long as they do not repeal the word *steady* by a unanimous vote of all the provinces, from demanding a large measure of constitutional reform, though it might commend itself to them as desirable. It is possible that the greatest lawyer of Calcutta dismissed the argument as legal pedantry.

We now come to the famous passage in which Sir Satyendra enumerated three possible ways of attaining self-government, dismissed two of these as out of the question for India, and recommended the third as the only safe and practicable way. Now the argument by elimination of possible alternatives, by reason of its conclusiveness in the exact sciences, is often extended, by those that seek effect, to regions of speculation where all the data are generally not known and even those that are known are incapable of precise definition. But the result of such extended application is not always happy. In this particular case one is constrained to say, with all due respect to Sir Satyendra, that he falls into a grievous error. The reasoning requires that the three ways open to us should lead to the same destination: in other words "the priceless treasure of self-government" must in the three alternative cases be one and the same, and the context clearly proves that autonomy within the empire is the intended goal. Now the first way is that of a free gift from the British nation. In rejecting this alternative, Sir Satyendra speaks of it as a vision that "could only be realised if India free from the English could have stood in a tranquil state or in a sphere of absolute isolation." This is independence outside the British empire: who asked for this boon from the British nation? Did ever any political party in India petition the Imperial Parliament for a decree that the British people should immediately withdraw from India and leave her to herself? What has been put forward as India's aspiration is autonomy *within* the empire. This surely it is possible for Great Britain to grant as a free gift. She has done so to several colonies, though none of them can stand even to-day, if cut off from the empire, in a tranquil state or in a sphere of absolute isolation. The second way is that of a conflict with the British power—open war or intimidation by assassination. Open war, if successful, will result in absolute independence. As to those miscreants who throw bombs, it is difficult to say what their political aim may be, if they have a clear political aim—whether to drive the English out of India or only to wrest political concessions from them. The third way, that of increasing fitness on the one side and ready concession on the other, is the only one that is admissible in view of the object to be attained. Here we stand on firm ground. Great changes have taken place, as has been stated in dealing with the first way, in the status of British colonies as the result of peaceful political agitation. Our hopes are grounded on such

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

precedents. Sir Satyendra cites French Canada and the Boer Republics as examples of British generosity even in dealing with rebels and enemies. Such examples are dangerous. The perverse student may infer that Britain is generous only when she cannot help it. Let us examine this third way a little more closely. It is to be a prolonged process of growth, during which the people of India are to ask in proportion to their fitness and the British Imperial authorities are to give, when and to the extent that it will be impossible for them to withhold. This is what is known as political agitation or constitutional struggle. The process may conceivably be peaceful throughout. Given unfailing forbearance and good faith on both sides, it is quite a possibility. The one constant business of patriots should be to bring about and maintain this condition of peaceful and happy progress. Sometimes a concession may be too easily granted—the first way. Often, however, the tension between the sides will become severe. A sense of delayed rights will lead to impatience and strong speaking and writing. The reply on the other side will be repression. And this disturbed state of the polity may go on from bad to worse till finally a settlement is reached by the grant of concessions. In such a case one set of chroniclers will describe the event as a boon granted freely and without reference to fitness, while another will boast of having wrested a just right by sacrifice and suffering. In other words, what is called the third way will be found generally to be a combination, more or less difficult to analyse, of the first and second ways. Both Ranade and Gokhale used to say that privileges too easily conferred are not valued or used properly, and that only those are real blessings which are won by adequate sacrifices and sufferings. This is true doctrine without doubt. But every step of popular progress makes the next step easier, and unless history is a profitless study and experience makes no addition to human wisdom, there is reason to hope that political advancement will involve a continually diminishing amount of sacrifice and suffering. Of living empires, the British empire is the one within which it has been proved possible for a government to rise through regular stages from autocracy to the ideal of government of the people, for the people and by the people. As it is the good fortune of India to have come within the British empire, so let it be the glory of that empire to raise India to the fullest height of her constitution by entirely peaceful methods.

The idea of fitness for self-rule requires some clearing up. Those who affirm India's fitness are asked: Are we ready *to-morrow* to start a parliamentary form of government in the provinces and in the seat of federal authority? Can we have the whole machinery in full working order at a moment's notice—party cabinets, resignations of the ministry, appeals to the country and all that? Nobody makes such an absurd claim. When we say that a certain person is fit for the office of Deputy Collector, we do not mean that the moment he is installed he will make an efficient Deputy Collector, but that, if he be given a fair trial in the office, he will in time discharge its duties efficiently and satisfactorily. So in the case of the Indian people. Our contention is that among them there is sufficient material on which to build a structure of self-government. Their intellectual and moral equipment fully justifies their being trusted with responsible government. But existing political institutions cannot be overhauled altogether. Adjustments have to be made with the utmost care. This is a work of several years, perhaps of one whole generation. The probation, therefore, will last longer than till *to morrow*. Let us remember also that political education does not proceed at a uniform pace. During certain periods it takes enormous strides. The last ten years have witnessed in India more progress than has taken place in any fifty years since the English came to India. The next ten years are sure to be marked by vastly greater progress. Nevertheless, the exercise of autonomy will in the first decades lead to serious mistakes and result in heavy losses. Perhaps a few animosities, now held down by superincumbent pressure, will break out in violent forms. But these risks and others of the kind will have to be faced at any time the people of India get real power—whether now or at the end of two hundred years. Shall we face them as we may or leave the hard task to succeeding generations?

One idea of great usefulness which the President of the Congress put forward was that at the end of the war the Imperial authorities should issue a declaration definitely accepting the political goal of the National Congress and the Muslim League. The present writer may be pardoned for quoting a sentence from an article that he contributed to the first issue of "Young India" published on November 17 of last year. "At the end of the war Indian politicians, unless they mean to betray the interests of their country, must press for an undertaking by the supreme authorities, not to be set aside or whittled down in practice like some of the pledges and proclama-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tions known to the history of this country, that they will adopt suitable measures devised for the express purpose of placing India constitutionally alongside the Colonies." The language in some respects anticipates Sir Satyendra's words. After quoting Lord Hardinge's advice to the Civil Service which contained a promise of India's future "as a true friend of the empire and not merely as a trusty dependent," he proceeded: "Lest there be any among us of so little faith as to doubt the real meaning of those memorable words, or any Englishmen inclined to whittle down the meaning of this promise, I hope there will be an authentic and definite proclamation with regard to which there will be no evasion or misunderstanding possible." The appeal carries peculiar weight as it comes from one who in his own words "has been in the inner counsels of the empire for however short a time." No doubt it will "touch the heart and appeal to the imagination of the people," and therefore we fully trust the President will press the suggestion on the attention of the authorities. To prevent this proclamation, if it should be made, from being disregarded like some former proclamations by the authorites, it is essential that its fulfilment should be safeguarded by the insertion of a time-limit, say of 20 or 30 years. But it is precisely on this question of time that Sir Satyendra would not commit himself, to the great disappointment of his more enthusiastic fellow-Congressmen. He used an abundance of such expressions as 'the steep and weary path,' 'gradual,' 'cautious' and 'patient preparation.' On the other hand, he saw that the authorities would take advantage of the omission of a time-limit and postpone reform indefinitely. But he left the matter there, unable to make up his mind in the only way proper to the case. Mark the balance and indecision in the following passage: "While we admit that the goal is not yet, we refuse to believe that it is so distant as to render it a mere vision of the imagination. We deprecate the impatience of those who imagine that we have only to stretch our hands to grasp the coveted prize. But we differ equally from those who think that the end is so remote as to be a negligible factor in the ordinary work of even present-day administration." Shallow optimism may be dangerous in political affairs; but is not the pessimism equally dangerous which, after so many years of English education and apprenticeship in representative institutions under the peerless guidance of the British *raj*, hesitates to demand that responsible government should be worked up to in the course of the next thirty years?

How excessively and needlessly cautious Sir Satyendra is in his estimate of the political capacity of his countrymen comes out clearly in his treatment of the subject of local self-government. In this sphere a bold and fresh departure would be appropriate, no dire disaster or red ruin need be apprehended. But we see no strong demand, no bold enunciation of policy. It is still only "*more and more* of elections both of members and chairmen, and *less and less* of official control from within." It is quite time to ask that it should be, at least in advanced localities, *all* elections and *no* official control from within. Sir Satyendra recognises that local bodies are a most effective training ground to fit the people for the use of higher political powers. He deplores that after thirty years local bodies are still far from the stage outlined in Lord Ripon's famous resolution of 1882. After saying that the goal of self-government is not yet, he might have affirmed that the day of real local self-government had come. The lesson of autonomy must be learned somewhere: where shall it be if not in the more advanced local bodies?

INDIAN NATIONAL EVOLUTION.

A SURVEY OF THE ORIGIN AND PROGRESS OF THE INDIAN NATIONAL CONGRESS.

BY AMVIKA CHARAN MAZUMDAR.

It is, as we have said, so crammed with information that we cannot pretend to have done more than scratch the surface. But if we have succeeded in sending any reader of these lines to the book itself we are content. Its perusal is an education.—*India.*

"BULGARIA'S DEBT TO THE ALLIES."

BY MR. R. M. STATHAM, M.A.,

(*Principal, Kumbakonam College.*)

Neither her debt of gratitude to Russia and Roumania, nor the ties of kinship that link her with Serbia and the Tzardom, nor the interests of the lesser political organisms of which she is one, would seem to have any weight among the considerations that inspire or affect her policy of revenge and rancour. But it should not be forgotten that the sins of the leaders do not tarnish the Soul of the Nation.—Dr. E. J. Dillon.

In the light of Bulgaria's past history it is not surprising to learn that there are many Bulgarian soldiers who are anxious to avoid fighting against either Serbia or Russia, at the bidding of the Teutonic Powers. The present situation in the Balkans is almost entirely due to the intrigues of its Germanic Princelings, and is, in a special way, a vindication of Russia's protest against the election of Prince Ferdinand as King of Bulgaria. Even a very superficial knowledge of the conditions in Macedonia reveals the fact that the interests of Bulgaria as a nation are much more bound up with the ambitions of Russia and Serbia, in spite of old enmities, than with Austrian and Prussian aims for domination in the Adriatic and the Black Sea. It is from a national point of view a wholly artificial position that the nation, which gained freedom by the aid of Russia, Serbia and England, and which so recently raised the strongest protest against the bad Government of the Turk, should be allied with Austria and Turkey against the friends of her country. In the complex past of the Balkans, it is perfectly true there have been many times when Serbia appeared as the national enemy of Bulgaria, and when Russian influence seemed tending more to the fettering of Bulgarian freedom than to liberty; but the Bulgarian people can never forget that without Russia their cause would have perished at the outset, and that without Serbia and the Pan-Slav movement independent existence was well-nigh impossible. Since 1908, the Fox of Bulgaria has led his people into the vortex of World-Politics, pandering to their greed and holding out dreams of Bulgarian domination over the whole of the Balkans and Turkey in Asia. The second Balkan war largely engineered by Austria, should have warned England of the true state of affairs, when unwilling Bulgarian generals led their troops against their most recent allies. There will, it cannot be doubted, be much heart sorrow amongst the Bulgarians when they learn that the tide of success is turning against their new found masters, and that in 1916, even more than in 1913, they will find none to whom they may turn.

Bulgaria's national development has been of sufficiently recent attainment for its history to be fresh in most men's minds. The startling betrayal of Slavonic interests in the Near East comes, therefore, with special disappointment. Even if there had been no treaties to break and no pledges to disregard, one would have thought that Bulgaria's debt to the Allies was large enough to preclude all chances of armed opposition to the Allied cause. The Allied assistance was no doubt greatest at the time of the first Balkan War, but their share in creating Bulgaria dates further back. To those who have watched the rise of Bulgaria with pride it must come as a shock to see the country which freed itself from foreign yokes by self-developed patriotism and heroic sacrifice sold to the Teuton.

Bulgaria, it is true, had to free herself as much from the leading-strings of Russia, in the initial stages, as from the tutelage of Turkey; but Russian opposition in 1885, arising as it did largely from the personal feelings of one man, Tzar Alexander the Third, is not to be compared with the continuous and powerful help rendered by Russia throughout the 19th century.

How very personal was the feeling in 1885 is seen from the following remark of Alexander the Third: "I shall never be the friend of my namesake in Bulgaria." In this connection it is well to remember Russia's patience and toleration. In the words of Dr. Dillon:—

> There is a firm conviction that no reprisals are to be feared from Russia. This belief is grounded on the inexhaustible indulgence shown by the Tzardom to its creature ever since the emancipation. Stambuloff's waywardness, the election of a Coburg Prince, the annexation of Eastern Roumelia, the proclamation of independence, and last, but most significant of all, the refusal to refer the dispute with Serbia to the Tzar's arbitration and the treacherous assault on the Allies, in defiance of the solemn, but quickly-forgotten threat of the Russian autocrat, are so many object-lessons of Russia's constitutional soft-heartedness.

But Russia has not been alone in her patronage of Bulgaria. England and France have been consistently friendly and helpful. It is at least doubtful whether Bulgaria would ever have evolved as an independent kingdom had it not been for the kindly and firm offices of Britain.

The facts were briefly these:—Freed by the Treaty of Berlin from the worst rigours of Turkish misrule, Bulgaria, under Russian protection, was established as a principality, with Alexander of Battenburg as Prince. Bulgaria owed Russia much for setting her thus far on the road to freedom. But Alexander the Third in his excessive anxiety to keep Russian interests in Bulgaria dominant, misused his trust, and by his high-handed policy evoked, what was most needed for the future of Bulgaria, patriotism and a sense of nationalism. Prince Alexander, at this crisis, showed his spirit by throwing in his lot with his people, and accepted a royal crown as the outward indication of the New Bulgaria. His position was, to say the least, precarious. Russia, through her Tzar, fulminated, and Turkey and Serbia, at Alexander's instigation, seemed likely to oppose the new Kingdom at the sword's point. At this juncture Bulgaria was undoubtedly saved by the firmness and sympathy of England, or, perhaps, it is more correct to say, by the diplomacy of Lord Salisbury and Sir William White.

Has Bulgaria so soon forgotten the invaluable services rendered by England and France at the Conference of Powers which met at Constantinople in the winter of 1885, to consider the new situation in Bulgaria? Whilst Russia, Austria and Turkey demanded the restoration of the old condition of things, England and France were so strong in support of the New Bulgaria that so far from that country having to surrender her newly won freedom her position was consolidated. The short war with Servia which followed still further showed Europe what the new state was capable of. The Conference had dealt Alexander a hard blow, and he retaliated by a personal triumph over the Bulgarian King. Under pressure from St. Petersburg Prince Alexander was kidnapped, and though restored amidst jubilation, he thought that circumstances were too strong for him and abdicated. Prince Ferdinand of Saxe-Coburg was elected in his stead in 1887. Russia and Turkey protested. Their protest may be remembered to-day! It is well to remember also that under the terms of the treaty of Berlin, Turkey and Austria ought to have intervened in 1886, to protect Bulgaria from the attacks of Serbia. That they neither of them did so only serves to show what an unstable alliance the present one must be. As the present war in the Balkan area continues evidence is accumulating which reveals the dissatisfaction of both Turkey and Bulgaria with the objects and methods of their Austrian and German masters.

If Bulgaria's debt to England and France for past services is a large one, her debt to Russia is infinitely larger. It is useless for historical critics to point out, as they have done in plenty, that what Russia did was entirely self-interested. Even if such a statement were true it would not alter the undeniable fact that Bulgaria gained her present existence at the hands of Russia. Moreover there is abundant evidence to prove that Russia has, on the whole, been actuated by humanitarian motives. Turk mis-government, Turk treachery, Christian sufferings and the hopes of Slavonic liberty have been the instruments which repeatedly forced Russia into activity on behalf of the Balkan races. One whole century of interference in the Balkans has given Russia far less new privileges and territories than those she has been instrumental in procuring for the smaller nations of the Near East. As far back as 1812, a Russian war with Turkey resulted in the protection of the greater part of the State that is now Roumania. Some eighteen years later another Russian campaign forced the Turk to recognise the independence of Roumania, which at that time consisted of the Principalities of Moldavia and Wallachia. In addition to this Greece was recognised as independent, and Russia became the avowed protector of Christian interests in the Balkans. Russia has consistently declared that Turkey was unfit to take her part, as a civilised nation, in the concert of Europe. It has been unfortunate for the freedom of the Balkan people that the other great European powers have not always agreed with her. Turkey's trust in the tolerance of the powers after the Crimean War undid a great part of the ameliratory work of Russia. The Bulgarian massacres in 1875, and the revolt of Serbia and Montenegro in the same year prepared the way for the entry of Russia into one of her most bloody and self-sacrificing wars on behalf of oppressed nations. The results of the War of 1877 were seen in the Treaty of Berlin (1878), the details of which have already been noted.

Bulgaria has not been unmindful of the great assistance rendered by Russia. At the moment when Prince Alexander was celebrating his accession, a Bulgarian Mission was at St. Petersburg engaged in thanking the Tzar for his constant and invaluable help. This feeling of gratitude cannot be dead in Bulgaria. As late as the time of the capture of Adrianople in the first Balkan War, Bulgaria's representative at St. Petersburg is reported to have said: "The victory is the victory of Russia. Long live great Russia." And it is the opinion of those diplomatists and journalists who

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

know the Balkans intimately that, even to-day, the Bulgarians as a people are in sympathy with the allied cause. More particularly it cannot be doubted that "the Bulgarian masses are well-disposed towards the Russians and strongly averse [illegible] calculated to injure that generous [illegible] but one of our [illegible]tist," writing in Indian or Anglo-Indian, devotes space to criticising the situation. All agrees, the state of affairs is bad, but all are not equally agreed as to the remedies to be applied.

[illegible] of very able articles appeared in the interference of Russia in the [illegible] of the year 1878, when such suspicion was at its height, the Duke of Argyll wrote :—

> Everything that has been gained for the cause of human freedom to the East of Europe by the Treaty of Berlin has been gained wholly and entirely by the sword of Russia.

How then can we account for Bulgaria's present attitude? It may, perhaps, be attributed, primarily to three causes. The disastrous effect of the second Balkan war. The personal ambitions and intrigues of Tzar Ferdinand, and the absence of any great national leader to voice the Nation's conscience. The second Balkan war left Bulgaria isolated and broken, and intensified her hatred of Serbia. Her old interests in the Slav cause, in the unity of the Balkans and in the protection of Christianity, have all paled before her present passionate desire to obtain reparation for wrongs inflicted on her by the Treaty of Bucharest. Austrian and German influence was successful in the second Balkan war in putting Bulgaria into an entirely false position. A position from which she could neither safely withdraw, as withdrawal [illegible]ablation, nor one in which she could safely [illegible] and [illegible], since to continue would result in the [illegible]in[illegible]ination of true Bulgarian interests. It is unfortunate for Bulgaria, and for the Allies at the present time, that no worthy successor to Stambuloff has yet appeared. Greece, even with Venizelos, has not been allowed to follow her national bent. Bulgaria, without a Venizelos, has perforce dumbly followed her Tzar. There is nothing, perhaps, in the whole war that English people have felt so keenly as the apparent ingratitude of Greece and Bulgaria. They can only console themselves by regarding this aspect of the war not as a betrayal by their friends, but as one more revelation of the innumerable ramifications of German diplomacy, which were essential preparations for the "World War."

The Congress and the Moslem League.

BY MR. SHAMNATH MUSHRAN, M.A., BAR.-AT-LAW.

THERE may be persons here and there who have not been touched by what has happened at Bombay, but to the majority the sessions of the Congress and the League came like a sudden clap of thunder, which has rolled away the wisps of cloud that overhung the horizon. We see better and we see farther. We shall ignore the unworthy comments which will seek to make material out of the rowdy incident at the second meeting of the League and use it to the discredit of that body. That its critics should have nothing else against it is no small matter for gratification. The session has justified our faith in the natural, healthy life of the community—we see that in spite of temporary lapses and fits of waywardness the heart of the great community is sound. All roads of thought in this lead to self-government.

Nothing could have been more interesting or more symptomatic than the two addresses from the chair. The Congress address was what we had expected, our hopes were reserved for the other, and in neither were we disappointed.

It is greatly desirable that an appreciation of our difficulties or a sense of our limitations should moderate the formation of our wishes and the attempt to realise them so far as they do not lie beyond the pale of possibilities. That is not a plea for a lower aim or for invariably having the second best for an ideal. You can forsake the path of sanity on two sides, and the mean has extremes at either end. To be moderate we have to be in step with time and remember that what is moderation to-day may be inanition to-morrow. The pathos of this oversight is that we are obliged to mould the thought of to-day in the language of yesterday, and men have not only to moderate their demands, which is quite legitimate, but also to modify them in expression which is decidedly unfortunate. We half say what we mean, although what we mean is perfectly fair, and we half pursue what we think lest we come face to face with the anomaly of our views: we lose not only the virtue but the sequence of thought.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

We are not to ask for self-government because we are not fit for it. If we analysed this sense of fitness we might come to the conclusion that the standard of efficiency is not so very high, but it would be immoderate to ask for self-government, therefore we must not see what fitness consists in. The question needs a little more honest handling. There is no pretension that India is fit for self-government in the sense in which England or France or Japan is. No country would be if it never began lower down the scale. Nature of there can be no suggestion either that self-government is not to be trusted to people who have come abreast of England or France or Japan. There are some countries in Europe not quite so ahead of us as people might imagine—and there are others elsewhere which are decidedly behind. Peru and Argentine stand clear of leading strings, and yet there is ample material there for a stronger power, if it seized them, to establish their incapacity to look after themselves. The maximum of security there may leave something to be desired but they won't exchange their right to mismanage their affairs for culture and progress under the ægis of another. A great statesman whose name lends honour to the language of England once resorted to the argument that a fur coat though useful in Canada was out of place in India—and so was Home Rule. To ignore the retort that there are places in India where a fur coat might not only be useful but would be indispensable, we do not ask the powers for the luxury of a fur lining. We claim the modest indulgence of having over our shoulders the mantle of Mysore or Travancore.

All this is of course on the assumption that good government is no substitute for self-government—though how far Mysore would yield on the point of good government it is not easy to say. But when Mysore leads, India can follow. Security of life and contentment of the people, the bedrocks on which all bureaucracies base their own justification, afford no compensation for the loss of stature in self-respect and self-reliance. Nor is it sure that ignorance of all design and lack of purpose coupled with an entire absence of share in the moulding of one's life can rightly be called contentment. When others think for us and face our problems, it is a terrible Nemesis which we invite, and no sense of peace can atone for the corroding sense of incompetence. India takes her stand by that view. She has listened long enough to the charge that she is unfit for self-government, and it is with some bitterness that she throws back the charge that she is not being fitted for it. Other cheeks than hers should mount a blush when her incompetence is pleaded as a bar to her claims. Her present fear is that she will never be fit for self-government. It is the tentative effort which leads to the firmer step—and it is neither sagacity nor solicitude which prohibits the novice from [illegible] not alter because he [illegible] that Bulgaria gained her pre-[illegible] existence at the hands of Russia. Moreover there is abundant evidence to prove that Russia has, on the whole, been actuated by humanitarian motives. Turk mis-government, Turk treachery, Christian [illegible] helplessness, it is no relief to the apprehension that our muscles are being atrophied.

It is from this point of view that the President of the League approached the work before him. It is a magnificent tribute to the Moslem community that starting so late in their interest in the affairs of the country they have been able to grapple them with a purpose and a definiteness, which are far ahead of those of their Hindu fellow-subjects. They have set to work with a matter-of-factness which is denied to the workers of the Congress. They have not our indefiniteness of method because they have not the same inexactness of thought. It would be a bold statement that in ten years the League has not traversed the ground that the Congress did in thirty—or that she is in any way less appreciative of our difficulties or less capable of dealing with them. As against us they have greater earnestness and if they do not speak for so many they speak with greater clearness. All credit is theirs, and they have achieved a position from which they can call on us to follow. The pledge of Bankipur was redeemed at Bombay, and the belief was amply justified that the League would come to the view of the Congress from which currents flowing under the surface of our politics had deflected it for a time. The cross currents that still baffle us will be lost in the wide sweep of the flood when the younger generation comes a little more into its own. The diplomacy of age invariably yields to the earnestness of youth and the considerations which convinced the League will soon be as far behind us as the persons who first urged them. Nature is not more insistent on having its way than youthful minds with a healthy and honest outlook feel the desire of self-dependence and self-sufficiency. Young men, whatever their denomination, will realise more and more that the worker is to be lost in [illegible] work and in the race it is immaterial whose [illegible] wins the laurel so long as it gets to the feet [illegible] country.

THE EDUCATIONAL PROBLEM IN INDIA.

BY MR. WILLIAM JESSE, M.A.

(Principal, Meerut College.)

THAT education in India is not in a satisfactory condition at the present moment is apparent to everyone. Hardly a day passes but one or other of the leading newspapers, Indian or Anglo-Indian, devotes a portion of its space to criticising the situation. All agree that the state of affairs is bad, but all are not equally agreed as to the remedies to be applied.

Not long ago a series of very able articles appeared in the London *Times*, but, in spite of the obvious fact that the writer had a first-hand knowledge of the educational problems of the East, his criticisms tended to be destructive rather than constructive, and, while pointing out many weaknesses and anomalies, to omit to indicate clearly how those same defects could be best remedied, having regard to the special conditions, both financial and social, of this country.

This latter consideration is, unfortunately, too often ignored by those who have received a Western training. The Englishman, quite as much as the Indian, is very conservative, and is especially attached to that form of up-bringing, which has served him and his forefathers so well. This is particularly the case with those who have been educated at the great public schools and at Oxford and Cambridge, and they, remembering the influence that their peculiar discipline and venerable traditions have had on themselves, sometimes seem to think and act as if no other system could turn out men of character and self-reliance.

Yet even in England everyone is not reared on the same plan. Those whose training has been under the more fluid constitutions of our newer Universities tend to decry the claims put forward by the alumni of the more ancient seats of learning, pointing out—with some show of truth it must be acknowledged—their deficiency in utilitarian teaching, and the too great importance attached to a purely literary education on the one hand, and social life on the other. Those reared under conditions north of the Tweed have a contempt for what passes for education south of it. And, as if these views were not sufficiently bewildering, there are yet others, a smaller number no doubt, who, having obtained their knowledge from the Continent or America, are firm advocates of the particular methods which have proved successful in their own individual cases.

Unfortunately, it does not seem to be sufficiently considered whether, as the pupils are, almost without exception, Indians, it might not be well to try and understand things more from an Indian point of view than we do. It is true that, theoretically, they are consulted, and, in the case of a few leading men, considerable weight is attached to their views, but much more might and should be done to give them a greater 'say' in what so deeply concerns them. There is no time here to go into the difficulties that lie before such a policy. They exist, but are due, I venture to think, chiefly from the natural differences between Eastern and Western mentality, and, fundamentally, both sides have far more, and that the most important, in common than either party suspects. In any case, whatever difficulties there may be, it is absolutely necessary to get the public in sympathy if any real advance is to be made.

Before a doctor seeks to cure his patient, he diagnoses the ailment from which he suffers, endeavours to assign the cause, and then applies the remedy.

Similarly, before any cure can be suggested for our present ills, an effort must be made to determine exactly what are the evils of the system under which we work.

These have been variously pointed out from time to time, but speaking broadly, may be classed as four: inefficiency, unsuitability, inadequacy, and lack of religion.

Let us deal with these one by one, leaving for the present moment any attempt to explain their cause or suggest their remedy.

Let any one who is competent to judge—both from experience as an educationist, and from a knowledge of Indian conditions—examine the syllabus for the ordinary B.A. degree of one of our Universities, and he will be compelled to acknowledge that if a student has passed the test, he should be able to lay claim to a fair general education. Doubtless it is easy to criticise the various courses, now on this ground and now on that, but any one who has had actual experience in their construction knows only too well how much easier it is to point out a defect than to suggest the alternative. Taken as a whole the average "course" is satisfactory, and, if properly studied, should produce a reasonably educated young man. Alas! can we honestly say that the results are in accordance with our expectations? Are our gra-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

duates, when they have finished their college careers fit to take up posts for which their degrees should qualify them? Recently, speaking in the Calcutta University Senate, Dr. Fermor, of the Geological Survey, gave his experience as a member of a certain committee to examine candidates for an appointment as to their educational fitness. Most of these were Calcutta B.A's or B.Sc's. "All those who sat failed to satisfy a single test in their own subject, although they had obtained degrees but a year before. The physicists had forgotten their physics, the geometricians their geometry, the mathematicians their mathematics, and failed in simple addition, and ultimately the candidate selected was one who had not gone through a course of the University education." Let us hope that this is an extreme case, but at the same time there is no doubt that many of our young men select subjects for which they have no real taste, manage by dint of hard work to secure the bare pass mark, and within a short while of obtaining their degree have forgotten practically all they have learned.

The ignorance of what should be regarded as the mental equipment of any educated man is astonishing. The veriest elements of geography, history, and science have only too often been entirely forgotten by the time the youth has reached the higher college classes. The increase in hostel and college common rooms, where leading dailies and weeklies, many of them illustrated, are regularly subscribed for, will, it is hoped, ere long show their effect. Meanwhile this lack of "common knowledge" is an undoubted handicap, both to the young man who wants to become a "leader," and to him who desires to enter into society.

In English the inefficiency of the student is only too apparent. Examiners know well that the quality submitted by the candidates for degrees is far below what it ought to be, and that frequently the writer is quite unable to express his thoughts in simple and grammatical language. As a result the number of failures in these University examinations is large, but under present conditions it is inevitable. The blame does not entirely rest with the student, but until the teaching of English even be very materially improved in the schools little can be done. Much though we may regret the low percentage of passes, it is impossible to hope that it will substantially rise until a candidate is better able to put his ideas on paper. Nevertheless this fact does not do away with the perfectly reasonable complaint that the present state of affairs is unsatisfactory. If so few students pass the comparatively simple examinations which lie before them, it is at least not unnatural to infer that this is due, as much to the inefficiency of the training, as to the idleness of the examinee.

Finally, when we look for the results of our highest teaching we must candidly admit it is woefully disappointing. The general standard of culture has undoubtedly increased, but the number of names of those who have risen above mediocrity is few indeed. Tagore the poet, Roy and Bose the scientists, Tata the captain of industry, spring at once to our minds; as also those of several famous judges and not a few great politicians. But these are few in comparison with the size of India, even allowing for the vast proportion of illiterates. The cry that goes up when a Gokhale, a Mehta, or a Sir Syed Ahmed passes away is undoubtedly a true expression of the deep sorrow that overwhelms the nation, but underlying it is also a note of despair of not being able to find one to take the departed leader's place. This can hardly be regarded as a satisfactory condition of affairs after some seventy years of educational progress in a great country like India. From whatever point of view we look at it we are compelled to agree that, at its best, the results of our policy for the greater part of a century are mediocre, and as a preparation for the battle of life, whether of the individual or the nation, our educational system has proved inefficient.

But education in order to be efficient must be suitable. In the first place, it must have a practical value, and in the second, it must comply with the social and racial habits of the people. Does our present system conform to these conditions?

Without going to the lengths of the condemnation that had been brought against it, it has to be conceded that there has been too great a tendency to slavishly follow the English model, without sufficiently considering the different conditions that obtain in the two countries.

Our British system undoubtedly forms an excellent basis. Indeed, seeing that the English had to introduce a system of some kind and Englishmen had to work it in the first place, it was inevitable that they should advocate that to which they were accustomed. Unfortunately they insisted too rigidly on the similarity, without allowing sufficiently for Eastern idiosyncrasies. An English public school, and a French

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

lycée are as different as the poles, although the two countries are only separated by a narrow channel of the sea. How much more likely is it that arrangements, rules, and a discipline that would be admirable in an institution like Winchester may fail dismally in a school in the Punjab or a college in Bengal. Journalists and others who should know better have more than once referred to Aligarh as "the Indian Oxford," and Ajmere Chief's College as "our Eastern Eton." In neither case is there the faintest resemblance, nor under the present social conditions is anything of that nature likely to spring up. There are rumours that schools for Indian lads of the better classes, to be run on public school lines, are being started in Calcutta and Simla. Whatever they may ultimately develop into, they are bound to be something very different from that which is essentially English, and which has been both the admiration and the despair of every other country.

Apart from the religious and caste difficulties, our rigid discipline is utterly out of harmony with the ideas prevailing in the average Eastern household. Many of our difficulties in dealing with students, and the resulting strikes are due to the fact that the Englishman cannot understand that what would be readily accepted at home is sometimes deeply resented out here. We may believe that our ideas are better: it is quite possible that they are. The fact remains that the Indian does not think so, and hence often does not support authority as he should. This attitude is much to be regretted, but it has to be taken into account if any satisfactory work is to be done. In England tradition has given enormous power to masters and senior students. Parents having themselves been brought up under these conditions rarely think of listening to complaints from their progeny, and if they ever do make a remonstrance they cannot hope for much sympathy either from the authorities or the public. Discipline such as exists at Rugby or Marlborough, or at a university college, would in India be bitterly resented as unjustifiable tyranny. It is sometimes forgotten that even in England it is only the so-called upper classes that willingly submit to it, and they do so on account of their patriotism to school or college, and because of tradition. Where these feelings are not so strong, we find symptoms not unlike—though perhaps not so marked—those prevailing in this country.

Secondly, there seems to be a very general consensus of opinion that the present system is unsuitable from a practical point of view. Constant complaint is made that the courses are too literary, and that more attention should be paid to the future calling of the pupils. A more resolute effort is demanded from the Government in forthcoming technical and industrial education.

Much undoubtedly remains to be done in this direction. Things are far from satisfactory, and much time is wasted by youths in learning subjects, which, from the nature of things, can be of no value in after life. Unfortunately the solution of this problem is not a simple one, and is far too wide to be more than referred to here. But, although at first sight our training may seem too literary, it must not be forgotten how absolutely lacking in general education our young men would be were all teaching reduced to the mere improvement of the wage-earning capacity. It must not be forgotten that social conditions are not such as to encourage a good general knowledge. In Europe much is assimilated in the home, from the parent or friend, or in ordinary social intercourse. In India conditions are somewhat different, and the class-room has often to do not only its own work, but that which should have been already completed in the home circle.

Much has been said and written during the past few years regarding the need for technical training. That institutions are very few is perfectly true, but is as much use made of those that do exist as might be expected? It would be interesting to learn more, for instance, of the numbers that apply for admission into the Tata Institute at Bangalore, the courses selected, the standard attained, and the demand for the services of its diploma-holders. Unfortunately sufficient publicity is not given to the work of the college, and very little is known, in Northern India at any rate, of its labours or results. The entries into the agricultural and veterinary colleges have not apparently been satisfactory except where the entrant is practically assured of Government service, and the same seems to be the case with other technical schools.

The causes for this reluctance to enter such institutions as exist require further investigation. It is obviously impossible to expect young men to expend time and money on special training if afterwards they cannot be sure of finding employment, and if young men will not enter, it is useless to further increase the number of schools. It is sometimes forgotten that one who has received a technical education is rarely of much value until he has had further practical training, and at present conditions for such training are not available to any great extent. Fur-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

thermore social customs and the need for being early in a position to maintain a wife and family preclude the more lengthy and thorough course of instruction, with the long wait without adequate remuneration which is the normal state of affairs in the West. Still when all is said and done, matters cannot be left as they are. India demands further technical education and commercial and industrial opportunities; the Government asks for guarantees that that any expenditure will be justified. The result is somewhat in the nature of an *impasse*, but the matter is so urgent that it cannot be left where it is. It surely cannot be beyond the wit of man to devise some line of policy which shall result in turning aside a portion of the present crowd of literates into the channels of commercialism and industrialism.

The third difficulty under which education labours is its inadequacy. Owing to the fact that superior employment, not only under Government, but in any capacity, is practically confined to those who can produce a certificate of having passed one or other of the University examinations, it is almost imperative for every youth who hopes for anything of a post to pass at least the Matriculation or its equivalent. As might be expected the upper classes in the schools and the lower classes in the colleges are deplorably congested. Numbers of new schools have been built, but they have only partially relieved the pressure, and each year matters become more serious. This overcrowding is leading, and has led to a very great loss in efficiency. It is a physical impossibility to give any individual attention to the crowds that throng the lecture-rooms, the inferior students keep down the standard of work, as teaching has necessarily to conform to their level, and the result on the work of the more intelligent is simply deplorable. Yet the insistence of parents that room should be made for their sons is very natural, when we remember this necessity for some University diploma. It is no use blaming them for their supposed indifference to efficiency. While they are waiting for efficiency the opportunities for their particular son are lost. Equally is it unfair on the part of leading personages to put down the demand of Government for improved tuition to an insidious attempt to restrict education. There is urgent need for a free and open enquiry into the means for reconciling these two diametrically opposite views. Improvement will cost money—much money—but it must be found. If the present revenue is insufficient and private enterprise not forthcoming, special taxation will be necessary. In England an educational rate is charged, and it might be worth while to consider whether something similar might not be introduced into India.

As things stand at present the schools and colleges are insufficient in number, and in many the class-rooms are not large enough to hold more pupils, even if such a measure were desirable. Additional rooms cannot be called into existence in the manner of the walls of Troy, and, when they have been provided, teachers must be engaged. The pay given to the schoolmaster is so low that the wonder is that men with any qualifications at all can be got to accept posts, and hence, unless further funds are forthcoming—for the fees of the additional students will not suffice—expansion must founder on the rock of finance.

Lastly, there remains the ethical side of the question. Undoubtedly the Government were right in determining to maintain a strict neutrality with regard to religion. Unfortunately this action has led in practice to the total elimination of religion and religious teaching in all but a few special schools and colleges. Divorced from religion ethics lose their force with the young, and the teacher who can with success substitute 'moral' for 'religious' teaching is practically non-existent. A man of high character undoubtedly exercises a tremendous influence on his pupils and for this, if for no other reason, the miserably low pay allotted to teachers as compared with that of those in other professions is greatly to be deplored.

In India this policy of non-interference is fraught with particularly grave consequences. The Indian, whether Hindu or Mussalman, is nothing if not religious, and to him the action of his rulers, even when he understands its motives, is entirely contrary to his ideas. The Government during the past two or three years has begun to realize the mistake and has endeavoured to remedy it—in part at any rate—but the evil has been working too long to be eradicated easily, and any change of policy is liable to be looked upon with suspicion, or at least with indifference. The benefits that a wider recognition of religion would bring are so great that, in spite of every difficulty and discouragement, its re-establishment should be aimed at, but this can only be done with the fullest co-operation of the people. I cannot do better than conclude by quoting a recent well-known Lieutenant-Governor of Bengal, Sir Andrew Frazer:—"I am very strong-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ly convinced that, unless we provide for religious training as well as for secular instruction, we expose the peoples of India to an unspeakable danger. We do more than this. We educate the youth of India in a manner that is strongly distasteful to their parents.

The people of India are naturally a religious people, and they have a strong belief in the influences of religion and of home life. If we fail to give religious instruction, we shall either find the people of India becoming by our influence, and against their will, agnostic and atheistic in their views, and wanting in religious and moral character; or we shall have them full of an altogether unjustifiable discontent with our system of education. . . . . I regard this matter, therefore, as of the very highest importance in respect of the future of India."

BRITISH WOMEN IN WAR-TIME

BY ST. NIHAL SINGH.

THE war is most seriously affecting the lives of British women. Millions of them have stepped into the posts vacated by men who have thrown down the pen, brush, spade, and other tools of trade to join the ranks of the army and to engage in war work. Thousands of them have been called upon to give direct help in various ways, to prosecute the war. You seldom come across a woman who has not sent to the front her husband, lover, son, or other male relative or friend. Some of the soldiers and sailors have already been killed or wounded, and many more of them are likely to be maimed or to lose their lives before the war comes to an end, bringing sorrow to their women-folks and perhaps hardship and perplexity. The longer the hostilities continue and the fiercer the struggle, the greater will be the disproportion between the males and females of Great Britain, where before the present conflict began the women outnumbered the men by about 1,000,000. Great issues, therefore, confront the British women.

It is difficult to compress into a short article a comprehensive account of the far-reaching effects of the war upon women, and of their many-sided activity during this crisis: but I shall attempt to present here a few outstanding points.

I may first consider woman's entrance into avocations in which she was not permitted to engage before the war. I am being constantly surprised by finding women working in new capacities, and nearly always succeeding in whatever they undertake.

THE WOMAN-CONDUCTOR.

The other day I went to town on an omnibus, and found that a woman conductor had taken the place of the man who used to collect my fare and give me my ticket. The woman was quite business-like in manner and smartly dressed. Her boots, however, had high heels—"Cuban heels"—I believe, the women call that particular style. That made me wonder how she would be able to stand the wear and tear of a ten-hour day seven days a week, involving much running up and down the stairs, for the London omnibus is a double-decked conveyance with seats inside and also on the top. The winter in the British metropolis is not unlike our monsoon weather except that it is cold in addition to being wet and slushy. One, therefore, is not at all sure how the women conductors will bear constant exposure to the inclement weather. The British women are however, uncommonly gritty, and they are driven by necessity to take up positions of this description. Although the innovation was introduced recently, I find that it promises to prove a success. I see that women conductors have already discarded high-heeled boots and are wearing sensible foot-gear. Their skirts barely reach to their boot-tops, and will not become wet and muddy at the bottom while they are engaged in the performance of their duties.

There is a strong sentiment in favour of employing women conductors on the London trams. Many complaints are being made about the infrequency and irregularity of the tram service on certain lines, which are attributed to shortage of labour, and which can only be remedied by employing women to take the place of the men who have enlisted in His Majesty's forces. Opposition is being offered by the tram men, who are afraid that the introduction of women conductors may result in lowering their wages. Tram men showed similar hostility in provincial towns, but yielded more or less gracefully when they found that there was no help for it. Women tram conductors have become an ordinary sight in several cities of Great Britain, and everywhere they have proved an unqualified success. London is bound to follow the lead of these cities.

RAILWAY WOMEN.

Women have taken the place of some of the men who have left railway offices to join the colours or to work in munition factories. It is seldom that one now sees a man acting as a booking clerk at any of the metropolitan stations. Women are being increasingly employed as ticket-collectors. Those working in the last-named capacity have been given a uniform which is most becoming to them, and they are showing great diligence in their work.

A season-ticket holder related the other day that while the men ticket-collectors took it for granted that he had his season-ticket, and did not ask him for it, the women who have taken their place demand to see it at short but irregular intervals. Honest man that he is, he added that the vigilance of the women employes has stopped his forgetting to take out a new ticket as soon as the old one expired, something that he, like many others, was formerly in the habit of failing to do.

One is getting used to having one's luggage carried by a woman porter. Most of them are not required to haul heavy weights, though some of them appear capable of doing so.

I should not be surprised to see women acting as guards, and even as drivers, if compulsory service goes into effect and there is a further drain of men from the railways. The military authorities appear to be considerate and are taking care that recruiting does not dislocate railway traffic.

WOMEN AND TRACTION.

Women are being largely employed on delivery wagons. The lighter types of vans are now almost altogether "manned" by them. There is little doubt that they shall have to be employed also on the heavy lorries, because the shortage of men is greatly dislocating the transport of goods by roads, and, in some cases, is even leaving vans idle.

Women are said to be unsuitable for this class of work. It is, however, being suggested that they should be used as assistants to men-drivers of heavy vans, and thereby free a large number of men who are at the present time acting in that capacity. It was stated in a recent issue of the *Times* that:

"At least one firm in London is satisfied with the experiment of using them as drivers of four-ton lorries. They do not take charge of the machines unaided, and as the task of starting the engine is beyond their strength, the 'cranking' is done by a man who is also carried on the vehicle; . . ."

It is hardly necessary to add to what has been written that women are acting as drivers of some of the taxis, which ply about the town for hire, and of many private motor cars and other vehicles. Many women who formerly employed men to act as *chauffeurs* now drive their own cars.

A PATRIOT WITH ONE LEG.

I know of one case in which a doctor's wife has taken charge of her husband's car and drives him about from house to house when he makes his professional visits to his patients. The case is remarkable because she has only one leg, the other having been amputated some time ago.

The appearance of women in out-door occupations other than those that I have described is also noticeable. Let me give a few instances.

Before the war, men were sent from house to house to read the gas meter and collect the gas rates. Now their place is being taken by women.

Formerly men came to receive orders for dry and green groceries and to deliver them, at present there is a strong tendency to employ women at such tasks. There is a concerted movement to discourage the practice of sending persons to book orders and even to deliver them —the inevitable result of shortage of labour. One notices, in many shops, requests printed in large letters begging customers to take home with them all the purchases that they can conveniently carry. I can cite the case of at least one establishment which refuses to deliver goods carriage free unless they exceed a stipulated amount in value. The same firm, before the war, used to deliver insignificant orders without charge.

From my personal experience I find that the men who used to distribute circulars from house to house and hawk merchandise of one kind or another have nearly all been drawn into the army, or absorbed in trades and industries, and are not such a nuisance as they used to be. The number of women canvassers does not appear to me to have increased very much. This fact speaks eloquently of the urgent demand for women to engage in occupations that supply the necessities of life.

I have seen women delivering milk. They were not employed previously in this vocation: but they may even monopolize it.

I have also noticed women "postmen" delivering letters. There is little doubt that they will be used in this capacity in increasing numbers as

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the war goes on. In any case, the post office is employing a larger staff of women than it did at any other time in its history.

Whereas before the hostilities commenced there were very few women newsvendors, now there are many of them. An enterprising London newspaper has recently given smart uniforms to its women "newsboys."

Women are also working as window cleaners. In some towns they have formed themselves into fire brigades.

Many of the stalwart men who used to stand before the doors of shops and restaurants and were known as "commissionaires," have disappeared and their places have now been taken by women, who open the doors of motor cars and carriages as they come to a halt at the edge of the pavement, hold an unbrella over the customers' heads as they walk across the sidewalk to the door when it is raining, and whistle for taxis when they are required. Women are also being employed to act as messengers and "errand-boys", to deliver messages to firms, and perform similar services.

SCARCITY OF SERVANTS.

Even before the war the number of men-servants in London and other cities and towns in Britain was limited: but now they have nearly disappeared. The few who still remain are usually above or below the military age, being either old men or boys. There seems to be a great scarcity of women servants on account of the great demand for female labour. Many who, before the war, were contented to be in domestic service have gone into factories and shops.

Before the war began the waiters in the moderate priced restaurants and the tea-shops were women, but the high priced restaurants, *cafés* and clubs employed men exclusively, mostly foreigners—Germans, Austrians, French, Italians, Swiss, etc. The Germans and Austrians have been interned, and most of the other aliens have returned to their homelands to join the colours there. During the early part of the war the attempt was made to employ Englishmen in place of the foreigners, but that effort had to be abandoned, as the men were needed for the army and for military work. The number of waitresses, therefore, has increased, and to-day they are to be seen in exclusive restaurants and clubs which in the past disdained to employ them in any capacity.

Establishments which formerly refused to open their doors to women have had to let them in. The banking world, for instance, has had to make this concession. Some time ago I was surprised to see a woman's coiffure projecting above a partition in a bank to which I used to go quite often, and in which I knew women were not employed in the capacity of accountants, clerks, etc. I hear that the bank of England has recently engaged hundreds of women as clerks.

Before the war, women were not employed, to any extent, in the libraries. Now there is probably no library where they do not act as assistants.

SPECIAL TRAINING.

Women have taken the place of men behind the counters of grocery and provision shops. I understand that some of the technical institutes are making a specialty of offering a short course of training, at a nominal cost, to fit young women to take up this line of work.

Women are being engaged in shops at work for which they were not considered fit formerly. They are, for instance, acting as "floor-walkers"—whose duty it is to walk about the shop to superintend the sales-women, and to give information concerning the stock to inquiring customers. Women, before the war, were generally considered incapable of bearing such responsibility. The war may or may not have made the shopkeepers change their views on this subject—I believe it has, to some extent, at least: but it is compelling them to employ women in this capacity. The heads of establishments have also been forced to engage women as "liftmen", and as I have already noted, as commissionaires and "van-men".

Public and private offices are now employing women in larger numbers and in much higher capacities than they did before the war. Women are also being given work in mills and factories for which they were formerly considered unfit. I do not wish to go into details, as they are of a technical nature.

There appears to be a shortage of boy labour. Girls are, therefore, in great demand. One is surprised to see girls in newspaper and other offices opening doors, answering inquiries, running errands, and carrying about papers and parcels.

RISE IN WAGES.

Wages are steadily rising in those trades that supply the necessities of life, or those that are directly or indirectly connected with the war. Both men and women are benefiting from this general rise.

Except in isolated cases, women are receiving lower pay than is given to men for serving the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

same number of hours and performing the same work. Much agitation is being carried on by women leaders to force employers to give the same wages to women that they pay to men: but so far without much effect.

Thus far I have confined my remarks to the subject of the introduction of women in avocations to which they were not formerly admitted, and to the increase of their number in the occupations in which they were engaged before the war. Now I shall write of the patriotic work that women are doing.

A WOMAN COLONEL.

The demands made by the war upon army doctors have been so great that the authorities have had to remove the ban from women doctors. I cannot state the exact number of women who are employed in military hospitals at home and abroad: but I believe it is considerable. I know of at least one case in which a woman doctor has been given the rank of Lieut.-Colonel. I hear that one military hospital is entirely managed and staffed by women.

British women were employed as Army and Red Cross nurses long before the present war: but never before in such large numbers as now. I never go to any public place without seeing one or more women in the uniform of an army nurse. They are to be seen in trams, trains, restaurants, theatres, lecture-halls, here, there, and everywhere.

Some of them look fagged, but tired though they may be, their patriotism never flags. Many among my acquaintances have taken to army nursing during the last sixteen months, and those whom I have not from time to time always show great love for and interest in their work, and deep sympathy and concern for the wounded soldiers.

I understand that a large number of women have expressed their readiness to serve as military nurses on the registration forms that they were required to fill up some time ago. Many titled and wealthy women have offered their services in this capacity.

Rich women are placing their motor cars and carriages at the disposal of the military hospitals for a definite number of hours every day, in order to enable convalescent soldiers to go out for an airing. In some cases they drive the cars themselves. One daily sees conveyances of all sorts loaded with wounded Tommies dressed in hospital clothes driving through the streets and the parks.

Women are also doing ambulance work. I believe they constitute a reserve force and are called upon only in cases of emergency. I often see a woman belonging to an ambulance corps driving about town in a small motor car.

Women are also serving as volunteers. They are called upon to do light work.

Thousands of women are employed in munition factories, making, with their own hands, shells, ammunition and weapons that are being used to defeat the machinations of the enemy. Titled and society ladies are working side by side with their poor sisters, all inspired by patriotism of the highest type.

POLICE WOMEN.

Some women have also taken up patrol (police) work. They go about the streets, especially in the vicinity of liquor shops (public houses as they are called in Britain), and seek to save young and inexperienced women from falling into temptation.

SELF-SACRIFICE IN EXCELSIS.

A noble sense of patriotism is impelling many women to marry blind and otherwise disabled soldiers and to devote their whole lives to bringing comfort and happiness into the lives that have been blasted while the unfortunate men were engaged in fighting for their "King and Country." One occasionlly sees advertisements in the personal columns of the newspapers, inserted by women who are desirous of making such a sacrifice.

Women are distinguishing themselves in affording relief to those who have suffered through the war. Large bodies of Belgian and French men, women, and children, fled during the early months of the war from those parts of Belgium and France that are occupied by the enemy and sought shelter in Britain. Many of them brought money and valuables along with them. Others, however, were not so fortunate, and have had to be taken care of. The British have been very kind to these strangers within their gates. Comfortable homes have been found for them and they have been helped to rehabilitate themselves.

The manner in which British women are behaving during this crisis enthuses even a blase observer. The ingenuity and willing sacrifice with which they are meeting the emergencies as they arise do credit to them. The activity that they are displaying in helping the men to fight, and in carrying on life in spite of the fact that millions of males have been taken away from peaceful pursuits, shows at once their patriotism and their resourcefulness. A nation which is privileged to possess such women is bound to live and thrive.

How Can England Know More About India.

BY PANDIT SHYAMA SHANKAR, M.A., BAR-AT-LAW.

THERE is an injunction in our sacred code—the Code of Manu—which runs as follows:

> Tell the truth, say what is agreeable
> But do not tell an unpleasant truth.

This is what we should follow under ordinary circumstances. But under special circumstances, we should rather follow the moral maxim: "If you want to injure an enemy, flatter him; on the other hand, if you want to benefit a friend, expose his defects." So please judge me according to this maxim. If I be wrong in my views—and man is liable to err—the error should not be attributed to any motive but friendly.

My subject is:—"How can England know more about India?" But before I take up the *how*, I must explain the *why*, and I must show how little England comparatively knows about India.

THE NECESSITY OF THE KNOWLEDGE.

To put my whole proposition in a pointed way, let me say:—"India and England are necessary to each other for the British Empire and hence the knowledge of each other is imperative to either."

The many comparisons that I shall draw in the course of this lecture* in favour of Germany, may give you the impression that I am a pro-German. Nothing of the kind, and I must tell you straight away at the very outset, that by religion I am a universalist, socially I am a humanist, in international politics, I am for a Federation of the Powers and in Indian politics, I am for a thorough amalgamation of Great Britain and India—an identification of the political and commercial interests of the two great countries based on indissoluble relations. So I lay stress on my statement: India and England are necessary to each other.

This object cannot be accomplished, if England does not know India and England's true interest in India can only spring from a better knowledge. It is on the face of it obvious that you cannot consolidate your interests in any country unless you know the people; their traditions, their genius, their characteristics and their aspirations

* Delivered at the University College, London.

THE EXTENT OF IGNORANCE.

England's ignorance of India is colossal. One in a thousand knows whether India is inhabited by savages or civilized people. One in tens of thousands can tell a Mohammedan from a Hindu. Very few of the members of the Parliament—the Supreme Legislative Body of the Empire—know where the United Provinces are situated and fewer still can say why Benares or Lucknow is famous.

It were well if this ignorance was an utter void or a merely passive element. Unfortunately it is sometimes broken by wrong or partial information which infuses into it an element of distrust, prejudicial regard or hatred. To give you some instances:—

† You are often told what barbarous atrocities the Sepoys perpetrated during the Mutiny. But you are not told what generous protection was extended to the British fugitives by all classes of the gentry and what valuable assistance was rendered by the majority of the Gurkhas, Sikhs, and the Mahratta and Rajput Chiefs, who are still fighting side by side with the British troops—the Rajput Chiefs, whose chivalry and laws of honour date back to pre-historic times and whose ancestors followed a civilized form of warfare which the modern Western nations have not yet approached.

In the epic battle of Kurukshetra, in which all the important princes of India took part, fighting began after morning prayers and stopped at sunset. At night the combatants visited each other's camps and enjoyed reciprocal hospitality. The commander-in-chief of one army, Bhishma, preferred death to using arms against a woman who was fighting as a prince in disguise.

You are sometimes told that an Indian is by nature sly and unfaithful, but you are seldom told that the honour, life and property of the English ladies in India, is not guarded by British soldiers, but lie in the hands of Indian watchmen who generally draw a pay of five or six rupees a month (*i.e.*, about 2 shillings a week).

The newspapers do not fail to report to you the anarchic attempts against British life in India, but they hardly tell you the splendid services

† The ordinary British public,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

done by the Indian officers and police to trace and defeat anarchy. The self-sacrifice of the Indian sepoys to protect English life both in India and in all parts of hostile Asia, has no parallel in the history of the world.

You are sometimes told that the Indians look down upon the English because they do not admit them into their temples, their family, and they refuse to dine with the English. But it is not always explained that they do the same thing with their own people, without regard to rank or wealth.

You have heard it said that the women of India are not properly treated and kept very much in the background. But you seldom know what affection we have for daughters, what dowries we pay at their weddings, how we, as a rule, love our wives and study their happiness and how we *worship* our mothers, who really command us and rule all our family affairs. All our social concerns—weddings, funerals, banquets, etc., are controlled and conducted by our elderly ladies. You may also know that our much-condemned *purdah* is enforced by the ladies themselves. No woman of the Indian gentry is allowed to work for her livelihood and social law demands the protection of every woman. Thousands of years before 1882, when the Married Women's Property Act was passed in England, our married women could legally possess separate property and a widow could claim maintenance from her husband's relations.

The influence that women in India exerted on men's life can be best estimated by a reference to the epics. One particular legend you will find at page 120 of "Metrical Translations from Sanskrit writers by J. Muir." The heroine of this legend, who exhorts her son to "awake to deed of high emprize", is described to be learned and statesman-like.

You are told that the Indians marry many wives, but you are not told that one in a thousand, who has the means to maintain more than one wife, indulges in bigamy. The percentage is so small, that the last census does not trouble about the statistics.

There was about two years ago a pompous announcement about staging at Earl's Court an Indian Show, the object of which was to glorify the fact that the Christians arrived in India to prevent human sacrifices. The organisers did not mean to supplement the show with another scene to illustrate the habits of millions of Indian people who abstain from all kinds of slaughter and many of whom actually live the life outlined by Christ's Mount Sermon, so rarely put to practice in Christendom. Long before Christ, an Indian Emperor (Asoka) sought to make humanity a state religion. You hear of depressed castes or classes in India, but perhaps do not hear that slavery was never recognised by the ancient Indian laws. This is supported by the Greek account to the effect that there was no slavery nor untruthfulness in India.

I can go on giving you further instances of the partial truths that you are told, but I hope these are enough to illustrate that the one-sided stories go a great length towards prejudicing English mind against India and impairing the regard which is otherwise due to our country.

CLASSICAL TRADITIONS.

You cannot know India, unless you study her classical traditions. Although she possesses no regular history of old times, she is a living museum of her own antiquities. The primitive habits of both your and our common ancestors are still preserved in her, although she has passed through many phases of transition.

One who studies the religious and classical lore of India, knows and understands the Indian people better than those who have studied them superficially. Dr. Barnett and Dr. Thomas, who have never been in India, know more about India than many of the retired I.C.S's. Very few of the Indian Civilians take up the study of Indian classical traditions in early years, and they generally come back from India with a skin-deep knowledge of Indian arts, literature and social characteristics. Their education to qualify them for Indian service is so defective that they can never go into these with a true spirit in after years. Even our own Indian students who are trained in England for the Indian Civil Service suffer from the same lack of proper education. The other day an Indian student of Oxford asked me: "How many wives has your Mahárajáh? Does the chap pull his subjects by the nose or has he got any laws?" To tell you the truth I was shocked. He is a Hindu claiming Rajput origin and yet he does not know that the most conservative Hindu Ruler, called "The Sun of the Hindus," the Maharana of Udaipur who traces unbroken lineage from the greatest ruling dynasty of the epic age—has got only one wife and has got a Council called Mahendra Sabha to administer justice strictly according to fixed laws. I am glad that the student failed in his Civil Service Examination, but what astounds me is this, that the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

candidates for the Indian Civil Service Examination need not have any previous knowledge of India at all. Is there not a bitter irony in the fact that with the object of teaching and educating India, you send out Professors who do not know India at all? They may be good scholars of Latin and Greek, but that does not help them in being acquainted with the traditions, social habits, mode of living and mode of thinking of Indian students in their true light. England has been directly associated with India for a long period, yet her literature of classical India is poorer than that of Germany. Consult the British Museum Catalogue and you will find that the bulk of German literature on the soul and spirit of real India by far outweighs that of English. Only a few years ago, the greatest Sanskrit scholar in England was Max Muller, a German; and the greatest Sanskrit scholar in India was Dr. Thibaut, a German. Even America is going ahead of England in her study of classical India and the real spirit of India of to-day. Does it redound credit on ourselves and England? To prepare my thesis for the M. A. examination, I had to do some research work, and my Professor, Dr. Barnett for whom I have the greatest admiration, had to give me notes from the German works of Jolly, for there was no book in English for the required information. I had to read Jolly's "Tagore Law Lectures" prescribed by the University on the subject of History of Hindu Law. When I pointed out to my examiner, Prof. Neill who is happily here in our midst, how confounding and illogical some of the Lectures were, he confessed that the University chose the book because there was no other good book on the subject. What does this prove? It proves a sad lack of interest on the part of England in the study of Indian classical literature, which has got a living influence in India. William Jones, Colebrook, Cowell, Monier Williams, Prof. MacDonnell, Sir Charles Lyall, Dr. Barnett, Dr. Thomas and Prof. Rapson, Dr. Arnold and others have done and are doing splendid work. But is the list of scholars adequate? Are their works studied by an appreciable number of Englishmen? Besides, are our English professors working independently of the many theories, prejudicial to India's ancient glory, forged in the German workshop?

POLITICAL KNOWLEDGE.

It grieves me to discover that many members of Parliament, which exercises the supreme sovereign power over the whole Empire, betray lamentable ignorance of Indian politics. I have heard some say that India loves to be governed despotically. Evidently they do not know that:—

1. India could never be governed *despotically* in the sense of the sovereign's "word being law." The greatest Emperor of ancient India could not form a complete state in its proper sense, or his state was wanting in legislative power. He could not make laws. The whole of India was under one law, principally embodied in the Code of Manu, subject to modifications made by local customs and juristic interpretations.

(*a*) The King could not be an autocrat, for he was always checked by a council composed of the wisest Brahmans.

(*b*) There was prefect village autonomy which only contributed to the revenue and paid a nominal allegiance to the Sovereign, even in the days of the Mahomedan Rulers.

2. The dynasties for the truly despotic monarchs were swiftly swept away. The Indians are as sensitive to unbounded despotisn or tyranny as any other nation and they never failed to avail themselves of an opportunity to overthrow a purely despotic rule.

3. The proper type of despotic rule that counts towards stability is afforded by Akbar's reign. But the difference between Akbar's administration and the British, is brought out by the following conspicuous facts:—

(*a*) Akbar lived in India and became an Indian.

(*b*) His Commander-in-Chief was a Hindu. His Financial Minister was a Hindu.

(*c*) Although a Mahomedan by religion, he treated wise Hindu and Mohammedan priests with equal respect. He had Hindu courtiers as well as Mahomedan. He took a deep interest in the classical literature of India and was surrounded by Pandits as well as by Ulemah.

(*d*) He held constant durbars at his capital which his vassals attended in regular rotation. The Feudatory Chiefs were given *tázim* (*i.e.* return courtesy).

(Let me say in connection with this that our Emperor's position is the most anomalous. You call him a King and we call him an Emperor. The Chapter of Precedence does not make any room for the Indian Feudatory Sovereigns. The position of these sovereigns, paying homage to His Majesty at a Buckingham Palace Levèe, is not at all defined.)

4. The most prominent feature of a despotic rule was the capacity to mete out swift punishments and swift rewards. The former were

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

actuated by local information and the latter neutralised the effects of injustice, if any.

The semi-constitutional system of Government in India cannot encompass these ends. The long drawn processes of litigation ushered in by the British Government and the powers of the Monarch, tied hand and foot by Constitution, can hardly be compatible with the ideals of a despotic Government. So it is useless to talk of despotic methods being employed now in India, when you cannot sacrifice your constitution and make the Emperor a despot in its true sense. The Indian idea of a sovereign is that he can make and unmake not laws, but the fortunes of men or communities. In this respect a petty chief of India exercises more power than our Emperor. The grand effect of His Imperial Majesty's last visit to India was to a great extent undone by some short-sighted politicians at home, who vigorously opposed the measures proclaimed at the Delhi Durbar. They say that they attacked the Ministers, but they forgot that we knew that the Decrees had gone forth from His Imperial Majesty and, when once so, they were above the breath of a question.

To make this awful muddle between a constitution and despotism is the outcome of a regrettable ignorance.

Lord Morley, who is no doubt a great master of Indian politics, said in the course of a speech that self-government for India was like a fur coat for a tropical country. The great statesman forgot that India has got high hill-stations where fur coats are a suitable wear even in the summer. Besides, the English education in India is creating an atmosphere cold enough for a fur coat. The constitutional revolutions in Japan, Turkey, Persia and China should preclude such political prejudices as place a permanent natural disqualification on an Oriental nation.

At this critical juncture when India is looking forward to a preliminary form of Self-Government being on the tip-toe of expectation, the House of Lords flung away the Bill to create a Council for the Government of the United Provinces. No doubt there are some veteran Indian politicians in the House of Lords, but they forget that India of to-day is not the India over which they governed. She is moving fast—very fast since Lord Curzon's administration; and political opinions, formed fifteen years ago, are now out of date. These opinions must be revised every year to keep in touch with the waves of current politics in India.

The British public often hear praises of our splendid I. C. S. I am glad they are now hearing something of our Sepoys. But the most important person, who constitutes the vital part of Indian administration—the Babu—they hear the least of. He sometimes comes to you in caricature, as a comic figure in stories. You read of the 'fearful' Babu in Kipling's "Kim" and many other novels. Yet it is he who makes the administration of the handful of English Civilians in India possible. It is he who makes up for the want of knowledge of Indian affairs and Indian languages. It is he who virtually works the whole machinery of Indian Government. He is nothing but an educated or semi-educated Indian gentleman, who has not yet received the recognition he deserves. Politically he is the most important person, but he is the least known to you and the least studied.

A Bengali Babu is often branded as disloyal and seditious. But it is known to very few here that the person who unearthed the bomb factory in Calcutta and thus saved a terrible disaster to the English population down there, was a Bengali Babu, who, along with many Bengali gentlemen, subsequently lost his life in the suppression of anarchy, and that the most genuine demonstration of loyalty accorded to His Imperial Majesty on his last visit to India came from the Bengali Babu.

ECONOMIC KNOWLEDGE.

India is full of resources which, if fully utilized, would drive away all the poverty of India and England. Her mountains are full of rich minerals and you can use the waterfalls and the tremendous amount of heat from sunshine for power. Yet while you can find hundreds of pleasure-trips and shooting excursions on these mountains, you will look in vain for companies of scientists or prospectors making serious efforts to do something to increase the wealth of India.

We have a copper-mine in our State (Jhalawar). Will you care to know who was first eager to work this mine? A German Company, Smidt & Co.

We were looking for a steel safe at the Army and Navy Stores, Bombay. The safes in store there were not of the best quality which we wanted. The manager, wishing to oblige us, sent us to a German firm where we got exactly the thing we required.

I can multiply examples. But I hope these are enough to show what little England has done to apply science and industry to Indian resources. We have got manganese and iron-ores, but we

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

could not profitably work the mines nor manufacture steel works because of German competition. England has not only omitted to send us scientific aid in force, but has also unaccountably ignored India's claim to the protection of her infant industries and trades.

You send out from Oxford and Cambridge graduates with ostentatious Oxon and Cantab titles to teach the Indian students the dainty tales of Tanglewood stories or Jungle Book, Shakespeare's "Midsummer Night's Dream", "Tempest", Milton's "Comus", etc., etc. But how many experts have you sent to India to give the Indian masses practical education to earn their livelihood? You know India is mainly an agricultural country. Does "Midsummer Night's Dream" or "Jungle Book" help the Indian students in learning agriculture, horticulture, farming and dairy? England must know that we do not want Greek or Latin scholars, but agricultural, industrial and art experts—not one or two, but in numerical force and with financial strength.

Raw materials come from India to be manufactured in England and are then sent back for Indian consumption. The English financiers must know that by applying their finance and skilful knowledge in India, they would enrich both the countries. They must probe public feeling in India on this subject. This one-sided business cannot go on for long and if they keep on "grabbing" too much they will hold nothing fast.

BUREAU OF INFORMATION.

Through a reliable person, I was informed that Germany has got a bureau of information about India. In England if you want to know anything about India, you have to go to the India Office. Some days ago, I badly wanted to know about rainfall in India and went to the India Office Library for the latest monsoon reports by cablegram. There was nothing there to answer my inquiry. In order to know how many Indian students reside in Great Britain for education, I went to the office of the Educational Adviser, attached to the India Office. I received the information that the information of the offices itself on the subject was very limited.

RELIGIOUS AND SOCIAL KNOWLEDGE.

The solid rock of stability on which the British Government is founded in India, is its non-interference with the religious and social institutions of the country. But ignorance of religious and social customs sometimes leads to unintentional unpleasantness. Let me give you a simple example: we were entertaining about five hundred convalescent Indian soldiers at a base-hospital near New Milton. There was an English conjurer with us, who after producing some cigarettes through "magic", threw among the Sikhs seated in front of the improvised stage. Immediately a commotion occurred and the Sikhs rose to leave with an angry scowl on their faces. I had to interpose and explain to the Sikhs that the offence was not intentional; and when the gentleman conjurer learnt from me that it is against the religion of the Sikhs to touch tobacco, he apologised through me—and that settled the matter.

You perhaps know that the Sepoy Mutiny was due to an ignorance of this character and ended in a terrible calamity which I wish could be effaced from history.

LINGUISTIC KNOWLEDGE.

In bestowing praises, such as on the Indian Civilian, the Indian Sepoy and the Indian Babu, we should not leave out another class of people who deserve special mention:—The *khansamas* (butlers) and *chaprasis* (peons). To them belongs the credit of understanding an Englishman's Hindustani. With a few honourable exceptions the English officers in India speak Indian dialects with accents and grammar which are known only to the above-mentioned wonderful people.

It may be argued that the English have done pretty well without learning the Indian dialects properly, and they can safely do without the mastery of them. Yes, they are quite safe so long as they have the Babus on their sides as interpreters. The English officer is something like a semi-divine being in India to be approached by the masses only through the intermediary priest, the Babu. But as there is a demand for more direct relationship and more active sympathy and co-operation, there must be a reformation in the official Church of India and the priest must drop. The greatest source of a widespread discontentment in India is the despotic police, and the police cannot be efficiently kept in hand unless the officers address directly to the masses and receive first-hand information.

THE SOURCES OF KNOWLEDGE.

Perhaps I need not dwell long on the subject: "How can England know more about India," if I have been able to explain to you the necessity of doing so. For necessity is the mother of invention. If you really feel that England ought to know more about India, the means of knowledge will not be far to seek. Where there is a will there is a way. The proper channels of knowledge of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the country are the schools and colleges, the newspapers, magazines and novels, the stage and the picture palaces. To these I may add personal inquiries. If there is an organised effort made to impart a wholesome knowledge of India through these channels, the prevailing ignorance can be gradually removed.

SCHOOL-BOOKS.

I hold in my hand the regulations of the three most important Universities of Great Britain (namely London, Oxford and Cambridge) for Matriculation, Preliminary Local, Junior and Senior examinations. Nowhere in the courses prescribed by any of these, I find India mentional by name. The languages mentioned under distinct sections are:—

Latin, Greek, French, German, Italian, Spanish and Dutch. The London University only adds Oriental languages (including Hebrew). But at the same time, it is apparent that there is no arrangement to examine (and far less to teach) the Oriental languages unless notice is given well in advance.

Under History (London University), we read:—

Ancient.—"The General Course of Greek and Roman History and an outline of the earlier monarchies."

Modern.—"The General Course of English History .... with some references to contemporary history of Europe and Colonial development."

Under Geography: "(*a*) England and Wales; (*b*) Scotland and Ireland; (*c*) Europe, the Mediterranean, the North Atlantic, North America and Greenland; (*d*) the remaining continents."

How can young men acquire any knowledge of India?

We do not want such civilians and professors in India as do not feel interest in the country. This interest can never be created in those who leave it to the last moment to decide whether it suits their convenience or pocket to stand as a candidate for Indian service or not.

The Government must see that a candidate for Indian Civil or Educational Service has, unless under very special circumstances, previously acquired a general knowledge of Indian history and geography, as well as the important traditions and characteristics of the Hindus and the Mohammadens; and the Universities must accordingly make arrangement for the necessary course. I can easily anticipate the many questions that may be raised by way of pointing out the practical difficulties in the way. The most important point is that India has got so many dialects, so many races, castes and sects, that it is next to impossible to pick up one dialect or set of habits and customs for the early education of an English youth. It is quite true, but suppose you are to govern the continent of Europe, would you shrink from teaching your youths as many dialects and popular customs as the continent has? You must remember that Hindustani, Tamil, Bengali, Mahratti and Gujarati, are the dialects of provinces which are as big as Germany, Austria or France, and considering the area of the country, India does not possess too many popular characteristics. The Mahommedans have got only two important sects and the Hindus have a common stock of traditions and customs.

But to start with, I would propose that as an optional substitute for one of the compulsory subjects for the Matriculation or Senior Examination, a subject called "Indian Branch" or "Indian Subject" be introduced with the following syllabus:—

I. Nagari, Persian and Tamil alphabets.

II. Vocabulary of some important Sanskrit, Persian and Tamil words, explaining the literary associations or allusions involved in some of them.

III. Translations from Classical traditions of the Hindus and the Mohammedans in English.

This course may be gradually improved for the B.A. Examination to the following syllabus:—

I. An Elementary Reader in Sanskrit or Persian.

II. Indian traditional history with a fair knowledge of the principal characteristics of Sanskrit and Persian literature.

III. A religious and social survey of India.

Under History and Geography, I would have India specially mentioned.

I would also propose that Hindustani should be substituted as an optional subject for Greek, Latin, or one of the modern languages at the Eton, Harrow and Rugby Schools.

I have talked to the Headmasters of these schools, Dr. Lyttleton, Rev. Ford and Dr. David. They agree with me. Dr. Lyttleton said that he had felt the necessity of introducing Hindustani, but the difficulty was:—

(1) To induce the governing body to appoint a teacher.

(2) To induce the Oxford and Cambridge Universities to accept Hindustani as a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

substitute for one of the compulsory languages.

NEWSPAPERS AND MAGAZINES.

Sir Rabindra Nath Tagore on his arrival in India explained to our countrymen how scanty notice the newspapers in England take of India. He said that when leaving for India, he read the account of a terrible flood in Burdwan District, both in English and German newspapers. While the English papers disposed of the news in a few lines, the German papers devoted columns to it.

Some days ago, I read in the *Daily Mail* of a "Hindu Murderer" of a British soldier—the name given of the Hindu murderer was Abu Abbas. I saw the Editor and asked him to contradict the report as Abu Abbas could never be a Hindu. I did not come across the contradiction in the next morning's paper.

It is far from me to run down the English papers, but I must say I was sadly disappointed to scan the contents of the daily educators of the public of the metropolis of a world-wide Empire. While we in India daily receive through Reuter, all the most important events of the world—the majority of the English public read in their evening half-penny papers (during peace time) nothing much beyond suicide, murder, divorce and bigamy cases, accounts of London gaieties, amusements and sports and slurs on party politics. Certainly they can devote at least one column daily to imperial news of consequence.

NOVELS, DRAMAS, THE STAGE AND CINEMA HALL.

We well know that a novel or a drama will not be a success unless it produces something very out of the common, something sensational or fantastic or grotesque. Similarly a show on the stage or Cinema-film will not take unless it is of the above character. An Aryan character of the East whose virtues and failings are so much in common with those of the Western nature, is never presented in its true and ordinary colours. So it is in vain to look for anything like a true estimate of Indian affairs or Indian character in these, which in my opinion have more influence on national education than the school-books. Sometimes I have been asked to help in the staging of some Indian plays here. Nothing seems to appeal to the theatrical experts here as Indian unless it is extraordinarily mystic or queer. Nothing can be accepted as Indian if it is a common-place Western chracteristic.

I do not object to these, but I seriously take exception to these shows which create and intensify hatred against India coming as they do from authors whose ignorance of India is appalling. To mention one: I saw a Cinema picture entitled "A Hindu's Hatred" in which a snake-charmer was represented to have maliciously caused the death of some European ladies under blood-curdling conditions. Of course the plot was fictitious. To add insult to injury, the author of it called a non-Aryan snake-charmer a Hindu. Another picture presented a diabolical character in the form of a Hindu Raja, who was called Aboulla. These productions by irresponsible authors must be checked by a responsible and wise censor.

PERSONAL INQUIRIES AND INQUISITIVENESS.

I now come to the most serious, but perhaps the most delicate point of my lecture. I really do not know whether to praise or blame the English for their extreme reserve. Of all the peoples, John Bull is the least interfering or boring. In India, he is always a remote and reserved person, who very seldom mixes with the people. The spare hours he gets there, he spends at an English Club or on shikars (shooting) and his furloughs he spends in England. By this process, he saves himself many troubles otherwise quite probable.

But his loss is correspondingly great, perhaps more than his gain. He discharges the duties of his service and then retires from it without being much the wiser about the country in which he lives.

Instinctively perhaps, John Bull is the ablest person in the world, for his genius enables him to meet an emergency with wonderful presence of mind, device and adaptation. He need not fear anything in India so long as he is strictly just, impartial and honest. The Babu works the Intelligence Department faithfully. So he is safe.

But there are a thousand and one pitfalls into which ignorance may lead him and splendid as he is, he will be more splendid still if he be a little more inquisitive and improves his knowledge of the country. The passive virtue of indifference indicates lack of interest and India is daily feeling this lack—so he must show an active interest.

The indifference and reserve prevent the English here from making acquaintance with foreigners and gathering much valuable information which they can easily do by being a little inquisitive.

We can travel hundreds of miles with Englishmen in the same compartment of a train without being spoken to. At Libraries, Common Rooms, Class Rooms, Restaurants, we may sit for hours with Englishmen without opening our mouths to converse. I have been a student of the Middle Temple for three years and of this

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

College for two years. But unfortunately, I have not made one friend who is an English student. The loss is decidedly mine and perhaps the fault is mine too. But I hope the authorities will, in future, try to see that there be a little more intercourse between Indian and English students. At the Middle Temple dinners, the Indian students group together in one row and the English in another far from each other. My friend Dr. John Pollen of the M. T. will bear me out. The English must know that we love to be spoken to, and it is no breach of etiquette with us to be inquisitive. If we ourselves show a reserve and apathy, it is only in imitation of or in answer to, the English reserve.

During the last International Historical Conference of which I was a member—who do you think took interest in me? Some German Professors—Drs. Kern, Hofflinger and Meyer whose cards I hold in my hand. While the English Professors smiled at me, these Professors drew me into conversation and pumped me deeper and deeper as to the internal state of Indian affairs. Mind that many English scholars are kind to me. Dr. Barnett, Dr. Arnold, Professor Neill, Dr. Thomas, Sir James Dewar of the Royal Institution, Dr. Walker of the London University, Physiological Research, Mr. Prothero and Professor Rapson, have not only helped me, but have always offered to help me in any possible way. But the difference which I marked between an English and a German Professor is this—while the former requires to be drawn into a conversation, the latter draws you into conversation.

Who do you think took the greatest interest in my Indian songs? It was a German Baron—Baron von de Heydt, whom my Maharaja and I met at the house of Sir Lawrence Jenkins, the late Chief Justice of Bengal, in South Wales—as the guest of Lady Jenkins, who is one of the most popular ladies in India and who has done so much to bring India and England together. While the other guests were talking of hills, greens, flowers, fruits, games, etc, etc., the Baron went right to Indian life and evinced a great interest in Indian metaphysics. Since then, he often invited me to his London house to hear Indian songs, which he always admired.

I present this contrast only to arouse our English youths from the indifference and apathy they show towards Indian politics, philosophy and fine arts, etc.

The British Empire is the grandest thing in the world. Never was an Empire founded on such a vast scale and on such a solid basis. The most glorious feature of the Empire is its moral strength and the bond of goodwill. We are proud to belong to this Empire as partners. My friendly appeal to you is this: "Do not let lack of knowledge undermine the fabric of this most glorious Empire."

You ought to know and thoroughly realise that two forces have germinated and are at work against this mighty Empire: one is *political* and the other is *economic*.

It may sound paradoxical to you that India, governed as it has been for ages by foreigners, never felt racial *subordination*. A close study will reveal to you:—

1st:—That the Mohammedans became *politically*, though not socially and religiously, fused among the Hindus.

2nd:—That the Hindus took life more in a spiritual light than material. The Brahman was seldom touched by any government, and he always thought himself to be the highest living being on earth. The poorest orthodox Hindu refused to give a daughter in marriage to, or dine with, the greatest Mohammedan Emperor.

Times are changed now. Material education, economic pressure exerted by international commerce, and the open door of Law to any person against any other, have shaken the spiritual life of India and its social constitution to the very foundation. The sons of Brahmans do not now feel that they are the highest people on earth. An injurious consciousness of belonging to a subject-race is dawning upon them as well as the rest of the younger generation, and you must take a full note of it. The reason why they do not like to be a subject-race you need not go far to seek. Consult your own sentiments and human nature. For the stability of the Empire you should examine the real nature of this feeling and take steps to make my countrymen feel that they are really the fellow-subjects of His Imperial Majesty, not only in letter but in spirit, and it should be demonstrated that to be *loyal* is to be *patriotic* also and *vice versa*.

The second danger comes from the *economic* quarters. Your Economic Unions must extend their narrow circles to embrace India and effect an economic union between the two countries. They may thereby lose something, but their gain will be more.

For this grand end it is your duty to educate England, and reckon on us that we will do our best to educate India.

Colonial Self-Government: Its meaning and form.

BY MR. N. M. MUZUMDAR, B.A., B.SC. (LONDON), F.R.E.S., BAR.-AT-LAW.

I.—ORIGIN AND GROWTH.

THE Colonies of the British Empire have been acquired by (1) Protectorates assumed over Native States or races, or conceded by their chiefs and recognised by other Powers; (2) the territorial acquisitions of companies chartered by the Crown primarily for trading purposes; (3) conquest; (4) the settlement and colonisation of British subjects. Accordingly, the colonies may be classified as: (1) Protectorates, in which sovereignty is shared by the Crown with the native ruler, and the external relations of which are fully controlled by the Crown, the Protectorates being divided between the Colonial, Foreign and India Offices; (2) Chartered Companies in which the sovereign power is delegated to a company, whose agents administer the government; (3) Crown Colonies and India, which are directly administered by the Crown on the advice of ministers responsible to the British Parliament, and through agencies the details of which vary from colony to colony; and (4) Self-Governing Colonies, enjoying self-government under constitutions granted by the Imperial Parliament.

The history of the self-governing dominions of the British Empire begins with the history of the British Colonies in North America. The mother-country for some time took little interest in the doings of the chartered companies, and the condition of her colonies. But when she had once settled her internal affairs, she began to realize the importance of her possessions in the New World, and began to control them more and more by the Navigation Acts, by a policy to develop mercantile relations. With the subsequent transfer to the Crown of the territories of the companies, the colonies received more or less a uniform system of government, that of a Governor appointed by the Crown, and a legislature with a popular branch elected by the colonists, and possessing the power of the purse. English political traditions determined the form of government for the English inhabitants of the colonies. But administrative control from home could not be reconciled with the fiscal power of the colonists, and could not last as a permanent system. The 18th century was full of conflicts between the Governor sent from home and the colonial legislatures. The colonists would refuse to grant his salary for more than a year, would prevent him from exercising the veto by "taking" measures to supply bills, would pass their own appropriations, and appoint their own officers. The system broke down with the American Revolution and the loss of the American colonies. But with the growth of a new colonial empire the problems had to be faced again. These were solved by the granting of Crown colony administration to some colonies, and self-government to some others. The latter was first evolved in Canada.

In 1791 elective assemblies were granted to the British North American Colonies, and Canada was divided into Upper and Lower, the former wholly English, the latter chiefly French. But with the increase in political power, the racial and economic conflicts soon rendered Canadian public life "a maze wherein all men and all parties had lost their way." An insurrection broke out in 1837, which, however, was quickly suppressed. Lord Durham was sent to restore order. His deportation of two prominent men, without legal authority, provoked the censure of the Home statesmen, and he had to resign. But his Report on the affairs of North America still remains one of the most valuable contributions, and one of the most important documents in the history of British colonial administration that has ever been written. He proposed the union of Upper and Lower Canada, which was carried out in 1840. The defect of the then existing administrative system, he declared, was the conflict between the executive and the representative body. "It is difficult to understand," he wrote, "how any English statesmen could have imagined that *representative* and *irresponsible* government could be successfully combined; (the italics are mine); and further that "the opposition of the Assembly to the Government was the unavoidable result of a system which stinted the popular branch of the legislature of the necessary privilege of a representative body;" that the conduct of the Assembly was "a constant warfare with the executive for the purpose of obtaining the powers inherent in a representative body by the very nature of representative government;" and that "the Crown must . . . submit to the necessary consequence of representative institutions; and if it has to carry on the government in unison with a representative body, it must consent to carry it on by means of those in whom that body has confidence." He suggested a simple remedy—

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ministerial responsibility on the English model, asking the Governor to entrust the administration to members of the Assembly who could command the confidence of the majority in the Assembly; in a word, the Cabinet system, the ministers being responsible to the representative assembly, and the Governor being in the position of a "constitutional" ruler. But it was not at once accepted by the English Statesmen. The traditional commercial motive for possessing colonies had, however, by this time come to an end. And when Free Trade was adopted in 1846, and the Navigation Laws were repealed in 1849, the commercial purpose for retaining colonies had gone completely. Responsible government was given to Nova Scotia, New Brunswick and Canada soon after: to New Zealand in 1854; to New South Wales, Victoria, South Australia, Tasmania and Newfoundland in 1856; to Queensland in 1859; to Cape Colony in 1872; to Western Australia in 1890; to Natal in 1893; and to the Transvaal and Orange River Colony in 1906.

But responsible government alone could not remove the existence of provincial feeling in Canada. The Act of 1840 had failed to unite the two Canadas. Federation was inevitable. And the one result of the grant of responsible government to these colonies was the formation of federations in three of the largest groups of colonies in Canada, Australia and South Africa, the initiative in each case coming from the colonists themselves. The British North America Act of 1867 brought together in the Dominion of Canada the provinces of Ontario, Quebec, Nova Scotia, and New Brunswick. The Commonwealth Act of 1900 brought together in the Commonwealth of Australia, Victoria, New South Wales, Queensland Tasmania, Western Australia and South Australia. The Union of South Africa Act of 1909 brought together in the Union of South Africa, Cape Colony, Natal, the Transvaal, and the Orange River Colony. The process of federation in Australia was less rapid because of the absence of any racial and economic conflicts, and of any great neighbour to accelerate it.

II.—THE DOMINION OF CANADA.

The exceptional importance of the Canadian constitution lies in the fact that in its broad general features it has been the model for the Australian and South African constitutions. The British North American Act of 1867 laid down that the constitution of the Dominion of Canada "shall be similar in principle to that of the United Kingdom." According to it, the Governor-General is appointed by the Crown. Every bill passed by the Dominion Parliament has to receive his assent. He may either give it or refuse it, or withhold the bill for the signification of the Royal pleasure. As regards bills passed by the provincial legislatures of the Dominion, he is in the same position as the King in Council for the self-governing colonies. For executive purposes he appoints a Privy Council. The actual executive power is, however, vested in a Cabinet which is a committee of the Privy Council, and which as in present consists of the First Minister, the Secretary of State, the Ministers of Trade and Commerce, Militia and Defence, Railways and Canals, Marine and Fisheries, Inland Revenue and Mines, Finance, Agricultire, Customs, Justice, Public Works, Interior, and Labour, and the Postmaster-General—fifteen in all.

THE LEGISLATURE.

The Legislature consists of a Senate (the Upper House) and a House of Commons (the Lower House). The Senate consists of 87 members nominated for life by the Governor-General, 24 each from Ontario and Quebec and the remainder from the other provinces. The Governor-General can nominate not more than 6 members to overcome a deadlock. There is a property qualification for Senators of 4,000 dollars, and they are paid 2,500 dollars a year. They must be at least 30 years of age. The Speaker of the Senate is appointed by the Governor-General. The House of Commons consists of 221 members elected for 5 years. Quebec has 65 members and the other provinces elect according to their population in this proportion, the allotment being revised every 10 years after the census. The members are elected by the provinces whose legislative assemblies supply the franchise. The franchise varies in the different provinces, but in most of them it is manhood suffrage. The leader of the Opposition in the House is paid 7,000 dollars a year. Money bills must originate in the Lower House, and must be preceded by a recommendation from the Governor-General

POWERS OF THE LEGISLATURE.

The Dominion Parliament has exclusive legislative powers in all matters except those specifically delegated by the Constitution to the provincial legislatures. Whatever is not specifically assigned to the provinces is reserved to the Dominion. Its most important powers are those relating to trade regulation, postal service, currency, coinage, banking, navigation, defence, laws relating to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

crimes, bankruptcy, copyrights, marriage and divorce, naturalisation, and native affairs. In agriculture, immigration and quarantine affairs, the Dominion and Provincial Legislatures have concurrent legislative powers. The Dominion Parliament can amend the Constitution only in minor matters like regulating the electoral machinery, varying the quorum of the Senate, the number of members (reserving the proportionate representation of the provinces); altering the salary of the Governor-General; or establishing a new province. Other changes in the Constitution can only be brought about by an act of the Imperial Parliament, as for instance, the proposed extension of the life of the present Dominion Parliament beyond the prescribed term of five years.

PROVINCIAL GOVERNMENT.

The Provinces are under the Dominion Government as much as the colonies in general are under the British Government. The Governor-General appoints the Lieutenant-Governors of the Provinces on the advice of his Ministers, and on the advice of his Ministers also he may exercise a veto on provincial legislation. But the Provinces possess responsible government and are self-governing units within the self-governing dominion. The Lieutenant-Governors are appointed for 5 years, and their salaries are paid by the Dominion Parliament. They are assisted by Executive Councils varying in number, from 4 in Alberta to 16 in Manitoba, and consisting usually of the heads of the chief departments, who must moreover possess the confidence of the majority in the Provincial Legislatures. The Provincial Legislatures consist of one House only, viz., the Legislative Assembly, except in the case of Quebec and Nova Scotia which have two Houses, a Legislative Council (the Upper House), and a Legislative Assembly (the Lower House). Most of the legislatures are elected on manhood suffrage. The powers of these legislatures are confined to the subjects specified in the Dominion Constitution, the chief being the alteration of their own constitutions, direct taxation within the province, local works, general civil law and education. Bills passed by the provincial legislatures require the assent of the Lieutenant-Governor, and may be disallowed within a year by the Governor-General, or may be reserved by the Lieutenant-Governor for the Governor-General's pleasure.

III.—THE COMMONWEALTH OF AUSTRALIA.

It was little more than 15 years ago that the Australian Colonies forwarded Home a scheme of federation, after it had been drafted and redrafted, corrected and revised in Australia, had received the sanction of the various colonial parliaments of the country, and had been approved by a plebiscite of the people. The Commonwealth Act was passed in 1900, and on the 1st of January 1901, the Australian Commonwealth was proclaimed. The underlying principle of the federation is the same in the case of Australia as in that of Canada, viz., that of uniting the several colonies under a single government for certain purposes, such as the abolition of internal custom duties and the establishment of a single fiscal area, the organisation of a general system of posts and telegraphs, of defence, and of matters in which uniformity of legislation and unity of administration are necessary. But in each case the union has been approached from a different standpoint. While the Dominion Parliament possesses full legislative powers in the most important matters, and certain specified matters only are reserved to the provinces, the Commonwealth Parliament can legislate only in certain matters and control certain departments, the general control of legislation and the bulk of the power remaining with the original colonies. While the Provincial Lieutenant-Governors of the Dominion are appointed by the Dominion Governor-General in Council, the Governors of the Australian States are still appointed by the Crown, and remain in direct communication with the Imperial Government. While the Dominion Government can disallow an act of a Provincial Legislature within a year, such a thing is unknown in the Australian Constitution. While the Dominion Government has assumed the greater part of the debt of the provinces, in Australia each State remains responsible for its own liabilities. While the Dominion Government collects the customs and excise, and hands over a fraction of the revenue to the provinces by way of subsidies, the Commonwealth Government hands over three-fourths of such revenue to the State governments. While the Federal Government is prominent in Canada, the State Governments are still prominent in Australia. This is illustrated by the fact that while the Australian States all possess a legislature consisting of two Houses on the British model, in the Canadian Provinces such a legislature has been abandoned except in Quebec and Nova Scotia.

THE CONSTITUTION.

The Australian Commonwealth is, therefore, a federation of self-governing colonies. The Governor-General is appointed by the Crown, and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

represents the Crown. He has to be kept informed of correspondence between the Governors of the States and the British Secretary of State for the Colonies. His assent is required to all legislation, and he may either grant it or withhold it, or reserve a bill for the Royal pleasure. He summons and prorogues Parliament, and may dissolve the House of Representatives (the Lower House). He is the Commander-in-Chief of the naval and military forces of the Commonwealth. The Executive is vested in the Governor-General assisted by a Cabinet, appointed by him, but responsible to the Commonwealth Parliament, of which they must be members, or become within three months. The Cabinet now consists of the Prime Minister and Treasurer, the Ministers of Defence, Trade and Customs, External Affairs, Home Affairs, the Attorney-General, the Postmaster-General, the Vice-President of the Executive Council, and two Honorary Ministers.

THE LEGISLATURE.

The Senate (the Upper House) consists of 6 members elected from each of the 6 States for 6 years, equal representation being, as in the U. S. A., the basis of the federal idea. The Senators are elected in each State by the electors for the House of Representatives (the Lower House), and one-half of them retire every three years. The House of Representatives consists of 75 members, allotted among the States in proportion to their population according to each census, and elected for three years by the same persons who are voters for the Lower House of the various States. The franchise is thus the same for both the Senate and the House of Representatives, and is based on universal suffrage. Money bills cannot originate in or be amended by the Senate; but nothing must be "tacked" on to a money bill. Members of both Houses are paid £600 a year.

The provisions for a deadlock between the two Houses are interesting. If a measure passed in Lower House is twice rejected in the Senate, in the same session or in two successive sessions, the Governor General is empowered to dissolve both the Houses, so that an appeal may be made to the constituencies. If the newly elected Houses also disagree, the Governor-General may convene a joint sitting of the two Houses, and the question is decided by the absolute majority of the members of the two Houses voting together.

POWERS OF THE LEGISLATURE.

The legislative powers of the Commonwealth Parliament are limited, the principal powers being those relating to trade, taxation, bounties, exports, borrowing, currency, banking, insolvency, external affairs, corporations, marriage, divorce, old age pensions, immigration and emigration, railways and the seat of Government. The Constitution may be amended only by an absolute majority in each House, further approved by a referendum to the entire electorate, by a majority of electors voting in a majority of States, and also by a majority of all the electors of the Commonwealth. If any law of a State is inconsistent with the law of the Commonwealth, the latter must prevail. The Commonwealth Parliament cannot legislate in respect of religion.

STATE GOVERNMENT.

Each of the six States of the Commonwealth is a self-governing unit in itself. It has a Governor appointed by the Crown, and corresponding direct with the British Secretary of State for the Colonies. He has the same power as the Commonwealth Governor-General of disallowing State legislation. The executive is vested in him with an Executive Council, appointed by him from among the members of the State Legislature, and responsible to it. The Legislature of every State consists of a Legislative Council (the Upper House), and a Legislative Assembly (the Lower House). The members of the Legislative Councils of two of the States are appointed by the Governor or the Crown for life, but in the rest are elected. The members of the Legislative Assemblies are all elected, practically on universal adult suffrage, for three years. The State Executives administer all the departments except those reserved specially for the Commonwealth Executive. In the matter of legislation, there are three subjects which are reserved exclusively for the Commonwealth Parliament, viz., bounties, defence and coinage. In some matters the legislative powers of the Commonwealth are shared concurrently with the States. In all other matters the States have sole powers, such as in agriculture, banking, borrowing on State credit, amendment and maintenance of State Constitutions, State Courts, State departments, education, factories, fisheries, forests, health, insurance, licensing, mines, local government, police, prisons, etc. The consent of the Commonwealth Parliament is required in matters which would conflict with Commonwealth legislation. The High Court of Australia can declare any act of the Commonwealth, or of a State legislature, unconstitutional or *ultra vires*. The supreme judiciary, therefore, as in the U. S. A., interprets the Constitution.

IV.—THE UNION OF SOUTH AFRICA.

The latest and the most finished existing form

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of colonial self-government is that of the Union of South Africa. It may not be uninteresting, therefore, to examine its constitution a little more in detail. Within seven years after the annexation of the Boer Republics, a constitution embodying all that the Boers had struggled for, and uniting four colonies into one union and one nation, was accepted by all parties and all races in South Africa. One of the delegates at the Convention, that preceded the Act of Union of 1909, declared that it was the finest constitution of the world. General Smuts proclaimed that more wonderful than the constitution itself were the signatures at the end of it. No political transformation in the world appeared so astonishing, so rapid, so complete. The far-seeing statesmen behind it had seen that if the different colonies were not welded together, they would some day break asunder. The conflicts that raged round questions of custom dues, the wars of railway rates, and all such other elements of economic conflict between colony and colony, together with the conflicts of race, could only be ended by removing the prime cause—disunion. Under such circumstances the Convention appointed by the four colonial parliaments of South Africa met in October 1908. In June 1909, a South African Constitution was accepted by every Colony. And on the 20th September 1909, the Union of South Africa Bill passed into law in the Imperial Parliament. Within a few months was acheived a work that, in the words of Mr. Balfour, was "without parallel in history."

THE CONSTITUTION.

The Constitution of the Union of South Africa is in form similar to that of Canada and of Australia. But the spirit underlying it is different. It has none of the characteristics of federal constitutions such as those of Canada and Australia possess;—the supremacy and sanctity of the constitution, the distribution of united and co-ordinate power among the States composing the federation, or the authority of the judiciary to interpret the constitution. The Constitution of South Africa is a unitary constitution. The Parliament of the Union, for all the internal affairs of the country, is supreme, and *not* the Constitution. The supremacy of the Union Parliament in all matters relating to South Africa is complete, subject only to the qualification that certain sections of the Constitution may not be amended save by certain special processes, and subject, of course, to the theoretical limitation that the Imperial Parliament that gave the Constitution may also change it, or take it away. The Union Parliament has full powers to make laws for "the peace, order and good government of South Africa." Any ordinance, such as an Act of the Council of one of the colonies composing the Union, is valid only if it is not "repugnant to an Act of the Parliament of the Union." The latter, moreover, may amend the Constitution by a simple act of legislation, just as it would amend an ordinary law. The only limitations are that some of the provisions relating to the legislature cannot be amended for a definite period, and some, e.g., those relating to the native franchise in Cape Colony can be amended only by a two-thirds majority of both the Houses of the Union Parliament sitting together; and in the case of some other provisions, e.g., the existence of the Provincial Councils, an amending bill has to be reserved for the pleasure of the Crown. Beyond these qualifications, the Union Parliament is supreme. The method of amending the Constitution laid down in the Act may itself be amended by a two-thirds majority of the two Houses sitting together. The Act, therefore, while avoiding the disadvantages of a federal constitution in the irritation and weakness caused by the distribution of power among the States, adopted a unitary constitution towards a more centralised and closer union.

THE EXECUTIVE.

The supreme executive power is vested in the Governor-General appointed by the Crown to administer the territories for the Crown. He acts with the advice of an Executive Council (corresponding to the British Cabinet) consisting of not more than ten Ministers of State, appointed by him from among the members of either House of the Union Parliament, to administer the Departments of State. The Ministers are responsible to the Union Parliament, and he must act on their advice. (Ministers without portfolio may also be appointed.) They may sit or speak in either House, but may vote only in the House of which they are members. The first Ministry consisted of the Prime Minister and Minister of Agriculture, Ministers for Internal Affairs and Defence, Railways, Education, Finance and Mines, Native Affairs, Land and Irrigation, Public Works, Post and Telegraphs, Trade and Commerce, and a Minister without portfolio.

THE LEGISLATURE.

The legislative power is vested in the Union Parliament which, technically speaking, consists

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the King (acting through his representative the Governor-General), a Senate (the Upper House), and a House of Assembly, (the Lower House). The Governor-General has the power to summon, prorogue, or dissolve Parliament, subject to the proviso that the Senate cannot be dissolved within ten years of the Act of Union, and that the dissolution of the Senate does not affect the Senators nominated by the Governer-General in Council. There must be at least one session of Parliament every year.

THE SENATE.

The Senate consists of 40 members in all, eight of whom are nominated by the Governor-General in Council, four of these eight to be selected for their knowledge of the coloured races in the Union. The remaining 32 are elected, not directly, but by means of proportionate representation, eight by each of four provinces of the Union (Natal, Cape of Good Hope, the Transvaal, and Orange River Colony) from among the members of their legislatures. A Senator must not be less than 30 years of age, must have resided for at least 5 years within the Union, must be a British subject of European descent, must in the case of an elected Senator, possess property in the Union of at least £500, and must be a registered voter for the election of members of the Assembly in one of the provinces of the Union. The Senate elects its own President, and the quorum is 12. The election of Senators on proportional representation saves the Senate from becoming a rival of the Lower House, while softening also racial antagonisms.

THE HOUSE OF ASSEMBLY.

The House of Assembly consists of 130 members, elected directly in electoral divisions, each returning one member, 51 in all from the Cape, 17 from Natal, 45 from Transvaal, and 17 from the Orange River Colony. The number of members may be increased in proportion to the increase in population, but may not be diminished till it has reached 150. The duration of the House is for 5 years, unless dissolved sooner by the Governor-General. The Union Parliament may at any time prescribe the qualifications of voters and the method of election. Till then the existing qualifications and methods remain. And in the case of the Cape of Good Hope, where only the coloured man can have the franchise (if he has the necessary property qualification and is able to sign his name), he may not be deprived of his right to vote except by a joint session of both the Houses, and by a two-thirds majority in such session. (In Natal a coloured man may obtain a vote, but under restrictions that make the privilege practically nugatory.) The qualifications of a member of the House of Assembly are the same as in the case of elected senators except that he may be below 30 years of age, and need not possess property to the value of £500. The House elects its Speaker and one Deputy-Speaker to perform his duties in his absence. The quorum is 30. The members of both Houses are paid £400 a year. The Governor-General may, after a bill has passed both Houses, assent to it in the King's name, withhold his assent, or reserve the bill for the King's pleasure. The King may disallow any law assented to by the Governor-General within one year. The proceedings of both Houses may be conducted either in Dutch or in English.

PROVINCIAL GOVERNMENT.

The Governor-General appoints an Administrator for each of the four provinces, whose salary is placed on the Union Estimates. There is a Provincial Council in each Province consisting of the same number of members as are elected in the province for the House of Assembly (with a minimum of 25), and elected for a period of 3 years by the same voters, in the same electoral divisions. The Council elects its own Chairman, and cannot be dissolved. Each Provincial Council elects after every general election an Executive Committee of four members from among its own members, or outside, of which the Administrator is the Chairman. The Administrator, or any member of the Committee who is not a member of the Provincial Council, may sit or speak in the Council, but may not vote in it. The administration of the province is carried on by the Executive Committee, which cannot be dismissed. The Administrator is the chief executive officer of the province. Apart from his ceremonial functions, he determines when the Council shall meet. No money bill can be introduced without his recommendation, and no money can be used without his warrant. In other respects he is simply a member of the Committee, with no more power than a casting vote as its Chairman. He is a servant of the Provincial Council; but he is also a servant of the Union Government, and as such he must carry out the instructions of that Government, if necessary, even without consulting the Committee. The system is in some respects like the system in India at present. The country is divided into administrations, at the head of which is the administrator who is its chief executive officer,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and also the general representative of the Central Government. In regard to matters in which no powers are reserved or delegated to the Provincial Council, the Administrator must, if required to do so, act on behalf of the Governor-General in Council, and he may in such cases act without reference to the Executive Committee.

RELATIONS BETWEEN THE UNION AND PROVINCIAL GOVERNMENTS.

The functions of the Provincial Governments are limited only to matters which in the opinion of the Governor-General in Council are of a merely local or private nature. The Provincial Governments, subject to the assent of the Governor-General in Council, have power in the matter of direct taxation within the province for provincial purposes, in education other than higher, agriculture, charity and medical relief, municipal institutions, local works other than railways and harbours, roads, bridges, markets, pounds, fish and game preservation, and any other matter in which power may be delegated to them by the Union Parliament. Provincial accounts are audited by an auditor appointed by the Governor-General in Council, and removable by him, provided that he communicates the cause of such removal to both the Union Houses.

FINANCE AND RAILWAYS.

All revenues over which, before the Union, the several colonies had powers of appropriation, all their properties and rights are vested in the Union Government. Its financial control of the Provincial Governments is complete. The financial relations are not defined in the Act, but are left to the decision of the Union Parliament. The Governor-General in Council appoints a Board consisting of not more than three Commissioners for five years to control and manage the railways and harbours of the Union. They must be controlled and managed on business principles, due regard being paid to the agricultural and industrial development of the Union by means of cheap transport. The total earnings must not be more than sufficient to meet the expenses for working, maintenance, betterment, depreciation and the payment of interest on capital. Any surplus accruing is secured to the railways for their own purposes. The central idea is to work the railways at cost to their highest utility, and not turn them into instruments of taxation.

NEW PROVINCES AND TERRITORIES.

The Union Parliament may alter the boundaries of any province, divide a province, or form a new province out of the existing provinces of the Union. It may also address the King to transfer to it, on the advice of His Majesty's Ministers, territories administered by the British South African Company, belonging to, or under the protection of, His Majesty, and inhabited wholly or in part by natives.

Both English and Dutch are the official languages of the Union, are treated on a footing of equality, and enjoy equal freedom, rights and privileges.

V.—THE TIES THAT BIND.

It might not be out of place now to examine the relations between the mother-country and her self-governing dominions. Power has passed from the mother to the children, more and more as the children grew up. Nevertheless, the ultimate control of the mother remains. No doubt, with the grant of responsible government, and the growth of federations, there is less and less of imperial action in the affairs of the units of the federations, and in those of the federations themselves. The units have receded more and more from imperial care and control. But fewer, larger, stronger and national units have taken their place, units easier to direct and control. Responsible government and federal growth have created three, single, larger units out of a score, too numerous to handle well, too small to stand alone, too weak to grow unaided in the growing problems of the world. It has allowed scope for the development of national feeling. And in no less a degree has it paved the way for a larger union, has rendered *Imperial* Federation not only possible but probable.

RELATIONS WITH THE MOTHER COUNTRY.

The main features in the relations of the self-governing colonies with the mother country may be summarised. The Crown appoints the Governor General. The Secretary of State for the Colonies has no control over any other colonial officer. In the internal affairs of the colony he acts on the advice of his ministers who are responsible to the colonial legislature. That legislature is supreme in the colony within certain limits. The limits are that it cannot legislate on any matter that affects interests outside the colony, and its laws must not be repugant to the laws of England, must not conflict with an act of the Imperial Parliament. All its laws require the assent of the Governor-General as the representative of the Crown, which he may either give or withhold. He has also the power of reserving a bill for the signification of the King's pleasure. While the King has the power of disallowing a law within one or two years, even if it has received

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the assent of the Governor-General. Some classes of laws must be reserved for the King's pleasure according to the consitution of the colony, e.g., laws relating to divorce, currency, differential duties; laws inconsistent with the treaty obligations of Britain, or interfering with the discipline or control of the Imperial Navy or the colonial armies; laws which might conflict with the Royal prerogative, with the rights and property of British subjects, with the trade and shipping of the Empire; or laws imposing disabilities on persons of non-European descent, not imposed on persons of European descent.

CHANNELS OF CONTROL.

The grant of responsible government does not necessarily remove altogether the control of the Home Government. That control remains, though in a diminished form, and is exercised *first* of all by the Royal Governor, or Governor-General, appointed by the Crown. He is the chief executive officer of the colony as far as its own internal affairs are concerned; and as such, must follow the advice of the ministers of the colonial legislature. But he is also an officer of the mother country, appointed by the Crown to guard her rights and exercise her control, and, as such, in matters that affect other parts of the Empire or foreign countries, he must act on the advice of the ministers at Home. He stands in the colony in the place of the Crown, and like the King, he is the symbol of Empire and Imperial authority on the spot. The *second* means of control lies in the Imperial power to veto colonial legislation. Every Colonial Statute requires for its validity the assent of the Crown through the Governor-General. And even if a bill has been assented to by him, and has become law, it may still be disallowed by the Crown within a certain time. Moreover, in the colonies, the power of the Royal veto is not as dead as Queen Anne, as in England. It is not seldom exercised, and three or four bills are thus ended on an average every year. The *third* means of control lies in the Imperial control of all foreign relations. In all, and for all foreign affairs, the British Empire is treated as one Power, and that Power is the United Kingdom. All treaties, all negotiations are made for the component parts of the Empire by or on the advice of Ministers of the Crown in the United Kingdom, appointed by the Crown, and responsible to the British Parliament. Any control of foreign relations by the colonies themselves would rouse perhaps endless frictions and even complications. A *fourth* means of control, rather of connection, lies in the appeals that as a rule lie from the decisions of the Colonial Courts to the Judicial Committee of the Privy Council. Such centralisation in the administration of justice is undoubtedly a powerful force for political unification and Imperial unity.

OTHER TIES.

But there are also other ties that bind. Those who did not know the foundations on which the British Empire has been built up, prophesied that, once in the throes of a great war, the component parts of the Empire, thus held together, would fly asunder. That prophecy has been falsified. Far from it, no rally for an empire in the world's history has been more magnificent than the one in which every distant part of the British Empire has joined in the great struggle going on to-day. The war has only served to strengthen the ties of Empire, to cement the Empire all the more, more than has ever been done, be it by ties of common language and common blood, or common sentiment and common traditions. But neither language, nor blood, nor sentiment, nor tradition, valuable assets though they are, are, to be quite plain, as potent factors as the factor of common defence for a common Empire.

What is, in brief, the fundamental basis of colonial self-government? It is that colonies far away from London could not be ruled from London; that representative government is the foundation of British political institutions; that representative government could not possibly be combined with administration by a Governor, be he even in Council, acting outside and independently of the representative body; and that the only solution of the difficulties involved lay in making the Council or Ministers *responsible* to the elected representatives of the colony. On this basis the self-governing colonies of the British Empire have evolved. On this basis they are evolving. The ties that bind them to the mother country, and were thought too slender to stand, have stood the strain of a world war. Far from flying asunder, the colonies are nearer the Mother Country to-day than they ever were. For, as long as the heart is sound, and the limbs have fair play, the whole body grows in health and strength. The whole body works for common defence, for common interest, for common growth. For, in the modern world, dissociation means decay and death. Association means life and growth.

WORLD STATISTICS OF ILLITERACY.

BY THE LATE MR. S. M. DIKSHIT, B.A., LL.B.

[AN UNFORTUNATE VICTIM OF THE RECENT *Persia* DISASTER.]

STATISTICS of illiteracy help to reveal the extent to which various Governments in the world have succeeded in mitigating the evils of an ignorant and untrained citizenship, and the circumstances peculiar to each country which have prevented the rapid enforcement of laws relating to compulsory education. That an ignorant and untrained population is a danger to civilisation and weakens the stability of all orderly government by making the cost of administration enormously high is a proposition which all students of political administration will easily admit. The government of the many by the few, is evidently a government by *opinion* and a high percentage of illiteracy deprives any government in the world of a powerful lever it can use, in organising the moral and intellectual forces of the people it is called upon to govern. In proportion as the population of a country is ignorant and undisciplined it is more subject to the sway of impulses which naturally dominate the *crowd-mind*.

It is interesting however to note, how the causes that influenced the increase or decrease of illiteracy in Europe were, to begin with, mainly religious. The Protestant Reformation made it a necessary article of its creed that members of that religion must be able to read the word of God. This left an open door for the exercise of private judgment and all the tendencies which culminated in the rationalism of the 18th century. To-day the smallest percentage of illiteracy is to be found in the Teutonic and the Mixed Teutonic nations of Northern and Western Europe.

Norway, Sweden, Denmark, Finland, the States of Germany have the largest proportion of literate population. Then come England, Scotland, Switzerland, France, and Netherlands. European countries with a large Roman Catholic population shew a higher percentage of illiteracy. The South and East of Europe shew increasing degrees of illiteracy, which reaches its highest point in Spain, Portugal, Russia, Servia, Roumania, Greece, Italy and the States of Austro-Hungarian Empire. In all these countries the illiteracy of females is higher than that of males. America is the only country where females from the ages of ten to twenty-four show a higher degree of literacy than in any other part of the world. In Asiatic countries the male population shows a larger percentage of illiteracy than in the rest of the world. The illiteracy of females is more complete there than anywhere else. It is curious to note how, in spite of a highly accentuated religiousness in the general mentality of Eastern peoples, the spirit of Eastern religions should not have promoted a widespread knowledge of reading for purposes of using their Scriptures. Scriptural texts are more or less memorised as a matter of customary training.

It is only in the last few decades of the 19th century that Governments in Europe have carried on a vigorous campaign for the suppression of illiteracy. The experience of the United States of America, in this respect, is unique. In 30 years they have stamped out every trace of illiteracy and have gradually raised the statutory reqnirements of a minimum of elementary education for exercising the privileges of citizenship. There the reasons were of an imperative character arising mainly from the democratic character of their Government and the extent to which the interests of orderly government vitally depend upon the education of the average citizen.

The following statistics will help to throw considerable light on the main elements in the problem of illiteracy and the place which *India* occupies in the scale of national values.

The following figures relate to *Asia* and *Oceania*:—

	Population over ten years.		
Ceylon (All races) ..	78·3	All ages	1901
Ceylon (European races).	11·9	All ages.	1901
Ceylon (other than European)	78·4	All ages.	1901
India	92·5	Population over ten years	1901
Philippine Islands ..	55·5	Population over ten years	1903
Russia in Asia ..	87·3	Population over ten years	1897
Hawaii	36·3	Population over six years	1896
American Negroes ..	30·5	Population over ten years.	1910

(Quoted from American Cyclopædia of Education.)

The illiteracy of the population of India is highest in the world, and most of the difficulties of administration arising from what appear on the surface to be racial, religious or economic causes will be found on a closer examination to result from this wide-spread illiteracy. The proverbial indebtedness of the Indian agriculturist, his inability to emancipate himself from the thraldom of custom and convention, and many other facts of social life too numerous to mention here are at bottom remediable by a systematic campaign against illiteracy. In this respect no suffering is the penalty of ignorance, for a vast population in which only five out of every hundred are literate. The census of 1911 may shew a slight decrease in the percentage of illiteracy but that will not affect the substantial accuracy of the figures quoted above and of the conclusions that may be legitimately drawn from them.

SELF-GOVERNMENT FOR INDIA.

I. SIR S. P. SINHA, K.C.I.E.

(From His Congress Presidential Address.)

WHAT, to begin with, should be the political ideal of India? To some the raising of this question may seem to be unnecessary and at best academic and, to others positively mischievous. To me, however, it seems that the greatest danger in the path of the future well-being of the country is the want of such a reasoned ideal of our future as would satisfy the aspirations and ambitions of the rising generations of India and at the same time meet with the approval of those to whose hands our destinies are committed. It is my belief that a rational and inspiring ideal will arrest the insidious and corrupting influence of the real enemies of our Motherland, even if it is not able to root out from the land that malignant mental disease which has been called Anarchism and whose psychology it is so difficult to analyse. It must be obvious to all sincere and impartial judges that no mandate whether of the Government or of the Congress will be able to still the throbbing pain in the soul of awakening India unless the ideal which is held up by the Congress and accepted by the Government commends itself first to the heart and then to the head. It seems to me that the only satisfactory form of self-government to which India aspires cannot be anything short of what President Lincoln so pithily described as "government of the people, for the people, and *by the people*."

When I say this, I do not for one moment imply that the British Government is not the best Government we have had for ages. We have only to look round to see the manifold blessings which have been brought to this country by that Government. But as a British Premier early in this century very truly observed, "good government cannot be a substitute for self-government." Says a recent writer in a well known British periodical:—

> Every Englishman is aware that on no account, not if he were to be governed by an angel from heaven, would he surrender that most sacred of all his rights, the right of making his own laws . . . He would not be an Englishman, he would not be able to look English fields and trees in the face, if he had parted with that right. Laws in themselves have never counted for much. There have been beneficent despots and wise law-givers in all ages who have increased the prosperity and probably the contentment and happiness of their subjects, but yet their Government has not stimulated the moral and intellectual capacity latent in the citizenship or fortified its character or enlarged its

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

understandings. There is more hope for the future of mankind in the least and faintest impulse towards self-help, self-realisation, self-redemption than in any of the laws that Aristotle ever dreamt of.

The ideal, therefore, of self-government is one that is not based merely on emotion and sentiment but on the lessons of history.

I believe in all sincerity that such has been the ideal which the British Government itself has sedulously entertained and cherished almost from the commencement of British rule in India. Generations of statesmen have repeatedly laid down that policy, solemn declarations of successive sovereigns have graciously endorsed it, and Acts of Parliament have given it legislative sanction. I will not burden my speech with quotations from these: they will all be found in previous Presidential addresses. But, with your leave I will quote only one passage from a speech of John Bright delivered at Manchester on the 11th of December, 1877.

> I believe that it is our duty not only to govern India well now for our sake, and to satisfy our own conscience, but so to arrange its Government and so to administer it that we should look forward to the time when India will have to take up her own government and administer it in her own fashion. I say he is no statesman—he is no man actuated with a high moral sense with regard to our great and terrible moral responsibility—who is not willing thus to look ahead and thus to prepare for circumstances which may come sooner than we think and sooner than any of us hope of but which must come at some not very distant date.

It is, however, unfortunately the fact that a few years ago unhappy statements and even actions of responsible statesmen gave rise to a widespread suspicion among large classes of people in all parts of India that there was a change of policy—a deliberate intention to retrace the steps. That this suspicion is not wholly without foundation will appear from the estimate of an eminent French publicist who cannot be charged with either lack of admiration for the British administration of India or excess of sympathy for the Indian reform party. This is what M. Chailley says (I am reading from page 188 of the translation by Sir William Meyer):

> Had England taken as her motto 'India for the Indian,' had she continued following the ideas of Elphinstone and Malcolm to consider her rule as temporary, she might without inconsistency grant to the National Party gradual and increasing concessions which in time would give entire autonomy to the Indians, *but that is not now her aim.* (The italics are mine).

Does any reasonable man imagine that it is possible to satisfy the palpitating hearts of the thousands of young men who, to use the classic words of Lord Morley, "leave our universities intoxicated with the ideas of freedom, nationality and self-government," with the comfortless assurance that free institutions are the special privilege of the West? Can any one wonder that, many of these young men, who have not the same robust faith in the integrity and benevolence of England as the members of this Congress, should lose heart at the mere suspicion of such a policy, and, driven to despair, conclude that "the roar and stream of confusion and carnage" is better than peace and order without even the distant prospect of freedom? Fifteen years ago Lord Morley said: "The sacred word 'free' represents, as Englishmen have thought until to-day, the noblest aspiration that can animate the breast of man." And to-day millions of Englishmen are freely sacrificing their lives that others may be free: therefore, an Englishman will be the first person to realise and appreciate the great insistent desire in the heart of India and I say with all the emphasis and earnestness that I can command that if the noble policy of Malcolm and Elphinstone, Canning and Ripon, Bright and Morley, is not steadily, consistently and unflinchingly adhered to, the moderate party amongst us will soon be depleted of all that is fine and noble in human character. For my part, I believe with the fervour of religious conviction that that wise and righteous policy is still the policy of the great English nation. When His Majesty sent us his gracious message of sympathy and later on hope, what did he mean but sympathy for our political aspirations and hope for their ultimate fulfilment? As late as the 8th day of October this year, His Excellency the Viceroy, addressing a large number of representative officials at the United Service Club of Simla, said:

> **England has instilled into this country the culture and civilisation of the West with all its ideals of liberty and self-respect. It is not enough for her now to consider only the material outlook of India. It is necessary for her to cherish the aspirations, of which she has herself sown the seed, and English officials are gradually awakening to the fact that high as were the aims and remarkable the achievements of their predecessors, a still nobler task lies before them in the present and the future in guiding the uncertain and faltering steps of Indian development along sure and safe paths. The new rule of guide, philosopher and friend is opening before you and it is worthy of your greatest efforts. It requires in you gifts of imagination and sympathy, and imposes upon you self-sacrifice, for it means that slowly but surely you must divest yourselves of some of the power you have hitherto wielded. Let it be realised that great as has been England's mission in the past, she has a far more glorious task to fulfil in the future in encouraging and guiding the political self-develop-**

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ment of the people. The goal to which India may attain is still distant and there may be many vicissitudes in her path, but I look forward with confidence to a time when, strengthened by character and self-respect and bound by ties of affection and gratitude, India may be regarded as a true friend of the Empire and not merely as a trusty dependent. The day for the complete fulfilment of this ideal is not yet, but it is to this distant vista that the British official should turn his eyes, and he must grasp the fact that it is by his future success in this direction that British prestige and efficiency will be judged.

These noble words of Lord Hardinge, which must still be ringing in our ears, are not the idle speculations of an irresponsible enthusiast, but the well-considered pronouncement of a statesman who, after guiding the ship of state during a period of unprecedented storm and stress, sends forth this message both to his own countrymen and to us. Lest there be any among us of so little faith as to doubt the real meaning of those memorable words, or any Englishman inclined to whittle down the meaning of this promise, I hope there will be an authentic and definite proclamation with regard to which there will be no evasion or misunderstanding possible. So far as we are concerned, there is no real reason for mistrust, for this policy proclaimed so long ago and repeated so recently has been fruitful of innumerable beneficent results. Officials, even the highest, may sometimes have spoken or even acted in a different spirit, but England always did and does still consider it her glorious mission to raise this once great country from her fallen position to her ancient status among the nations of the earth, and she enjoins every English official in India to consider himself as a trustee bound to make over his charge to the rightful owner the moment the latter attains to years of discretion.

But are there any among us who, while accepting His Excellency's message of hope are disposed to demur to the qualification therein expressed, namely, that the goal is not yet? If so, I do not hesitate to express my entire disagreement, because I would sooner take the risk of displeasing than injuring my countrymen. I am fortified in my opinion when I find that almost every prominent leader of the Congress has laboured to impress upon all true lovers of our country that the path is long and devious and that we shall have to tread weary steps before we get to the promised land. "Day will not break the sooner because we get up before the twilight." The end will not come by impatience. I maintain that no true friend of India will place the ideal of self-government before us without this necessary qualification. It inevitably makes passionate youth anxious to avoid the steps and weary path, take to dangerous and even fatal short-cuts, for it is undoubtedly true that impetuous youth finds it easier to die for a glorious ideal than to live and work for it with steady patience and persistent self-sacrifice. I yield to none in my desire for self-government, but I recognise that there is a wide gulf between desire and attainment.

Let us argue out for ourselves freely and frankly the various ways by which we can obtain the priceless treasure of self-government. It seems to me that it is possible only in one of the three following ways:—

First, by way of a free gift from the British nation.

Second, by wresting it from them.

Third, by means of such progressive improvement in our mental, moral and material condition as will, on the one hand, render us worthy of it and, on the other, impossible for our rulers to withhold it.

Now, as to the first, even if the English nation were willing to make us an immediate free gift of full self-government—and those who differ most from the Congress are the first to deny the existence of such willingness—I take leave to doubt whether the boon would be worth having as such, for it is a commonplace of politics that nations like individuals must grow into freedom and nothing is so baneful in political institutions as their prematurity: nor must we forget that India free can never be ancient India restored. Such a vision, as has been justly remarked, could only be realised if India free from the English could have stood in a tranquil solitude or in a sphere of absolute isolation, but unfortunately the hard facts of the modern world have to be faced and India, free from England, but without any real power of resistance, would be immediately in the thick of another struggle of nations.

As to the second, I doubt if the extremist of the extremists consider it feasible to win self-government immediately by means of a conflict with the British Power. Such a conflict is impossible, if not inconceivable: and I cannot imagine any sane man thinking that assassinations of police men and dacoities committed on peaceful unoffending citizens will do aught but retard progress towards our goal. Such acts, if they proceeded from any considerable section of the people, would only emphasise our incompetence for self-government, which demands the highest qualities of patient preparation and of silent and unobtrusive work in every aspect of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

our social and political life. Fortunately, acts like these are reprobated throughout India. They may appeal to the perverted imaginations of misguided youth, but are abhorrent to the sober sense of the great mass of the population of India. They alienate not only the sympathy of those Englishmen whose support would be invaluable to our cause, both in India and in England, but they provoke the bitterest resentment among our own people who naturally shrink from an ideal where lawlessness is likely to have sway. On your behalf and for myself, I express my utmost and unqualified detestation of these lawless acts, and I fervently appeal to all sections of our people to express in unmistakable language their abhorrence of these dastardly crimes which besmirch the fair fame of our country and so to co-operate with the authorities as to render their detection and punishment absolutely certain.

We are left, therefore, with the third alternative as the only means of attaining the goal of self-government. Before I deal with it, let me remind you of a parable in Mr. Edwin Bevan's thoughtful little book on *Indian Nationalism*. He likens the condition of our country to that of a man whose whole bodily frame, suffering from severe injuries and grievous lesions, has been put in a steel frame by a skilful surgeon. This renders it necessary for the injured man, as the highest duty to himself, to wait quietly and patiently in splints and bandages—even in a steel frame—until nature resumes her active processes. The knitting of the bones and the granulation of the flesh require time, perfect quiet and repose, even under the severest pain, is necessary. It will not do to make too great haste to get well. An attempt to walk too soon will not only make the matter worse, and above all the aid of the surgeon is indispensable and it is foolish to grudge the necessary fee.

When we ourselves have so far advanced under the guidance and protection of England as to be able not only to manage our own domestic affairs, but to secure internal peace and prevent external aggression, I believe that it will be as much the interest as the duty of England to concede the fullest autonomy to India. Political wiseacres tell us that history does not record any precedent in which a foreign nation has with its own hands freed from bondage the people which it has itself conquered. I will not pause to point out, what has been pointed out so often, that India was never conquered in the literal sense of the word, and, as very properly observed by the late Sir John Seeley, India is not a possession of England in the sense of legally being a tributary to England more than any of her colonies. I will not wait to examine the cases of French Canada and the Boer Republics in South Africa to whom free institutions have been granted. But, has there been a situation before this in the history of mankind like that of India to-day? Has there been a nation whose ideas of political morality have ever reached those of the great English nation? Has there been another nation which has fought so continuously and strenuously for the freedom and liberty of other nations as the English? My faith is based not on emotion or unreasoning sentiment, it rests on the record of what has already been achieved by the undying labours of far-sighted English statesmen and noble-hearted Indian patriots, both those who are still working for the cause and those whose labours are done and whose spirits hover over us to-day and guide and inspire us. The East and the West have met—not in vain. The invisible scribe who has been writing the most marvellous history that ever was written has not been idle. Those who have the discernment and inner vision to see will know that there is only one goal and there is only one path.

The regeneration and reconstruction of India can take place only under the guidance and control of England, and while we admit that the goal is not yet, we refuse to believe that it is so distant as to render it a mere vision of the imagination. We deprecate the impatience of those who imagine that we have only to stretch our hands to grasp the coveted prize. But we differ equally from those who think that the end is so remote as to be a negligible factor in the ordinary work of even present-day administration. It seems to me that, having fixed our goal, it is hardly necessary to attempt to define in concrete terms the precise relationship that will exist between India and England when the goal is reached. Whatever may be the connection of India with England in the distant future her impress on India could never be effaced and the inter-communion of the spirit and the breathing of new life into India by England will be a permanent factor which could never be discounted. Autonomy within the Empire is the accepted political faith of the Congress, and I find it difficult to believe that our patriotism and love of country cannot be reconciled to the picture of the future which generous English statesmen like Lord Haldane draw in which Englishmen and Indians will be fellow-citizens of a common Empire and of a common and splendid heritage, all of us bringing our special talents to bear co-operatively

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

for the common good of the whole. For the attainment of this great ideal, our first great duty is the exercise of the difficult but indispensable virtue of patience. There is no royal road to that goal, and we must all patiently, persistently and strenuously co-operate in all measures necessary for that purpose. Some of these can be undertaken only by the Government, others will depend on ourselves alone, but none will bear fruit without a spirit of mutual trust, toleration and forbearance. In order to foster this spirit so far as the people of India are concerned, it is vitally necessary to admit them in an ever-increasing measure, to direct and active participation in the higher work of Government in all its branches, civil as well as military, executive as well as judicial, administrative as well as legislative. It is a cruel calumny which asserts that, when asking for the expansion of the powers of our Legislative Councils, for the appointment of Indians to the Imperial and Provincial Executive Councils, for the admission of a larger number of Indians to the Indian Civil Service and all other branches of the higher Public Services, the Indian National Congress asks only for honors and appointments for the members of the educated classes. It may be that some of those who still persist in repeating this libel on the intelligence and patriotism of this country in good faith believe it to be true. If so, they have failed to take note of well known facts, namely, that Congress leaders like Telang, Tyabji, Krishnaswamy Iyer and others accepted high office only at considerable personal sacrifice and that others of them had to refuse because they could not afford to make the necessary sacrifice. These critics have neglected to read the literature of the Congress. In any case they have missed the point of it all, namely, that those measures are advocated only as means to an end. They are valuable chiefly because they concede the demand of the people for direct and active participation in the work of Government, not merely as tools and agents, but as members of the Government itself. They are valuable only in so far as they tend to identify the people with the Government, and enable them to think of the Government as their own and not as an alien bureaucracy imposed on an unwilling people by a conquering nation. We can afford to treat the taunts of these unfriendly critics with contempt, but there is another school of critics whose counsels are more seductive though not more sound. These insist on the impotence of the reformed Legislative Councils, whose resolutions they ridicule as mere pious wishes. They see no good in the powers of interpellations and discussion of the budget. They treat the admission of one Indian into each of the existing Executive Councils as a matter of no consequence, because it has not produced immediate or far-reaching changes in the ordinary routine of administration. They insist that even a liberal and philosophic historian like Viscount Bryce has pointed out that no more in India than in the Roman Empire has there been any question of establishing free institutions, either for the country as a whole or for any particular province; and that the Council Reforms of 1861, 1892 and 1909 were merely intended to give opportunities and means for the expression of Indian opinion and not to give any real power to the people. Well, it does not require much political acumen to discover that we in India are yet a long way off from free institutions and that the reforms so far effected have not yielded any real power to the people either in the Imperial or in the Provincial Councils. But it is my firm belief that the privileges already acquired, if used with industry and moderation and tact will in no distant future receive considerable enlargement, and we must continue to press for further expansion in all the directions I have mentioned, undeterred by the criticism of the one and by the cynicism of the other. We shall continue to urge the enlargement of the powers and modifications of the constitution of the Legislative Councils. We shall continue to ask for larger and yet larger admission of Indians to the higher ranks of the Public Services in all its branches, and we shall claim these not as mere concession but as a gradual fulfilment of solemn pledges for the progressive nationalisation of the government of the country. We shall continue our labours till really free institutions are established for the whole of the country—not by any sudden or revolutionary change, but by gradual evolution and cautious progress.

II. THE HON'BLE MR. D. E. WACHA.

(From the Address of Welcome to the Congress.)

At present the air is thick with another popular grievance which, as time goes on, will demand the highest counsel of perfection and the most mature political wisdom for purposes of redress. It is, of course, in consonance with the constitutional creed laid down by the Congress, that Self-Government under the British Rule is its *Ultima Thule*. But the way, I am afraid, to the promised land is long and beset with difficulties which demand should be wisdom on our part to take cognisance of. A hasty or rash step or a precipitate move, calculated to endanger the patriotic aspirations breathing in every enlightened unit of the Empire, is most inexpedient and absolutely undesirable. We must so balance our minds as not to be carried away by sympathy for liberal maxims into wild transports of revolutionary rapture. Great organic measures, as the constitutional history of free countries teaches us, are always preceded by a reasonable period of discussion. A variety of ideas on Self-Government, more or less of a crude or nebulous character, now mooted in the country, need to be well moulded into a crystallized form and to be tested in the crucible of practical politics before they could be materialised. It is only by such a slow and measured process that we can reach the goal. It is not the multiplicity of organisations which is wanted. What is most essential and of paramount importance is the concentration of responsible opinion, well-reasoned, well-balanced and well-directed, which might unmistakably reveal the fact that India is of one mind and one heart. There are lions in the path who will have to be overcome, and we should not forget another important fact that bureaucracy, in every part of the world, is stubborn and unwilling to move. Their pace of progress is the pace of the tortoise. In practical politics we cannot omit to take into account these elements. It would not be inappropriate here were I to quote the opinion of a distinguished member of the Anglo-Indian Bureaucracy in reference to all Indian political progress. It was Sir Auckland Colvin who in 1884 observed in that remarkable but exceedingly statesmanlike paper entitled: "If it be real—what does it mean?" contributed to the *Pioneer*, as follows:—

> While the English mind in India has been tempted to stand still, arrested by the contemplation of the fruits of its efforts in former times, and by the symmetry of the shrine, the pride of its own creation, in which it lingers to offer incense to its past successful labours, the Indian mind has been marching on, eager and anxious to expand its own sphere of action, and to do what it for its own part has to do.

Thus it is that while the dry bones in the valley have been galvanizing themselves into life for the last 30 years and Indian humanity has been taking large strides in all matters affecting its political, social, educational and industrial welfare and is instinct with manifold activities in all directions, the Bureaucracy has been almost standing still before its venerated but absolute shrine, making *puja* to it, while unconscious of all the progress that has been so quickly going around it. That hierarchy still seems to be little aware that the country has rapidly passed through the transition stage ever since the epoch-making Viceroyalty of Lord Ripon, and that it is now entering on a stage which is in every respect a radically different one from that to which its members have been accustomed since the mid-Victorian age. Self-Government is bound to come. I venture to say, albeit, by measured stages, from precedent to precedent. Of course, there are those enthusiastic and ardent though impatient idealists who seem to entertain the belief that they have only to pronounce aloud the shibboleth of Self-Government to realise in a trice the accomplishment of their ideas. To such I have only to refer to the sage observations which that stalwart Congressman and robust friend of India, the late Sir Henry Cotton, made in the course of his address in this very city eleven years ago, as the President of the twentieth session of the Congress:—

> The process of reconstruction cannot be effected otherwise than by slow and gradual means. Many years must elapse before we can expect the consummation of a reconstructive policy. But it is a policy which we should always keep before our eyes. . . . . In the cautious and gradual development of representation, in the increase of your power and influence in India itself, involving the ultimate extension of autonomy, we shall find the appropriate and natural prize and legitimate goal for Indian aspirations.

So far as to the impatient idealists. As to the members of the distinguished service, the men in power and authority, I need not say that it would be idle for them any longer to deny the ideal altogether to the Indians or to say that the country can never be ready for it or to put every obstacle in the way of its realisation. And the sooner, therefore, they prepare themselves to meet the wishes and sentiments of that New India, rising fast before it, the better it will be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

for their own existence and their reputation for administrative sagacity. In his memorable "History of Civilisation," Buckle has observed:

Men have recently begun to understand that in politics, no certain principles having yet been discovered, the first conditions of success are compromise, barter, expediency, and concession. It will show utter helplessness even of the ablest rulers, when they try to meet new emergencies by old maxims. It will show the intimate connection between knowledge and liberty: between an increasing civilisation and an advancing democracy. It will show that for a progressive nation, there is required a progressive polity; that within certain limits, innovation is the solid ground of security; that no institution can withstand the flux and movements of society, unless it not only repairs its structure but also widens its entrance; and that even in a material point of view no country can long remain either prosperous or safe in which the people are not gradually extending their power, enlarging their privileges, and so to say, incorporating themselves with the function of the State. Neglect of these truths has entailed the most woeful calamity upon other countries.

Such is the undoubted truth which history has deduced from past politics of great States which, we fain hope, will be ever present before the mind of the rulers of present India and serve as the basis of the coming polity of reconstruction. Let us earnestly pray that this terrible war now waging may by the mercy of Divine Providence be brought to a satisfactory and peaceful close whereby our rulers may be enabled to respond to the popular appeal by laying down a far-seeing policy which will give a first instalment of genuine and living representation in the active government of the country broad-based upon the people's will. And you will all agree with me that no one is more capable of formulating such a beneficent policy in this direction, on a sound and liberal basis than our present beloved Viceroy, whose sagacious and sympathetic statesmanship has already achieved for him a name and fame as imperishable as that of Canning and Ripon, in the annals of British India.

III. THE HON. MR. MAZUR-UL HAQUE.

(From the Presidential Address to the All-India Muslim League.)

Gentlemen, our demands are neither immediate nor peremptory. We can wait and must wait till the end of the war, when the whole Empire will be reconstructed upon new lines; but there is no harm in postulating our demands now and informing the British people of the unity and the intensity with which the reforms are insisted upon. When the affairs of the Empire are taken into consideration, our views should be before the English nation. Of course we cannot expect that India will change in the twinkling of an eye by some magical process, but we do hope that a new policy will be initiated which will end in self-government and give us the status and power of a living nation. If you ask me to give you indications of reforms which are immediately needed, I would say that the first step towards Self-Government must be taken by abolishing the packed official majority in the Imperial Council. We must have a sure and safe elected non-official majority, which would discuss and deal with all Indian questions from the Indian standpoint. Next, we must free the Executive Council of the Viceroy from the incubus of the Bureaucracy. Then fierce light would be thrown into the dark corners of Indian administration. We must have more Indians in the Executive Council, which is really the chief source from which policies emanate. Again, a great reform that is needed is what has been called "Provincial Autonomy." Local self-government should not be a mere sham, but based on real foundations as contemplated by that noble Viceroy, the Marquis of Ripon. The Arms Act must disappear from the Statute-Book, and no limitation should be laid on the entry of Indians into any Public Service. Volunteers should be enlisted freely from all classes. Agriculture must be improved, and commerce and industry helped. Education will have to be free and compulsory. I have refrained from laying down any cut-and-dry scheme of self-government. I suggest that there should be unanimity on these questions amongst all the people of India, and I can conceive of no better agency than that of a joint deputation of the Congress and the League, which would place our demands before the British public and the British Government.

[For the full text of the speeches of the Hon. Babu Surendranath Bannerji, Mrs. Annie Besant, the Hon. Pandit Madan Mohan Malaviya and Mrs. Sarojini Naidu, delivered at the last Congress on the Resolution urging Self-Government for India, vide section on "Utterances of the Day," p. 65 —Ed. "I.R."]

Secondary and Higher Education of Women.

BY PROF. D. K. KARVE, M.A.

My idea of secondary and higher education for women is based fundamentally upon the recognition of two principles. (1) That the most natural and therefore efficient medium of instruction is the learner's mother tongue. (2) And secondly, that women as a class have independent functions to fulfil in the social economy different those of men. We must recognize that both national and social economy require that women should occupy a station of their own distinct from that of men. If schools and colleges are started on these lines with vernacular as the media of instruction and English as a second language, with courses of study specially suited to the needs of womanhood, there need be no apprehension that they would find no learners. Many of those that at the present day rush to the University portals for matriculation will be glad, I dare say, to join the new institutions, provided only that at the completion of the courses there, there is a similar examination and a similar distinction or public recognition of their educational status. It is the educational stamp that attracts girls to the University examinations today and not so much the benefit of the education received. If they get the genuine metal and a similar stamp along with it in the new institutions, there need be no want of girls to avail themselves of them.

In framing these secondary and higher courses of studies, we may be guided by the Japan Women's University. A prudent and practical Japanese thinker and worker, Mr. Naruse, conceived the idea of this University and with immense patience and perseverance made it a success to the great advantage of the Japanese nation. So far as our women are concerned, our circumstances are very similar to those of Japan, and we can profitably turn for guidance to institutions conducted by those people rather than to schools and colleges for women in the West. Mr. Naruse saw in what condition Japanese women were and he pitched his hopes accordingly. He writes :—

"Our aim in establishing the Women's University is neither to copy the higher institutions for women in America and Europe, nor to rival the men's University courses in this country. What we aim at is so to frame our schedules of study as to suit the mental and physical conditions of women at present, and so gradually raise the standard in accordance with general progress."

The Japan Women's University became so very popular in course of time that even women of thirty and thirty-five years of age sought admission to its institutions to win the honour of being in the lists of graduates of its high schools and colleges. If we follow in the footsteps of the Japanese in this matter and organize vernacular Universities for women throughout the length and breadth of the country, we shall be doing a great service to our nation, by putting before the generality of our women an ideal within their reach.

Although the organizers of the Japan Women's University were at first satisfied with a humble programme of studies in order that they might bring it within easy reach of many women, yet they kept before their mental vision high aims and they were very careful to lay down sound principles to guide them. I cannot resist the temptation of quoting at length :

There is a widespread tendency to regard a woman merely as a tool or a machine destined solely for service at home or for the propagation of family line; and in opposition to such extreme tendencies, we feel the necessity of educating women as human beings, that we may be able to call forth their consciousness as personalities with infinite aspiration and longings.

The fact that an express statement had to be made to the effect that woman was not to be considered a mere tool, shows the sentiment of the generality of Japanese people in regard to the status of woman in society and as we have to fight against a similar prejudice in our society, we shall do well to follow the line of work laid down by these people. Just as, on the one hand, they boldly enunciated this principle in opposition to narrow-minded conservatives, on the other, they had to enunciate another, equally bold, to oppose the views of extreme radicals.

We cannot support another movement which aims at the so-called emancipation of women. In opposition to this tendency, we lay emphasis on home life as the chief sphere of a woman's activities. Here her proper place is found as wife and mother, not indeed as a tool or ornament, but as an active partaker in the humanitarian and national spirit, which should animate a home..... Our aims is to educate women that they shall come to realize their own special mission in life as free personal agents and as members of the Empire of Japan and that, as such, they shall be able to perform their services as wives and mothers in a larger sense and more efficient manner than hitherto.

But at the same time we must remember there will always be women who, owing to various reasons, do not marry. To these we must give room for realising their mission in life and utilising their own peculiar personal abilities. We must recognize their spheres of activity

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as legitimate, and not as existing on sufferance, and their lives as having important missions for the nation and the community at large.

Thus the principles, which shall govern us in educating women are:—First. to educate them as human beings, personalities; secondly, to educate them as women in order to fit them to become good wives and wise mothers; and thirdly to educate them as members of the nation so that they may always remember that their lives at home are related in an important manner, however hidden, to the prosperity or decay of the nation.

The Japan Women's University has a complete course of studies beginning with standards for the kindergarten school and ending with a three years' course for post-graduate studies. Kindergarten for children from 3 to 5, elementary school course extending over six years, high school course of five years, college course for three years, and post-graduate courses from one to three years. You will be interested to hear that the number of institutions under the Japan Women's University increased to 182 during its twelve years' existence up to 1912. During this period the Japan Women's University turned out 1,243 graduates, and in addition to these the Girls' High Schools sent out 896 graduates or matriculates of their own, who did not pursue the higher course. The Japanese did not wait till they had an adequate staff of efficient lady teachers and lady professors. Out of the 30 professors of this University, 25 are men and only five are women. In the Girls' High School attached to the University, however, there are 11 lady teachers and only 7 men teachers.

To suit Indian conditions, we shall perhaps have to make a still humbler beginning than the Japanese did. We should devise a course of secondary education for women so adjusted that by the time a girl attains the age of fifteen or sixteen, she should be enabled to complete it. Parents are sure to postpone marriage of their daughter for a year or two if an educational distinction is near at hand for her. This age also is likely to be the minimum age of marriage of girls in advanced Indian communities in the very near future.

It is impossible to check the growing disparity in the education of our men and women unless vigorous efforts are made to spread secondary education among women far and wide through the medium of the vernaculars. Men's secondary and higher education are sure to advance by leaps and bounds; while the advance in women's education in these departments cannot but be nominal if carried on only along the present lines. When women are not intelligent enough to sympathetically appreciate men's enterprises, when they are unable to bear their share in the progress of the nation or reform of society, men cannot but be handicapped in whatever they do. There has always been a complaint that we have been living double lives, one at home and one outside. The only way in which this can be remedied is to educate women properly, so that they may be real and intelligent partners in our views and actions. In the way of the balanced progress of society, this disparity is a great stumbling-block and the sooner we remove it the better.

I shall now give a rough idea of the Japanese secondary and higher courses by giving sketches of their schedules. The secondary courses such as Practical Ethics, Japanese Language, and and Language, History, Geography, Mathematics, Physics, Domestic Science, Sewing, Painting, Music, and Gymnastic Exercises. For higher education there are at present four departments:—(1) Domestic Science, Japanese Literature, English Literature and Pedagogics. Each department has three kinds of studies: (1) Required; (2) Elective, and (3) Voluntary. Here are the studies of the Domestic Department. There are similar lists of other departments too, too long to be given here.

Required studies common to the four Departments:—Ethics, Practical Ethics, Psychology, Pedagogics, English, Physical Exercises.

DOMESTIC SCIENCE DEPARTMENT.

Required studies:—Physiology, Hygiene, Applied Physics and Chemistry, Economics, Home Management, Cooking, Japanese Language, Child Study.

Elective studies:—Applied Natural History, European History, History of Art, Constitution and Civil Law, Etiquette, Horticulture, Sewing.

Voluntary studies:—Philosophy and History of Philosophy, Chinese Literature, Japanese Literature, Music, Painting.

It will not be very difficult to frame secondary and higher courses on these models to suit local conditions in any province, when the time for experimenting comes. Until suitable texts could be written, selected portions from existing books might be utilized. In short, if the will arises, the way will be forthcoming.

In devising our courses on these lines, we ought not to make an abrupt departure. The new high school courses for girls ought to be, for the present, accommodated to the courses now in force. They should be complete in themselves for those who, at the close of their high school education, will enter upon their worldly tasks. They should

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

be of a preparatory nature for those who will choose to go in for higher grades in a vernacular college; while they should also be so framed that girls with the necessary intelligence and ambition may find it easily possible to go in for the matriculation of the present Universities after a couple of years' further preparation.

It will certainly mean an educational experiment, and we may reasonably expect Government to take the lead here as they have done in agriculture. I am aware the finances of Government at the present day are the most strained owing to the abnormal conditions created by the war in Europe, and instead of undertaking new financial responsibilities they would be anxious to use the scissors wherever they could. In these circumstances all that may be legitimately expected of them is the setting apart of a part of their ordinary allotment to the education of women, for making a small beginning in that direction. It will even be a great thing if they set it down as one of the most urgent schemes of the day, to be taken up before everything else when normal times return. Let us hope and pray they soon will. That our empire is bound in the end to come victoriously out of the present struggle, every one of us cannot but be confident. For our cause is righteous. It is only for the early termination of the war that we have to pray.

But even if Government be favourably disposed in the matter, their wheels often are too slow to move. It is already late. To wait any longer will be almost suicidal. I would appeal therefore to Indian States, to public bodies, to private institutions and to men interested in the social amelioration of the country, to take up the matter without further delay, and start experiments which are bound to succeed if only they are pursued with a firm grip. They will yet save the situation if they lose no time in empty discussions. Let them set to work practically. When they have some work already done to show, I feel sure, Government will not be tardy in extending their helping hand to them. The matter is of such grave urgency and far-reaching import, that I would urge it on the Conference to take it in hand and to appoint a committee to formulate a scheme with all its details clearly reasoned out and to suggest ways and means to found vernacular high schools and colleges on the lines here advocated. Women's education has sufficiently advanced now for us to take the step.

In this connection I am very happy to say that I've been authorised by the managing committee of the Hindu Widows' Home Association to announce to this Conference that they are prepared to start, by way of an experiment in the direction, college classes as the natural development of their Mahilasrama or Girls' High School. What makes me feel still happier is that already a contribution of no less than ten thousand rupees has been promised by one of my colleagues at the Mahilasrama. The letter he has addressed to me, comes as a very auspicious augury, synchronizing, as it does, with the inception of the new idea. The moment appears to be opportune, and my friend's contribution is a circumstance that is, to my vision, a sacred intimation, that the institution, if started, would not be allowed to die for want of funds—for want of sympathy and co-operation by my countrymen. Happy in its arrival, I cannot resist the temptation to quote portions from my friend's letter. He writes :—

> **For a long while I have been thinking of practising a kind of renunciation, the renunciation of money. Love of money is like strong fetters, and hampers and obstructs the way to progress. Of the ancestral estate that has come to me, therefore, I am anxious to set apart just enough for the daily needs of my wife and daughter, and of the rest make a gift of Rs. 10,000. I only desire that the amount be devoted towards the foundation of the first college at Hingne, in connection with the proposed Maharastra Women's University. I have no objection to your making any use of this letter, that you may deem fit.**

On the heels of the letter just quoted from, comes another—equally propitious—from Miss Krishnabai Thakur, at present the Lady Superintendent at the Mahilashrama, offering a donation of Rs. 4,000 towards the equipment of a small library for the new institution. She tells me, it is the amount that the friends of the late Mr. B. G. Godbole have collected among themselves to give a concrete form to the last wish of the deceased gentleman towards whom Miss Thakur's feelings were almost those of a daughter. It was he who being her guest, while on a visit to the Widow's Home just before his death, expressed a wish that he could be instrumental in providing a decent library for the institution. His spirit will certainly feel gratified to see that Miss Krishnabai has done for him what he was not spared to do. The lady has actually handed the amount of Rs. 4,000 to me with a desire that the amount be spent for the purpose of creating the nucleus of a library that must ever grow to meet the requirements of a vernacular college.—(*From the Presidential Address to the Indian Social Conference.*)

A Plea for Higher Scientific Education.

BY SIR DORAB J. TATA.

A WIDE diffusion of the highest scientific and technical education amongst a population is a condition congenial to the appearance of the great captain of industry. One hears it frequently said that great technical and scientific institutions follow, not precede, the establishment of great industries. This view has been shown to be based on a complete misreading of experience by no less an authority than the former Member for Education in the Government of India, now Lieut.-Governor of Burma, Sir Harcourt Butler. The following passage occurs in a very able Note which he prepared on Technical Education for the Government of the United Provinces some eight years ago :—

Every civilised country has its Technological Institutes in numbers ; and in almost every country except England the foundations of these institutes were laid in the earliest stages of technical education. In America the Rennselaar Polytechnic Institute was established in 1824 ; the Massachusetts Institute in 1865 ; the Worcester Polytechnic in 1868; Lehigh University in 1866 ; the Steven's Institute in 1871. The Paris Ecole Polytechnique was opened in 1795 ; the similar institute at Vienna in 1815. The German Technological Institutes date from the end of the eighteenth and the beginning of the nineteenth century; Brunswick, 1745; Berlin, 1799 ; Carlsruhe, 1825 ; Munich, 1827 ; Dresden, 1828 ; Stuttgart, 1829. Japan commenced with higher technical schools. In the beginning all these institutions were, doubtless, humble ; but it is still true that in countries yearning to be industrial, technical education has begun largely at the top. Technical education lower down followed as a rule after the spread of general education.

I may be allowed to state that it was because he held similar opinions that the late Mr. Tata sought to give practical effect to them so sar as it was in his power by means of the Institution at Bangalore, known as the Indian Institute of Science. He intended it to be not a glorified technical institute, turning out a few indifferent chemists and electric operators, mainly intent upon making a living for themselves ; but a sort of nursery and training ground to inculcate the spirit of original and specific research in different branches of science and industry, which might ultimately serve as a means for the development and prosperity of the country. . . . The Board of Education in the United Kingdom have, I am glad to see, recently adopted a great scheme for the organisation and development of scientific and industrial research under expert guidance and control, which scheme I would like to see extended to India. The Government of India too have made a welcome departure, creating a special appointment in which our eminent countryman, Mr. Jaggdish Chander Bose, can puruse the remarkable researches which have earned the admiration of savants all over the world, and have given rise to the conviction that at least in the fruitful field of investigation which these researches have opened up, Europe will have to come to India for inspiration. This, we may hope, will be the commencement of a forward policy in scientific and industrial education.

This is a field which pre-eminently be[illegible] such a[illegible]nd and the State. I shall refer later to the fun[illegible] Viceroy, the State in industrial development ; but scien[illegible]n fic research needs such large endowments that only the State can provide it. When, however, we talk of scientific education let us be quite clear what we mean. It connotes at the top the machinery for higher scientific study, for the creation of that atmosphere of scientific knowledge and research which will permeate all our industries. Sir Norman Lockyer once said that the greatest economic asset of Germany was not the possession of a few great scientists ; other countries possess as good scientists and as good brains ; but the possession of a diffused knowledge of science. We want to build up in India that diffused knowledge of science. Below this we want technical schools to increase the skill of our craftsmen ; museums and exhibitions to bring this knowledge home to the people in the most practical and instructive manner, namely, ocular demonstration ; and universal education in order to produce a higher standard of manual labour. Then, industrial success lies not only in creating products but in studying demand. Here we enter the whole field of economics wherein study is no less essential than in scientific research. We rejoice in the stimulus given to economic studies through the foundation of the Bombay College of Commerce and the more recently established Economic Bureau. In short, we have to make science the handmaid of our industries and of our commerce and to banish empiricism from every branch of both. I have spoken of this as essentially the domain of Government ; so it is. But here as in every other field of economic activity the co-operation of our industrialists and men of commerce is demanded. —(*From the Presidential Address to the Indian Industrial Conference.*)

COMMERCIAL AUTONOMY FOR INDIA.

BY THE HON'BLE SIR FAZULBHOY CURRIMBHOY.

IN July, 1913, I suggested the convention of an Indian Commercial Congress, composed exclusively of members of the Indian commercial community. The suggestion did not come too soon, as is amply proved by the fact that it was enthusiastically taken up by the Indian Merchants' Chamber and Bureau and found general acceptance among the Indian commercial community. The Press too supported the idea. The correspondence on the subject disclosed a singular unanimity among commercial people in its favour; the Indian Industrial Conference in a special Resolution welcomed the proposal; and if we did not start the Congress last year, it was only because of the abnormal conditions then prevailing on account of the war. . .

But the impelling reason for an early session of the Commercial Congress is the paramount need for the speedy formation of an Associated Indian Chamber of Commerce in view of the expected settlement at the close of the war of important issues affecting Indian trade interests.

The need of a Federated Chamber of Commerce, great at all times, is paramount in the present political and economic situation in India. Here public opinion can acquire momentum sufficient to move Government only by consolidation and concentration. Ours is not a self-governing country, and the voice of the people must in any case be united and very strong indeed to influence the policy and action of the authorities. The subjects of a Dependency must of necessity be at a serious disadvantage. So long as the Government of a country is not thoroughly national in spirit and sentiment and personal; so long as it is, from its constitution and the accident of its foreign character, more or less exclusive; with all its benevolent intentions and desire to promote their material welfare, it must to some extent at least be ignorant of the true feelings and the real needs of the people. The difficulty is considerably enhanced when the Government is subject to the powerful influence of the ruling nation, which has sometimes conflicting interests, and an effective industrial and commercial organisation which can make that influence irresistible. It is a matter of common knowledge that the Government of India is powerless to shape its commercial and industrial policy with a single eye to Indian interests. The British manufacturer and the British merchant, with their votes which they know how to use to the best advantage, are masters of the situation. In the result the Government of India has on many an occasion to adopt a line of action at once repugnant to it and prejudicial to the interests of the people. It has not a free hand, and in fiscal matters is practically helpless. For instance, even for the purposes of revenue customs duties cannot be imposed upon British manufacturers along with other manufactures unless countervailed by corresponding excise duties, whether the home-made articles compete with the imports or not. Again we have lately seen the deplorable sight of a strong British syndicate attempting to get from one of our Provincial Governments a practical monopoly for the manufacture of cement. It is useless to multiply instances. The outstanding feature of the situation is that the Government of India does not lack the will to take the right course in industrial and commercial matters, but has not the necessary freedom of initiative and action. We the people of this country must therefore do all we can to strengthen its hands, and an Associated Indian Chamber of Commerce with periodical Commercial Congresses should provide the machinery through which we can make our support effective. But the Government of India must be free to adopt, in consultation with the representatives of the people, the policy most conducive to the best interests of the country, without interference from either the Imperial Government or the Secretary of State for India. All improvements in fiscal, commercial and industrial matters must begin with this independence. *In a word, we want self-government in commerce and industry.* Indian public opinion has already expressed itself on the point with singular unanimity, force and persistency, and it would be the barest justice to India to grant her fiscal independence. And this can be done without jeopardising in the least the political interests of Britain. The Associated Indian Chamber of Commerce will have before it a heavy programme of urgent business, and must work throughout the year for Fiscal Autonomy. Without this autonomy our commercial prosperity, however imposing, will lack a sound and firm foundation. In principle and in fact our position is unassailable.—(*From the Presidential Address to the First Session of the Indian Commercial Congress.*)

EDUCATION OF THE MASSES.

BY THE HON. MR. JUSTICE ABDUR RAHIM.

I doubt if there is another country in the world where the educational status of the people is so low as in India. That of 255 millions, only 15 millions can read and write is a phenomenon which cannot be paralleled elsewhere. I am sure that the Government is not pleased with the situation any more than you and I. How could any one be content or happy in such surroundings? At every turn you are shocked by sights and sounds of misery, moral, intellectual, and physical, directly traceable to the illiterate condition of the people. Perhaps their most appalling ignorance and superstition is most vividly illustrated in the stories of crime and folly which are told every day in hundreds of Courts of Justice. You remember that the late Mr. Gokhale introduced a private Bill in the Imperial Legislative Council for instituting free and compulsory education; but unfortunately it came to nothing. I am afraid public opinion, which at the time was not very well instructed, did not express itself with sufficient clearness and definiteness. Since then, however, opinion has in this connection grown with remarkable rapidity so that at the present day there is an universal demand for free and compulsory education. As practical men we do not expect that such a measure can be applied all at once throughout India. But there can be now no difficulty whatever in accepting the principle and enforcing it in selected areas. A commencement might well be made by empowering the Municipalities in larger cities to levy an educational cess for establishing primary education on a free and compulsory basis. I have no doubt that such a measure will be welcomed by all classes of the people and receive their hearty co-operation. While the experiment is carried on in larger cities, the District Municipalities and the Boards should receive ample grants to maintain primary schools in sufficient numbers to meet the wants of every town and village. Here I take the opportunity to invite the especial attention of the Government and the Legislative Council of Bombay to the extreme expediency of placing upon the statute-book the measure known as the Sindh Paisa Cess Bill, which was introduced as far back as 1907, for promoting popular education among the Muhammadans of Sindh, whose need in this connection is particularly pronounced. The Muhammadan representatives of this Presidency are, I believe, all agreed as to the need for such a measure and the general consensus of Muhammadan opinion is now strong in its support. It will be a very gracious and politic act on the part of His Excellency Lord Willingdon and his Council to fulfil the desire of the people in this respect.

I may observe that I have been much struck by the fact that men belonging to the poorer classes are as keen to see that their sons receive a certain amount of education as those belonging to the upper crusts of society. I believe that in most cases there will be no need for using the power of compulsion; the reservation of such power will be mostly useful in keeping awake in illiterate parents a proper sense of their duty. At the same time, if a sufficient number of schools be provided at present, it will be time enough afterwards to consider how far the doctrine of compulsion may or may not have to be legalised. The statistical figures show the number of boys attending school as 17·7 per cent. of the number of boys of school-going age. Of these the proportion of Muhammadan boys is 17·4 per cent. In this department the Muhammadan community is no worse off than the others. The condition of all, however, is equally deplorable. . . . .

Another practical question, but of a general character, that calls for consideration is the combination of training in some useful industry with instruction in the three R's. Unless that is done, it will be difficult to expect the boys of the peasant and the labouring classes to stay on in the school long enough to learn anything useful. Then again we have to see to it, that the boys keep up in after life what they have learnt; too many of them now relapse into illiteracy. As a remedy, the continuation classes deserve proper encouragement. Further, if the benefits of popular instruction are to be made at all enduring, village libraries where newspapers, periodicals and simple instructive literature will be available have to be organised. Then if we could organize a service of popular preachers and lecturers with men who daily pass out of the numerous Madrassahs, we should have done much indeed towards uplifting the Muhammadan masses.—(*From the Presidential Address to the All-India Mahomedan Anglo-Oriental Educational Conference.*)

Indian Christians and the Spirit of Nationality.

BY RAJA SIR HARNAM SINGH, K.C.I.E.

There is a new spirit in India—the spirit of Nationality—to the healthy development of which it should obviously be the aim of missionary policy to contribute in an ever-increasing measure. It is unfortunate, therefore, that the feelings and relations between missionaries and educated Indian Christians are not what they should be. It may be and, no doubt, it is a fact that both parties are to blame for such a condition of affairs, for Indian Christians are often unduly sensitive. Are we not justified, however, in believing that the greater responsibility in this connection rests on those who are privileged to come out to this country to preach the Gospel—its principles and practice—to the people of India?

In mission polity there is at present no place for the educated Indian Christian. No status is assigned to him, and generally speaking, he is not in receipt of a living wage. At the same time, the missionary is apt to resent independent opinion and to be chary of advice. It sometimes happens also that laymen, who desire and are anxious to take an interest in Church work, do not receive that encouragement which they have a right to expect and which it is only fair, other things being equal, that they should have. What are the reasons for this? In my view there are two main causes:—(1) Racial prejudice and (2) the desire to keep all power and authority in the missionary's own hands.

Brethren, I have sometimes heard it urged by foreign missionaries that, as the money subscribed to their missions is so subscribed by charitably disposed members of their community and not by Indians, therefore the missionaries alone have a right to have a voice in the disposal of that money. But, if we look a little further into the matter, it seems to me that the principal object of the donors is the spread of the Kingdom of Christ in India. Surely it cannot be denied that the time has come when, with the increase in numbers and in education of the Indian Christian community, their opinion and advice would be of great value to the missionary bodies of all denominations in the furtherance of the original aim of the donors. And, therefore, their opinion is entitled to have some weight in the matter in some form or other. Moreover, this would certainly act as a stimulus to bring foreign missionaries and the Indian Christian community into closer touch with each other and enable them to co-operate more heartily with each other. I submit these remarks for the consideration of those whom it may concern.

If my opinion is in any way correct—and it is for you all, also, to search your hearts and to ask yourselves if such a state of affairs is in itself a reality—this is not as it should be, and it seems to me to be all the more distressing because the time has certainly not come for us to separate ourselves—if indeed, it ever be desirable—from missionary societies. We need their continued help and advice and, above all, their true and kindly co-operation. Indeed, I myself look forward to the eventual establishment of an Indian Church in which all races will have a part and be able to work harmoniously together, untrammelled by prejudice of race or sentiment of colour, for the material and spiritual development of the people of this land and the common good of humanity.

Finally, as regards our relations with the non-Christian community in India. The circumstances of India are such that for some time to come, I fear, Communal Associations must be the main channel for the development of civic virtues in our countrymen. We might, indeed, wish it were otherwise, but the many and wide divergences of interests, creeds and social system in our country make for the present, at any rate, the ideal of development on purely national lines somewhat Utopian, and we must make in the meantime the most of what is perhaps the only course open to us, namely, association on communal lines. The community that does not organize on these lines, under existing circumstances, will inevitably succumb sooner or later, both materially and socially, before the better organized communities. We must, however, scrupulously guard ourselves against the over-emphasis of the separatist tendency of communal development; and there is never any need for the infusion of bitterness or rancour in either our personal or communal relations. On the contrary, the Indian Christian community must ever keep before itself the national ideal and should always strive to enter into friendly relations, both individually and collectively, with its non-Christian brethren.—(*From the Presidential Address to the Indian Christian Conference.*

The Outlook for Temperance Reform.

BY THE HON'BLE MR. M. GOKUL PRASAD.

The year has been one of decided progress in the cause of temperance. The number of shops for sale of country spirits has been appreciably reduced, and there is a likelihood of further reductions in the following years. The fixed-fee system has been tried with success in Bombay and Ferozepur, and the excise officers themselves are alive to its advantages. The work of advisory committees has been appreciated by the Government, and it is certain there will be many more such committees in the near future. The populated parts of some of the cities have been rid of the liquor shops and others will, I hope, follow the example. The hours of sale have been restricted and the restrictions placed thereon have been more strictly enforced. Experiments in some parts of the country of allowing liquor to be sold in sealed bottles only and ordering sales off the shops in other parts of the country, have certainly resulted in smaller consumption; the sale of liquor on days of festivals, both Hindu and Mahomedan, has been stopped with advantage in some places and the prohibition is going to be extended to others. The preachers have done good and useful works, a feeling against drink has been created amongst certain sections of the depressed classes who had been up to very recent times largely addicted to drink. The temperance councils and advisory committees have been more alive to their responsibilities and have shown activities in various directions and their efforts have to an appreciable amount been crowned with success. The attitude of the Government has been uniformly sympathetic, and the workers in the cause of temperance cannot but congratulate themselves on the advance made in our cause.

Gentlemen, before I close my address I would like to put forward a few suggestions for carrying on our work in the coming year. Notwithstanding all that has been said to the contrary by several people in high authority, I am an advocate of total prohibition. It is only by totally prohibiting the manufacture, import and sale of intoxicants that one can expect a real decrease in the evil. That this evil makes a man unfit to perform military, naval and other duties which require a sound body in a sound mind is amply evidenced by the ukase of the Czar prohibiting the manufacture and sale of Vodka in Russian territories, the well known order of the President of the French Republic against the manufacture and sale of absinthe throughout France and her colonies, the last appeal of Lord Roberts to the British nation, the message of Lord Kitchener to British troops, the speech of Admiral Sir John Jellicoe at Gibraltar, the utterings of Field-Marshal Viscount Wolsley, Field-Marshal Sir John French, the Hon. Josephine Daniels, Secretary of the United States Navy, and others, and last though not least, by the King-Emperor's lead in the cause of total abstinence by prohibiting the use of alcoholic drinks in the Royal household. I might well say that the world is much nearer to total prohibition than it ever was before. If a poor country like Russia could forego a revenue of millions of pounds, and France could notwithstanding its gaiety and liveliness and the enormous expenditure of the present war do without absinthe, there seems to be no reason why the poor Indian should not be made to do without drink. It would make him the richer in body and soul and the loss of revenue will, I am sure, be made up by the decrease in crime and disease and progress in so many other departments of life, and India will be the richer in its better and consequently a more prosperous people. When there are so many forces working in furtherance of our cause, we ought not to lose this golden opportunity, and our efforts should be energetically directed towards taking steps for the success of our cause. Attempts should be directed towards a larger dissemination of temperance literature, the organisation of special temperance meetings in schools and colleges, and a more vigorous and systematic attempt should be made to have periodical lectures accompanied with magic lantern show, wherever possible, to make them more attractive for the younger people and the ignorant masses. The preachers should also direct their attention to caste associations and panchayats, and address them about the evils of intoxicants.

* * * *

The reform must come mainly for amongst ourselves, the people, and then we will be in a much stronger position to influence the policy of the Government for the better.— (*From the Presidential Address to the All-India Temperance Conference.*)

Bond of Union Among Indian Theists.

BY THE HON. DR. NIL RATAN SIRCAR, M.A., M.D.

WHAT is it, then, that serves as the bond of union among the Indian Theists? No doubt, in some of our churches there have been internal bonds in the shape of creeds, liturgies and Samhitas (ceremonial codes), though, as we have seen, even these creeds are coming to be more and more elastic, if not nominal or obsolete. But in the absence of a common subscription or confession or a common ceremonial or personal law, is there a Theistic community or communal life? The answer is clear. The *de facto* bond is membership of some Theistic congregation based on similarity of convictions, aspirations and ideals, partly religious and partly social; and as new Samajas are formed, or the existing ones multiply or subdivide, the common hopes and ideals will become more and more indefinable in terms of positive formulation, until, in the end, with the widening of religious ideals, there will be only one congregation left, that of the worshippers of the True, the Good, and the Beautiful God, held together in the Church Universal, the Church of all time. That is the only congregation that lasts, that runs like a golden thread through the web of time. All other churches are aisles of this one church, choirs within this one congregation.

But in the meanwhile we have also some negative bonds and marks. We are bodies of practical reformers, and like all such bodies, whether in the social or in the religious field, we are held together by our practical programme of reform, at any rate until our reforms are accomplished. We, who are mainly of Hindu extraction, have rejected certain practices of the orthodox community; we have had no need to reject any tenets or dogmas, as Hindu orthodoxy insists on none. We have rejected idolatry, idolatrous ceremonials and Samskaras (sacraments), caste, non-adult marriage, the Zenana system, and the compulsory celibacy of widows. These negative marks, by dividing us from the orthodox Hindu folds, have drawn us together. But as reform associations, our Theistic bodies have a peculiar character. Some reforms, as in matters of food, drink, dress, can be practised by individuals independently of social acceptance. Some require co-operation of other individuals, or of the general body of the people, or of the State itself. Reforms may also be divided according as they do or do not lead to excommunication from general social intercourse, according as they are or are not usually inherited from father to son, or according as they do or do not require or obtain any State recognition. Social and religious reforms generally require co-operation, are often under a social ban, and are likely to be inherited.

The Theists in rejecting idolatry, caste, and non adult marriage, became pronounced reformers of this type, and naturally formed a community with a social cohesion based on marriage and commensality among themselves. They also required and obtained legislative sanction. In the absence of a general Civil Marriage Act, a special marriage facility was granted by the State in their case, *viz.*, the removal of the disability under which they laboured in contracting marriages in accordance with their own programme of reform. But Indian Society is rapidly passing to the stage in which a legal provision for a Civil Marriage Act without reference to religious persuasion or creed is one of the decencies, if not the necessaries, of civilized life; and when this is secured, the cumbrous Act III. of 1870, with its curious negative declaration will become a dead letter. Not a special Brahmo-Marriage Act, but a general Civil Marriage Act without any declaration, positive or negative, as to the religious persuasion of the parties concerned, should be the objective of our efforts. A special Brahmo-Marriage Act is likely to present grave difficulties, whether we define a Brahmo by creed or ceremonial; or maintain registers for the purpose of the Act, or leave the matter to the declaration of the parties themselves. A general Civil Marriage Act, on the other hand, will give a general relief in the simplest and most effective way. Indeed, large numbers of our orthodox brothers will also profit by such an Act to provide a safeguard against polygamy and other risks to which the orthodox marriage bond is now liable, as well as to celebrate intercaste and adult marriages and the remarriage of widows. Further, a Brahmo-Marriage Act will be a barrier against the rapproachment of the orthodox community and the Theistic reformers, while a Civil Marriage Act will hasten their union.—(*From his Presidential Address to the All-India Theistic Conference.*)

The Ayurvedic System of Medicine.

BY KAVIRAJ JAMINI BUSHAN ROY KAVIRATNA, M.A., M.B, F.C.U, M.R.A.S.

THERE is ample evidence to prove that the root principles of the science of medicine were first preached in Arabia by Indian physicians and professors and that the *Charaka* and the *Susruta* were translated into the Arabic language. From Arabia Ayurveda travelled through Egypt to Greece, thence to Rome and from there, again spread all over Europe and gradually throughout the world. Of course, the principles of Ayurveda do not any longer retain their original shape, but, transformed and developed and named afresh by different peoples in different countries, they have given birth to various systems of medicine. Many Western savants have expressed their opinions in this connection, and I may cite a few of them here.

Dr. A. F. R. Hoernle, M.A., PH. D., C.I.E., says in his *Studies in the Medicine of Ancient India* :—

> Probably it will come as a surprise to many, as it did to myself, to discover the amount of anatomical knowledge which is disclosed in the works of the earliest medical writers of India. Its extent and accuracy are surprising when we allow for their early age, probably the 6th century before Christ, and their peculiar methods of definition. In these circumstances, the interesting question of the relation of the medicine of the Indians to that of the Greeks naturally suggests itself. The possibility, at least, of a dependence of either on the other cannot well be defined when we know as an historical fact that two Greek physicians, Ktesias about 400 B.C. and Megasthenes about 300 B. C. visited and resided in Northern India.

Next, in his *History of Medicine* Dr. Max Neuburgher writes :—

> "That Greek medicine adopted Indian medicaments and methods is evident from the literature. The contact between the two civilisations first became intimate through the march of Alexander, and continued unbroken throughout the reign of Diaduchi and the Roman and Byzantine eras. Alexandria, Syria and Persia were the principal centres of intercourse. Indian physicians, means and methods of healing are frequently mentioned by Graeco-Roman and Byzantine authors as well as many diseases, endemic in India, but previously unknown. During the rule of the Abbasides, the Indian physicians attained still greater repute in Persia whereby Indian medicines became engrafted upon the Arabic, an effect which was hardly increased by the Arabic dominion over India. Indian influence, in the guise of Arabic medicine, was felt anew in the West. The apparently spontaneous appearance in Sicily, in the 15th century, of Rhino-plastic surgery bespeaks a long period of previous Indo-Arabian influence. The plastic surgery of the 19th century was stimulated by the example of Indian methods, the first occasion being the news, derived from India, that a man of the brickmaker caste had by means of a flap from the skin of the forehead fashioned a substitute for the nose of a native."

Ignorance of Ayurveda has on more than one occasion led Western physicians and medical writers to draw erroneous conclusions. For instance, Dr. William T. Councilman, M.D., says in a *System of Medicine*, a work edited by Doctors Osler and Macrae, that " the first description of the disease small-pox, which leaves no doubt as to its nature, is given in the well-known treatise by Rhazes in the 10th Century." But the fact is, that long before this time the symptoms and treatment of *Masurika* (small pox) were discussed in the *Charaka* and the *Susruta*. And it is his ignorance of this fact that is responsible for the erroneous and misleading conclusion which Dr. Councilman has arrived at. It should, therefore, be the duty of this Conference to point out all such errors and omissions with the help of evidence and thus uphold the glory of Ayurveda.

It is a matter of congratulation that many Western medical men have been able to realise the greatness of Ayurveda. The illustrious Surgeon, Sir Havelock Charles, when Professor of the Calcutta Medical College, often used to say to his pupils :—

> I am only repeating to you what the Aryan medical science preached two thousand years ago and am reproducing to you only a small fragment of the lesson taught by Charaka.

And the great regard Sir Havelock has for the Vedic system of medicine is shown by the extract from *Charaka* inscribed on the marble tablet placed by him on the wall opposite the staircase of the Calcutta Medical College. Dr. Clarke of Philadelphia observed after a perusal of the English translation of *Charaka* :—

> If the physicians of the present day would drop from the Pharmacopœa all the modern drugs and chemicals and treat their patients according to the methods of *Charaka*, there will be less work for the undertakers and fewer chronic invalids in the world.

Speaking of the same work, Dr. Paul Bartholomew says :—

> I have been exceedingly struck with the profound meanings of many passages which indeed go beyond anything that I have met before in medical literature.

The above extracts, scanty though they may be in comparison with the greatness of Ayurveda, conclusively prove that many Western medical men have realised, in part at least, the glorious position which that system of medicine occupies in the world.—*(From his Presidential Address to the All-India Ayurvedic Conference.)*

The Social Problems of the Bhatia Community.

BY DR. HIRA LAL.

I AM by no means inclined to condone or apologise for the evils of corruption growing in any society or sect, but we must look for the seeds of corruption elsewhere than in the personalities or tenets of religious leaders and pioneers. The seeds rather lie in us, their followers.

* * * *

European writers who have studied and described the Bhatias bear testimony to their business capacity, diligence, enterprise and perseverance, and many instances of fabulous wealth-making under the auspices of the cotton industry and the export and import trade lie to the credit of the Bhatias. But perhaps this rapid growth in wealth and prosperity has not been an unmixed blessing, for the worship of Mammon has not failed to introduce its evils in India as in other countries of the world. We Bhatias have the reputation of being practical-minded, and we are eager to give our boys a business education from an early age, but we have neglected those liberal and refining sides of education which go to the formation of high ideals of duty and morality. Taking up the line of enquiry with which I began this part of my discourse, I may conclude by saying that it is the superfluity and consequent misuse of wealth, side by side with the want of education and of the spread of knowledge, that have affected not only every strata of our community, but the priesthood also, by obscuring those ideals of personal sanctity, learning and piety with which the profession and practice of religion in India have been rightly associated. We all have our weakenesses and faults in the different parts of the country, and if I have raised this question specially before you and appealed to you to remember your better selves, it is because by your worldly success you are in the position of acting as examplars to the whole community and have the means of uplifting the entire body of your brethren better than others. Inherently religious as you are, in spite of all contrary material influences, you have only to revive your own Vaishnavite ideals of devotion, self-sacrifice, purity and love, and to remember that the proper use of wealth is not the selfish enjoyment of those who have it, but the removal of the needs and filling the wants of those who have it not.

The remainder of my task is rendered comparatively easy now that I have tried to lay down the lines and principles on which we should proceed. While your President of the first Conference laid down the motto "Deeds before words," I go a step further and say "Principles and Character before everything." The social problems facing us, Bhatias, are very much the same as those of other Hindu castes; but each caste must proceed to deal with them in accordance with its special traditions, history and ideals.

* * * *

The first plank in the platform of the practical social reformer should be Education—both of boys and girls. In my opinion the Hindu ideal, and for the matter of that the universal ancient ideal, that the woman's proper sphere is the home, should not be disturbed, far less destroyed; and the system of her education should be framed accordingly. The teaching and the medical professions are the only learned professions in which women may prove useful without causing social disorder or friction with men, provided only that even in these cases the sphere of their operations be confined as far as possible to their own sex. Every girl of the middle and higher classes at least, should as far as possible learn enough of her own vernacular to be able to read all the best books in it, including the sacred scriptures as well as current newspapers and periodicals, providing useful and general information.

With regard to education of boys I would set no limit at all. I do not see why the wealthy Bhatias of Bombay, who are already helping and maintaining some useful educational institution should not start insitutions for giving all kinds of education—elementary, secondary and collegiate—to members of their own community as well as others in need of cheap education—a most pressing necessity at the time. I would particularly insist on their founding Technical Schools and Colleges, for although they have excelled in trade and commerce, they ought to put their practical instincts into the work of starting big industries as well as helping small handicrafts, without which the bread problem in India will not be satisfactorily solved. Lastly, the study of Sanskrit should be encouraged by all means, specially among the priesthood by giving prizes and rewards.—*(From his Presidential address to the Second All-India Bhatia Conference.)*

CURRENT EVENTS.

BY RAJDUARI.

THE SITUATION.

REVIEWING the events of the past four weeks, we find that the most salient event was the evacuation of Gallipoli by the combined British and French troops and the departure of the fleet from the Dardanelles. The troops have been ordered to other theatres of war more or less supposed to be in Mesopotamia and Egypt. This step was no doubt necessitated by military exigencies created by the treacherous conduct of the King of the Bulgarians and by the vacillating and unwise policy of the King of the Hellenes. No doubt the original mistake had been made by the two Allies in having failed to omit at the commencement in March last of sending the fleet only to the Dardanelles. Possibly at the time it was not quite carefully calculated, the unreliability of the Czar Ferdinand and the imbecility of King George of Greece. Whether it was an error of judgment or a miscalculation of the Balkan politics, it is unprofitable to inquire at present. When time arrives for writing a correct history of the War, many matters now wrapt in secrecy for reasons, obvious or diplomatic, will be fairly known and the impartial jury of the day will not fail to pronounce its just verdict. Meanwhile let us look at accomplished facts. So far as those facts go, it is now recognised in all responsible quarters that the Allies had acted with wisdom in evacuating the troops and the fleet from the Gallipoli peninsula. Their need is greatly wanted in other places of far greater importance at the present military moment. With the advent of spring the drama in all the theatres of war will develop and reveal to the world the objective of the belligerents. At present it seems that the events happening daily in the Eastern theatre of war are more absorbing than those in the Western. Indomitable Servia hath had to suffer a crushing defeat in spite of all the national heroism and noble traditions of that warlike race. The fates were against them while the Allies, in spite of their desire to assist them to the fullest, were unable to render that help in time which was needed. As a consequence Servia has been despoiled and overrun by the enemy. A great many people have taken refuge for the time in the Island of Corfu, which the British and the French have jointly occupied in order to give them rest and to recuperate the remnant of the Servian army. Montenegro also has shared a similar fate. That historical race of mountain warriors, after achieving miracles of heroism against heavy odds, has been partly decimated and the remainder obliged to take refuge in Southern Italy. Meanwhile let us have a glance at the conduct and attitude of Greece during the month.

The Greek King seems to have been better advised than he was previously. His neutrality continues though he seems now to have been fully alive to the consequences which may happen to his country if the Hohenzollern and the Hapsburg overrun the entire Balkans and dominate the destinies of Bulgaria and Turkey. He is growing conscious of the fact that in order to keep Greece full of her national liberty there is only one course open to him. That course is to be as friendly as possible to his natural Allies, who alone up to the last fifty years have given to Greece that freedom which she enjoys to day. The pro-German dynastic influence has had its share in Greek politics of late. But the influence is not so overpowering as was once feared. As a consequence it is evident that the protection which the King has given to the Allied Troops at Salonica, and the leave given to occupy Corfu, are hopeful signs of that political consciousness of maintaining the integrity, independence, and freedom of his people. So far there are signs of great encouragement to the future action of the Allies in their coming struggle against the Austro-Germans. As to Bulgaria the less said the better. The entire world of civilization, not obsessed by junkerism, has known of his ingratitudes to the great saviour of Bulgaria. Without Russia there could have been no Bulgaria, as we have known it since the conclusion of the Turko-Russian War of years ago.

His devious ways are too well-known, while none ever believed in the honesty of his diplomacy. It is, therefore, astonishing that Sir Edward Grey should have been so weak as to have placed any reliability in him. Things would not have come to the pass in the Balkans had Sir Edward Grey been as astute as this Czar Ferdinand has been known to be. He has been really outwitted. However, even this is a matter which must be left to the impartial historian of the future for a fair verdict.

Of Roumania it is impossible to state anything more favourable. He has been playing a waiting game just as he did two years ago and found it to his great benefit. He is still sitting astride on the fence. That is all about that can be said in his favour. It is his only qualifying grace in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the matter which distinguishes him from the unreliable man at Sophia. One cannot help regretting that the entire policy of the British foreign office in regard to the Balkan politics since the declaration of the war has been of an unsatisfactory character.

Coming to Turkey it must be observed that the iron domination of the Germans has made the common people helpless as much as their Sultan. Enver Pasha is the great military dictator, who is playing his own cards under the German *ægis*. But for the way now opened between Berlin and Constantinople, matters might have been exceedingly perilous for the Turks. It remains to be seen how the Ottoman fares at the close of the war by the hands of its so-called protector. As for Turkey in Asia it is clear from all accounts that there the Hun, despite his desperate efforts, is being worsted in every struggle with the British and the Russian troops. The coming spring will soon bring the British to Bagdad at all costs and hazard. That will be the signal of a complete defeat of the German machinations and other misch efs in that part of Asia Minor. But we will not anticipate coming events though they are casting their shadows before. So much then for the Eastern theatre of the war.

As to the Western theatre nothing conclusive or decisive has taken place yet. French warfare is going on continuously with all the havoc it can produce. Artillery duels, sometimes violent and sometimes mild, are of such daily occurrence that they have ceased to interest the public. There is a great hope that in the spring active offensive policy is fully anticipated, the outcome of which the world will await with the keenest anxiety. Both sides are intent on forcing a decision which at present hangs in the balance.

As to sea warfare, blockade in the North Sea is growing more and more effective, and the civilized world recognized the incalculable value of the service the British Navy has performed and is performing.

The enemies' submarines' activities have been somewhat greatly in evidence in the Mediterranean. Their further piratical murders of innocent women, men and children have been as rife as they were in the Irish Channel months ago. Besides some liners of different nationalities, P. and O. mail boat *Persia* was sunk without notice with a frightful calamity which is already a matter of history. We may be quite sure this activity of the enemy under the sea in the Mediterranean will soon be silenced, as it has been in the North. Meanwhile it is satisfactory to note that a recruiting policy in England has met with remarkable success. Now Parliament has been able to pass by a large majority a compulsory bill for raising a fresh army. The spirit of the nation is to be distinctly discerned in the way that the people have responded to the appeal of the Government in this matter.

The Statistical Abstract of the Mysore State. Government Press, Bangalore.

Statistics, though cold, are of more value than administration or other reports in estimating the moral and material progress of a country. Figures and comparative tables are free from any bias of the writer, which may unconsciously influence the writing of reports. The Government of Mysore have compiled this Abstract "with a view to place before the public . . . . statistics on all matters of interest and importance relating to the material and economic condition as well as the administration of the state." The book is compiled after the model of the Statistical Abstract of the United Kingdom with the necessary modifications to suit local conditions.

Visions, Pre-visions and Miracles in Modern Times. By E. Howard Grey, London. L. N. Fowler & Co.

This is a book dealing with the so-called spiritualistic and occult phenomena of which records have been preserved in modern times and an examination of the incidents from a psychical researcher's point of view. Very interesting information is afforded in the volume regarding the instances of "levitations," "healings," and "rappings," which the author has been able to unearth from past records. The book is likely to interest the student of the historic basis of psychic phenomena.

THE WORLD OF BOOKS.

[ONLY SHORT NOTICES APPEAR IN THIS SECTION.]

Muthumeenakshi: The autobiography of a Brahmin girl. By A. MADHAVIAH. (TRANSLATED FROM TAMIL BY ONE OF HIS DAUGHTERS). LAW PRINTING HOUSE, MADRAS. WITH AN INTRODUCTION BY SIR SANKARAN NAIR.

This is an English rendering of a story originally written in Tamil, and dealing with certain aspects of Hindu social and domestic life in South India. The author's talent for graphic writing both in English and Tamil is well known, and his works in English, though considerably varying in merit, have sometimes reached a high level of excellence from the literary and artistic point of view. We are second to none in our admiration for the author's gifts, and have a good deal of sympathy for his views, but at the same time we cannot help feeling that he has a lamentable knack of presenting exaggerated pictures of accidental evils, and dwelling with disproportionate vehemence on certain insignificant features or abnormal excrescences of domestic life, obtaining, if at all, in certain very backward and ignorant classes of people. We are not sure that even the cause which the author has at heart gains anything by presenting exaggerated and disturbed pictures of customs which, whether they prevailed or not to any extent at any time, are now at any rate not extant anywhere, and speaking from inside knowledge of the communities which the author purports to portray, we can only express our astonishment that certain matters due to great ignorance and backwardness, which are incidental to all communities, should have been brought out in great relief to the glare of publicity, in such a manner as to suggest altogether a false idea of the mental and moral outlook of the Brahmin community in this part of the country. No harm is done so long as the book is read only by the people who are attempted to be depicted therein, but when it is dressed up in English and presented to outsiders and all and sundry as a faithful picture of Brahmin life and manners, one is tempted to exclaim: 'Save us indeed from our abnormal geniuses!' It is unnecessary to pursue this topic further, but we must confess to a feeling of repugnance that the author's accomplished daughter should have had to translate certain passages dealing with a certain incident of doubtful taste in the book before us.

"The Battle of the World": VERSE. BY GEORGE WEDDELL. LONDON: ELIOT STOCK: 7, PATERNOSTER ROW, E.C.

A short volume of verses inspired by the War. The themes are not the unfamiliar ones of call to patriotism, Kultur, Honor to the dead and so on. The subjects are well-chosen and the treatment well-conceived. Though the high flame of poesy is rarely perceptible, and the practical mind of the author finds expression everywhere, the effort is one that is not altogether vain. The appeal to America, for instance, is quite timely and faithfully reflects the mind of every one at the present time:

"What country now can stay to calculate
And weigh her profits up in either hand?
* * * *
The movement comes for choice
Shall we be dollar-wise, or let the voice
The strong clear voice of Honor here dicate?
The flames of Hell are lit, and Europe spends
The life-blood of her sons to fight them back;
Shall we stand off and let the fight proceed?
Nor help, nor hinder either hell or friends?
Or shall we sell the fuel Hell may lack
To feed her fires?—let Europe burn and bleed?"

The Research Magnificent. BY MR. H. G. WELLS. MACMILLAN'S EMPIRE LIBRARY.

Another powerful novel from the pen of Mr. Wells depicting vividly the growth and development of certain peculiar mental phases. Of late there has been a great deal of anxious cogitation and examination of various mental phenomena as the result of the stress of economic conditions and the physical pressure of mental forces to the entire exclusion of moral currents as illustrated in the present awful war. The place of idealism in the scheme of life may well be said to be the keynote of the present volume. It is the study of a man whose life is devoted to the pursuit of an idea. The struggle between the ideas of socialism and aristocracy, between pure intellectualism and human sympathy, is exemplified in the life-history before us and the adventures, both mental and physical, are portrayed with rare force and inimitable charm. The final solution of the eternal riddle appears to be devotion to humanity and condemnation of materialism as insufficient to satisfy the emotional needs of man.

1. How we Remember our Past Lives.
2. Theosophy and Modern Thought.
By Mr. C. Jinarajadasa, M.A. The Theosophical Publishing House, Adyar.

In the first of these small and neatly got-up Theosophical publications, the author expounds with great learning the arguments which make Reincarnation not only highly probable as a hypothesis but almost the only possible rational theory that will explain the sudden bursting forth of genius and other peculiar traits of character which the ancestors of a man never exhibited. The author advances the probability of Keats having been a Greek poet, Gibbon a Roman historian, and Schopenhauer a Buddhist philosopher and other similar coincidences which are interesting if somewhat fanciful. The chapter on the "Vision of the Spirit" explains the stages of evolution of a young soul through the vision of self, the vision of mind or emotion, and the vision of intuition, stages during which the soul gains necessary experience and wideness of vision, and finally, under the guidance of 'The Master,' enters into the Vision of the Spirit when 'the many is the one,' and the heritage of the soul is finally established.

The other book noted above, "Theosophy and Modern Thought," consists of the Convention Lectures delivered at Adyar in December 1914, by Mr. Jinarajadasa. The first on 'Heredity' expounds the ideas of heredity and evolution as depicted by Darwin, Bateson, Lamarch, and finally by Mendel and his school, and adds certain factors which Theosophy supplies to fill up the gaps in the explanation of facts. The second lecture is on 'History and Reincarnation.' The author here takes a bolder tone than in his earlier work above noticed, and we have a delightful review of world history from the standpoint of Reincarnation or Life-Evolution. The author considers that the English nation of to-day is formed by rebirth substantially of the Roman people with their ideas of law, order, and practicalness. The French have reproduced the love of art and beauty and grace and all that appertains to form in the ancient Greek nation. The Germans, according to the author, are a reproduction of the ancient Phœnician nation, with their trading instincts, industrial initiative, and organising power. The author believes that as the Phœnicians tried in vain to master the sea, being foiled by the ancient Romans, so the Germans in spite of their 'Culture' will be defeated in their ambition as to the mastery of the sea by the reborn Romans, *i.e.*, the British nation.

DIARY OF THE MONTH.

December 24. The Eleventh Indian Industrial Conference and the Bhatia Conference commenced to-day in Bombay, Sir Dorab J. Tata, and Dr. Hira Lal Bhatia presiding respectively.

December 25. The Fortieth Theosophical Convention and the Arya Samaj Anniversary met to-day in Bombay, Mrs. Annie Besant presiding at the former.

December 26. The Theistic Conference, the All-India Hindu Conference, the Bhatia Conference and the Commercial Congress began to-day in Bombay, with the Hon'ble Dr. Nilratan Sircar, the Hon'ble Pandit Madan Mohan Malaviya, Dr. Hira Lal Bhatia and the Hon'ble Sir Fazulbhoi Currimbhoi presiding respectively.

December 27. The Thirtieth Session of the Indian National Congress began to-day in Bombay, Sir S. P. Sinha presiding.

December 28. The All-India Kshtriya Conference met to-day in Bombay, the Maharaja of Kashmir presiding.

December 30. The Social Conference, the All-India Temperance Conference and the All-India Muslim League met to-day in Bombay, Prof. D. K. Karve, Rai Bahadur Gokul Prasad and Mazar-ul-Haque presiding respectively.

December 31. A big public meeting of the Hindu ladies of Bombay met to-day, under the auspices of several Associations for ladies to adopt a Memorial to H. E. the Viceroy, urging the cause of education for Indian women.

January 1916.

January 1. The Volunteers of the National Congress and the Muslim League were jointly entertained at a party this evening.

January 2. The Anglo-Indian Empire league Conference concluded its deliberations to-day.

January 3. The Benares Conspiracy Case resumed hearing to-day.

January 4. His Honour the Lieutenant-Governor of Burma was presented with an Address of Welcome at Mandalay to day.

January 5. Their Excellencies the Governor and Lady Willingdon replied to various Addresses presented to them, at Karachi, to-day.

January 6. The Shareholders of the Bombay Cotton Trade Association have donated Rs. 22,500 towards War purposes.

January 7. The East Indian Railway Police are enquiring into the daring escape of a Punjabi life-convict from a running train at Chinsurah.

January 8. Mr. E. S. C. H. Cresswell, a well-known Calcutta merchant, died to-day under tragic circumstances.

January 9. The Maharaja of Durbhanga arrived in Madras to-day.

January 10. The death took place to-day of Sir Samuel Way.

January 11. H. E. Lord Willingdon opened the Marwari Vidyalaya to-day in Bombay.

January 12. A fire broke out near the Madras harbour this afternoon, but the damage was slight.

January 13. The Maharaja of Durbhanga was voted an Address of Welcome to-day by the Hindu citizens of Madras.

January 14. The prosecution in the Benares Conspiracy Case closed their case to-day.

January 15. Sir James Meston received a deputation of leading Shias to-day in Lucknow in connection with the proposed Shiah College.

January 16. The apointment of Lord Chelmsford to succeed Lord Hardinge as Viceroy of India was made to-day.

January 17. Mr. H. V. Lanchester began his lectures on Town-Planning at the Engineering College in Madras to-day.

January 18. The United Provinces Educational Conference opened in Lucknow to-day, the Hon'ble Pandit Madan Mohan Malaviya presiding.

January 19. This morning the Commissioners concluded the recording of the accuseds' statement in the Benares Conspiracy Case.

January 20. In the House of Commons to-day, Mr. Asquith announced that arrangement for the extension of the Allied War Councils were progressing.

January 21 A meeting was held this evening in Calcutta for the promotion of the Baden Powell Girl Guides Movement, Mrs. Carter presiding.

January 22. The Madras Provincial Co-operative Conference opened this afternoon in Madras, the Hon'ble Mr. A. G Cardew presiding.

January 23. Holland is being visited with a series of disasters in fires and floods.

January 24. Surgeon-General Sir Pardey Lukis, Director-General of Medical Services, arrived in Madras this morning and is a guest of H. E. the Governor.

"ALL ABOUT THE WAR—THE INDIAN REVIEW WAR BOOK."—A comprehensive and authentic account of the War with numerous illustrations, portraits, cartoons, maps and diagrams, contributed by officers of the Indian Civil, Military and Medical Services, Ministers of Native States, Engineers, Educationists, Journalists, Lawyers, Publicists and other Specialists. Edited by G. A. Natesan with an introduction by His Excellency Lord Pentland, with an appreciation by H. E. Lord Hardinge. Cloth Bound, 240 Portraits, 107 Illustrations, 37 Cartoons and 16 Maps. Price Rs. 4. To subscribers of the "Indian Review," Rs. 3.

G. A. Natesan & Co., Publishers, George Town, Madras.

TOPICS FROM PERIODICALS

INDIA TO-DAY AND TO-MORROW.

An article in the quarterly *Round Table*, dealing with India as it is and as it will be, shows how the new angle of vision is adjusting itself to the true perspective of things regarding India. For example, the writer says :—

> Though it is undoubtedly true that we hold India by the strength of the sea-power, and that it is less British bayonets in Hindustan than British battleships in the North Sea which are responsible for the present sense of security, we must not forget that the Indian princes and peoples had rallied to our side before that sea-power was assured. The Maharaja of Mysore's spontaneous offer of fifty lakhs of rupees to the Supreme Government towards the expenses of the war was the beginning of that Homeric list of gifts and contributions to which there seems to be no end. The money had been saved for expenditure on public works, and the Maharaja of Mysore, by his diversion of this wealth to the prosecution of a European war, publicly proclaimed, to all intents and in a manner plain to the whole of the Indian Empire, that in his opinion reproductive works and other benefits and advantages of civil life were dependent upon the stability of British rule. It was not only an act of splendid loyalty, but of shining statesmanship.

That which is called by some "unrest" in India, the writer welcomes as the most hopeful feature of British rule. Its absence, he says, would signify failure of British rule, for it is the ferment of the living forces of progress and new ideas. Speaking of the blessings of British rule, which are many and varied and which the people of India gratefully recognise and try to deserve and repay to the best of their power, as is evidenced in this great crisis, the writer in the *Round Table* calls attention to one aspect which Englishmen generally are apt to overlook. He writes :—

> We hear a great deal about the disquieting and disintegrating influences of Western education and religions, but little or nothing about the equal or greater disrupting force of machinery. It is a mere accident that British rule in India should have synchronised with the rapid development of mechanical power; it cannot be said that the latter is due to the former. Had an Englishman never set foot on the Coromandel Coast or the Red Ensign never flown beneath Malabar Point, machinery would still have found its way to the Peninsula and the whirl of its wheels have sounded a mournful requiem for scores of village industries. Say what we may, British rule, as regarded by the village weaver, potter, coppersmith, etc.—bear in mind these are not individuals but families and communities—has not been an era of undiluted prosperity.

The writer hopes that this fact will receive the attention it deserves, and that after the war the revival of village industries will be the special concern of all Englishmen. The writer in this connection calls attention to another strange irony by which the British rulers of India have, for all their boasted hygienic wisdom, been powerless to check the ravages of plague and malaria, with the result that the East is "still inclined to look on Western sanitation as a vain thing, and to express annoyance in its own way when it interferes with its old traditions and customs." This, at any rate, is a striking explanation of the so-called Eastern "apathy," so frequently heard of in India, in sanitary reforms on Western lines.

Speaking of India's place in the Empire after the war, the writer has no doubt that if she bears her full share of the shock of war, suffers, as the others parts of the Empire suffer, endures to the end as they endure, she will have won the right to be treated in the Councils of Empire on the same level as they are treated. But here a pertinent question suggests itself to him :—

> If she comes to the Imperial Conference she will bring her own Imperial needs and expect them to be settled in an Imperial spirit. But is the Imperial Conference for all its fine-sounding title capable of this? Remember it is an old Eastern saying, older than the Gospels: 'The son asked bread of the father, and he gave him a stone.' Representation at the Imperial Conference implies in the Indian mind something far more than a native gentleman to sit at table in Downing Street with the Prime Ministers of our Self-governing Dominions.

This echoes the sentiment of all India and of all true Englishmen who love the Empire and all that it stands for, and this sentiment found ardent expression at the last Indian National Congress. The writer proceeds :—

> The problems of Empire after the war are to be new problems, but no less weighty than those which preceded it. The Imperial Conference has its uses, but a deliberative assembly of greater permanence and wider powers will be necessary if the British Empire is to assume a more concrete form in the future. And in this assembly, not merely India, but the component parts of India will have to be adequately represented.

HINDU POLITY ABOUT B.C. 300.

In an able article contributed to the December number of the *Educational Review*, Mr. V. Rangachariar presents an interesting survey of the pre-Mauryan field of Hindu polity and incidentally explains how far that system conduced to the prosperity and welfare of the people who lived under that administration. Many of the details brought to light now possess but an historical interest, but the curious will not fail to receive suggestion even from them at this distance of time. For instance, we shall mention the ordinary sources of income tapped at that now vanished epoch. The *Arthashastra* of Kautilya is the authority mainly relied on.

Kautilya enumerates six sources of income, the durga, the rural parts, mines, gardens, forests and herds. Taking the city or durga, for instance, we can say what taxes were likely to be collected. Towns would be, for example, places where trade and traffic was large, where the merchant and the manufacturer, the oilmonger and the butcher, the weaver and the dairy-man, the goldsmith and the retail merchant, the prostitute and the gambler, would find demands for their vocations and their commodities. It was there again that corporations of artisans and handicraftsmen throve, it was there that the use of a good currency was appreciated. In such places we can, without any references to extraneous authorities, say what are the likely contributions demanded of the people by the State. We should expect the collection of tolls from merchants, a seignorage for coinage. We should expect license-fees for the sale of liquor and for carrying on houses of prostitution and gambling, contributions from gilds and taxes from the various merchant classes. And these are the demands enumerated by Kautilya. "Tolls, fines, weights and measures," he says, "the town-clerk (Nagaraka), the superintendent of coinage (Lakshanadhyaksha), the superintendent of sales and passports, liquor, slaughter of animals, threads, oils, ghee, sugar (kshara), the State-goldsmith (sanvadnika), the warehouse of merchandise, the prostitute, gambling, building-sites (vastuka), the corporation of artisans and handicraftsmen (karusilpigana), the superintendent of gaols, and taxes collected at the gates and from the people (known as) Bahirakas come under the head of forts."

Passing on to the country, the second limb in the body of income, a similar general *a priori* consideration of the possibilities of exploitation by the State will give us an idea of Kautilya's expectations from the people inhabiting the rural parts. It is in the rural parts that the crown lands, *i.e.*, the lands set apart for the maintenance of the monarch and his household were. It was there that road communications and water communications were to be carefully looked after and necessary provisions made for. Chanakya in his enumeration of the different varieties of the State's income from these, remembers all these. "Produce from crown lands," he says, "portion of produce payable to the Government (bhaga), religious taxes (bali), taxes paid in money (kara), merchants, the superintendent of rivers, ferries, boats and ships, towns, pasture-grounds, road-cess (vartini), ropes (rajju) and robes to find thieves (chora-rajju) come under the head of country parts,

INDIA IN WAR AND AFTER.

Mr. William Black has been urged to write in the columns of the *Christian Guardian* an answer to a malicious insinuation in the form of a flaring headline in a British newspaper to the effect that Lord Kitchener had gone to India to take in hand the quelling of a serious insurrection that had gathered head here. The writer finds no difficulty in attacking the aspersion, as, indeed, who would, after the splendid loyalty of India in the war. According to Mr. Black,

when the war broke out there were many people within the English-speaking section of the British Empire who had the same misgiving as to what India would do as the writer of the headline above referred to gave evidence of. There isn't any doubt at all that Germany really hoped that the excitement and uncertainty of a European war would bring trouble in India, and possibly serious revolution. Pan-Islamism would co-operate with certain revolutionary elements in Bengal and elsewhere, with far-reaching results. And what Germany hoped would come many Britishers feared might.

But as everyone knows what was hoped for and feared did not come.

Instead of it from one end of the country to another all classes and all creeds united in one purpose, how to help most and best in the hour of the Empire's need. With all its congeries of races, speaking upwards of fifty languages and scattered over a territory larger than Europe, exclusive of Russia, the Empire of India has shown itself to be in absolute and intense and self-sacrificing sympathy with the greater Empire in its time of tremendous strain and struggle. Illustrations of this spirit could be given in bewildering number and variety. In men and money and enthusiasm no part of the British Empire has been more ready and hearty in the response than India.

The man who thinks with pride of British traditions and who believes that Britain has tempered justice with mercy in her dealing with subject peoples all through her history can look upon the spectacle which India presents to-day with considerable satisfaction. And the outlook for the future in India's history is bright and hopeful. The thing that British statesmen must learn for the future is, not so much to give greater freedom to the masses of India, for it would seem as if they had up to the present about all the freedom and opportunity they could profitably use, but to give to India's educated sons the opportunity to direct and guide her development according to their own plans and ideals. And we believe they will learn that.

FUTURE GOVERNMENT OF INDIA.

In a communication made to the current number of the *Asiatic Review*, Mr. J. B. Pennington makes a breezy, but withal, sympathetic reference to the future Government of India. He takes it for granted that the ultimate object of every enlightened thinker is to educate the people of India in such a way as to make them fit for some form of (at least local) Self-Government approximating to the Colonial system. Every reasonable man "must agree with Sir Thomas Munro that it is 'impossible' to govern a country like India for ever from the outside, and that it must, sooner or later, be taught to govern itself."

Now, it is impossible for the people of India, or any other country, to learn the art of government without practice; and the only reasonable question is: How are they to get that practice?

Mr. Pennington observes:—

> We have taught what is often called a 'microscopic minority' to become one of the finest subordinate services in the world; but we have done very little so far, except incidentally, as the *quasi*-independent Indian States to teach them the art of governing others except again in a very subordinate way. How then did we ourselves learn the art of self-government so far as we have learnt it? Chiefly, it must be confessed by fighting amongst ourselves for hundreds of years. But we cannot afford to let the millions of India learn the art of self-government by cutting each other's throats and the survival of the fittest. Nor is it necessary.

In the writer's opinion, it is only by becoming the friends of the people that the Government of India can guide public opinion and lead it into fruitful channels. If the officials show no friendliness in expressing their views on subjects which engage the minds of the people, and become dear to them they cannot expect to win the love and devotion of the people.

This is, however, no new policy. Akbar instituted it, and left a mighty Empire behind him; Aurangzeb departed from it and brought that Empire to ruin.

The only method which can bring strength to the Government is to associate the people with the Government of the country. This has been the policy of both Lord Minto and Lord Hardinge. The wisdom of a generous concession at a proper time in South Africa has proved itself in the present crisis, as it proved itself many years ago in Canada.

All that points to 'decentralization.' What the Hindu, perhaps more than any other man, wants is a local God, but one made of flesh and blood within easy reach of his village to whom he can go with his grievances; not a distant Board or Court of Star Chamber, with a cold-blooded secretary instead of a human soul. Mr. Pennington writes:—

> A great many years ago when I was a very subordinate official I made a note which I have just unearthed to the effect that the 'Madras Presidency was reduced to one dead level of mediocrity by the influence of the Board of Revenue alone'; and the only practicable remedy I have come across in my career is that originally suggested by Mr. Donald Smeaton, C.I.E., so far back as 1904, which, so far as I know, was to all intents and purposes stillborn. His idea was to group our present districts so as to form small provinces and put them under selected 'Indian' Governors with Councils as in Mysore, 'under' (say, rather, 'advised by') British Residents; but that sort of Government is, I think, even yet in advance of the times, if only as Sir John Hewett observed because there is probably not yet a sufficient supply of 'Indians' qualified to act as Governors of even such small provinces. It has always seemed to me that the obvious way to begin the reform is by associating a European official on equal terms with an Indian, and putting them in charge of two or three of our present districts, with powers equivalent to those of the Board of Revenue in Madras.

PRICES AND FREIGHTS.

Mr. Shirras in his 'Memorandum and Statistical Tables relating to Prices and Freights in India since the outbreak of the War,' lays stress on the fact that the level of prices in India, during the opening months of the War, was much below the level which even the best-informed judgment anticipated on the outbreak of war on so large a scale. He says that in the first six months of the war, the rise in prices was undoubtedly counterbalanced to an appreciable extent by the influence exerted by a good monsoon in the contrary direction. The tables that Mr. Shirras gives reveal very marked differences in the effects the war had on different groups of Indian products. The prices of oil-seeds and raw textiles declined steadily; but there was an increase of 4 per cent. in the price of food-grains. The phenomenal increase of 38 per cent. in the price of wheat at the end of December is to be explained by the fact that other factors besides war like the bad crops of Australia and Argentina had their own influence on it. The case of rice is the reverse of that of wheat; but gram rose considerably in all the provinces in spite of a decrease by 68 per cent. in the exports of gram. Mr. Shirras attributes this rise to two causes, scarcity in the districts of supply and increased demand. Since exports fell off, it is plain that the increased demand must have come from India itself, and not as Mr. Shirras concludes, from the operation of world-factors, i.e., factors which affected markets in Western Europe, owing to the outbreak of war.

HOUSING OF THE UNTOUCHABLES.

In the January number of the *Social Service Quarterly*, Dr. Harold H. Mann, D.SC., M.SC., writes an interesting article on the housing of the depressed classes in Poona. It is the result of first-hand observations of the economic condition of the Mahars, Mangs, the Bhangis, and the Chambhar community dwelling in that city. The method of study pursued consisted in a house to house investigation of the people, how they live, what they work at, and under what conditions they carry on their existence. The experience gained by the writer is remarkable in many directions, but there is one point which stands out above all others. He writes:

The conditions of city life among the depressed classes were so unhealthy and so unsuitable that the population could not maintain itself without continuous immigration. If new-comers from outside were not continually arriving in Poona, the labouring classes, so far as they were represented by the Mahars, the Mangs, the Bhangis, and perhaps, though less certainly, the Chambhars, would speedly die out, or at any rate become largely reduced in numbers.

The first point which must strike any one who considers the data presented by Dr. Harold Mann is the extremely small families among the depressed population. As an average, the actual number of persons per household is below four, except in the case of Chambhars, where it just exceeds that figure. From this the writer concludes that the population must be diminishing as the average family numbers less than four.

Regarding the housing conditions among the untouchable classes, it is observed, that wherever they are met with in the Deccan, the housing conditions are deplorable.

Under ordinary village conditions they are excluded from the village site, and live outside in an area which is rarely visited by others, and in which the houses are, so far as by far the largest proportion is concerned, of the most crude and primitive type. Usually made of grass, with, in some cases, a sheet of corrugated iron forming a part of the roof or walls, sometimes covered with kerosene oil tins beaten out flat, or with thatch composed of grass or leaves, they form under usual circumstances the picture of neglect.

What is the effect of such environs on the people? Dr. Harold Mann writes:

I must own that this inquiry into the conditions of the housing among the depressed classes does not give us any very clear results as to the effect of the character of the housing on the healthiness of the people. The size of families is almost entirely the same in all the three communities (the Mahars, Mangs and Chambhars). . . . though the percentage of *pucca* houses is so different. Among the Bhangis who live almost entirely in *pucca* houses, the family is exactly of the same size as among the Mahars whose housing is of a very *kuchha* character. More than this, there does not seem very constant relation between the size of families in a particular quarter and the proportion of of *pucca* or *kuchha* houses.

What is the remedy? According to Dr. Harold Mann, in his own words:

What I feel is wanted is a constructive policy, by which accomodation shall be secured which will at least be sanitary and in which it will be possible for self-respecting people to live. I proposed in the Poona Municipality some time ago the construction of a model colony as an experiment. The matter was sanctioned, the scheme was prepared, and land was given for the purpose, and its carrying out only awaits the provision of money. The difficulty is that such a scheme could not be expected to yield more than four per cent. on the money expended, and hence would hardly attract private capital. But it seems a matter in which the honour of the municipality is concerned.

All who wish to see our cities to be really the abodes of happy, healthy people must feel that the housing of the untouchable classes is a matter which demands earnest and early attention.

LESSONS OF THE WAR.

According to a writer in the *Hibbert Journal*, the war has raised the issue between modern social democracy as exemplified in England and the bureaucratic militaristic system of Prussianised Germany. The war has also demonstrated the complete vindication of the enlightened British Colonial policy of the latter half of the nineteenth century. In the field of international law, all the belligerents are anxious to set themselves right in the eyes of the neutral nations, and neutral opinion seems to be exercising a perceptible influence on the course of the war. There is bound to be a revulsion of sentiment in favour of the humane regulations contained in the Hague Conferences. In respect of maritime warfare, England has been trying to push her belligerent rights somewhat beyond the terms of the London Declaration in dealing with neutral commerce. The war would be certainly harmful to sociological studies and would revive a number of biases which blind facts and cloud the judgment. It would destroy the search for panaceas and Utopias, as well as the eugenic dream of a 'superman.' The previous equilibrium between labour, capital, and natural resources having been disturbed, a readjustment will come which will distribute the results of production among them in somewhat different proportions. Among historical studies that would be encouraged by the war are the work of history as a subject of study, the importance of international law, the exposition of the different types of nationalities, the disadvantages and advantages of different forms of political government, etc.

SOME ECONOMIC ASPECTS OF THE WAR.

Mr. Philip Snowden, M.P., writing in the last number of the *Socialist Review*, refutes the popular notion that war is good for trade and says that the illusion arises only from the temporary industrial activity caused by the manufacture of the instruments and necessaries of war. The fact that the nation and the people who supply the financial means to carry on the war are different parties in this connection, makes the cost of a war to the nation enormously greater than would be the case if the nation were conducting the war out of wealth and resources which were its own property. If the nation owned all the wealth of the community, it would not require to borrow from its own citizens to finance the war. Or if the whole cost of a war could be met by taxation, then the war would have been paid for, at its conclusion, in the full sense of the word, though its citizens would have been impoverished by the extent of their contributions in taxation. The actual loss to the nation would then be represented by the amount which had been paid for war services in men and material, and by the commercial and industrial dislocation which had resulted. The burden of the new debt which has been incurred in the present war will amount to about £1,600 million at the end of the present financial year; and this would involve the payment of an annual sum of about £100 million in the shape of interest to certain individuals. This dependence on loan-mongers for the prosecution of a war is one of the unavoidable consequences of an economic order in which the State owns no wealth-producing machinery. A collectivist State could wage war far more economically, as it would do so in the main out of the accumulated treasure and current production, and would therefore avoid dependence upon the loan-mongers.

The last War-Loan has created a class of people, numbering over half-a-million who have been given a strong vested interest in the policy of borrowing. The campaign of the War Economy League is a ridiculous farce, since economy is recommended in order that the savings may be invested in a war-loan, *i.e.*, to encourage the ruinous policy of borrowing and to increase the number of those who have a personal interest in that policy. It is idle to pretend that by what has been done, Government has yet approached the end of the possibilities of the taxation. During the Napoleonic Wars, Pitt raised national taxation to a point which absorbed 2/7 of the total income of the nation. Taxation has not yet been carried to such a point as to limit expenditure to any material extent or even to limit luxuries. Even when all should be obtained which can be got by an ideally perfect and graduated income-tax, there will still remain a considerable sum to be raised by other means. Two items which have not yet been touched by the Chancellor of the Exchequer are the estate duties and the spirits duties. The difficulties in the way of carrying out a scheme for the taxation of capital may be considerable, but they are not insuperable. The tax might be fairly graduated, being very small on estates below £5,000 and graduated up to 10 per cent. on estates of a million, and it might be made to yield a sum of £500 million. The nation is to be impressed seriously with the terrible financial situation in which the nation would be left as the result of the present policy of large borrowings. The memorable words of Gladstone might now be revived. "It seems to follow at once that up to the point at which endurance is practicable, payment by war-taxes, rather than taxes in peace, is for the interest of the people at large."

WAR AND HIGHER LEARNING.

Charles Franklin Thwing, President of the Western Reserve University, U. S. A, writing to the current number of the *Hibbert Journal*, estimates the special suffering and effect produced by the war on the normal course of higher learning in all its branches. The sympathy of at least nineteen-twentieths of all academic people in America is with the Allies, and they feel towards Germany a sentiment of pity rather than of anger, and one of anger rather than of hatred. The effects differ according to the character of the studies themselves. The war has diminished the element of personal encounter and reduced the matching of individual brain, wit or prowess, is resulting in an indiscriminate elimination of all the fittest physically in the contending nations and from the standpoint of eugenics is of the greatest calamity that could happen. We have also to recognise the *esprit de corps* and communism which are developed by the war and which may be regarded in the light of virtues though bought at a wholly ruinous price.

It would be extremely difficult to prophesy the effect of war on the whole domain of philosophy. The great conception of Schopenhauer in presenting the world as Will has had a formative and evilly inspiring force in the present war. The ethical conceptions of James and Dewey that the rules of morality must continually change to meet new conditions, will also be brought into prominence.

HINDU-MUSLIM RELATIONS.

Writing in the January number of the *East and West*, Mr. H. Narain Row, B.A., B.L, considers certain national tendencies calculated to compose the differences that may exist between the Hindu and Muslim communities in India. The Government have been in the past acutely susceptible of any deflection in the feeling of the Mohamedan community, away from British rule; for it must be remembered that the Musalmans of India are not as isolated from the rest of the world as are the Hindus, and whenever the fortunes of their co-religionists elsewhere are adversely affected by strained relations with Christian nations, the effect of the course of history in other parts of the world on the attitude of Indian Muslims gives rise to curious and suspicious enquiries, and questions are asked in the British Parliament to find out whether the officials in India are awake or are nodding.

Whatever may have been the attitude of Government towards the Mahomedan element in India in past years, the wisdom of adopting any other than a preferential policy in the administration of all Indian communities has been perceived. And the result has been to the good of all. Says the writer:—

> A more important and abiding result of the policy of treating the Hindu and the Musalman demands in the same spirit, and lending an equally ready ear to both, has been that the two communities are coming more and more to perceive, not only the harmlessness, but the utility of pursuing their common ends in harmony with each other. The personal influence of certain Muslim leaders in bridging the gulf between the two communities cannot, indeed, be ignored or undervalued, but besides the personal factor, the trend of events both in India and in other countries, and the Government's declared policy of discountenancing rivalries and deprecating the danger to the public peace therefrom, have given a new direction to the political activities of educated Musalmans. Right up to Lord Minto's time they were in the habit of emphasizing their separate interests more than the general interests represented by the National Congress, and their demand of special electorates marked the acme of their distrust of acquiescence in the reforms advocated by what has been called the Hindu Congress. Their separate interests are indeed watched by the Moslem League.

After all, the concessions demanded by the National Congress are, many of them, of more or less equal benefit to all communities, and when the Government is disposed to grant them, it would be ungracious for the Moslem League to belittle the services and repudiate the aspirations of the more forward political thinkers and workers. The fact that the league has adopted the ideal of "Colonial Self-Government" is of significance.

INTERNATIONAL MORALITY.

Writing in the October number of the *International Journal of Ethics*, Mr. L. S. Woolf estimates the actual effects the ideas of right and wrong have upon the handling of international affairs and explains that diplomats usually reduce their arguments to one of the three following forms: (1) we ought to do this because it is to our interest and it is morally right; (2) we ought to do this because it is to our interest and not morally wrong, and (3) we ought not to do this because it is morally wrong. The international action of Great Britain with regard to the slave-trade in 1815 was prompted by no motive of self-interest and was caused by a remarkable popular wave of positive and not merely negative morality. Again in 1876, Mr. Gladstone's astonishing campaign and speeches on the Bulgarian question produced a gust of popular feeling which swept the nation off its feet into the paths of peace and righteousness and destroyed the axiom of British policy that British interest made it imperative to bolster up Turkey and to keep Russia's hands off her at all costs. In these cases positive international morality has actually dictated national action, even wher there was no question of self-interest. There are of course innumerable cases in which statesmen and nations have claimed and rightly claimed to act from moral motives; but in these cases the dictates of national interests coincided with the dictates of international morality.

Negative international morality would dictate in the following way: "We ought not to do this, even though it is in our interests because it is wrong." It is beyond doubt that the actual standard of international morality, as revealed in the actions of one State towards other States, is very low when compared with the standard of individual morality in civilised or even uncivilised countries. Statesmen, however, even when they admit immoral or non-moral policy, always drape their notions with deductions of right and wrong and justify their action only by pleading necessity. Though a standard of international morality is always assumed and admitted, it has very little effect upon international relations, because of the traditional secrecy of foreign offices, and of the fact that nearly everyone professes a profound lack of interest in and sense of responsibility for his country's actions. Again international actions depend largely upon the traditions and standards of the small governing class actually responsible for them.

BRITAIN'S WAR-FINANCE.

Mr. J. Ellis Barker, writing to the last number of the *Nineteenth Century and After*, considers the consequences of the nation's gigantic war expenditure upon its economic position and future. He supposes that the war might cost more than 3,000 or 4,000 million £ and perhaps more and that it may swallow up one-third or perhaps one-half of the national capital and may permanently double or even more than double taxation. Great Britain spent on the Napoleonic War about 1,100 million £—a sum about equivalent to the national income of two years and a half, and considerably larger than one-third of the entire national capital, at that epoch. Three-fifths of the cost of that war was raised by loans and two-fifths by taxation. Between 1792 and 1815, taxation was almost quadrupled, and the interest paid on the National Debt grew almost three-and-a-half-fold. Then the taxes on food, drink, tobacco, raw materials, imports and manufactures increased from three to fourfold, the stamp duties were raised at a similar ratio, while the direct taxes on the income and the property of the well-to-do and on their establishments, increased almost seven-fold. The present war has cost so far about 1,300 million £, and it may swallow up anything like 2 to 3 times the present charges incurred. The country will have to make up and more than make up for her war expenditure, however large it may be, by vastly increasing production, by reorganising her industries.

After the conclusion of the terrible Napoleonic War, the expected collapse of British industries and commerce did not take place, but on the contrary they expanded in an unprecedented manner. In no other period of the nation's history, did its wealth progress at a more rapid rate as between 1815 and 1845. The principal cause which led to this marvellous economic development was due to the great burden which 40 years of almost incessant warfare had laid upon the people; and it was the tax-collector who converted the backward and happy-go lucky British nation into a nation of strenuous and intelligent industrial workers.

It is to be hoped that the pressure of the war-taxation will once more stimulate inventiveness and industry, that necessity will cause Englishmen to discover new avenues which lead to prosperity and that the gigantic cost of the present war will be as easily borne as that of the Great War a century ago. The lamentable inefficiency of British production is apparent not only in manufacturing, but in agriculture and mining as well. British coal production per man has been steadily decreasing during the last 30 years and has fatally increased the price of British coal. The coal-miners have succeeded in reducing the output and creating an artificial scarcity. British employers have come to consider business to be a bore, if not a nuisance, and take little note of the scientific and technical progress made in other countries. Transport by railway is also lamentably behindhand and inefficient. And the workmen look upon improved organisation and machinery with positive and undisguised hostility; they believe in a high wage and a low output and consider that every increase in output injures other workers and themselves. The German agricultural area which is only 60 per cent. larger than that of this country produces approximately three times as large a quantity of animal and vegetable food. The English must pay for the war, by introducing in all their industries, the best and most scientific methods, must compel employers of labour to increase production to the utmost, to replace labour-wasting with the best labour-saving machinery and must induce the workers and trade-unions to reverse their insane policy of antagonising all mechanical improvements and of restricting output. Government should increase thrift among the masses, partly by taxing worthless amusements and partly by organising thrift among the workers.

FAILURE OF EDUCATION IN INDIA.

The *Hindustan Review* for December contains an article by Mr. P. N. Bose on "The Failure of Education in India." This failure he attributes to the intrusion of the lower European culture on the higher Indian plains of excessive respect for literacy:—

> The intellectual progress of new India, which it is supposed to secure, is thus of a more or less illusory character. In the face of the immense literary activity of new India, as evidenced by largely circulated numberless newspapers, periodicals, novels, dramas, etc., the like of which was absolutely unknown in old India, such a statement may sound astounding and paradoxical, but there does not appear to us to be any warrant for the inference of intellectual superiority which is drawn from it. It is based upon the unwarrantable assumptions, that the diffusion of literacy on modern lines implies diffusion of right knowledge, and that literacy on old Hindu lines or illiteracy implies ignorance. There are good many people of both sexes in old India who, though innocent of Western education or even illiterate, are better conversant with the affairs pertaining to their spheres of life and are morally and spiritually more advanced than are many literates of corresponding classes in new India. The intellectual development of the former, though its range is restricted, cannot be reasonably presumed to be inferior to that of the latter. The fact of the matter is new India has her full share of the superstitious veneration of the present age for printed matter.

THE COST OF ADMINISTRATION.

Lala Lajpat Rai, in the *Modern Review*, takes the annual income of an Indian—the official figure in Lord Curzon's time—as Rs. 30. He estimates the purchasing power of the rupee in India, going by his own experience in the three countries, as equal to that of a dollar in the United States, and of a yen in Japan. He then proceeds to compare the salaries paid by the poorest country in the world with those paid by Japan and America, the latter probably the richest country in the world.

HEADS OF GOVERNMENT.

President of U. S.	...	$ 75,000
Prime Minister, Japan	...	Y 12,000
Viceroy, India	...	Rs. 2 50,800
		Plus large allowances.

CABINET MINISTERS.

Cabinet, U. S.	...	$ 12,000
„ Japan	...	Y 8,000
Viceroy's Council, India	...	Rs. 80,000

DEPARTMENTS.

UNITED STATES.

President, Naval Board	...	$ 13,500
Solicitor-General	...	„ 10,000
Assistant „ „	...	„ 9,000
Treasurer	..	„ 8,000
Chief of Staff	...	„ 8,000
Quarter Mastar General	...	„ 8,000
Rest from	...	„ 6,000 to 21,000

JAPAN.

Imperial Household	..	Y 5,500 to 8,000
President, Railway Board	...	„ 7,000
„ Board of Audit	...	„ 6,000

Comptroller Auditor-General	...	„ 42,000
D. G. Post and Telegraph	...	„ 36,000 to 42,000

PROVINCES.

One U. S. State pays its Governor $12,000 a year; five pay $ 10,000: one $ 8,000; one $ 7,000; 36,000; the rest (43) $ 5,000 or less.

In Japan, Governors of Provinces have Y. 3,700 to Y. 4,500 and allowances of Y. 400 to Y. 600.

The Governors of Madras, Bombay and Bengal, each Rs. 120,000; Lieut.-Governors, Rs. 100,000; Chief Commissioners, Assam and Central Provinces (with Berar) Rs. 62,000 each; Delhi, Rs. 36,000. All have large extra allowances.

OTHER POSTS.

The rates run in about similar proportions for the higher offices, but in India there is a striking and painful peculiarity, the huge gap between the higher offices and the lower. Lala Lajpat Rai illustrates by the Police. The New York Chief Inspector receives $ 3,500 a year, and a Patrolman, our Constable, receives $ 1,400. (The Chief Commissioner has $ 7,500.) In India the Inspectors General have from Rs. 24,000 to Rs. 36,000; their Deputies from Rs. 18,000 to Rs. 21,600; District Superintendents from Rs. 8,000 to Rs. 14,000 and so downwards to constables, who have only from Rs. 120 to Rs. 144 a year.

HIGH AND LOW PAY.

Lala Lajpat Rai concludes:

We do not believe there is a single country in the world where the difference between the remunerations allowed to the highest and the lowest State servants is so disproportionate as in India; yet there is a tendency still further to increase the salaries of the high officials, European and Indian, while even very insignificant increases to the salaries of the lowest servants of the State are very grudgingly allowed. . . . The fact is that the Government in India does not attach sufficient importance to the ordinary man. His needs are often overlooked in the desire to please the higher services, and to keep them contended. Considering that every man in India is supposed to have a family, the condition of the lowest official is extremely miserable, and justifies corruption in their ranks.

QUESTIONS OF IMPORTANCE.

RESOLUTIONS OF THE CONGRESS AND THE MOSLEM LEAGUE ON SELF-GOVERNMENT FOR INDIA.

The following is the full-text of the Resolution on Self-Government for India passed at the last Session of the Congress held in Bombay, December 1915:—

That this Congress is of opinion that the time has arrived to introduce further and substantial measures of reform towards the attainment of Self-Government as defined in Article I. of its Constitution, namely, reforming and liberalising the system of government in this country so as to secure to the people an effective control over it by amongst others; (*a*) the introducing of provincial autonomy, including financial independence; (*b*) the expansion and reform of the Legislative Councils so as to make them truly and adequately representative of all sections of the people and to give them effective control over the acts of Executive Government by (*c*) reconstruction of the various existing Executive Councils and the establishment of Legislative Councils in provinces where they do not now exist; (*d*) the re-adjustment of relations between the Secretary of State and the Government of India, and a liberal measure of local Self-Government.

In order to work out a scheme for carrying out the above, the following further Resolution was passed:—

That this Congress authorises the All-India Congress Committee to frame a scheme of reform, a programme of continuous work, educative and propagandist, having regard to the principles embodied in this Resolution; it further authorises the said Committee to confer with any committee that may be appointed by the All-India Moslem League for the same purpose and to take such further measures as may be necessary. The said Committee to submit its report on or before 1st September 1916, to the General Secretaries who shall circulate it to the different Provincial Congress Committees as early as possible.

The following is the full-text of the Resolution passed by the All-India Moslem League at its last Session held in the Taj Mahal Hotel at Bombay, 1st January 1916.

The All-India Moslem League resolves that a Committee consisting of the following gentlemen be appointed to formulate and frame a scheme of reforms, and that the said Committee is authorized to confer with political and other organisations or committees, if any, appointed by any such organisation as they may deem fit, provided always that due regard is paid to the needs and interests of the Musalmans of India in the formulation of the aforesaid scheme of reforms.

The Committee shall submit its report and scheme to the Council of the All-India Moslem League to be presented to the League at its next Annual Sessions,

UTTERANCES OF THE DAY.

SELF-GOVERNMENT FOR INDIA.

(*Speeches at the National Congress.*)

I. THE HONOURABLE BABU SURENDRANATH BANERJEA.

Brother Delegates, Ladies and Gentlemen,—In moving this Resolution I am confronted with an initial difficulty. A spectre is conjured up to frighten us out of this Resolution. We are told by our critics, and they are as multitudinous as the stars of heaven, and by our candid friends, whose number is considerable, that to move a resolution of this kind at a time like the present and to formulate proposals of Self-Government now would be to embarrass and hamper the Government. If I could be persuaded of the soundness of this view, I, for my part, would have no part or share in this Resolution, and furthermore I would ask you to drop it. Our attitude—the attitude of the educated community—throughout the crisis of this war has deen one of profound devotion to the Throne and of active co-operation with the Government. Agitation is far from our minds. We may deliberate, discuss, even formulate proposals of reform, but we, men of the Congress, are firmly resolved to embark upon no agitation, no controversy, and not to let loose the forces of public opinion, so as to put pressure upon the Government. The war cannot last for ever, and peace must come. God grant that it may come soon. We must prepare for the peace and for the situation in which we shall find ourselves at the conclusion of peace. I can think of no more patriotic task than that. We shall soon be called upon to play the part of men. Let us equip ourselves for that exalted function.

The idea of readjustment is in the air, not only here in India, but all the world over. The heart of the Empire is set upon it. It is the problem of problems upon which humanity is engaged. What is this war for? Why are these nameless sufferings endured? This is a war of readjustment, a war that will set right the claims of minor nationalities, and uphold and vindicate the sanctity of treaties, charters and proclamations—ours is one of them and similar "scraps of paper."

They are already talking of what will happen after the war in Canada and Australia. They are talking about it from the floor of the House of Commons, in the gatherings of public men and Ministers of State. May we not talk a little too from our standpoint? And are we to be charged

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

with embarrassing the Government when we follow the examples of illustrious public men in all quarters of the globe who are weighted with a sense of responsibility at least as onerous as that felt by our critics and our candid friends?

The Resolution says that the time has come when a definite advance should be made for the attainment of our goal, which is Self-Government. There are those who tell us that we are unfit for Self-Government, that the goal is distant, very very distant, so distant as to be illusory, and that not even from the Sinai of hope and faith can we obtain a glimpse of the promised land. A high authority, speaking from his place in Parliament, said that, so far as his imagination could pierce, he could never conceive of a time when India would be fit for Parliamentary institutions. The same authority is the author of the Reform Scheme. I am no prophet and do not desire to be one though my Brahminical ancestors were (*laughter*), but I will say this that it will be one of the bitterest ironies of fate that will hand down Lord Morley to distant generations as the Simon de Montfort of the future Parliament of India (*cheers*).

Let us analyse the problem. Self-Government is the order of nature, the dispensation of Divine Providence. Every community must be the master of its own destinies. That is a part of the Divine Law and the immutable order of the moral universe written in every line of universal history, written in characters of light by an invisible hand. Every deviation, every departure from it, is transient and transitional and like the compass pointing always northward steadily deflects towards the goal which is Self Government.

Self-Government being the natural condition of things it is incumbent upon those who say that we are not fit for Self-Government and that it is a distant goal, so distant as to fade away into the mists of the unseen future—I say it is incumbent upon them to prove their case. The burden of proof is upon them and not upon me. But with the chivalrous spirit characteristic of our great movement I will come to their rescue and take upon myself the burden. I am prepared to descend from the vantage-ground which I occupy and meet my adversary in the open. I am willing to fight him with his own weapons and upon a footing of perfect equality.

Let us survey the past, examine the present, and look around and then pronounce our verdict. In the morning of the world before Rome had been built, before Babylon and Nineveh emerged into the historic arena, our ancestors had founded those village organizations which represent the first beginnings of Self-Government. So well-organised were they, so tenacious of life and vitality that they survived the crash of Empires, the subversion of Thrones, the fall of dynasties, and lived down to our own times with a never-ending life.

Coming down to more recent times what do we find? Wherever we have been tried we have never been found wanting. We have been tried in the matter of Local Self-Government under adverse conditions as admitted by Lord Morley and yet the experiment has proved successful. We have been tried in the higher regions of Self-Government under the Reform Scheme of 1909, and again we have been successful.

Here we have a stupendous gathering of representative men from all parts of India. Look north, south, east and west, is there any other part of the world which can present to the view an assembly equal to this? It has been observed, and rightly so, that Self-Government is government by discussion, and the discussions in this great assembly are carried on with a sense of moderation, self-restraint and regard for constituted authority which is proof positive of our capacity for Self-Government (*cheers*). In this great assembly by the manner in which we conduct our deliberations we demonstrate that we are qualified for government by discussion.

But that is not all. The best training ground for Self-Government are the institutions of Self-Government, and Mr. Gladstone is my authority for it. He says: "Free institutions alone qualify a people for Self-Government. If you deny the people free institutions, you take away from them the most useful academies for training in Self-Government."

Look abroad for an illustration of this truth. Japan was given full Parliamentary institutions immediately after Japan had emerged from mediæval feudalism. Japan was not presumed to be fit for Self-Government; but after fifty years training in the actual work of Self-Government, it is the universal verdict that the experiment of Parliamentary Government in Japan without a previous trial was fully justified.

Take the Philippine Islands, which only the other day became a province of America. America has given her free institutions, and with the best results. Let not our critics start the objection that we are not qualified. When they say so, we reply: You are out of court because you have not given us free institutions which will serve as a training ground,

The Resolution lays down the principles upon which the scheme of reform is to proceed. First and foremost is Provincial Autonomy. What is Provincial Autonomy? It is the government of the province, not by the bureaucracy of the province, but by the chosen representatives of the people (*cheers*). It is the government of a province by the people of the province for the benefit of the people of that province.

Financial independence is the basis of Provincial Autonomy. The revenues of a province belong to the province. Many years ago, Sir James Westland, speaking from his place in the Imperial Legislative Council, said that the revenues of India belong to the Government of India. I wholly dissent from that view. The revenues of India belong to the people of India—to you and me held in trust by the Government of India for the benefit of the people of India. It is open to our trustees to delegate their authority to a subordinate administration in whom they have confidence. We, who represent the people and voice their throbbing aspirations, appeal to the Government of India to delegate its powers over the revenues of the provinces and to divest itself of all control over those revenues for the self-government of the provinces. You will ask me what will the Government of India do if we take away these revenues. There are Imperial revenues such as Customs, Salt, Railways, Post and Telegraphs and Opium, and they may be supplemented by rateable contributions from the provinces if necessary. We stand on a very firm ground in asking for Provincial Autonomy because the pledge of Provincial Autonomy is given in the great Despatch of the 25th August, 1911. An attempt has been made to attenuate the message contained in that document. Confronted with a hostile House, Lord Crewe declared—he was a bit afraid of Lord Curzon and Company—that this Despatch contained nothing more than a delegation of power from superior to subordinate authority. This view, however, is not borne out by the context. What is more, the assumption was promptly refuted by his Lieutenant who, in the free atmosphere of a liberal club—I am speaking of Mr. Montagu—said that this Despatch represented a new departure in Indian policy and opened out a new vision to the people of India. True it is a new vision. Truly it is the beacon-light that will guide us in the grand march that will lead us to the promised land. We take our stand on this Despatch, and we resolutely stick to it, and in season and out of season call for its redemption. There are other recommendations embodied in the Resolution to which I am speaking.

Let me refer to the expansion and re-constitution of the Legislative Councils. I am a member of two Legislative Councils, and I know something about them and their working. In my own province it was declared with a flourish of trumpets that we had a non-official majority, a very captivating phrase, but a pure, undiluted, unqualified myth.

A non-official majority is very different from a popular majority. I do not remember that we have ever been able to defeat the Government by a non-official majority except on one occasion. Therefore that myth of a non-official majority implying greater power in the popular representatives must be dispelled. We must have an absolute, unqualified majority of popular representatives.

Then I come to another point. We propose resolutions—and I am one of the greatest sinners in that respect—and these resolutions are sometimes graciously accepted and as often ungraciously rejected. When they are accepted what does it matter? A resolution after all is a pious hope and aspiration. The Government is under no statutory obligation to give effect to it. I must, however, say to the credit of Lord Carmichael that so far as His Excellency is personally concerned as the head of the Bengal Government, he is full of liberal sympathies and a resolution accepted by his Government is not always a pious hope. But in a matter of this kind we cannot allow ourselves to be dependent on individual discretion which may often mean individual caprice; and we must see to it that every resolution accepted by a majority in the Legislative Councils shall be binding upon the Government and carried out. (*Hear, hear.*) I am encouraged by the attention you have been giving me but it involves a reciprocal duty on your part, namely, that you will do your best to bring this controversy about Self-Government to a successful, triumphant issue.

Brother Delegates, there remain two more points. I now come to the Executive Councils. My friend the President was a member of that Council. He will not let us into the secrets of his prison-house; but I think if the depths of his heart were sounded, it is possible that we might be able to extract a residue of sub-conscious feeling which would tell us that at times he felt it would have been better if he was associated with an Indian colleague, and as a matter of fact Sir Ali Imam in the admirable speech he made in reply to the dinner given in his honour by the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

inhabitants of Simla told us that at times the cloud of depression hung heavily over his mind and he felt discouraged, and was only supported by the active sympathy of His Excellency the Viceroy. Therefore, I say, we Congressmen ought to come to the rescue of our Indian representatives on the Executive Councils, (*hear, hear*) and resolve that there should be a substantial increase in the number of such representatives. Nor is this all. We think that at least one-half of the members of the Executive Councils should be elected by the elected Indian representatives of the Legislative Councils. We do not want Rajas, Maharajas and Nawab Bahadurs, unless they are popular representatives who will be answerable to us.

We have asked for Provincial Autonomy. We must also press for the independence of the Government of India. We say that the fetters imposed upon the Government of India by the India Office should be withdrawn, and that the Government of India should reflect the public opinion of India and not that of Lancashire. If those fetters are removed, I am confident that the excise duties on Indian cotton goods will disappear.

The Resolution says that the All-India Congress Committee is to formulate Self-Government in concert with the Moslem League. I rejoice that the Moslem League is going to meet to-morrow in this city and hold a session. Our fraternal greetings go out to the Muslim League. We sympathise with them in their patriotic efforts. May the Divine Dispenser of all blessings preside over their deliberations. We are brothers, standing shoulder to shoulder on the same platform for the advancement of the interests of the same mother, a mother whom the Hindu, the Mussulman, the Parsi and the Sikh alike venerate, who lies prostrate at our feet and whom it is the sacred duty of every Indian to rejuvenate, to uplift, elevate, and to prepare for the high destiny which in the decrees of an all-wise Providence has been assigned to her among the nations of the earth.

The ideals of the Moslem League and of the Congress in the matter of Self-Government are the same. The goal is the same. We both want Self-Government within the Empire. A common demand put forward by the Moslem League and the National Congress and backed by the voice of United India and pursued with unflinching tenacity of purpose would be irresistible.

The Subjects Committee of the Congress have authorised the All-India Congress Committee to prepare a programme of continued work of an educative and propagandist character for the spread of the ideals of Self-Government among our people. As an old Congressman this appeals to me most forcibly. Self-Government has always formed the principal plank in the Congress platform ever since the birth of the Congress. In 1890, we sent a deputation to England, and as the result of its labours, the Legislative Councils were reformed and expanded for the first time on a popular basis, and the Parliamentary Statute of 1892 was enacted. From Bengal we sent up a memorial to the House of Commons signed by fifty thousand persons. Again and again Mr. Gokhale visited England as our delegate, and helped in the elaboration of the Reform Scheme. In 1914, another deputation went to England in connection with the reform of the India Councils. Let us make a supreme effort at the present psychological moment to educate people and accomplish this work of propagandist which I hope will culminate in the crowning triumph that will give to us and our country the inestimable boon of Self-Government.

Mr. Asquith has observed in one of his great speeches:—"The Empire rests, not upon the predominance, artificial and superficial, of race or class, but upon the loyal affection of free communities built upon the basis of equal right." We appeal to Mr. Asquith to redeem his words in their application to India. We aspire to be a free community, enjoying equal rights with the subjects of the Crown in other parts of the Empire. Other great statesmen in the United Kingdom and even in the Colonies have spoken in the same strain. The angle of vision of the British democracy in regard to Indian affairs has, indeed, changed—but not, I am afraid, the attitude and outlook of our officials out here in India. Their angle of vision remains the same as before. The Press Act is being worked with a severity which has caused uneasiness throughout the country. The rigours of the Arms Act remain unrelaxed, notwithstanding the prevalence of dacoities in more provinces than one and the helplessness of the Police to protect the people or to suppress the dacoities. We are barred out of the commissioned ranks of the Army despite the fact that our soldiers are freely shedding their blood in the defence of the Empire, and that their courage, resourcefulness and power of initiative have evoked the admiration of the civilized world. We are prevented from enlistment as volunteers. In England the cry is for more men for the front and recent papers indicate that conscription

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

is about to be resorted to. Does not India present a most promising field for recruitment which, if properly utilized, would obviate the necessity of conscription? The youth and the manhood of our race are eager to unsheathe the sword in the defence of the Empire; but the call has not yet come. Will it ever come? What is needed is a little more trust and confidence in the people which, I am sure, will be reciprocated with enthusiastic gratitude. Read the open page of Indian history and note the outstanding lesson which it teaches. A stranger, the son of an adventurer, Akbar enthroned himself in the hearts of the people. What was the secret of the wonderful fascination which he exercised over the many millions of his subjects? He loved and trusted them, and they loved and trusted him in an abounding measure. Centuries have elapsed since Akbar has been laid in his grave; his princely house has disappeared; the Moghul Empire has crumbled into dust; but the name of Akbar still excites the profoundest veneration among Hindoos and Mahomedans alike. But we do not despair. The British democracy are the masters of our masters, and when their angle of vision has changed, we may be sure that the outlook of our officials here will undergo a similar transformation in regard to the great principles of Indian policy and administration.

We aspire to Self-Government because we want to be a nation, and secure for ourselves a place in the comity of nations, so that we may fulfil the high destinies assigned to us in the Providence of God. We aspire to Self-Government for the highest ends of life, for the moral elevation and the uplifting of the character of our people. With the brand of political inferiority marked on our brow we cannot grow to the full height of our manhood or of our civic and moral responsibility. The campaign in which we are engaged is thus moral as well as political in its character and complexion, and we are bound to triumph. For we have with us the time forces, the sympathies of civilized mankind, the good wishes of the true and the thinking in all parts of the world and, above all, the blessings of Almighty Providence. Thus equipped we are invincible and irresistible. That is the faith which inspires us and "faith," says the divinely inspired founder of Christianity, "can remove mountains." Self-Government is inscribed on our banner. We hold it aloft, we invite the representatives of all creeds and races to gather round it, and we are resolved to carry it, God willing, to an assured victory. (*Prolonged cheers.*)

II. MRS. ANNIE BESANT.

The Resolution which I have the honour to second before you to-day is, perhaps, the most momentous that has ever been laid before the National Congress during the thirty years of its splendid existence, for not only does it proclaim that a step is to be taken towards the attainment of Self-Government, but also it lays down the principles of reform which, if embodied in the committee's report, will make Self-Government a reality, not in the distant vista of time but within the lifetime of the present generation.

I find a bold demand is made that we should have expanded and reformed Legislative Councils to make them truly and adequately representative of all sections of the people and, most vital of all, to give them an effective control over the acts of the Executive Government. If adequate representation is given, if effective control over the executive is granted, then it will be difficult to say that you have not Self-Government in India. It is the largest step that the Congress has ever taken and it will make the Congress memorable in the grateful memory of the India of the future.

Not only so, but there is the vital proviso that the All-India Congress Committee is to frame not only a scheme of reform but a programme of continuous work, educative and propagandist, not agitation, you must understand, but educative propaganda. I am not clever enough to distinguish between that and popular agitation, but I beg you to cling to the words of the resolution, which are doubtless statesmanlike and desirable.

In the brief time at my disposal I want to put to you three reasons why Self-Government is necessary. One is the practical reason, namely, the need for legislation on certain vital points; the second is the economic condition of the country, the most pressing reason of all; the third the historical justification for the granting of Self-Government to India.

As regards the first there are certain things that press upon the Nation which would be rapidly altered if we had a majority, an effective majority in the Legislative Councils and, if, as I hope, they are made wholly elected. What we require has been laid down for us on very useful lines. It was said, and I believe truly said, that it was impossible for England to train India on her literature and in admiration for her institutions, teach her that taxation without representation was robbery, and to expect her to remain unrepresented and without any effective control

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

over the budgets which are passed year after year.

Sometimes people say that by some inscrutable Providence England has come to this land. I see nothing inscrutable in it, for Great Britain, when England came here, was the only free country in Europe, and Providence chose her to come that she might bring India into touch with Western institutions. (*Cheers.*) The ways of Providence become inscrutable only when you have un-British rule in India. Then you may have a conundrum that you will ever find it impossible to solve.

There is another reason, a very practical one, why we believe that if we have really representative institutions we shall be able to carry the measures we desire. This Congress has been asking for thirty years for the separation of the executive and judicial functions and has not gained it, but in some Indian States that separation has already been made. Baroda has done it, Gwalior has done it, and when you have Self-Government you will not ask for it in thirty years, but you will make it in your first year (*cheers*). Your Panchayats, Gwalior, Baroda, Patiala and many other States have already established those village councils successfully, and yet in British India it is impossible to get them thoroughly on foot.

You will sweep away that Arms Act, of which our President has so earnestly complained. You will get rid of the Press Act against which you have already protested. You will get rid of the Seditious Meetings Act, and you will also get relief from the Old Regulation (Regulation 3 of 1818), the shameful revival of the Old Regulations which exists only in India to-day. These are some reasons why we demand legislative assemblies with a majority at least of the representatives of the people.

Take the economic reason. Take the incidence of taxation. It is admitted by the Government that in India there is no effective margin of taxation. It has been pointed out by Mr. Gokhale, among others, that taxation of a country trenches on the subsistence of the labourer. It has been pointed out that India's production amounts to £1 2*s.* per head, and we find that in 1910 the taxation, local and imperial, was 5*s.* 5*d.* per head. You have taxation which threatens bankruptcy of India by the ruin of her agricultural population. Mr. Wacha has told us, and there is no better authority, that the indebtedness of the peasantry rises to Rs. 5,00,00,00,000. Is that no reason for changing the system of Government which produces it?

I ask you to consider in relation to this not only the question of taxation, but the admitted fact that India is the most heavily taxed country in the world, not in amount, not in shillings or rupees, but in proportion to the production of the masses of her people. You cannot measure taxation by counting up a number of coins. You must find the produce of the labourer and say how much you tax.

The next point is that you have admittedly the most costly Government in the civilised world in India, and therefore the necessity for a crushing taxation; nor is it only that the Government is costly, but you have to remember that the taxes that are raised go largely out of the country in what is known as drains, which are bleeding India and asking that the lancet should be placed in the most congested places. You will have to remember that the drains run to about £20,000,000, and such a large amount goes in various charges of interest on capital and is managed in the most extravagant fashion. You must remember that the railways have been dealt with by the State as no business people would deal with them, and they had sold their shares at par when they do not bring in the market very much more than half.

I want you, younger men, passionate youths as you are, to turn your thought to these details of taxation and understand why it is you demand Self-Government for India. Then I ask you to remember the result. Now over eleven resolutions in this Congress have spoken of the horrible poverty of the people. They say that the Congress is a middle class and upper class organisation. If the Congress were the Parliament of India, the poverty of the people would long ago have been redressed. I find in the Ninth Congress Resolution number Eight, after concurring with the views expressed in the previous Congresses, stated that fifty millions of population, a number yearly increasing, are dragging out a miserable existence on the verge of starvation and that in every decade several millions actually perish by taxation. I find Sir William Hunter saying that more than forty millions are always on the verge of starvation. I find Sir Charles Elliot saying that half the population never know what it is to have a full meal. These, Sir, are not impatient idealists. They are historians. (*Cheers.*)

You have to consider that poverty, you have to realise what it means, you have to know the agony of hunger and then think that, as

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Mr. R. C. Dutt has declared, a hundred millions of the agricultural population are always on the verge of starvation. Some amount of impatience is justifiable when the people are suffering to that miserable extent. My fear for India is not the passionate enthusiasm of misguided youths but the spectre of hunger, the frightful spectre and coming bankruptcy which means an awful revolution of the starving people, whom nothing can check or rein.

The third reason is historical. Five thousand years ago this country was trading with ancient Babylon, and from that, three thousand years before the Christ down to 1613 after Christ, there is no break in the commercial and industrial prosperity of India. Five thousand years of Self-Government, believe you.

There were wars and there were revolts. Read history before you speak glibly about the disturbance in mediæval and ancient India. If war was here, war was there. Akbar was reigning when Elizabeth was on the throne. Queen Elizabeth gave the first Charter to the Company to trade with India. In the reign of James the First, the Company was allowed to establish itself in Surat and along the Western Coast. Since that time one King was beheaded and two Civil Wars on behalf of the exiles of the Stuart family have taken place. I do not know that Indian Wars were so very much more mischievous than the wars that prevailed over the whole of Europe during those historical times, (*cheers*) ; for, after all, is it not true that village organisations went on through them all ? Is it not true that villages were left untouched ? Is it not on record that while soldiers were fighting, ploughmen were ploughing the land within the sight of the battling army? The test of the goodness of Government is wealth and prosperity of the people. While India governed herself so long, every country in Europe fought for the Charter, that was the result of Self-Government in India. Whatever faults might have defaced that system to-day, our President has told us that India is the most poverty-stricken country in the world.

I put two things before you as answer to the statement that we are not fit for Self-Government. I submit that five thousand years of success is greater than the theory of as few Englishmen.

We were told that India is a poor cripple, with the limbs broken, tissues lacerated; aided with splints and bandages by benevolent English physicians. India is no sick man. She is a giant who was in sleep and is now awake. (*Cheers.*) Are you fit for Self-Government ? Mr. Gokhale, who knew his people very well, said that you were compelled to come in an atmosphere of inferiority, that made the tallest of you to bow your heads, and that the greatest moral wrong done to India was that she had changed in character under the present method of Government. Men who are mere representatives of India from every part of the land are not children of savages emerging from barbarism needing to be trained in the elements of Self-Government by a Western nation. They are the children of heroes, children of warriors, worthy to govern their own land, (*cheers*). Save for one reason, and that is that the noblest amongst you seem to think you are inferior to Englishmen. If only you will trust yourselves, if only you will believe in your own power, in your own strength. Did not our President Satyendra Sinha sit face to face with the Viceroy in the Executive Council ? Still do you think that an Indian is not worthy to rule in his own land ? Are we to think that he is the one swallow that does not make the summer ? Are we not to believe, as I believe, that there are hundreds like Satyendra, and that they also are worthy to fill such a place if only they had chances to do it ?

I wish that representation might be given to the Legislative Councils, as it means Self-Government in India by the guardians of the present, with the splendid future that lies before you. If, as Surendranath Bannerji has said on this platform, you are not emasculated as a Nation, stand up. For England understands when people plead face to face to give them free institutions. England is a country of free men and she does not understand people being contented to be under the rule of foreign domination. Show England that you are grateful for what she has done, for she has taught you the value of free institutions and has shown you, by the example of hers, how freedom is to be won and how a Nation becomes self-governing. (*Loud cheers*).

A HISTORY OF THE CONGRESS.

INDIAN NATIONAL EVOLUTION.

A SURVEY OF THE ORIGIN AND PROGRESS OF THE INDIAN NATIONAL CONGRESS.

III. THE HON'BLE PANDIT MADAN MOHAN MALAVIYA.

I have come to the conviction that there is no hope for political advancement but in better social surroundings for the peoples, in the progress of education and in other important directions, which will not be adequately achieved unless you get a real measure of self-government. I confess that you can find no parallel in the case of India under the British Empire. India is not a primitive population, just emerging from the savage state. Five thousand years of civilisation stand behind us. Until yesterday, our people used to rule over this vast continent. The Empire of Asoka was more extensive than the British Empire in India. During the last 1000 years India has suffered from internecine disturbances and foreign invasions. At this date one-third of India is ruled by Indians, rulers of Indian States are none but Indians, and their Dewans are none but Indians. When people with these traditions, history and training take up the question of self-government it is a sight for the gods to weep over. Happily in the midst of sorrows there is reason for comfort. We have long been placed under the rule of a nation which boasts of its love of freedom and is shedding its blood and is sacrificing the flower of its manhood to uphold the cause of liberty, truth, justice and civilisation. Having been placed under such a people, we have received a nationalising education, for which we are deeply grateful. But with that boon of education, with the knowledge we have imbibed, has come the consciousness of a feeling of degradation in finding that we of this wonderful land of ancient traditions are held to be incompetent to govern ourselves. We are asking only for certain steps to lead us to the goal of Self-government. Self-government unqualified would mean that we should have full control over the Army and Navy and our foreign relations. We do not ask for that; we are asking that in matters domestic, which do not affect foreign policy, the Army or the Navy, except in sanctioning expenditure. The people of India should no longer continue to plead by Resolutions which are almost always defeated, by petitions which are almost always disregarded, and by other ways which do not bring any successful result. We do not ask for the departure from India of our rulers. We ask to be liberally associated with them in governing ourselves. We ask, as the Australians, Red Indians and others—any one of whom choosing to appear for the Indian Civil Service examination is admitted into the Government of India —that at least the sons of India should be admitted into that Government.

The great point is, we ask that the system shall continue, but there shall be only a little readjustment, a little shifting of the power, that it should no longer be in the power of the Executive to say "No" by a dead official majority to every reasonable request of the non-official members of Councils; that it should be the duty of the Executive to carry out the wishes of people, as expressed by their representatives in the Councils, to spend money on education, sanitation, the promotion of indigenous industries and other reforms for which we have been praying for the last thirty years. Self-government does not mean the satisfaction of a mere political sentiment, though even that is of great value; it means an opportunity to do what the Government of the day have failed to do, despite repeated requests. We want an opportunity to carry out those reforms upon which the people are united, and I hope and trust that every Indian who recognises his duty to the Motherland, will stand boldly forward to advocate the cause and carry on all the agitation necessary to achieve that end. The Resolution does not express a mere pious wish. There are friends prepared to go to England to agitate and work from year's end to year's end until they have achieved the goal. I appeal to everyone to put in his share of support in this great cause. I have no doubt this hope of ours will be realised. Our Shastras and Vedas say: a man becomes what he desires to become. I pray you, therefore, to earnestly and prayerfully desire to be freemen, cease to think that you are serfs or slaves, cease to think that you have no capacity to govern yourselves, cease to think that the differences which may and do exist amongst us constitute an obstacle which cannot be overcome. Believe that you are as good as any mortal man born in any clime or land, believe that all you need is the opportunity to show what you can achieve, and, God willing, success will come to you earlier than you expect.

"ALL ABOUT THE WAR THE INDIAN REVIEW WAR BOOK."—A comprehensive and authentic account of the War with numerous illustrations, portraits, cartoons, maps and diagrams, contributed by officers of the Indian Civil, Military and Medical Services, Ministers of Native States, Engineers, Educationists, Journalists, Lawyers, Publicists and other Specialists. Edited by G. A. Natesan with an introduction by His Excellency Lord Pentland, with an appreciation by H. E. Lord Hardinge. Cloth Bound, 240 Portraits, 107 Illustrations, 37 Cartoons and 16 Maps. MR. GANDHI ON INDIANS AND THE COLONIES.

Mr. M. K. Gandhi, in moving the Resolution on India and the Colonies at the Congress, said :—

Mr. President and Friends,—The Resolution that stands in my name reads thus :—

The Congress regrets that the existing laws affecting Indians in South Africa and Canada have not, in spite of the liberal and imperialistic declarations of Colonial statesmen, been justly and equitably administered, and this Congress trusts that the Self-Governing Colonies will extend to the Indian emigrants equal rights with European emigrants and that the Imperial Government will use all possible means to secure the rights which have been hitherto unjustly withheld from them, thus causing widespread dissatisfaction and discontent.

Friends,—It is an irony of fate that whilst this vast assembly will be regretting the hostile attitude that has been adopted by the Self-Governing Colonies, a Contingent of your countrymen formed in South Africa will be nearing the theatre of war in order to help the sick and the wounded, and I am in possession of facts in connection with this Contingent formed in South Africa which shows that it is composed of the middle classes which, in accordance with the *Times of India*, are going to form the future self-governing nation. Those men are drawn from ex-indentured Indians and their children, from the petty hawkers, the toilers, the traders, and yet the Colonies do not consider it necessary to alter their attitudes, nor do I see the logic in altering their policy. It is the fashion now-a-days to consider that because our humble share in not being disloyal to the Government at the present juncture we are entitled to the rights which have been hitherto withheld from us as if those rights were withheld because our loyalty was suspected. No, my friends, if they have been withheld from us, the reasons are different and those reasons will have to be altered. They are due, some of them to undying prejudices, to economic causes and these will have to be examined; but prejudice will have to be cut down. And what are the hardships that our countrymen are labouring under in South Africa, in Canada, and the other Self-Governing Colonies? In South Africa the Settlement of 1914 secures what the passive resisters were fighting for and nothing more, and they were fighting for the restoration of legal equality in connection with emigrants from British India and nothing more.

That legal equality has been restored, but the domestic troubles still remain and if it was not the custom unfortunately inherited for the last forty years that the predominant language in this assembly should be English, our Madras friends will have taken good care to have learnt one of the northern vernaculars, and then there are men enough in South Africa who would tell you about the difficulties that we have to go through even now in South Africa in connection with holding landed property, in connection with men who having been once domiciled in South Africa return to South Africa, their difficulties in connection with the admission of their children, their difficulties in connection with holding licenses of trade. These are, if I may so call them, bread and butter difficulties. There are other difficulties which I shall not enumerate just now. In Canada it is not possible for those members of the Sikhs who are domiciled there to bring their wives and their children. (*Cries of shame, shame.*) The law is the same, but administration is widely unequal, so unequal that they cannot bring their wives and children, and the law or the administration still remains the same in spite of declarations about justice and what not, in view of the hostilities and in view of the splendid aid which India is said to have rendered to the Empire. How are these difficulties to be met. I do not intend to go into details, but the Congress proposes that this difficulty can be met by an appeal to the sense of justice of the Colonial statesmen and by an appeal to the Imperial Government. I fear that the Congress can only do this, but the Resolution so far as it goes in one respect is inadequate to the occasion. Lord Hardinge, only a few months ago, made a fervent appeal to Indian publicists and to Indian public statesmen for helping him to an honourable solution which will retain the dignity of India, at the same time, not because of any trouble to the Self-Governing Colonies. Lord Hardinge is still waiting for an answer, that answer is not supplied by the Congress, nor can it be by the Congress ; it is to be supplied by an association, the specialists, if I may so call them. The Congress has given them the lead, and it is for these associations to frame the details in which they will have to examine the rival claims and to offer to Lord Hardinge a solution which shall be saturated with details, a solution which will satisfy the Colonial Governments as well as the Indian people and will not take away anything whatsoever from the just demands that this Resolution makes. With these words I have much pleasure in proposing this Resolution.

INDIAN PRINCES AT THE FRONT.

Saint Nihal Singh, writing in the *Observer* on "The Rajas' Gifts," says:—

Only those who know of the sumptuous arrangements that exist in the Rajahs' palaces to insure their comfort can appreciate the depth of devotion to the British cause that impels them to bear the hardships of compaign life. At home they have large and commodious palaces, with scores of attendants, generations of whose ancestors have served the Rajahs, and who perform every possible function for their masters, even in some instances to the point of cutting away the meat from the bone, or placing a spoonful of rice in the Ruler's mouth. Even the most important Raja at the Front has to share his small room with another, and must content himself with a single attendant, who must simultaneously serve as private secretary, aide-de-camp, major domo, and valet. So anxious have some cadets been to come to the Front that they have put aside their pride of race and volunteered to serve as hostlers, if that position would enable them to get into the fight. It is characteristic of the culture of these personages that the hardship that they have felt the most has been the necessity of going without their customary baths. Privations, however, have no terrors for India's fighters, be they Rajas or commoners. Indeed, one of the most distinguishing traits of character of many of the Indian Rulers is to inure themselves to hardships. The Maharaja of Patiala, who was compelled by illness to abandon his journey to the Front, sleeps on straw, under ordinary Army blankets, when his troops are engaged in manœuvres.

COMPULSORY EDUCATION IN INDORE.

The excellent example set by Their Highnesses the Gaekwar of Baroda and the Maharaja of Mysore in making elementary education compulsory in their States has not been lost on their brother Feudatory Chiefs. The Maharaja Holkar of Indore has just followed in their wake and has issued a cricular declaring this kind of education compulsory throughout his State. We hope this measure of the pioneers of reform among our Ruling Chiefs will serve as an eye-opener to our Government and induce other princes of India to introduce this much-desired reform into their territories.

RAJPUTANA AIRCRAFT FUND.

The Maharao of Kotah has contributed Rs. 30,000 as an opening subscription to the Rajputana Aircraft Fund, and the Maharana of Udaipur has promised a contribution of Rs. 1,00,000 to the same object.

RAJPIPLA'S GIFT.

His Highness the Maharaja of Rajpipla has offered to His Majesty's Government through His Excellency the Governor of Bombay an armed aeroplane in commemoration of his installation on the *gadi*.

THE CHIEF OF THE OUDH STATE.

The Chief of the Oudh State in the Southern Mahratha country is making arrangements of the introduction of the Panchayat system in his State. It will be remembered that he recently introduced compulsory primary education in his State.

KISHENGARH AND JHALLAWAR.

The Maharaja of Kishengarh has subscribed half-a-lakh to the Hindu University, and the Raj Rana of Jhallawar one thousand rupees per annum in perpetuity.

MYSORE IMPERIAL SERVICE LANCERS.

In the course of a speech at a meeting of the Mysore Imperial Service Lancers' War Fund Committee, who have so far collected about Rs. 10,000, the Yuvaraj of Mysore remarked: "It is true that our Lancers form but a very small section of the mighty army of the British Empire that is engaged in this gigantic struggle. But none the less I am sure you all agree that we feel very proud of the fact that we have been allowed, in however small a degree it may be, to contribute towards this war, not silver bullets only, but if I may say so, human bullets also, and have thus been given a chance to share in a practical manner in the great trial that the Empire is going through. When I was in Simla, a special message that Lord Hardinge asked me to give my brother was his best congratulations on the excellent manner in which our troops have behaved."

INDUSTRIAL & COMMERCIAL SECTION

SOME INDIAN COMMERCIAL PROBLEMS.*

[*By the Hon'ble Sir Fazulbhoy Currimbhoy.*]

The strain which the war has caused to the public finances in India and the need of an early recoupment invests this question, (customs duties) with an importance much beyond its normal importance. In any scheme of additional taxation—not an unlikely contingency should the war continue some time longer—the customs will and ought to have, not only an important, but a predominant position. In every country these duties, barring one or two exceptions, are the most productive sources of revenue. In India, however, this source has been insufficiently tapped. Whether Free Trade or Protection wins in the end, there can be no doubt that a very careful revision of the tariff has become increasingly necessary in view of the financial needs of Government. In this matter of tariff Indian commercial opinion ought certainly to prevail, and one of the principal objects of the Associated Indian Chamber of Commerce is to press this opinion upon the attention of Government with all the force and all the weight which such a central and responsible Committee can lend to it.

There is important work to be done by the Associated Chamber in regard to another group of subjects, *viz.*, those relating to facilities of communication within the country and at sea. Comment on the absolute necessity of these facilities is superfluous. The whole point is, how best to secure them. Our attention must be focussed upon three main heads of improvements for facilitating the movement of heavy goods. For international commerce the essential conditions are *quick transit* and *low freights*. We have not much to complain about the first, but the present scale of freights, although not very high absolutely, is comparatively speaking somewhat higher than what would meet the exigencies of Indian commerce. Inland, the improvement of our waterways and railways must take precedence of all other measures. The country is backward as regards the first. The waterways are very inadequately developed; indeed, in certain respects we are losing ground. Channels which were once navigable and which once served as highways for the cheap transport of heavy merchandise have either become completely silted up or choked with weeds and their mouths blocked by bars. The rapid extension of railways has also contributed to the neglect of the water-courses. No serious attempt has yet been made to restore the river systems of the country to their former satisfactory condition. The result is, we have numerous stagnant pools, marshes and lagoons which are the breeding ground of malaria and other diseases. The natural drainage of the land is thus becoming blocked. The improvement of the rivers and water-courses will not only restore this drainage and facilitate the movements of merchandise, but will provide canals for the purposes of irrigation at a minimum of cost. Larger production of raw materials through improved irrigation will certainly increase our exports, at the same time that it will add to the financial resources of the agriculturists and enable them to consume larger quantities of finished articles whether manufactured at home or imported from abroad.

Great vigilance is necessary in the matter of railway development. Expansion is not the only point. . . . It is a question if any ambitious scheme of construction should be taken in hand before the necessary improvements on the existing lines have been fully carried out. As matters stand at present, the inland railways are defective both as regards cheap transit and quick transit. Railway rates are at present adjusted in such a way as to be more favourable to foreign articles than to articles which are exchanged as between province and province and district and district. We have got a resolution before us drawing the attention of the Government to this as well as to the long standing grievances of our merchants to the form of Railway Risk Notes B. and H., which operate harshly upon them. Railways are public carriers, and it is one of their first duties to indemnify the merchants against any losses which they may suffer through their neglect or some mischief of their servants. If they take a greater responsibility on their shoulders it will mean greater traffic for themselves, for it will be creating confidence in Railways on the part of the commercial community. Over and above these questions of Railway administration is the question of the Railway finance. Railway loans are raised in Great Britain, and it is a long standing demand that Railway rupee loans should be thrown open to the Indian people. This is an opportune moment for effecting the great change and affording to the people of India an opportunity to have their share in the railway development of this country, as Great Britain will not respond at present to any Indian or Colonial

* From the Presidential Address to the Commercial Congress.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

loans, so pressing are her own financial needs.

Connected with this subject of increased railway facilities is the important question of extension of branch lines or feeder lines. The urgency of a rapid expansion of these lines is obvious, and even people who condemn further construction of trunk or main lines advocate their construction at an accelerated pace. Next in importance to their need for opening up outlying areas is the attraction for safe investment they offer to shy capital. The experience of the last few years shows how these feeder lines have helped to draw out the unemployed capital of the country. This is a distinct gain to the cause of commerce and industry. But latterly a difficulty has arisen. Since the revision of the rules relating to the construction of feeder lines, the introduction of the present branch line terms under which the Secretary of State is pleased to guarantee a return of 3½ per cent. a year upon the capital and the financial success of the Light Railways, British directors of the main lines, with the evident object of monopolising this branch of the railway business also, have begun to raise difficulties. Under existing arrangements these British companies have a predominant voice in the matter of sanction of the feeder Railways, although Government finds for them the bulk of the capital required for the construction of the trunk Railways and guarantees interest both upon their portion of the capital and the debentures. This is unjustifiable in principle and injurious in effect to Indian interests. Messrs. Killick, Nixon & Co.'s railways from Nadiad to Kapadvanj and from Godhra to Lunavada would never have been constructed had not the Government given out of the Imperial Railway Revenue "Rebate-terms" refused by the B. B. and C. I. Railway Company, although that Company has only a five per cent. share in the surplus profits of that Railway system. Generally speaking, the objection is that the main lines run the risk of being "short circuited" by the Feeder lines, but this is an imaginary evil, as Government, having the largest stake in the main lines, may well be expected to consider carefully the probable financial bearings before sanctioning a new scheme. The real reason appears to be that the British companies working in India want to check Indian competition and to stifle Indian enterprise, as will be clear from the fact that they are trying to form subsidiary companies with British capital for the construction of feeder lines. And this is a matter about which the Indian public ought to be on the *qui vive*, and the Associated Indian Chamber, with all the power and dignity attaching to such a central body, must fight out the case for them.

But, more important than all, perhaps, to Indian Commerce and Industry are the complicated questions relating to Indian currency, banking facilities, location and employment of the Government funds, and the utilisation of Indian capital in the financing of Indian railways and irrigation canals. The Indian Finance and Currency Committee's Report on all these points has been before the Indian public for months past, but owing to the war, has nowhere received that attention which the paramount importance of the subjects dealt with deserve. . . . . .
The conclusions of the Committee in respect of some of the more important of these points do not commend themselves to the Indian public, especially the Indian commercial public. They fail to do full justice to Indian interests. The important question of a State Bank was not directly before the Committee, and it would be unfair to criticise its recommendation of a separate investigation by a small expert committee. But the Finance Commissioners' findings about the suggested gold currency, gold mint, location of the Gold Standard Reserve and of the surplus balances, the diversion of the gold portion of the Paper Currency Reserve, the employment of the profits on the coinage of rupees and the scheme of advances to approved borrowers in London, are open to question. They do not at least agree with Indian sentiment, and it is permissible to entertain serious doubts about their soundness. We see how India has absorbed a large quantity of gold during recent times. This absorption rose from Rs. 7½ crores in 1890-91 to Rs. 12 crores in 1903-04, and to Rs. 21 crores in 1907-08, to Rs. 25½ crores in 1911-12, in 1912-13 to Rs. 31½ crores and in 1913-14 to Rs. 37½ crores. This need not cause any nervousness to Lombard Street and drive them into finding out ways and methods of preventing what they call drain of gold to India. Rather, if there is a natural currency here, there will be no necessity for all that nervousness about the bogey of the Gold Standard reserve, and the so-called hoarded gold of India will come out through the gold mint to help and finance the many schemes of trade and industry which stand in need of financial support.

It is not enough, however, to establish the Associated Indian Chamber of Commerce, but in order to ensure its usefulness, we must further secure for it adequate representation on the Imperial Legislative Council.

SIR DORABJI J. TATA ON JAPANESE TRADE AND INDUSTRIES.

In his Presidential Address to the Eleventh Session of the Indian Industrial Conference, Sir Dorabji J. Tata said :—

Industrial education in the widest sense of the term is then primarily the function of the State. But a good many people wish the State to go far beyond this rôle and to enter into their actual field of industrial enterprise. They instance in this connection the co-operation of Japan. Now as much misapprehension exists on this subject I will digress for a few moments in order to put before you the result of inquiries which I instituted; the full investigation will be published in another form.

The most important articles of Japanese imports into India are glassware, matches, cement, and cotton goods. People ask why Japan should beat us even in cotton goods, and the most common explanation put forward is, that the bounties paid by the Japanese Government to cotton manufacturers enable them to beard us in our own homes. But is this the right explanation? The result of my inquiries is that no bounty of any sort is paid by the Government on cotton goods coming to India. Not that there are no bounties. Bounties are paid to develop particular markets but not by the Government; they are paid by the Japanese Millowners' Association. This Union has enabled Japan to :—

1. Apply effective short time working every time that is seemed incumbent in the interests of the industry.

2. Secure cheap transportation charges for their cotton from India or America, particularly India.

3. Open up new markets by sacrifices made in common in the shape of bounties, but as far as I can ascertain no such bounties are paid even by the Japanese Millowners' Association on any cotton yarn, cloths or hosiery exported to India.

Another direction in which this cry of bounties is loudly heard is in our yarn trade with China. It is common knowledge that we are losing ground rapidly in that market and here again we rest satisfied with the parrot cry 'bounties and subsidies' which prevents our going to the real defects and remedying them. What we should do is to find out by a careful study of the facts what the Japanese do to overcome the great disadvantage of having to bring their raw material thousands of miles, and next what they are doing to improve the quality of their output and to meet the tastes and requirement of Chinese buyers.

Next to cotton goods the imports from Japan that most attract attention are glassware and matches, and attempts are being made to provide ourselves with these, almost necessities of every-day life. The Talegon Works have shown how this can be done for glassware, and a leaf may well be taken out of their book for new works elsewhere. The fundamentals that we have to bear constantly in mind are that :—

1. The consumer we have to appeal to is the masses.
2. The income of these masses is extremely small.
3. Consequently it is low price and not good finish that is the most important consideration.

The same applies to matches. I have noticed that papers have been read before this Conference giving elaborate estimates of machinery, plant, etc. These are all adapted to the costly but very efficient European labour. Our capital, labour, and other conditions approximate far more to Japan than to Europe, and intending promoters should turn not to Europe but to Japan for a model and for expert workmen to train our own labour in these directions.

There is another factor besides the above fundamentals that should help us to rapid success in the development of the match and glassware industries. I mean here what is termed 'Natural Protection.' A great deal has been said on this and other platforms of the need for us of a Protective Tariff and of what such a tariff has done for Japan. It will therefore come as a surprise to many of you here to learn that Japan had no fiscal autonomy till about 1898, but only a Conventional Tariff with a 5 per cent. duty which did not come even to 5 per cent. where it has been fixed specifically instead of *ad valorem*. Japan's early efforts between the inauguration of the new regime in 1868, and the recovery of fiscal autonomy in, say, 1898, were therefore all made not under a protective tariff but a 5 per cent. tariff. We have this same 5 per cent. in India, particularly on matches and glassware with which Japan flooded our markets even bofore 1898, while we are even to-day—20 years later—without any glassware or match industry to speak of. What is wanted is not to dump down a factory in the first town we can think of; but to study the facts of the situation thoroughly and take advantage of the national protection. I speak in other words of the handi-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cap of freights on both sea and land and all the incidental charges that long haulages involve. I see some one advertising for suitable land for a glass factory in Bombay. He is deliberately throwing away the best protection he has against foreign competition because Bombay is not a consuming market but a very large distributing market, and what he makes and sells in Bombay will utimately have to travel many hundreds of miles into the interior. By locating his industry at an inland centre he will be placing himself at a great initial advantage as against Japanese or other foreign glassware that must pay all the haulage to such interior points. By further study of the situation a location will perhaps be found that has the additional advantage of having the right raw material at hand, saving further heavy haulage charges and reducing the cost. In bulky and very cheap articles like lamp-ware or matches such haulage charges will be found to amount to anything between 20 and 40 per cent., and it should be the aim of prospective industrialists so to locate their works as to get the fullest advantage of this natural protection. As a further illustration of the importance of this point, I would like to add that before deciding upon the floatation of the Tata Iron and Steel Co., it took us over a year of study to fix upon a site for the works, which combined the greatest number of advantages—especially with a view to 'Natural Protection'.

COMMERCIAL ENTERPRISE IN 1914-15.

In the year 1914-15, only 107 companies were registered in the whole of British India with an authorized capital of Rs. 3,94 lakhs against 345 companies with an authorized capital of Rs. 66,64 lakhs in the preceding year, and 284 companies and Rs. 12,19 lakhs in the year 1912-13. The 'serious' set-back is ascribed partly to war conditions and partly to the 'stringent' provisions of the Companies Act. The number of companies registered with an authorized capital of Rs. 20 lakhs and above was 5, those with a capital of between Rs. 10 and 20 lakhs numbered 7, and companies with between Rs. 4 and 8 lakhs, were 18.

INDIAN INDUSTRIAL CONFERENCE RESOLUTIONS.

The Eleventh Session of the Indian Industrial Conference was held in Bombay on the 24th December 1915. Sir Dorabji J. Tata presided and Sir Dinshaw Petit welcomed those present on behalf of the Reception Committee. The following are the principal Resolutions passed at the sitting which extended over three days :—

TECHNICAL EDUCATION.

(*a*) That having regard to the fact that the progress and prosperity of every nation depends in these times on industrial and technical education, this Conference earnestly recommends the establishment of a technological faculty at principal Indian Universities and the development of the already existing technical institutions and the opening of new ones and the gradual introduction of technical instruction in primary and secondary schools. (*b*) Recognising that no system of industrial and technological education, howsoever developed it may be, can be successful without a sufficient encouragement being given to persons who have received such education, this Conference appeals to men of capital and industry to help young Indians, technically trained, in finding practical work and employment.

FISCAL AUTONOMY.

This Conference desires to place on record its opinion that for the well-being of India it is the duty both of Government and the public to stimulate the old and foster new industries; while appreciating all that has been done by Imperial and Provincial Governments in this direction, recommends for the same the following measures :— (*a*) Fiscal autonomy should be granted to India in regard to the levying of duties, both on imports and exports. (*b*) Where the Departments of Industries do exist, they should be so organised as to effectively assist in the creation and development of industries, and in the Presidencies and Provinces where they do not exist they should be established. (*c*) Industrial survey should be taken of industries possible to be developed in the country.

EXCISE DUTY.

This Conference earnestly urges the repeal of the excise duty on cotton goods, which is an inequitable tax and considers it very desirable in the interests of Indian industries that countervailing duties should be levied on bounty-fed subsidised goods from foregin countries, when they compete to the injury of indigenous industries.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

FAVOURED NATION TREATMENT.

That this Conference trusts that in any treaties which may be arranged between the different International Powers hereafter, the Imperial Government will arrange that so far as Indian fiscal interests are conce[illegible]dia shall be allowed a voice through her own representatives in the settlement and, that, at any rate, she shall be accorded the most favoured nation treatment.

INDENTURED LABOUR.

This Conference tenders its respectful thanks to H. E. Lord Hardinge, Viceroy, and Government of India, for having recommended the abolition of the system of indentured labour to the Rt. Hon'ble the Secretary of State for India and, in view of its highly injurious and immoral effects, urges that the system be abolished as soon as possible.

INDIAN STUDENTS IN ENGLAND.

While recognising the efforts made by the Secretary of State for India for the better training of Indian technical students in the United Kingdom and on the Continent, this Conference strongly recommends that he should, in placing orders for the Government of India, give preference to such firms, other things being equal, which offer facilities to Indian students for practical training.

INDIAN COMMERCIAL ATTACHES.

This Conference is of opinion that Indian Commercial attachés should be appointed to principal British Consulates to look after Indian commercial interests and that standing museums of Indian products should be maintained at these Consulates and also at London. The Conference welcomes the creating of the post of Trade Commissioner for India in London and hopes that it will be a permament one held by persons, preferably Indian, fully conversant with Indian commercial and industrial conditions.

PURCHASE OF STORES.

This Conference earnestly urges the Government to purchase all their requirements as far as practicable from this country and to put their Resolution of 1909, regarding the same more and more into effect.

COTTAGE INDUSTRIES.

This Conference is of opinion that it is in the interests of the progress and well-being of the country that efforts should be made both by Government and the public for the starting and reviving of various minor and cottage industries.

COMMERCIAL EXHIBITIONS.

This Conference while welcoming the principle introduced by the Commercial Department of the Government of India of holding exhibitions at principal cities in India begs to suggest that there should be standing exhibitions of this nature at all the Presidency Towns and important trade centres.

INDUSTRIAL BANKS.

This Conference recommends the establishment of Industrial Banks, similar to those found in foreign countries.

FRUIT INDUSTY IN INDIA.

Mr. and Mrs. A. Howard, the Imperial Economic Botanists, have for some time past been making investigations and experiments in the Fruit Experiment Station at Quetta, the results of which are embodied in a recent Bulletin entitled "Some experiments in the Packing and Transport of Fruit in India." It is painful to learn that the methods of production are primitive compared with those of other countries in which the cultivation has been taken on modern lines, and the crops detained per unit of area fall both in quantity and quality. Mr. and Mrs. Howard observes that this "can only rise from a low standard of agriculture." The soil and climate as well as the varieties grown are not at fault and the obvious conclusion is that "the poor results obtained are the direct consequences of the primitive methods in vogue." In order to understand the rough handling, experienced at all stages in the process of working, fruits of all kinds are picked green and unripe and at a stage when the full development of flavour is impossible. Want of attention to growing and the close planting of the trees contribute also to the damage. The packages used are unsuitable owing to absence of ventilation, which affects the flavour and much bruising and crushing take place. It will thus appear that the defects are not unavoidable and if we brought to this business ordinary care aud knowledge, there is no reason why we should not enjoy large internal and external trade in fruit. It is a great pity, that the possibilities of fruit culture as a source of profit to the agriculturist have not been adequately investigated by our rural economists.

AGRICULTURAL SECTION

MR. WACHA ON INDIAN AGRICULTURE.

In his Address of Welcome to the Indian Commercial Congress, the Hon'ble Mr. Wacha said :—

Commerce cannot exist without agricultural products which could be safely exported to foreign countries after what may be necessary for home consumption. So, too, with industries and manufactures. It is the combination of these triple factors which educes commerce, that is to say, exchange of products of one country with another. It should, therefore, be the constant aim and object of this Commercial Congress to stimulate the agricultural (including the breeding of live stock) and mineral prosperity of the land. That is to say, agriculture should be so extended and improved as to enable our hapless ryots to produce more at less cost so as to leave them a fair margin of profit. And in this connection I wish to lay the greatest stress on the institution of Agricultural Banks on the lines of the Egyptian Agricultural Bank with such modifications as may be deemed essential. No doubt, the Government has with laudable zeal during the last decade paid greater attention to the improvement of agriculture by a variety of means and have also spent a large *modicum* of revenue on that behalf. Yet much still remains to be accomplished and could be only accomplished by following the example of the United States of America. That country is a model one for purposes of agricultural improvement, and it is superfluous to state here that the Government of India should by and by spend larger and larger sums out of the annual revenue for the achievement of this great national object which really signifies the material salvation of the country. Every rupee spent on the extension and improvement of Agriculture must be deemed wholly reproductive. So far as to the duty of the State in India. But more than the State private enterprise ought to take upon itself a thorough organisation of agricultural industry and agricultural credit on sound lines suggested by the prosperity of agriculture in the United States. The Government, at the best, can only be an auxiliary. It is the people themselves on whom lies the great responsibility of promoting the country's material prosperity by the larger and larger efforts they may put forth in the matter of agricultural organisation and credit. It is also needful to point out the great utility of further exploiting the rich mineral resources of the country, an active impetus to which Sir Thomas Holland so admirably gave when at the head of the Geological Department. In the near future mineralogy and metallurgy should greatly attract the attention of men of the great enterprise and courage of the late Mr. Tata. The war has made us all quite alive to the variety of metallic ores which might be utilised for purposes both of the arts of war and peace in the great British Empire.

Lastly, there may be immense progress in foreign and inland trade but that would not necessarily signify the prosperity of millions of cultivators. It is only when Indian agriculture is placed on a sound economic footing which would conduce to the prosperity of the ryot that the country itself could be said to grow in wealth. The larger, therefore, the exports of agricultural and mineral products from the country, while leaving a fair margin of profit to the ryots, the greater the balance of trade in favour of the country *pari passu* with such a financial policy of the Government as would steadily lead to diminish sterling obligations abroad.

SIR FAZULBHOY CURRIMBHOY ON AGRICULTURE.

In his Presidential Address to the First Session of the Commercial Congress, the Hon'ble Sir Fazulbhoy Currimbhoy said :—

I would point out that this country being mainly agricultural, it is right and proper that we should concentrate our attention on agricultural questions also and not be obsessed by purely industrial questions. Some of our Indian Chambers have long urged on the attention of Government the necessity of neglecting the claims of irrigation, while they are spending so much to develop the Railway system. I should like to suggest that better and more improved methods of irrigation should be adopted in order that the irrigation grants may be fully utilised and that we may never be haunted with that classic phrase of the late Finance Minister about Indian Budgets being a mere gamble in rain. In the meanwhile we have got a resolution at this Congress proposing to the Government that more attention should be paid than hitherto to the question of well irrigation which, while being comparatively cheap, will provide facilities for even poor cultivators and will be practicable in districts where there are no big rivers. It must be said to the credit of Government that they have established agricultural experimental stations and developed the agricultural department to a large extent. In this connection I am reminded of the wise words of the advice His Excellency Lord Willingdon recently gave to the students of the Agricultural College of Poona, when he observed that Indian landlords should, like their compeers in England, be more practically connected with their farms and not shy of manual labour, words of advice which may be well taken to heart. His Excellency did well also in drawing the attention of our people to the question of the improvement of the breeds of cattle, which, it is obvious, are deteriorating fast. Government efforts will not be sufficient in this direction unless they are supplemented by systematic and scientific cattle-farms started by people themselves. I am laying so much stress on these agricultural problems as in an agricultural country like India they are the very soul of trade and commerce. For instance, where would we be without cotton and jute, grain and seeds and numerous other agricultural products of which India has been from times immemorial and even now an emporium.

Literary

THE PRESS ASSOCIATION AND THE PRESS ACT.

One of the Resolutions accepted by the National Congress embodied a protest against the continuation of the Indian Press Act and urged its repeal. Mr. B. G. Horniman, who moved the Resolution, dwelt in doing so on the reasons that called for the removal of the statute. He characterised it as "a measure of most extraordinarily drastic provisions unparallelled. . . . in any civilised country of the world to-day." The state of affairs in the country which gave rise to this legislation had long passed away, and Mr. Horniman challenged any official to stand forward to-day and make a case for the existence of the Act. Secondly, in Mr. Horniman's words, "the Act must be repealed, because it is mixed with grave hardships and disabilities on the whole journalistic profession and printing trade in the country."

Subsequently, Mr. Horniman convened a meeting in Bombay of editors and proprietors of newspapers, proprietors and managers of printing presses, and it was then resolved to start a Press Association of India, and a committee was appointed to draft its constitution. The committee was empowered to approach the Viceroy to receive a deputation from the representatives of the Press of India and to work towards bringing about a repeal of the Press Act of 1910.

The Constitution of this Press Association, as approved at this meeting, states that the object of the Association shall be to protect the Press of the country by all lawful means, from arbitrary laws and their administration from all attempts of legislature to encroach on its liberty, or of the Executive authorities to interfere with the freedom of work of the journalists and Press proprietors, and for the purposes of mutual help and protection. Membership will be open to the proprietor, or the editor of any registered newspaper or periodical, and the proprietor or the manager of printing presses in India. The affairs of the Association will be managed by a council consisting of not more than six members from each province. Executive business will be managed by a committee consisting of one representative of each province. The council shall have power to take up cases brought to its notice, in which members of the Association are being prosecuted or oppressed or troubled by law or authorities. Mr. B. G. Horniman, Editor of the *Bombay Chronicle*, acts as the Honorary Secretary of the Association.

THE "INDIAN ENGINEER."

The "Indian Engineer" (Madras) is the latest recruit into the ranks of technical journals in this country. As this form of enterprise, Indian or Anglo-Indian, is comparatively rare in India, the new periodical will be welcomed by those for whose tastes it caters. In an "Ourselves" printed on the first page of the journal, the twin purpose of the venture is explained to be a thorough examination of the conditions obtaining in every industry in the land and to serve as a *via media* for all those engaged in the engineering profession. We wish the journal a useful career. The annual subscription is Rs. 6 post free, a moderate charge considering the cost of getting up a journal so as to appeal to a highly specialised profession as Engineering.

CITIES IN EVOLUTION.

Mr. F. J. Gould, reviewing in the December number of the *Positivist Review* Mr. Geddes' latest book, "Cities in Evolution," explains the Professor's idea that a city should be the most-typical expression of industrial, artistic and religious splendour. Comte's remark that "cities are in truth themselves beings, so organically complete that as each is capable of separate life it instinctively aspires to become the centre of the vast organism of Humanity," is fully in consonance with Geddes' ideal. But this instinctive aspiration is subject to tragical delays and perils; while the Industrial Revolution, the Railway Age, the candid and enthusiastic worship of money, created strange alienations in our towns and villages. "As the neo-technic order comes in—its skill directed by life towards life and for life—he, the working man as in all true cities of the past, aristo-democratised into productive citizen,—he will set his mind towards house-building and town-planning, even towards city-design; and all these upon a scale to rival—nay surpass—the past glories of history. He will demand and create noble streets of noble houses, gardens and parks, and before long, monuments, temples of his renewed ideals, surpassing those of old." But to accomplish this ideal the Professor needs, above all, the 'arousal of woman' and a more liberal propaganda than the mere conversion of councillors and aldermen. The site, the industry and the soul of the people—the 'place, work, folk' formula of the Professor—should all combine in constituting the local genius, so that each city, though aiming at the highest standard of hygiene and picturesqueness, should have its distinctive and original beauty.

Educational

THE VERNACULAR AS A MEDIUM.

The importance of vernacular as the medium of education is being every day increasingly recognised by all thoughtful well-wishers of our country; and it is therefore with great gratification that we welcome the pronouncements on this subject by two distinguished men, Lord Hardinge and Sir Rabidranath Tagore. H. E. the Viceroy, in declaring open tho new buildings of the Lahore Veterinary College, remarked :—

I have been particularly interested to learn that the main course of studies is conducted in the vernacular while English is the language of the post-graduate course. There is more than one school of thought as to whether the medium of instruction in our higher educational institutions should be English or the vernacular, but I think few will be found to question the wisdom of the policy abopted here, for many of those who are most fitted by their home surroundings for a useful veterinary career have neither the time nor the inclination to become versed in Western culture, and it is hardly open to qestion that it must be far easier for them to imbibe a knowledge of veterinary science when imparted in their own tongue than if it was complicated by the mysteries of a foreign language. On the other hand post-graduate courses necessitate the study of a wider range of literature, and there are obvious reasons for their being conducted in English.

Sir Rabindranath, on the same day last week, in addressing an audience at the Ram Mohun Library, Calcutta, said :—

People should learn English as the language of the State and for hundreds of other reasons, but at the sacred alter of learning the vernacular-knowing man was no criminal or a Shudra. He knew as a teacher that there were students who were naturally wanting in language. They experienced the greatest difficulties in the higher classes and it was no wonder why cramming occupied the place of real learning. He suggested that the Calcutta University in its teaching branch should have a vernacular section in which education should be given in the Bengali. Let it be only a humble beginning and in the course of time it will force itself upon the University and claim its due position as a vehicle of teaching. There was no doubt a difficulty of books in the verncaular, but once the University recognised the vernaculars as even an optional medium of education, books would be forthcoming.

THE PROPOSED UNIVERSITY FOR BURMA.

Sir Harcourt Butler recently received a deputation from the Burma Educational Syndicate in regard to the constitution of the proposed University for Burma. His Honour informed the Deputation that the Director of Public Instruction had already worked out a scheme for the University. It was now proposed to utilize the staffs and buildings of the constituent colleges and supplement them by a small Central University staff. The Director of Public Instruction will take action so that the Burma University Bill can be completed and submitted to the Government of India as early as possible.

STATE SCHOLARSHIPS.

The following communique has been issued :—

The Government of India have lately been considering the adequacy of the rates of State scholarships, tenable abroad and especially those held at Oxford and Cambridge. After consultation with Local Governments and with the sanction of the Secretary of State it has been decided that :

(1) The value of the Government of India scholarships annually placed at the disposal of the Indian universities and of the scholarship granted each year to a male student of the domiciled community shall be raised from £200 to £250 a year when held in a college at Oxford or Cambridge ;

(2) the value of the language or Oriental scholarships shall be raised from £150 to £200 a year on the understanding that scholars will be required in future to pay their own university fees and it will be further increased to £250 a year on the same understanding when held in a college at Oxford or Cambridge ;

(3) before a male scholar leaves India to take up his scholarship, his parent or guardian should show that he has sent to the Secretary for Indian students in London a sum of £25 for initial outfit expenses. In the case of a technical scholar the sum of £15 will be sufficient.

The increased rate of £250 under head (1) has been made applicable to all scholars at colleges at Oxford and Cambridge with effect from the 1st October 1914.

The Government of India propose shortly to issue a general resolution on the State Scholarship and to embody these changes in it.

VERNACULAR EDUCATION.

We notice that one of the Resolutions passed at the recent All-India Hindi Literary Conference thanked the Education Department of the United Provinces for having Hindi as the medium of instruction up to the 8th Standard, and requested that attention be paid to the language of the books with regard to style and the use of Hindi equivalents. The Resolution also requested all other Local Governments to adopt the Vernaculars as the medium of instruction, at least up to the 8th Standard.

THE MADRAS ADVOCATE-GENERALSHIP.

Mr. S. Srinivasa Iyengar, B.A., B.L., Vakil of the High Court, has been appointed to act as Advocate-General during the absence on leave for nine months of the Hon'ble Mr. Corbet. Mr. Srinivasa Iyengar is a lawyer of brilliant parts, and is now enjoying the most extensive and lucrative practice at the Bar. Having had his probation and training under the late eminent lawyer and jurist, Sir V. Bhashyam Iyengar, Mr. Srinivasa Iyengar made his mark quickly in the profession. Mr. Srinivasa Iyengar is a man of acute and vigorous intellect, is imbued with a keen sense of public spirit and has been taking an active and leading part in the public life of this Presidency. He is the President of the Social Reform Association, a Vice-President of the Madras Mahajana Sabha, a Fellow of the Madras University, and was one of the Secretaries to the last Madras Congress, and has been the President of several District Conferences. He has been very generous in his contributions to public causes. Last year he gave the Madras University Rs. 10,000 for a research scholarship to perpetuate the memory of Gokhale; and only a few weeks before he promised a donation of Rs. 10,000 to the Hindu University, Benares.

THE PUNJAB CHIEF COURT'S RESTRICTION.

The unwise restriction, by the Punjab Chief Court, of the number of pleaders to be enrolled every year in that Province has recently been the subject of a good deal of agitation there. A Fellow of the University urged the Syndicate to move in the matter, but without effect. He then moved the Faculty of Law who are said to have examined the matter carefully. It is not yet known what recommendations have been made by the Faculty, but we hope the Syndicate will reconsider the question and remove the restriction which is certainly unnatural and unjustifiable. As the *Tribune* says, the restriction must be completely got rid of, especially in view of the position in which our young men often find themselves, which may be summarised thus :

Our young men desire to take up law for a career, but the Chief Court say they admit 30 and no more. Our young men then desire to become teachers. But the Training College shuts its doors against them and says it has no accommodation except for a few. They turn to the Medical College and find they are not wanted there either. Each one of the Arts Colleges is also complaining of want of accommodation. The College of Agriculture is the monopoly of a statutory "tribe". The College of Engineering is closed to most students. And we all know what is the fate of those students who vainly seek to obtain the requisite training in England.

THE DEFENCE OF INDIA ACT.

It is directed that after rule 12 of the Defence of India Rules under the Defence of India Act, the following rule shall be inserted :—

12*a* (1) Any officer of Government authorised in this behalf by a general or special order of the Local Government may arrest, without warrant, any person against whom a reasonable suspicion exists that he has acted, is acting or is about to act with intent to assist the King's enemies in a manner prejudicial to the public safety or the defence of British India. (2) Any officer exercising the power conferred by this rule may use any and every means necessary to enforce the same. (3) Any officer making an arrest under this rule shall forthwith report the fact to the Local Government and pending the receipt of the orders of the Local Government may, by order in writing, commit any person he so arrested to such custody as the Local Government may by general or special order specify in this behalf. Provided that no person shall be detained in custody for a period exceeding fifteen days without the order of the Local Government. Provided further that no person shall be detained in custody under this rule for a period beyond a month.

COMBATANTS AND NON-COMBATANTS.

Both at sea and on land the dividing line between the combatant and the non-combatant is becoming blurred, remarks the *Law Magazine and Review*. Every citizen is an actual or a potential member of the Army Ordnance Corps. Every merchantman is an actual or potential scout or ram. The protection promised to the invaded populace, on condition of their remaining quiet, has proved illusory. The peaceful dweller at the seaside finds the proximity of a signal station or a railway line draws down on his villa a rain of naval shells. It seems really probable that the theoretical immunity of private property from confiscation, which in Napoleon's time Lord Ellenborough thought so unassailable (in *Wolff* v. *Oxholm*), will not much longer be maintained.

Medical.

INDIAN MEDICAL SYSTEMS.

A Deputation, consisting of (1) Haziq-ul-Mulk, H. M. Ajmal Khan, (2) the Hon'ble Lala Sukhbir Singh and (3) Nawab Ishaq Khan, recently waited on the Hon. Sir Reginald Craddock, the Home Member. With the Home Member were the Hon. Sir Pardey Lukis, Surgeon-General and Director-General of the Indian Medical Service, and Mr. S. R. Hignell, Deputy Secretary. The Deputation placed before the Home Member matters which were calculated to affect injuriously the position of the Vaids and Tabibs by certain provisions of the Medical Registration Acts of the several Provinces.

The points raised by the Deputation were sympathetically considered by the Hon. the Home Member and the Director-General, and a good result is anticipated.

The second point which was laid before the Hon Member related to the improvement of the Unani and Ayurvaidic systems in use in this country and official aid for their development. A very sympathetic hearing was given to this interesting subject also.

AYURVEDA AND THE HINDU UNIVERSITY.

At the All-India Ayurvedic Conference, Kaviraj Dwijendranath Roy, Kaviranjan of Bankipur, proposed the following Resolution :— "This Conference begs to thank the authorities of the Hindu University for including Ayurveda in the faculty of Oriental learning and further request them to consult the Ayurveda Vidyapitha in determinning the course of instruction in Ayurveda, both theoretical and practical." In doing so he said :—Mr. President and Gentlemen,—You all know that the Hindu University is going to have an Oriental Faculty for encouragement of the study of our ancient literatures and sciences and that they have included Ayurveda in the Faculty. I am sure I voice the unanimous sentiment of this assembly when I say that we are thankful to the authorities of the Universities providing for the teaching of Ayurveda. At the same time we hope that suitable arrangements will also be made for the teaching of surgery aud midwifery, both theoretical and practical. Absence of teaching institutions, lack of sympathy and the disheartening effect of chill penury have so long been responsible for the lamentable neglect which our countrymen have shown to the great science of Ayurveda (the science of life) which at one time was the glory of our forefathers. The tide, however, has turned, signs of a better time are already noticeable and our countrymen are awaking to the necessity of bringing back to life once again what they have lost and almost forgotten. The step which the University is going to take will be a move in right direction. But they must have expert advice, and we suggest that when determining that course of the Ayurvedic studies, they should consult the Ayurveda Bida Pitha and make arrangements for research works in co-operation with that body.

THE U. M. TUBERCULOSIS SANATORIUM.

The authorities of the Union Mission Tuberculosis Sanatorium at Madanapalle have issued a handsomely printed report of the opening ceremony of the institution performed recently by H. E. the Governor. The report is illustrated by a number of photographs of the staff and building, and gives an interesting and comprehensive account of the humanitarian work, which the various Christian Missions in Southern India are helping to maintain.

MILK AND INFANTILE MORTALITY.

In reporting on the sale of adulterated and impoverished milk iu the Borough, the Sanitary Inspector for Lowestoft (England) observes that : "When one considers that milk forms the principal food of infants during the first year of life, it will be seen how important it is that a pure and whole milk should be supplied to the public. In order to feed an infant on cow's milk, the milk has to be reduced to a certain degree so that it is suitable for assimilation by the child, and yet contain sufficient nourishment to maintain life. If the milk supplied is already adulterated and poor in quality, and has to undergo a further reduction, it will be seen that the child is not receiving its fair supply of food, and must suffer physically in consequence. Therefore, I think, you will agree that it is essential that the milk supply in the Borough should be pure, wholesome, and of the best quality."

POONA AYURVEDIC DISPENSARY.

The Collector of Poona has written to Mr. Hari Nayaran Apte, President of the Poona City Municipality, informing him that the Government have decided to amend Section 11 of the Bombay Medical Act by reserving to the Governor-in-Council the power to allow, in special cases, unregistered persons to hold the appointment of the nature referred to in that Section, and in the meanwhile to permit the Poona City Municipality to maintain its Ayurvedic dispensary.

Science.

DR. J. C. BOSE.

The following appreciation of Dr. J. C. Bose's discoveries is by the editor of the *Scientific American*:—"By a remarkable series of experiments of unimaginable delicacy, the Indian scientist has discovered that plants have a nervous system. He has discovered that a cabbage or a raddish responds to external forces very much as a human being; that it winces at a blow, is tired by exertion, is intoxicated by alcohol, stupefied by chloroform and degenerates through laziness. His experiments promise not only to revolutionise plant physiology, but to open great new fields experimentation in applied sciences, such as medicine and scientific agriculture. He belongs to the dynasty of scientists who have discovered great natural laws. His discovery of nerves in plants, and his success in inducing paralysis in them and afterwards effecting cure will enable physicians to treat successfully various forms of human paralysis. There can be nothing so wonderful as the true story of the growth of a plant as revealed by his most marvellous instrument, the Crescograph. In less than quarter of an hour the action of fertilisers, food, electric currents and various stimulants can be determined. In the boundless regions beginning with the inorganic proceeding to organic life and its sentient manifestations, the Indian scientist discovered an underlying unity in its bewildering diversity. He subjected all matter to questioning shocks and discovered that there is no difference in the reply. Patiently he added fact to fact in his explorations in the realms of the living and the non-living and was amazed to find dividing frontiers vanishing. At last he reached a new conception, which included in one magnificent sweep, the dust beneath our feet, the protoplasmic ooze floating on a stagnant pool and man himself."

AIR FILTER.

Professor Richet of Paris invented some time ago an air filter which consists of a small ventilator worked by electricity, and beneath the fans of the ventilator is a reservoir of glycerine. The rotation of the fans scatters the glycerine in very fine drops along the walls of the cylinder containing the ventilator. Two thousand cubic metres of air can pass through the cylinder. The air is purified thus. The particles of air constantly come into contact with a little cyclone of liquid particles which carry with them as they fall the germs, dust, microbes and spores which are always present in the air. Thus the air is mechanically sterilised. The invention is highly useful, and if it is used largely it would, as Professor Richet thinks, materially diminish the risks of contagion by the germs in such cases as small-pox, consumption, etc.

TRIPLANES.

The *Scientific American* learns that Germany will soon begin the construction of aeroplanes (triplanes) of enormous dimensions. These machines are to be three times as big and strong as the ordinary flying machine. They are to carry as many as twenty men. This crew has to work four machine-guns and one light field-piece mounted on a special light armoured turret. Eight Maybach motors, similar to those used by the Zeppelin airships, are to drive the apparatus through the air. The motors are coupled in pairs and drive four propellers. The propellers may be shifted in position so that they serve for steering in a horizontal plane. Manual steering is resorted to only for elevating or depressing the machine. All other movements are effected by the motors. The triplane will fly with two propellers only, if need be, and travels at high speed when four are turning.

APPROACH OF A THUNDERSTORM.

According to the *Electrical World*, an Electric Service Company in New York City is successfully using an ingenious electrical device which will indicate the approach of a thunderstorm several hours before any clouds appear. The Company uses this device in order to give ample time to provide for increased illumination when the thunder clouds darken the sky. The following is a very brief description of the apparatus: The storm-detector apparatus, which resembles a wireless receiving equipment, operated by faint impulses from electrical disturbances in the vicinity. Receiving antennae intercept the impulses, which cause a relay to close an alarm-bell circuit. At first the signals are far apart, but as the electrical disturbance approaches, the bell rings more frequently. From an hour to half an hour before the storm breaks, depending on the intensity thereof, the bell will ring continuously. In the meantime steam may be raised to operate generators of electricity which are placed in readiness to supply additional energy when the demand increases.

Personal.

THE ALL-INDIA MOSLEM LEAGUE.

The All-India Moslem League has elected the Hon'ble the Raja of Mahmudabad as its President in the place of H. H. the Aga Khan and re-elected Mr. Wazir Hasan as its secretary. Both of them have distinguished themselves by eminent public services, and the members of the League could not hope to have a worthier president and secretary. Their great merit is that neither of them is a reactionary or a bigot. They stand for the best interests of their own community but also for the cultivation of harmonious relations with other communities. They stand for progress and reform. They have done good work in the past and may be trusted to do even better in future under more favourable conditions.

THE GURKHA.

A very human picture of the Gurkha is given in the current *Bystander*:—

A strange little fellow, Johnny Gurkha. I have seen him receive the *medaille militaire* without a smile, and I have heard him roar with laughter while two of his subaltern *sahibs* indulged in a "rough-and-tumble" outside the mess. He has fought the Hun without the slightest idea of the reason for such fighting. In "Johnny's" eyes his *sahib* can make no mistake. He adores him. For the French he has merely a tolerant regard. He is mildly amused at the enormous value they set upon a chicken or an egg, and he pities them deeply for being compelled to live in so poisonous a climate. Indeed, his attitude towards our Allies has in it not a little of patronage. For what sort of a *Mem Sahib* was this who would ask 5 frs. for a chicken and three annas for an egg? His only amusements in Northern France consist in kicking about a football and conversing at infinite length. A Gurkha's conversational powers are absolutely inexhaustible. He will begin to chat at 5 a.m., and at 9 p.m. he will still be found in deep converse with the same friend. He seldom—happily for his *sahibs*—indulges in song, but he has a passion for a gramophone, and if presented with one will only cease working it when there is a breakdown in the machinery.

THE LATE PROFESSOR FAWCETT.

The following interesting reference to the late Professor Fawcett's work for India occurs at the end of a review in the *Nation* of a new biography by Miss Winifred Holt:—

"Fawcett belonged to a school which was confidently sure of its conclusions, because in a world where most politicians never wished to go below the surface they thought they had reached the foundations.....He used his great powers not to pursue his own ends, but to get rid of definite wrongs.....He saw that a thing was wrong and he attacked it, whether his conduct was convenient to his political friends or not.....Take his record as "Member for India." Sir William Lee-Warner said truly of him that the poverty of the ryot affected him as if he suffered himself. It was a characteristic incident that first brought him out as Indian champion. He found that India was going to be made to pay for a ball which the British Government was giving in honour of a foreign visitor. Mill urged him not to protest, as there were other and graver abuses; but Fawcett insisted. From that time he was always on the look-out for injustice to India, and the impression he made can be judged by the fact that whereas the Indian Budget used to be discussed at the end of the session, when it occupied a few hours, in 1879 it was discussed in May, and the debate lasted three days. In this respect, unhappily, Parliament has reverted to its earlier ways."

THE LATE MR. U. RAY.

The late Mr. U. Ray was a well-known pioneer among Indians of three-colour and process printing. Mr. Ray was a careful craftsman and possessed in addition a wide knowledge of the theory of photography and colour printing. He was a frequent contributor to the technical journals of England and America on questions connected with reproduction and the work of his press in Gurpar road is a well-known feature of the periodical press of Bengal. Mr. Ray, who was fifty-two at the time of death, was a member of the Brahmo community. The late Mr. Ray was a man of cultured tastes and was known as artist, writer and musician. For many years he was editor of *Mukul*, a magazine for young people, and he was until his illness much interested in the similar publication *Sandesh*, while his articles in *Prabashi* and elsewhere were read with attention. Mr. Ray had also written on musical topics and was himself a capable violinist.

Political

SIR HARCOURT BUTLER.

Sir Harcourt Butler, Lieutenant-Governor of Burma, made a notable speech in reply to an address that was presented to him by the municipality of Mandalay. He said :—

"Do you fully realise the great opportunity which you have under British rule of conserving and developing your national life within the circuit of the British Empire, the greatest and truest the world has ever known? Do you realize the significance of the acceptance by the Viceroy of the resolution that India should be represented in the Conferences of the Empire with the assurance from his Majesty's Government that this resolution should have 'sympathetic consideration?' To my mind this is the most pregnant political event since the Government of India passed under the Crown in 1858. From the day when India was left out of the benefit of the scholarship scheme provided by the will of that grand imperialist, Cecil Rhodes, I have steadily set before me as the ultimate object of our policy that India should in time and by careful process be admitted into free partnership in the Empire. Imagine my delight when Lord Hardinge, by his influence and love of India, was able to take the first step towards the realization of this ideal."

THE I. C. S. BILL.

The *English Mail* wrote the following on the I. C. S. Bill :—

"Appointments made by influence or patronage would work indescribable harm, and the prestige of the service would suffer materially by an invasion of this kind into its ranks to the detriment of India. The Indian Civil Service examination is, of course, by no means the only educative test, our university degrees affording ample security on this point. If, however, competition is abolished, even as a temporary measure, the whole fabric of this much-honoured Indian service will be undermined, as sheer merit has hitherto been the foundation of its pre-eminence—a distinction which will soon be dissipated if even the shadow of jobbery is once introduced into the proceedings. It is to be hoped, therefore, that Lord Islington's Bill will receive its quietus in the Commons, and that no such drastic expedient will be found necessary for the recruitment of the service."

THE HON. MR. P. C. LYON ON SELF-GOVERNMENT.

The Hon. Mr. P. C. Lyon delivered an interesting lecture to students, at Calcutta, on the evening of January 17, on the aspirations of a country for self-government. Referring to national development the speaker said that for real progress they must look to the nation and not to Government. Government could only help ; but motive power must come from themselves. As an illustration of what he meant he referred to the great speech of Sir S. P. Sinha as President of the Congress. Delegates at one time thought they were fortunate in capturing Sir Satyendra but they all realised that Sir Satyendra had captured Congress. That meant a great deal. That meant that this great Bengali gentleman had persuaded Congress and made them understand what his patriotism meant and what a great thing it was. Sir Satyendra asked in his speech for a declaration of the policy of Government. What Sir Satyendra meant was that there was a tendency among some Government officials to consider, like Germans, that a machine was the whole thing, that it never had a soul or spirit, and that it was enough to se that machine worked properly, and that they should go on seeing that routine work went on for ever. What Sir Satyendra wanted to say was that there should be a declaration from Government that this machine was really to help some thing far greater, to help in the development of the nation, to help it in its throes. The declaration asked for was that Government was to help fully in the development of the country and the forward policy which would end in the goal of national development, and that was self-government.

National development in politics was summed up in one word, self-government. It must begin low down and grow. They did not want to substitute one government for another by conquest, but to govern by themselves. They had a task to perform before they arrived at the goal. What they wanted was to take up the work already started of training and educating the people in the villages. They should teach the people in the villages co-operation. What was wanted was to restore the ancient bonds of co-operation and love, to train the nation to know and understand its own interests, to care for its neighbour, not to hate the law and tranquillity which were its salvation, but to co-operate for the public good, and to base public action on the love of humanity.

General.

THE CENTRAL UNITY OF THE REFORM MOVEMENT.

Under the peculiar conditions of Indian social questions offer perhaps greater difficulties and complexities than political or other questions. To all appearances Indian society is a conglomeration of races or communities and it is often deemed impossible to speak on a common platform of the various needs of the various members of Indian social polity. To my mind that aspect is rather an apparent one. At bottom the cause of social reform, or for that matter all reform, is one and the same whatever the community or country. The principles and processes of reform movement have a central unity that unfolds and sustains the various forms they assume under different conditions. . . .

Human nature is one all over the world and social matters so far as they are human, cannot but present a certain community of character. Hindus, Mahomedans, Parsees and other peoples of whom Indian Society is composed, have therefore to tackle fundamentally the same problems as regards social life.

Reform is nothing but a conscious and deliberate endeavour to change, to throw off the dead crust of use and wont and to put on a new and living coat of health. We cannot help changing. In spite of ourselves we are not to-day what we have been. "Why not then change intelligently," asks the reformer. It is the privilege of man alone to consciously adjust himself with his surroundings, and all that the reformer does in the case of social life is to consciously probe social evils and devise, as an intelligent being, means to remove them. This is a phase of the movement that is not confined to any single community. It is among all the same. . .

I may go still further and say that everywhere the reform movement has to deal with the same set of conditions. It has to deal with open and positive opposition, with stealthy but cowardly bitterness, with cold contempt, with stolid indifference, with passive sympathy, with active co-operation, with violent revolution, and in some exceptional cases with the rage of despair. This is the common experience of the reformer, be he Parsee, Hindu or any other. We may, nay, we ought, therefore, to join hands and correlate our deliberations and our activities.

To me all methods of reform are welcome, all attitudes that are vitally independent, are helpful. Why, I would welcome even active opposition. For those who go away from us will meet us in the end. I would not dogmatise in the matter. I know opposition, hatred, bitterness have a sincerity of life about them, and if Life is one in the main, they must ultimately subserve the ends of life and turn into love. I therefore welcome all methods of reform and all workers in the cause from the old cautious orthodox to the go-ahead heterodox. Every one of them can, according to his lights, help the cause onwards. All that I would insist upon is thorough sincerity. With that stamped upon us, we may go forward each one in his own way.

There is one prejudice against reform, however, that is very hard to die, and I cannot pass on without clearly stating our, at any rate, my position with regard to that. When we ask our brethren and sisters to overhaul social customs and institutions, we are accused of irreverence, of an irreligious spirit. Let me give a flat and emphatic denial to the charge. Far be it from me and from us to lay sacrilegious hands upon the teachings and precepts that are still pulsating with a spiritual life, and that are a perennial source of guidance to frail, tottering man. It is not there that the iconoclastic axe of the reformer is ever laid. He is impatient, as all nature is, of the dead and the effete, which, he, as the representative of the living principle of the race, cannot rest till he has done away with, lest it should rot and putrify and give rise to fatal pestilence. Let no one therefore labour under the misconception that reform is an undermining of faith and a violence to the susceptibilities of the religious and righteous. On the other hand faith in the ultimate triumph of Good is the very essence of the spirit of Reform. The reform movement, therefore, would not seek to undo that which is the very source of all life and health. It would only seek to bury the dead and clear the ground for all healthy and vital operations of social life. Let us all serve the cause of social reform in that spirit—in the spirit of one to whom righting social wrong and injustice is a sacred mission, and we need not fear the results. Fired as if with a call from on high, let us seek to do our share in the work; let us, as brothers, bound by love and sympathy, compare notes and learn and teach, teach and learn, so that even if we fail in the immediate future, our very failures will be as good as successes.—*From the Presidential Address of Prof. D. K. Karve, B.A., to the Indian Social Conference.*

THE INDIAN REVIEW

A MONTHLY PERIODICAL DEVOTED TO THE DISCUSSION OF ALL TOPICS OF INTEREST.
EDITED BY G. A. NATESAN.

Vol. XIX. FEBRUARY, 1918. No. 2

A LETTER FROM SIR WILLIAM WEDDERBURN.

TELEGRAMS, HUNTLEY, STATION, BARBER'S BRIDGE.

MEREDITH.
GLOUCESTER.

Christmas 1917

Dear N. Natesan

I have received no Christmas gift that has given me more pleasure than your little volume of "What India wants" It is an admirable statement of India's claim - tracing its history, quoting high authorities; setting forth present grievances & indicating the one great remedy of Self Government. My Wife & I are deeply touched by the kind words of the Dedication. If there has been a mild form of martyrdom, there have been full compensations.

Yours sincerely
W. Wedderburn.

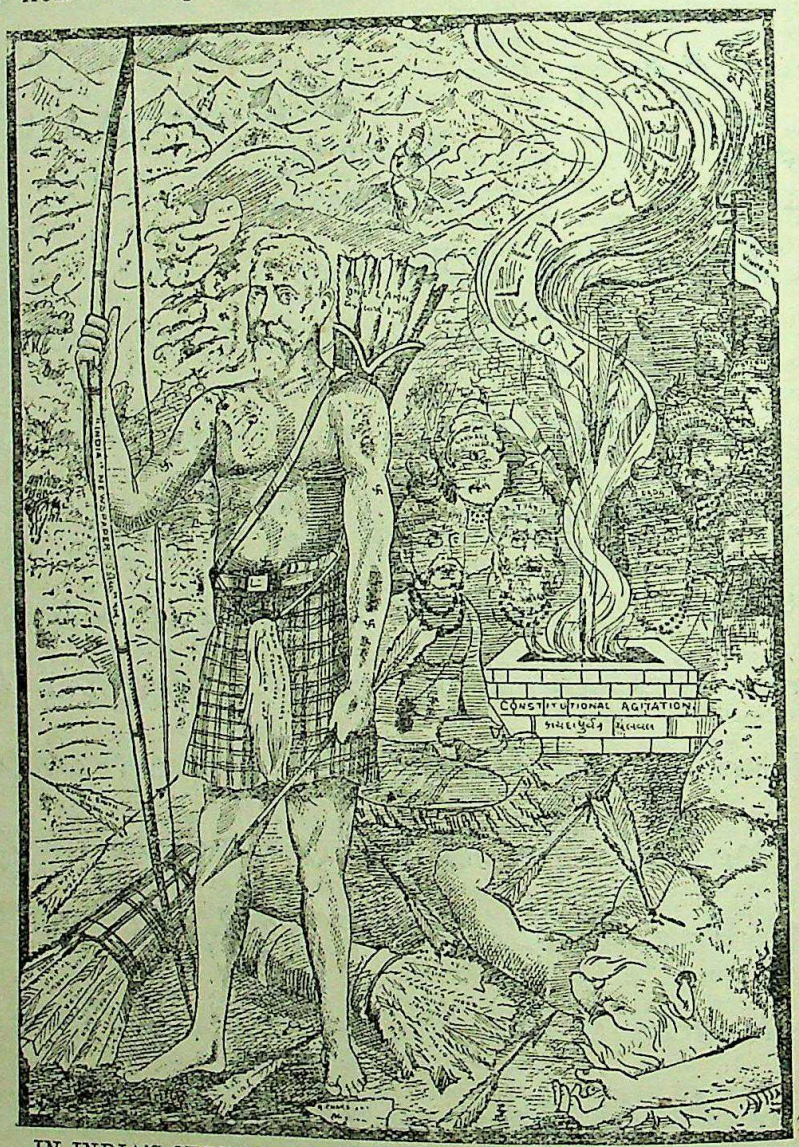
THE LATE SIR WILLIAM WEDDERBURN

BY THE HON. SIR DINSHAW EDULJI WACHA.

I

Sir William Wedderburn belonged to that small and rare but typical class of the great British nation whose chief trait of character, apart from their high intellectual, moral and social qualifications, is *noblesse oblige*. Scion of a distinguished family whose ancestry has been traced to six centuries back, there was to be plainly discerned in his person all those hereditary environments which differentiated the average Briton from one in whose vein runs the blood of all that is truly noble and gentle. An experienced judge of human nature had only to meet and converse with him but once for an hour or two to discover and admire what a fine specimen he was of all those virtues which go to make up what we call the "perfect gentleman." Educated in the University of Edinburgh,



IN INDIA'S SERVICE: IN INDIA'S DEFENCE!—*Hindi Punch.*

Digitized by Arya Samaj Foundation Chennai and eGangotri

which has often been compared to the classic academy of ancient Athens, the home of so many Scotch scholars and divines, statesmen, historians, poets and philosophers, Sir William possessed in no small a degree that culture which contributed so much to the cultivation of the faculty of broad-mindedness and the refinement of natural talents. From the earliest days of his career as a Civil Servant in India, Sir (then Mr.) William Wedderburn, whose immediate ancestors had for a hundred years also served in the same capacity, it was recognised in whichever locality his duties took him, he was known to have the deepest sympathy with Indians of all classes and his great solicitude for their political, social and material welfare. But his chiefest care was the amelioration, as far as it lay in him, of the condition of the indigent ryot, ground down between the upper stone of the revenue officer and the nether stone of the district or village money-lender. As he grew older in the service he was more and more convinced of the imperative necessity of relieving the luckless agriculturist from the heavy burden of his debt. He was never one of the majority of the Service who asserted, mostly without the book, that it was entirely owing to the ryot's unthriftiness and his extravagant expenditure on marriage and other domestic events. The allegations, though true, were grossly exaggerated. The primary cause of all the wants and woes of the peasant could be readily traced to the burden of enhanced revenue assessments which, as a consequence, led to borrowing from the money-lender at a heavy rate of interest. This view which Sir William firmly held was greatly emphasised by the first Famine Commission under the presidency of that most able and practical expert, the late Sir James Caird. There is overwhelming material in those ponderous volumes of the Commissions' report on the condition of the agricultural masses of India which he who runs may read even to-day with the greatest profit and instruction in order to be able to compare notes with the present condition of the Indian peasantry. He may judge for himself by an accurate comparison whether that condition has improved or deteriorated. But this much may be said without fear of contradiction that the private departmental inquiry which Lord Dufferin had instituted in 1887 proved to the hilt, from the carefully edited report of the Government published in 1888, that it was scarcely any better than it was after the first general famine of 1876-77. Even six years before the date of that report well-founded articles, based on facts, had appeared in some of the London journals, notably in the *Spectator*, then in the very vigour of its manhood and edited by a journalist of great independence who had acquired large experience in India. There was one article in that journal headed "The Great Danger in India" which at the time attracted no little notice of the authorities. It was therein openly asserted that the ultimate danger lay in the hopelessly distressed and indebted condition of the ryot. It would be impossible to overlook that danger as the rebellion of the belly was the worst of its kind to be apprehended in any country. A little later, in 1885, the late Sir Henry Cotton, in the first edition of his "New India," had also well portrayed the dangers of the Indian agricultural problem in words not to be mistaken. And as a further absolute testimony to the same gruesome fact, there was the appointment of the Commission in 1878-9, under the presidency of a most experienced and accomplished revenue officer of the United Provinces, the late Sir Auckland Colvin, to thoroughly investigate the condition of the agriculturists in the Deccan where grievous agrarian riots had taken place. The report of that Commission made most depressing reading and which eventually led to the enactment by the Government of India

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the Deccan Agriculturists' Relief Act, in 1880. It was this report primarily and the one of the Caird Famine Commission which led Sir William to publish his most excellent brochure on Revenue Enhancements. His active mind and his great solicitude for the welfare of the Deccan ryots, later on, prompted him to call together a meeting of some of the most influential citizens and capitalists of Poona to consider and frame a practical scheme whereby the agricultural indebtedness of the ryot might be greatly diminished and the lot of that waif and stray of cultivating Indian humanity, living as it did on a bare subsistence, somewhat improved. Even Sir Louis Mallet, Under Secretary of State for India, and an expert authority on land economics, observed in one of his masterly minutes that the poor ryot in all parts of India was the victim of the Revenue Survey Officer who only knew how to increase revenue assessments for his Government at the termination of the thirty years' settlement of all ryotwari lands. And, as if to heap Ossa on Pelion, there was that exceedingly comprehensive monograph of Mr. Allan Octavian Hume on Indian agriculture, dolorously depicting the dismal and almost hopeless condition of the peasant.

Thus it would be seen how amply Sir William was supported in his own views on the burden of revenue enhancements in regard to which he, as a District Judge, had often to decide law suits instituted by the money-lenders. The conclusion which the Poona meeting arrived at was the establishment, as an experiment in one of the worst indebted districts of the Deccan a land or agricultural bank. A practical scheme was drawn up which was blessed by Sir James Fergusson, the Governor of Bombay, from his own knowledge and experience of the success of land banks in New Zealand. It was formally submitted to the Government of India with Lord Ripon, of happy memory, as the Viceroy and with Sir Evelyn Baring (the first Lord Cromer) as his most able Finance Minister. The scheme passed that ordeal also having been most cordially supported by the Government. It was recommended to the then Secretary of State who cursed and pigeon-holed it, and it is a fact that it lies in some dusty pigeon-hole of the India Office, of non-progressive fame, to this hour. Meanwhile such was his solicitude for the Indian peasantry that in order to advance the progress of the scheme a further stage, he went to London, there to enlist the sympathy of many a prominent British parliamentarian and others. John Bright was convinced that it was a most practical scheme and he gladly presided at the meeting convened for the purpose and made a most eloquent appeal to the authorities at the seat of the Central Government. But it met, as just observed, with an adverse fate, most unluckily for the Indian ryot. Pigeon-holed as the scheme has been for well nigh 36 years past, Heaven only knows whether it ever would be resurrected, and whether the Council of India would seriously wake up to its grave responsibility in this matter. Poor India has no prospects for the present of a valued friend like John Bright or Professor Fawcett or Mr. Charles Bradlaugh. Sir William afterwards published in a pamphlet form this scheme of agricultural banks.

No retired English Civilian has since ever moved his little finger in this respect as strenuously, perseveringly and single-mindedly as Sir William did to the last day of his life which was devoted to promote the best interests of India and India alone. This was *the* one subject nearest to his heart, along with the political progress of Indians.

This then, is the most outstanding feature of Sir William's Civilian career. If he was greatly endeared to the Indian people for so many years, it may be unhesitatingly asserted it was primarily

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

for his deep and abiding solicitude and sympathy for the Indian peasantry.

The other outstanding feature, but of a secondary character, was Sir William's whole-hearted support of Lord Ripon's memorable scheme of Local Self-Government which, at least in the Bombay Presidency still acts as a red rag to the bull of the Bureaucracy. But on this subject as well as his persistent and consistent advocacy of education in all its branches, technical included, it is not needful to expatiate in this place. Suffice to say a grateful public held a public meeting in honour of the retiring Civilian in1887 and voted a handsome fund to perpetuate his memory. The late Mr. Telang observed that "it is one of the important features of Sir William's career that he has taken the most active, the most intelligent and the most useful interest in the progress and advancement of education in the country." And here the fact should be remembered of the very cordial and friendly relations he cultivated with the people among whom he lived and moved during his entire official career. Wherever he went he instinctively attracted all classes of the people by his great personality, his gentleness, his godliness, and his nobility of character. During the five years which preceded his retirement there was in Bombay a trinity indeed of highly cultured, highly bred, and highly sympathetic Lords in the persons of Sir Raymond West, Principal William Wordsworth and Sir William Wedderburn. This bright and illuminating constellation of the intellectuals was familiarly known as the three W's, and the Bombay generation of those days knew too well what marvellous influence, each in his own sphere, and all combined, exercised on Indians of light and leading of whom the other three stars of the first magnitude were Telang, Pherozeshah and Tyabji; and this trio became exceedingly marked with the advent of that great statesman and philosophical radical, Lord Reay, as the Governor of Bombay.

Sir William left the shores of India, esteemed and regarded by the people of the Bombay Presidency. Even then his name was a household word and he had declared that so long as Providence spared his life he would, in his retirement, devote his whole time and energy exclusively to the promotion of the welfare of Indians: specially their political advancement; and he faithfully and solemnly discharged his promise as all Indians so well know. Such indeed was his love and regard for India. It would be too long for these columns in this issue of the *Indian Review* to narrate the exceedingly unparalleled and unexampled career of Sir William Wedderburn as a retired Civilian, but a true friend of India; also some of the personal recollections and reminiscences of the present writer. These must be reserved for the next issue. All that might be said in conclusion, in this place, is that Sir William Wedderburn had proved in his life-time one of the noblest of noble Englishmen who loved India dearly and worked hard for it, day and night for thirty long years, sacrificing thousands of Rupees to repay his gratitude, as he thought it, for the salt that he had eaten of India. As Sir P. M. Mehta observed at the great public meeting in the Town Hall on the eve of his departure from the shores of India: "that Sir William Wedderburn lived in the hearts of the people of this country with respect, with admiration, and with gratitude. We count Sir William among the true friends of this country, because he has given loyal and sincere adhesion to those principles of justice and righteousness on which the declared policy of the Crown and Parliament for the Government of this country is founded."

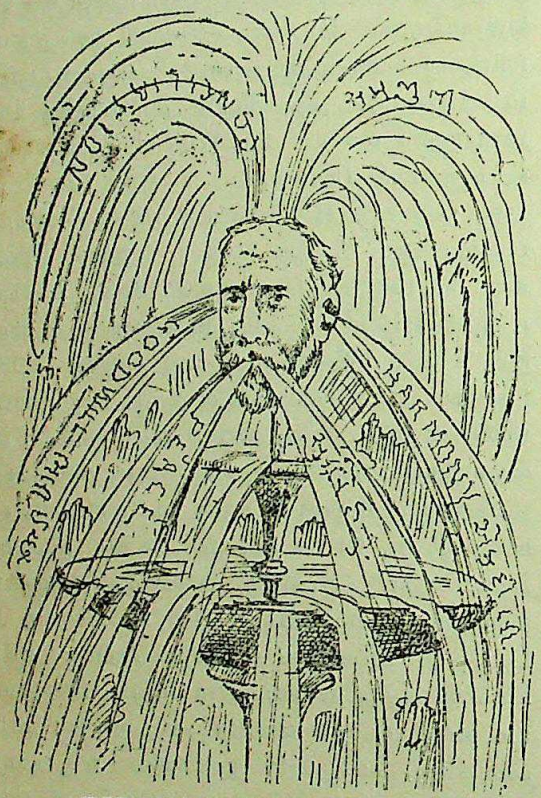
Sir William Wedderburn: An Appreciation

BY

THE HON. MR. V. S. SRINIVASA SASTRI.

THE sound and mature opinion of the late Sir William Wedderburn should have been of the greatest value to the Right Honourable Mr. Montagu and others who have in their various ways and degrees to decide the fate of India. He had been for over a generation the lid-less watcher in England of the interests of India and ever since the question of constitutional reform took shape, he had been giving and



THE WEDDERBURN FOUNTAIN.

receiving suggestions as to the lines on which it should proceed. In the first week of January last, he sent me a cablegram urging that Mr. Hirday Nath Kunzru, the head of our Society in Allahabad, should be sent to England at once to prepare the ground for the Congress deputation which should not be long in going. I have heard a Governor in India say that whether the Conservative or the Liberal ministry be in office, no big step of any kind affecting India would be taken without Sir William Wedderburn having been privately consulted. There are not wanting cavillers in both countries who say that Sir William commanded more reverence than influence; that he was regarded as a sort of well-intentioned crank, who thought of Indian affairs exclusively and could not, therefore, be trusted to see their full bearing on larger affairs. In truth, however, nothing has ever been done of value to humanity except by those who concentrated on what they cared for and concentration necessarily means the exclusion from view of many things of consequence. Sir William's love of India and anxiety to promote the interests of India were a passion—a passion that gives joy to life and redeems humanity from grossness. He gave his pension to the service of India. He gave some of his own money too to her service. He knew her faults and her weaknesses; but he dealt with her gently and his reproof scarcely differed from kindly exhortation. Mr. Gokhale was once struck by the extraordinary resemblance of a portrait in Sir William's house to himself and asked who it could be. He was told it was his brother, who, along with a child, had lost their lives in the Indian Mutiny! Sir William had never alluded to the incident before and he seldom alluded to it afterwards. Injuries not half so grievous, other natures would find it impossible to forget or forgive; nay, they have engendered undying hatred. The goodness that leads instead to love, to service and to sacrifice touches divinity. It is found only in the saintliest natures. In fact, in single-minded devotion, in the clear sight which no difficulty could cloud and no defeat could dim, in the complete surrender of the self, which minded no efforts, however great and never made any allusion to them, it would be difficult to find Sir William's match except amongst the great *rishis* of the land he loved. Spiritually he really was of India.

Towards the Goal

BY

SIR ABBAS ALI BAIG, C.S.I.

Late Member, India Council.

MR. G. A. Natesan's admirable brochure "What India Wants"* is published at a most opportune time when both India and Great Britain are responding to the pressure of the great events which must in the near future profoundly change the fortunes of the Empire and re-adjust the position of India as a *partner* in the scheme of the British Commonwealth of free nations. The value of the publication is greatly enhanced by a wealth of luminous extracts skilfully marshalled from the writings and speeches of some of the most talented and far-sighted statesmen, who have moulded the destiny of British rule in India. These informing extracts show how closely the great principles and the high purpose underlying the policy of some of Britain's noblest sons of the type of Malcolm, Elphinstone and Munro accord with the main features of the reforms which Mr. Natesan discusses. Incidentally Mr. Natesan's arguments constitute a vigorous indictment of the narrow spirit in which Section 87 of the Charter Act of 1833 and the pledges of three successive Sovereigns have been treated by the servants of the Crown charged with the sacred duty of giving full effect to them.

Mr. Natesan has indentified himself with the Congress-Muslim League scheme of reforms. Whatever scheme of reforms may eventually be adopted in a statesmanlike response to the rapidly changing conditions through which the country is passing—and no such scheme can have an element of finality—it is certain that the dawn of a new era in the political history of India is approaching and a great stride forward towards the goal of responsible Government is imminent.

* Written as a Foreword to Mr. Natesan's "What India Wants," but received too late to be included in the book.

SALAT

BY

MUSHTARI BEGUM.

(An English-Muslim Lady).

When dawn's fair glow illumes the sky
And paints it with an artist's brush,
The Lord in Fajar's pray'r I meet
And with Him hold communion sweet.

Subhana Rabbiyal Azim!

When noonday's scorching sun is high,
In Zuhr again my heart upsoars,
From work and toil and weary strife
I prize this respite more than life.

Subhana Rabbiyal Azim!

The endless stream of pray'r pours forth
From Al-Amin through ages on,
While now the hour brings Asar in,
And makes in pray'r the whole world kin.

Subhana Rabbiyal Azim!

In sunset's glow Maghrib I say,
Low prostrate' fore the Lord of All;
Towards the Qibla lost in awe
Within my being I withdraw!

Subhana Rabbiyal Azim

The toils of day are ended now,
Before I rest Isha I say;
With soul set free by sleep,—I fly
To my Beloved Lord on high!

Subhana Rabbiyal Azim!

KING PRATAPA RUDRA DEVA

BY MR. TARINI CHARAN RATH, B. A.

PRATAPA Rudra Deva Gajapathi was a very famous king of ancient Orissa who ruled an extensive country, during the first quarter of the sixteenth century A.D. He belonged to the Solar Dynasty and with him the fame and glory of the ancient kingdom of Orissa may be said to have waned. His country extended from the Ganges in the north to the mouth of the Krishna river in the south and he even carried arms as far as Rameswara at the extreme south, successfully for a time. He was the son of Purushottama Deva Gajapathi of Kanchi-Kaveri fame by his beloved Queen Padmavati or Rupambika, the daughter of the King of Karnata, whom he had taken prisoner during his expeditions. King Kapilendra or Kapileswara Deva of Orissa was the grand-father of Pratapa Rudra. He founded the Solar Dynasty after the extinction of the well-known Gangetic family. Pratapa Rudra Deva was the author or compiler of the most valuable treatise on Hindu Law, known by the name of 'Sarasvati Vilasa' or 'Recreations of the Goddess of Learning' which is even to this day an authority along with the Mitakshara in Orissa and South India. Several writers on Hindu Law commencing from Sir Charles Grey (afterwards Chief Justice of Bengal) to Mayne including Grady, Macnaghten, Morley, Strange, Thompson, Tagore and others have spoken highly of this legal compilation of the Orissan King. But owing to the confusion and dismemberment that followed the demise of the Great King in Orissa, the valuable treatise on Hindu Law seems to have not been given due prominence in the country. It appears to have been better known in South Orissa (Madras Presidency) than in its northern portion. The date of the compilation may be safely assigned to 1515 A.D.

For sometime the work was but blindly attributed to the Telingana King Pratapa Rudra Deva Ganapati of the Kakatiya Dynasty of Warangal. The book is in high-flown Sanskrit language and anybody who has the patience to go through it will certainly find out the real author. Palm leaf manuscript copies of the book have been found even in Travancore, Mysore, Coimbatore, Tanjore and other places in the South, written in the Old Grantha, Tamil and Telugu characters.

The work is an extensive one comprising the whole body of Hindu religious, moral and civil laws of the country. It does not omit even the customary law of land tenure. In the introduction to the book it is stated that the King composed it with a view to remedy the difficulties arising from the existence at that time of several authoritative works on Law, whose doctrines were in conflict with one another. On the fundamental question of the character of the ownership of property, the treatise is the most pronounced of all the works as yet known, on the secular side of the controversy.

The King is celebrated for his great wisdom, ability, valour, learning and religious knowledge. His skill in the arts of war and civil government was eminent. The introductory chapter of the book records his extensive literary accomplishments. He is said to have composed commentaries and popular narratives. He was a director of dramas and arranged the Dharmasastra. He was very fond of disputes and controversies on points of Theology. He was devout and built several temples. The Great Vaishnava Reformer Sri Chaitanya came to Orissa in his time and was much adored by him.

The book clearly makes mention of the successful and famous Kanchi-Kaveri expedition of his father King Purushottama Deva which is not fully believed by some infidels, though few, even from the existence of other evidence on the point. Rev. Thomas Foulkes translated from the original Sanskrit the portion of the book on Daya Bhaga or Law of Inheritance in 1881. This book is now out of print and not available.

The Uriya nation may rightly feel proud of such a worthy production of their ancient Kings. But it is to be regretted that the work has not been yet fully published and translated. It is hoped that steps will be taken soon, in the direction, by all concerned and also by the benign Government which has been doing so much in respect of such ancient and valuable Oriental records.

WORLD FEDERATION

BY MR. V. B. METTA, BAR-AT-LAW.

WHAT Vision of Life do European thinkers and seers see at the end of this mighty War?—They see the vision of what they call 'The World-Federation.'—A great and exalted idea truly! We must, however, judge it—not by its title, which is unsurpassably noble, but by the smaller details given by some of them, which go to make it up. We must find out whether their eyes see everything clearly and correctly, and whether their moral notions are self-seeking and utilitarian or absolute and ideal for all races of mankind.

And what is the conclusion that we come to—after we have penetrated the glowing epidermis of their ideal?—Well we regret to find that most of them are unconsciously selfish and narrow. Beneath all their talk of the welfare of humanity—we find that these European thinkers are thinking—not of the Tennysonian 'federation of the world'—but of the federation of a part of it,—namely, Europe. They want the nations of Europe to live at peace with each other henceforth. The East—(except Japan) and the uncivilized races of mankind are hardly ever mentioned by them!—Why?—Because they are weak and consequently not able to impose their will upon others! Surely Europe is not to exist for the good of the world—but the world is to exist for the good of Europe!

True morality, consists—not merely, in behaving better in the future, but also in undoing the mischief which we might have done in the past—if possible. The races of Europe and America must give up their ill-gotten possessions in other parts of the world, if they have been really illumined by the rays of ideal morality now. It is not merely the weak and small nations of Europe and America, who should be allowed to develop themselves along their own lines in the future, but the races of the East, and of the Dark Continent also. There should be no spheres of influence in Persia or China henceforth. America must give up the Philipines to the Filipinos. Rama, the present king of Siam, is said to be doing a great deal for reforming and improving his country. There is no doubt that he would be able to do a great deal more than what he has done, if Western Nations cease to ask for special rights and privileges in his country. It is anything but right to say that Eastern countries like Persia and China have failed or are not fit to reform themselves. They have had no freedom or time given them to work out their own salvation. Had the Western Powers continuously interfered with the development of Japan—for their own selfish ends in the seventies and eighties of the last century,—the Island-Empire would never have emerged as a Great Power to-day—in spite of all the burning patriotism and magnificent heroism of her children. There is a long interval of time between the sowing of a seed—and the bearing of fruit by the tree which comes out of that seed. When so much arduous toil, so much restraint, so much failure is necessary for an individual to pass from one stage to another successfully,—how much more difficult it is for a nation—with its innumerable currents and cross-currents to pass from one stage of civilization to another!

The true test for judging the greatness of a civilization is its capacity for making its actions—the legitimate children of its thoughts and ideals at all times and under all circumstances. In the past, many races and countries aspired to create enduring civilizations but failed,—and have now disappeared from the face of the earth. It remains to be seen whether the self-trumpeting modern Europe will succeed in doing that—which only India and China have partially succeeded in doing up till now in the history of mankind.

SELF-GOVERNMENT FOR INDIA

BY MR. N. C. KELKAR, B.A., LL.B.

Editor of "The Mahratha."

INDIA is grateful for what England has done for her so far. But India believes in the definition of gratitude as 'a lively expectation of favours yet to come.' And she is determined that she will not herself take rest nor allow rest to England so long as she has not obtained her heart's desire, viz., Self-Government within the British Empire and equal partnership with the self-governing Colonies in the British Commonwealth. Her aspiration has been definitely formulated; and there can be now no going back from it. India will not, and cannot, accept any half-way house to her ambition; and if that ambition is not to be realised in full, she will rather prefer to be, as she was, in true Oriental fashion!

> The East bowed before the blast
> In patient deep disdain;
> She let the legions thunder past
> Then plunged in thought again.

Why should India care who rules her if she is not to have under him a self-respectful status as a nation? She refuses to regard her present position of milchcow to the British Empire as dignified. She cannot appreciate the argument that she has got what she had not got before, viz., internal peace and contact with a civilised nation like England. There is no glory in being a bondsman, though attached to the retinue of the most illustrious master in the world. If India had internecine wars, she was living in an atmosphere which favoured the fullest growth of at least individual persons and communities. The clash of arms is much better for mankind than emasculating peace. Erring but responsible manhood is preferable to a life-long, though secure, tutelage. The rugged national life, the uneven social surface in pre-British times, was certainly preferable to the dead level and the dull uniformity established by the steam-roller of British Rule, in which first-class eminence is impossible and aspiring tall poppies are always in danger of being cut down. In pre-British times there was ever room at the top for whomsoever that possessed eminent qualities. A shepherd like Malhar Rao Holkar, who in his childhood spun wool and tended the flock in the field, could carve out, by his sword and statesmanship, a principality worth a crore and a half by the time he reached the middle age. Mahadaji Scindia, who was for twenty years the successful rival of the English at the Imperial Court of Delhi in the last quarter of the 18th century, was the son of a mere page who took care of the Peishwa's slippers. Under the British rule for over 150 years there has not arisen a man who was deemed able or distinguished enough to be a Revenue Commissioner in Civil Service or a Second Lieutenant in the Army. Even a Shivaji could not, as was once observed by Babu Surendranath Banerjea, hope under the British rulers to rise above the rank of a Subhedar-Major. What has British rule, it may again be asked, done for the agriculturist either beyond ensuring peace so that he may reap the corn he has sown? The rural population under British rule has been deprived of even such self-government as it enjoyed in pre-British days.

Evidently this could not have gone on for a long time, even if the great war had not come! But now that the war *has* come, now that the British Government has realised the possibilities of the strength to be derived from a contented and self-governing India to the empire in the future, and has also declared itself to be the natural guardian of the political freedom of nations in the world, small or great, India is inclined to put point-blank the challenging question to England:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Are you or are you not going to give political freedom to India just as you say you are going to win it by war for Belgium or Serbia? Has or has not India any claims upon you in that respect? If yes, then what is the scheme by which you are going to restore political freedom to this great nation? Despairing of a constructive policy and an honest scheme spontaneously emanating from you, the best brains in India have voluntarily framed a scheme of their own; and the Indian nation now demands that it should be at once put into operation as affording a wide enough workable basis for a fair experiment of nation-making in this country, and embodying a minimum of political reforms, a minimum, that is to say, of political power which the country thinks and feels is unreservedly or unconditionally due to her, a minimum which cannot be divided into parts without destroying its desired efficacy or without disappointing the people to such an extent as to make them lose faith in British statesmanship. And England would be judged by the response which she may give to this challenge.

The Congress-League scheme, reserving as it does to the Government of India the fullest measure of control and administration in most of the great imperial departments, cannot itself be valued at more than eight annas in the whole rupee of national self-government such as the British Colonies at present actually enjoy. That scheme, therefore, does not admit of any more cheese-paring economy or instalments. The Secretary of State for India would entirely misunderstand his mission to this land, if he thought that his presence was required only to arbitrate between a close-fisted Bureaucracy and an extravagant educated class as regards a claim for decentralisation of mere administrative business. Mr. Montagu is not looked to by India as a shrewd umpire who knows how best to settle a small bargain between two petty dealers. His task is not to apply the differential calculus so skilfully as to seem to be giving to the Indian people something without really taking away anything of value from the bureaucracy. He would be doing injustice to himself if he did not regard himself in as responsible a position with regard to Canada or Sir Herny Campbell-Bannerman with regard to South Africa. Here were instances in which political discontent was as deep as it is now in India, and in which the grant of full responsible government was recognised as the *only* real and abiding solution of the problem of pacifying the nation. There the theory of instalments was regarded as simply out of the question, and the same must be the case with India also. The minimum as embodied in the Congress League scheme is the minimum that India must receive if she should begin to feel that she is really a partner in the Empire and not a menial drudge; if she should rise to the required pitch of enthusiasm to put forth all her energy and resources for the cause of the Empire and share, in her own right, in the glory of the Empire. The minimum embodied in the scheme is that portion of the edifice of self-government which cannot admit of being done in parts. It contains just that measure, and no more, of the power of the purse and of the control of administration, which is necessary to inspire India with respect for herself and love for the Empire. If the bureaucracy does not possess imagination enough to perceive, it is our business to teach it to them, that the mere establishment of a barren peace, and the mechanical consolidation of territorial acquisitions, cannot entitle any rulers to the esteem, much less to the love, of a people who had a glorious political past and who legitimately aspire to a glorious political future. With a liberated and a loving India, England may overcome any dangers that threaten the British Empire. But in a discontented and emasculated India England may find only a mill-stone round

her neck, heavy enough in its turn to drown her in the seething and surging waters of an international struggle ; for, as was once observed by the late Sir Pherozeshah Mehta, a policy of force and despotism cannot fail to bring on its attending Nemesis. England's experience of discontented Ireland has not been pleasant enough ; and India, if not conciliated by the grant of self-government, is sure to prove another Ireland. A saner politician than Dr. Rash Behari Ghose cannot be imagined ; and yet he could not help saying in the course of his speech as Chairman of the Reception Committee of the twenty-second Congress held at Calcutta : "The pinch-beck Imperialism in England is made up of barbarous ambitions, passions and sentiments wholly alien to the culture and civilisation of the 20th century. To those brummagem Imperialists I would say : Do not misread the signs of the times. Do not be deluded by theories of racial inferiority. The choice lies before you between a contented people proud to be the citizens of the greatest empire the world has ever seen and another Ireland in the East, or—I am uttering no idle threat, I am not speaking at random, for I knew something of the present temper of the rising generation in Bengal—perhaps another Russia." A situation like this can be adequately dealt with only by the sympathetic imagination of a generous statesman, who can think in large dimensions, and not by the subtlety of a pettifogging politician whose skill lies only in investigating mathematical or evolutionary minima in political concessions. May we not hope that Mr. Montagu will rise to the occasion and transform India from a dangerously discontented dependent into a cordial co-operator and a faithful freind of the British Empire ?—*From a Memorandum prepared for the Bombay Home Rule League.*

THEISM AND BHAKTI

BY

PROF. N. G. WELINKAR, M.A., LL.B.

CRITICS of our movement (Theistic Movement) tell us that though Hinduism has been prolific in Bhatkas or Devotees, it affords no experience of genuine *Bhakti* (Devotion), no witness of spiritual communion, of devout prayer and soul-satisfying response. The cries of desire, they say, are more prominent in the devout utterances of our Bhaktas than the triumphant assurance of salvation sought and obtained. The Indian Bhaktas, that is to say, are groping but never finding. How far this is from being the truth of the matter, in what rich and many-toned harmony the soul of the Indian Bhaktas has uttered its song of deliverance and joy is known to every Indian Theist. Indeed, this sense of self-fulfilment in intimate oneness with God is to my mind the distinctive note of the Indian literature of devotion. Which Brahma is unacquinted with Guru Nanak's joyous outburst, "Vanished the doubt of my soul, when I had a vision of Thee," or Kabir's song beginning, "I have found a mine of jewels." Here are two expressions one of longing and supplication and the other a joyous outpouring of gratitude for grace and mercy received by our much cherished Western India Bhakta Tukaram whose devotional songs are the joy and consolation of the toiling millions of the Maharashtra. The metrical translations which I give I have taken from a delightful article entitled "the Indian Poetry of Devotion" from the pen of Rev. Dr. Macnicol of Poona in the latest issue of the *Hibbert Journal.*

I.

"Thy greatness none can comprehend
All dumb the Vedas are ;
For-spent the powers of mortal mind—
They cannot climb so far.
How can I compass him whose light
Illumes both sun and star.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

The serpent of a thousand tongues
Cannot tell thy praise;
Then how poor I? Thy children we
Mother of loving ways.
Within the shadow of thy grace
Ah, hide us Tuka says."

II.

Holding my hand thou leadest me,
My comrade everywhere.
As I go on and lean on thee,
My burden thou do'st bear.

If as I go, in my distress
I frantic words should say
Thou settest right my foolishness,
And takest my shame away.

Thus thou to me new hope dost send,
A new world bringest in;
Now know I every man a friend,
And all I meet my kin.

So like a happy child, I play
In thy dear world, O God,
And everywhere,—I, Tuka say,—
Thy bliss is spread abroad."

Let me give you one more quotation from another Saint of the *Bhakti* School from our Maharashtra, the poet Eknath who was both a great devotee and a great thinker. The extract I give is taken from his "Bhagwat" and is about the import and value of *Bhakti*: For the translation I am again indebted to Dr. Macnicol.

The Superiority of Bhakti to Yoga—

Though one restrains the senses yet they are not restrained. Though one renounces sensual desire, yet they are not renounced. Again and again they return to torment one. For that reason the flame of *Hari Bhakti* was lit by the Veda. There is no need to suppress the senses; the desire of sensual pleasure ceases of itself. So mighty is the power that lies in Hari Bhakti. Know this assuredly: The senses that Yogis, suppress Bhaktas devote to the worship of Bhagwat. The things that Yogis forsake Bhaktas offer to Bhagvat. Yogis forsake the things of sense and forsaking them they suffer in the flesh; the followers of *Bhakti* offer them to Bhagvat and hence they become for ever emancipated. Wife, child, house, self, offer them to Bhagvat. That is the perfect Bhagvat Dharma. In this, above all else, does worship consist.

The Superiority of Bhakti to Jnyana—

Though he has no knowledge of the Vedas, still by one so ignorant may the real Self be apprehended. The condition of Brahman may be easily attained and possessed. To that end did God send forth the light *Hari Bhakti*.....Worshipping Bhagvat by faith the man who has no knowledge is delivered. Women, Sudras and all others—place them on board this boat and they all together and easily can be borne by the power of faith and worship to the other bank. To cross thither without swimming, to gain possession without painful effort, to obtain Brahman by an easy means for this end Narayan sent forth the light of *Bhakti*. The special quality of Bhagvat Dharma is that the simple-hearted are borne safe across the ocean of the world. Brahman is attained by easy means.

What Bhakti is—

He who puts his trust in the worship of Bhagvat —rules and restrictions become his slaves. When he renders the ritual service of his heart, the World-Spirit is made glad. The marks of a Saint are his power of devotion, how he tramples on the works of his *dharma* how he sweeps clean the place of *varnasrama*, how he makes a *bon-fire* of Karma.

He who knows not *sruti* or *smriti* but worships, by faith, in the way of Bhagvat, him never for a moment does the burden of rules and restrictions obstruct. Those who lacking the two eyes, *sruti* and *smriti*, are blind, even they fleeing by the might of faith to the worship of Hari by reason of their heart's full love meet with no stumbling block. Those who follow this the Bhagvat Dharma, Karma cannot hinder. He whose will rules Karma that Purshottama (Supreme Person) is obtained by the worship of faith. Those who render service according to the *Bhagvat Dharma* to them the duty of their own Dharma becomes as a bond-slave. It cannot stand in their presence! How, then, can it possibly hinder them? Whatever is done, with purpose of reward or what is done without, what the Vedas, what custom, what our own nature prescribes, offer them, one and all, to Bhagvat. Behold that is the Bhagvat Dharma!

He whom the duty of his Dharma cannot hinder, hears his secret. Purshottama has been manifested in his heart by means of the knowledge of the illimitable Self.

Whenever the eye sees the visible, then the Bhakta sees there God Himself. Thus by means of worship he offers up his vision, namely, the objects that he sees. In like manner when he hears with his ear, it is an offering to Brahman. Without deliberate intent, know this, spontaneously and naturally Bhagvat is worshipped.

The Being who brings together the scent and the things that has scent, *he* becomes to the Bhakta the very sense of smell by reason of love. When the sweets of taste are tested then its flavour is God Himself. *He* abides in the delight of taste and the Bhakta perceives that the enjoyment of taste is an offering to the Brahman. When by our body we touch then in the body the unembodied Self is manifested. Whatever the Bhakta touches, whatever he enjoys, lo! it is an offering to Brahman. Wherever the Bhakta sets his foot, that path is God. Then in every step he takes, lo! his worship is an offering to Brahman.

This *Bhakti*, so well described by Saint Eknath, we Indian Theists should put in the fore-front of our religious life—both individual and congregational. By means of its mighty and mysterious powers we shall achieve greater results than we can ever hope to do by the employment of what are called modern methods, useful and needful though these latter are in their own way,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Discussions, lectures, apologetic literature all these are good and these we will have—but they will not bear a quarter or a tenth of the fruit which *Bhakti* will bear if we encourage its devout practice in our homes and in our *mandirs*, and in forms that are hallowed and endeared to the people by age-long usage. By *Bhakti* deep and unfeigned and clothed in an indigenous garb we shall, first of all, touch the heart of the masses of our country who constitute the real nation. It has been repeatedly urged by critical observers of our movement that it is only a movement of intellectuals and does not appeal to the people at all. We must in all honesty acknowledge the substantial truth of this charge. The way to reach the great mass of our countrymen, to touch the national soul, is by the practice of worship and devotion, according to the Indian pattern. In his Presidential address delivered at the Bombay Theistic Conference two years ago Dr. Sarkar truly observed: "In the past we have been content to divest the Theistic Faith of its supernatural, irrational and non-moral wrappings." Yes we have to confess that in our effort to moralize and rationalize the ancestral faith we have deprived it of much of its power of appeal derived from the ancient ceremonial and symbolism in which the masses of our countrymen find their best consolation amid the trouble and sorrows of life and their best hope hereafter.

Bhakti of a genuine, national type—only purified of every idolatrous or unethical suggestion—is sure to win for us the masses for whose love and trust every true-hearted Brahmo longs. And *Bhakti* will achieve yet more. It will give us power to successfully combat the two most deadly foes of religion—materialism and intellectualism. Materialism is the bane of Western civilisation and wherever that civilisation has spread materialism has gone with it and threatens to-day to draw educated India into its deadly grip. The essential evil of materialism is that it views matter as the ultimate reality of the universe, and so, instead of giving to it a merely ministerial position, exalts it to the over-lordship of life. And of all tyrannies, the most debasing tyranny is the tyranny of matter. It is the worst kind of idolatry for it dethrones and disowns the noblest part of our nature—the Divine within us, our spiritual self, and by doing this poisons the very springs of nobility in man. Our illustrious scientist Sir J. C. Bose spoke words of the deepest truth when at the opening of his Research Laboratory he said: "Not in matter but in thought, not in possession but in ideals are to be found the seeds of immortality. Not through material acquisition but in generous diffusion of ideas and ideals can the true empire of humanity be established." And while resisting materialism we have also to resist intellectualism with which materialism almost invariably allies itself. Intellectualism believes in the sufficiency of the mere intellect for all human ends. It acknowledges no other power than brain-power. It breeds the pride of knowledge and scoffs at the ideas of faith, inspiration and intuition. Intellectualism is capturing educated India. Our educated countrymen are manifesting tremendous interest in the training and development of the intellect alone. In Indian education this absorbs all the energy of teacher and pupil. How few realise that spiritual education is the very core of a sound training? How few care for the training of the will and the emotions? In our social life we lavish our admiration on the man of brilliant intellect—the man who can make a clever speech or write a clever book. We theists who believe in the supreme value of the spiritual life, we who hold that all true power is at bottom spiritual, that without the culture of the soul knowledge only leads to arrogance and aggression, we should earnestly endeavour to stem the rising tide of materialism and intellectualism by the cultivation of the spiritual life in our homes and in our churches and the surest way to the achievement of this end is the way of *Bhakti* which has been pointed out to us by our saints and sages.—*Presidential Address to the last Theistic Conference.*

Sarojini Naidu's Speeches and Writings

A REVIEW BY

MR. A. S. RAJAM, B.A. (HONS.)

A friendly critic of Mrs. Naidu feels rather pained that the flare of the public platform is luring her away from her "moon-enchanted estuary of dreams." He fears, as no doubt many others interested in her literary genius do, that the excitement of political life might obscure the clear vision of the poet, that absorption in the dry details of politics and association with its cavils and controversies might stifle the fulness and freedom of her songs. But the call of duty has sounded for Mrs. Naidu. She has questioned Death and Fate whether she should quit this mortal life of hers before achieving her destined deed of song or service for her country's need. She asks :

> Shall spring that wakes mine ancient land again
> Call to my wild and suffering heart in vain ?

She has naturally come out and at the cost of her health, has been addressing large gatherings in all parts of India. Wherever she goes thousands flock to her. Mrs. Naidu is beyond all doubt the sweetest and the most fascinating of our speakers. Her delivery is perfect. Her command over an English style of flawless perfection is simply marvellous. She lends to her speaking the manifold charms of her extraordinary personality. Her Speeches* make exceedingly pleasant reading and there are passages which stand well on the borderland of poetry and literature. The use of the idea of dawn in her recent speech on "The Hope of To-morrow" gives a passage of exceeding melody, while her speeches on the Vision of Patriotism (p. 107) and Ideals of Islam (p. 165) are exceptionally good. Her speech on Indenture delivered at Allahabad is a model of eloquence.

The leading note of her speeches as of her public life is the Unity of the Hindu and the Moslem. She said at Madras: "I shall always recognise with pride that what the Hindu Mazzini gives to India the Muslim Garibaldi gives to India and they make a perfect type to make an Indian patriot. . . . It is the spirit of the sword that we want to be brought to this great land. We want that courage that a soldier kept the sword swift in defence of the country, to revenge any insult to the honour of the manhood or womanhood that is defended. The young Muslim has to put his contribution—not the sword made of steel but the sword of the Islamic spirit which has been re-tempered in the older fires of the Vedic cult—the sword of Muslim love dedicated to the service of Vedic India."

It will be useless to expect from Mrs. Naidu's speeches any presentation of facts in regular order, any quotation of figures, or even close and cogent argumentation. It is well that it is so. We have enough of dryness and drought in our political temperature. It is relieving to find our political life touched to music by an artist and singer. Politics with us is not a matter of votes and ballot-boxes, of councils and bills and acts, of parties and guilds and corporations. It is something higher and purer and more idealistic. It is the resurrection of a great people. It is the renaissance of an ancient and unageing land. It is the striving of a race for emancipation. It is the passing of winter to the caverns of the north, and the coming in of spring which cannot call in vain to our poets and singers. Mrs. Naidu gives to our politics a touch of the ideal, a ray of sweetness and light and lifts it from the sordid levels of ambition, jealousy, and struggle to the higher levels of art, music and beauty.

CHEMICAL RESEARCH IN INDIA

BY SIR THOMAS HOLAND.

THE principal chemical problems in connection with Government activities are divided among; (*a*) agriculture; (*b*) forest products; (*c*) drugs, perfumes, essential oils and dyes; (*d*) tanning; (*e*) sugar and alcohol manufacture: (*f*) saltpetre refining; (*g*) salt and khari manufacture; (*h*) mineralogy; (*i*) metalurgical inspection; (*j*) explosives manufacture.

For administrative purposes these might be controlled in three groups:—(*a*) Agricultural Chemistry, with the chief laboratory at Pusa. (*b*) Organic Chemistry, with two chief laboratories at Dehra Dun and Bangalore. (*c*) Mineral Chemistry, with the chief laboratory at Kalimati or Calcutta.

Each group might be placed in charge of a senior officer, one of whom will be Chief Chemist to the Government of India or it might possibly be better to have three Deputy Chief Chemists for the three groups with a Chief Chemist at Dehra Dun and Simla, his status and functions being analogous to those of the present Surveyor-General. Junior members of the service could be lent to the Local Government and principal Government departments for terms normally limited to five years. These officers would carry on purely routine duties and, in some cases, teaching the principal problems of research being undertaken at the chief laboratories according to their nature. All results of scientific and practical value would be published in the records of the Indian Chemical Department, which would be issued in three series and edited by the three deputy chiefs. Once a year the whole staff of chemists might assemble for a week's Conference successively at Pusa, Dehra Dun, Bangalore and Calcutta. This Conference should be attended by private chemists, including manufacturing chemists and chemical members of the Education Department. Papers read at this Conference, if approved by a small committee might be published in the records which would thus establish at once a definite position of authority and value in scientific literature.

In considering the question of co-ordinating chemical reserach, it is obvious that a systematic investigation of Indian raw materials especially vegetable products is about the most urgent. In spite of the valuable results obtained at Dehra Dun, at the Indian Institute of Science, at the Imperial Institute in London and in our various colleges, only the fringe of this subject has so far been touched. For this work the chemist requires the co-operation of the Departments of Agriculture, Forests and Botany. It thus appears desirable to organise the chemical fraternity for representation on the Board of Scientific Advice. The co-ordination attempted during the past year by the Munitions Board has been accomplished by our friendly co-operation through Dr. Simonsen as Secretary of the Congress. Our first object has been to meet some urgent demands arising directly from the war. But we have done very little so far and must be content with small things so long as we are in India, so desperately short of chemists free of heavy routine work. This conference will result, I hope, in valuable suggestions for operations in the immediate future as well as in advance of value to the Industrial Commission which will be required to report on the question of official organisation of the scientific services to meet industrial needs. In addition to the question of official organisation it has been suggested that we might consider a proposal to establish in India a section of the Society of Chemical Industry. The size of the country is against the adoption of any one capital city as a centre. An alternative discussion, which is at variance with the usual organisation of the society, is to form a section which will meet annually as a branch of the Science Congress.—*Presidential Address to the Chemical Conference, Lahore.*

ANCIENT PUBLIC LIBRARIES

BY MR. C. I. VARUGHISE.

THE origin of libraries is lost in obscurity. The honour of having first made collections of books, rather writings is, by some, ascribed to the Hebrews; and by others to the Egyptians. Osymandyadas, one of the ancient kings of Egypt who flourished some 600 years after the Deluge, is said to have been the first who founded a library. The temple in which he kept his books was dedicated to religion and to literature, and placed under the special protection of the gods with whose statues it was magnificently adorned; it was still further embellished by a well-known inscription, for ever grateful to the votary of literature; on the entrance was engraven, "The Nourishment of the Soul." It probably contained works of very remote antiquity, and also books accounted sacred by the Egyptians, all of which perished amidst the destructive ravages which followed the Persian invasion under Cambyses. There was also according to some old authors, a fine library at Memphis, deposited in the temple of Phtha, from which Homer has been accused of having stolen both the Iliad and the Odyssey, and afterwards published them as his own. From this charge, however, the bard has been vindicated by various writers and by different arguments.

But the most superb Library of Egypt, perhaps of the ancient world, was that of Alexandria. About the year 290 B.C., Ptolemy Soter, a learned prince founded an academy at Alexandria called the Museum, where there assembled a society of learned men, devoted to the study of science and philosophy; and for their use he formed a collection of books, the number of which has been variously computed, by Epiphanius at 54,000 and by Josephus at 200,000. His son, Ptolemy Philadelphus, an equally liberal and enlightened prince, collected great numbers of books in the Temple of Serapis, in addition to those accumulated by his father, and at his death left in it upwards of 100,000 volumes. He had agents in every part of Asia and of Greece, commissioned to search out and purchase the rarest and most valuable writings; and amongst those procured were the works of Aristotle, and the Septuagint version of the Jewish Scriptures, which was undertaken at the suggestion of Demetrius Phalereus, his first Librarian. The measures adopted by this monarch for augmenting the Alexandrian Library were pursued by his successor Ptolemy Euergetes, with unscrupulous vigour. He caused all books imported into Egypt by Greeks or other foreigners to be seized and sent to the Museum, where they were transcribed by persons employed for the purpose; and when this was done, the copies were delivered to the owners and the originals deposited in the Library. He refused to supply corn to the famished Athenians until they had presented him with the original MSS of Æschylus, Sophocles and Euripedes; and in returning elegant copies of these autographs, he allowed the owners to retain the fifteen talents, more than £3,000 sterling which he had pledged with them as a princely security. As the Museum, where the library was originally founded, stood near the royal palace in that quarter of the city called Brucheion, all writings were at first deposited there; but when this building had been completely occupied with books to the number of 400,000, a supplemental library was erected within the Serapeion, or Temple of Serapis, and this gradually increased till it contained 300,000 volumes, making in both libraries a grand total of 700,000, volumes.

The Alexandrian Library continued in all its splendour until the first Alexandrian war, when during the plunder of the city, the Brucheion portion of the collection was accidentally destroyed by fire, owing to the recklessness of the auxiliary

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

troops. But the library in the Serapeion still remained, and was augmented by frequent donations, particularly by that of the Pergamean Library of 200,000 volumes presented by Mark Antony to Cleopatra so that it soon equalled the former both in the number and in the value of its contents. (This library at Pergamus was founded by King Eumenes, and enlarged by his successor, Attalus. It soon became so extensive that the Ptolemies, afraid that it would speedily rival their own collection at Alexandria, issued an edict forbidding the exportation of papyrus. But this prohibition so far from attaining the unworthy object for which it was destined, proved rather beneficial; for, the Pergameans, having exhausted their stock of papyrus, set their wits to work, and invented parchment as a substitute). At length, after various revolutions under the Roman Emperors, during which the collection was sometimes plundered and sometimes re-established, it (the library in the Serapeion) was utterly destroyed by the Saracens at the command of Caliph Omar, when they acquired possession of Alexandria in 642 A. D. Amrou the victorious general was himself inclined to spare this inestimable treasury of ancient science and learning, but the ignorant and fanatical Caliph to whom he applied for instructions, ordered it to be destroyed. "If these writings of the Greeks agree with the Koran, they are useless, and need not be preserved; if they disagree they are pernicious, and ought to be destroyed." The sentence of destruction was executed with blind obedience. The volumes of papyrus or parchment were distributed as fuel among the five thousand baths of the city, but such was their incredible number, that it took six months to consume them. This act of barbarism, recorded by one historian, is considered somewhat doubtful by another, in consequence of its not being mentioned by two of the most ancient chroniclers. It seems inconsistent with the character of Amrou as a poet and man of superior intelligence; but that the Alexandrian Library was thus destroyed is a fact generally credited and deeply deplored by historians.

Among the Greeks, as among other nations, the first libraries consisted merely of archives, deposited for the sake of preservation, in the temple of the gods. Peisistratus the Tyrant of Athens was the first to establish a public library in his native city, which always took the lead in everything relating to science and literature in Greece. Here he deposited the works of Homer which he had collected together with great difficulty and at a very considerable expense; and the Athenians themselves were at much pains to increase the collection. The fortunes of this library were varied and singular. It was transported to Persia by Xerxes, brought back by Seleucus Nicator, plundered by Sulla, and at last restored by the Emperor Hadrian. On the invasion of the Roman Empire by the Goths, Greece was ravaged; and on the sack of Athens, they had collected all the libraries, and were on the point of setting fire to this funeral pile of ancient learning, when one of their chiefs interposed, and dissuaded them from their design, observing that as long as the Greeks were addicted to the study of books, they would never apply themselves to that of arms.

The first library established at Rome was that founded by Paullus Emilius in 167 B. C Having subdued Perseus King of Macedonia, he enriched the city of Roma with the library of the conquered monarch, which was subsequently augmented by Sulla. On his return from Asia, where he had successfully terminated the first war against Mithridates, Sulla visited Athens whence he took with him the library of Apellicon, the Teian, in which were the works of Aristotle and Theophrastus. Lucullus another conqueror of Mithridates, was not less distinguished by his taste for books. The number of volumes in the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

library was immense, and they were written in the most distinct and elegant manner. But the use which he made of his collection was still more honourable to that princely Roman than the acquisition or possession of it. It was a library whose walls, galleries and cabinets were open to all visitors; and the ingenious Greeks, when at leisure, resorted to this abode of the Muses, to hold literary conversation, in which Lucullus himself loved to join. But although Sulla and Lucullus liberally gave public access to their literary treasures, still their libraries can in strictness, be considered only as private collections. Among the various projects which Julius Cæsar had formed for the embellishment of Rome was that of a public library, which should contain the largest possible collection of Greek and Latin works; and he had assigned to Varro the duty of selecting and arranging them. But this design was frustrated by the assassination of the Dictator, and the establishment of public libraries did not take place in Rome until the reign of Augustus.

The honour of having first established these valuable institutions is ascribed by the elder Pliny to Asinius Pollio, who erected a public library in the Court of Liberty, on the Aventine Hill. The credit which he gained thereby was so great that the emperors became ambitious to illustrate their reigns by the foundation of libraries, many of which they called after their own names. Augustus himself was an author, and in one of those magnificent buildings called Thermae, ornamented with porticos, galleries, and statues, with shady walks and refreshing baths, he testified his love of literature by adding a grand library which he fondly called after the name of his sister Octavia. The Palatine Library, formed by the same emperor in the Temple of Apollo, became the haunt of the poets, as Horace, Juvenal and Perseus have ommemorated. There were deposited the corrected books of the Sybils and it would seem that it consisted of two distinct collections —one Greek and the other Latin. This library having survived the various revolutions of the Roman Empire, existed until the time of Gregory the Great, whose mistaken zeal led him to order all the writings of the ancients to be destroyed. The successors of Augustus, though they did not equally encourage learning, were not altogether neglectful of its interests. Tiberius founded a library in the new Temple of Apollo, and instituted another called the Tiberian, in his own house, consisting chiefly of works relating to the empire and the acts of its sovereigns. Vespasian, following the example of his predecessors, established a library in the Temple of Peace, which he erected after the burning of the city by order of Nero. Domitian at the commencement of his reign, restored at great expense, the libraries which had been destroyed by the conflagration, collecting copies of books from every quarter, and sending persons to Alexandria to transcribe volumes in that celebrated collection, or to correct copies which had been made elsewhere. But the most magnificent of all the libraries founded by the sovereigns of Imperial Rome was that of the Emperor Ulpius Trajanus, from whom it was called the Ulpian Library. It was erected in Trajan's Forum, but afterwards removed to the Viminal Hill, to ornament the baths of Diocletian. In this library were deposited the elephantine books, written upon tablets of ivory, wherein were recorded the transactions of the emperors, the proceedings of the Senate and Roman magistrates, and the affairs of the provinces. The Ulpian Library consisted of both Greek and Latin works. The library of Domitian having been consumed by lightning in the reign of Commodus, was not restored until the time of Gordian, who rebuilt the edifice, and founded a new library, adding thereto the collections of books bequeathed to him by Quintus Serenus,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Samonicus the physician, and amounting to no fewer than 72,000 volumes. In addition to the imperial libraries, there were others to which the public had access in the principal cities and colonies of the empire.

When Constantine the Great made Byzantium the seat of his empire, he decorated the city with splendid edifices, and called it after his own name. Desirous to make reparation to the Christians for the injuries they had suffered during the reign of his predecessor, he commanded the most diligent search to be made after those books which Diocletian had doomed to destruction. He caused transcripts to be made of such as had escaped the fury of the presecutor, and having collected others from various quarters, he formed the whole into a library at Constantinople. At the death of Constantine, the number of books in the imperial library was only 6,900. But it was successively enlarged by the Emperors Julian and Theodosius the Younger, who augmented it to 120,000 volumes. Of these more than half were burned during the seventh century by command of the Emperor Leo III, who thus sought to destory all the monuments that might be quoted in proof respecting his opposition to the worship of images. In this library was deposited the only authentic copy of the proceedings of the Council of Nice; it is also said to have contained the poems of Homer, written in gold letters, together with a magnificent copy of the Four Gospels, bound in plates of gold, enriched with precious stones, all of which perished in the conflagration. The convulsions, which distracted the lower empire were by no means favourable to the interests of literature. In the eleventh century learning flourished for a short time during the reign of Constantine Porphyrogenitus. This emperor is said to have employed many learned Greeks in collecting books, and forming a library, the arrangement of which he himself superintended. But the final subversion of the Eastern Empire, and the capture of Constantinople in 1453 dispersed the literati of Greece over Western Europe, and placed the literary remains of that capital at the mercy of the conqueror. The imperial library was, however, preserved by the express command of Mahmud, and continued to be kept in some apartments of the seralgio. But it is commonly supposed that it was sacrificed in a fit of devotion by Amurath IV.

Now, may I close with a prayer? Will some kind friend give an account of the famous libraries of ancient India?

THE RAJPUT QUEEN.*

BY

PROF. P. SESHADRI, M.A.

The Rahtore Jeswant Singh retreating came
From field of battle; through the live-long day
His men had fought against the mailed array
Of Delhi's teeming Moslem hordes, aflame
With wrath; they fought as men of Rajput name
And birth alone could fight and hundreds lay
Along the banks of Nerbada, away
From where their offspring played the childish game
And women kept their daily vigil sad,
For warrior sons and husbands doomed to death.
But all in vain—and when with weary breath
Defeated Jeswant came, his consort bade
The gates be closed against him, for she said
"A Rajput comes victorious or dead."

THE PROBLEM OF NATIVE STATES

BY PROF. H. G. LIMAYE, M.A.

Fergusson College, Poona.

IN a note submitted to the Right Honourable Mr. Montagu and His Excellency the Viceroy Mr. G. R. Abhyankar of Sangli* raises the whole question of Native States, their status in the Empire, their rights and disabilities, and above all the very delicate question of the rights of the subjects of these States, and the necessity of providing regular constitutions for them. It is a sign of the times that such a note should be published and opportunity should be offered to have all these questions discussed openly. The wave of a new political consciousness that is passing over the nation at the present moment has, it appears, reached even the subjects of Native States. In British India even the most backward communities have been roused into activity. Sections of the people that for years were engrossed in their own private pursuits, never minded what others were doing or troubled about public affairs, have suddenly realised that they possess political rights and that they have a political destiny. Agriculturists, *Ahirs*, the various groups of the backward classes and even the depressed masses, have come forward to claim separate representation on Legislative Councils. With all these signs of a new life before us, we cannot help being reminded of the happenings in a distant land about a hundred and thirty years ago. On the eve of the French resolution the French people issued *Cahiers* instructions to their representatives showing the great depth to which their hearts had been stirred by the new ideas that were then permeating French Society. Even so are the various representations submitted to the Secretary of State for India and the Viceroy. Fortunately for us we need not apprehend any developments on the lines of those in France. We have here an administration which is progressive, with all its drawbacks being controlled and directed by a Cabinet inspired by the high ideals of the free British people.

In this general awakening the States themselves have taken part. Their rulers who, till quite recently maintained an attitude of supreme indifference towards the political aspirations of the people of India, have, through their selected representative, blessed the cause of Indian Nationalism, and are now engaged in formulating their own demands. Mr. Abhyankar puts forward a strong plea in support of the improvement of their status. He traces the history of their relations with the British Government and shows how and when these relations began. The great object of the British Government was to cripple their power, to curb their turbulance and to isolate them completely from one another and from the outside world. The object was secured directly or indirectly by the provisions of the treaties made between the British Government and these States, with the result that the latter became completely helpless and dependent upon the former. This could not however, be for the good of the States, nor did it strengthen the position of the British Government in international politics. The crisis through which the British Empire is now passing, proved this to the hilt. The rally of the Indian Princes round the Flag at such a time has been the admiration of the Empire and the despair of its enemies. They did the very best that they could. But they might have done immensely better. They might have solved for the Empire the great

* Native States and the Post-War Reforms, G. R. Abhyankar, B.A., LL.B. Sangli, S.M.C.

Digitized by Arya Samaj Foundation Chennai and eGangotri

question of man-power. They have sent their troops to the front in thousands. They might have sent them in hundreds of thousands, if their armies had been drilled, equipped and organised on modern lines. Even now they maintain an army of nearly two-hundred thousand men. But it is no better than a feudal levy, splendid indeed for show, but worthless in use, and a costly plaything. This has not been the result of accident. It has been the result of the deliberate policy of the British government. It is to be hoped that the mistake has been seen and hence-forward the excellent material will not be allowed to run to waste in this manner. An efficient army of the Native States in numbers as large as, or perhaps larger than, the army of British India may raise questions of training and equipment, of discipline and command. Mr. Abhyankar proposes the erection of a Council of Defence made up of the Executive Council of the Viceroy with some military experts and the representatives of the Princes and Chiefs.

The disabilities and the grievances of the Princes are dealt with in considerable detail in this note. The doings of the Political Officers, Residents and Political Agents, who consider themselves the masters of Native States, questions of disputed succession, of minorities, marriages, mal-administration, jurisdiction over European British subjects, freedom of movement within British territories, intercourse with brother-chiefs, these and others of a like character require deep consideration and sympathetic treatment. Mr. Abhyankar proposes that Conferences of Princes and Chiefs should be established for the purpose and judicial tribunals should be substituted for executive authorities.

By far the most important of the suggestions made by Mr. Abhyankar is that constitutions should be created for all States so that arbitrary government would be at an end and the subjects of the Native States would enjoy the same rights and privileges as those of British India. There is no denying the fact that public men in British India have not devoted sufficient attention to the improvement of the internal administration of Native States, nor have they advocated the cause of the subjects against their rulers. Perhaps their hands were too full with their own problems. Perhaps there were technical and legal objections to an agitation about the affairs of Native States. Whatever the cause, the result is that the subjects of Native States with all the advantages of indigeneous rule, are without most of the political rights which are enjoyed by the citizens of British India. It is in the fitness of things that Mr. Abhyankar, himself a subject of a Native State should plead vigorously for the amelioration of their political condition. He points out with justice that the responsibility for this stagnation lies at the door of the British Government. It has guaranteed the Native States not only against foreign aggression but also against internal disorders. The princes have in consequence a feeling of artificial security and in some cases they carry on the work of administration in a manner which is most distasteful to their subjects. But they are helpless, because the British Government with all its might stands behind the ruler to support him. In a free State the danger of a popular rising is a natural and wholesome check upon the arbitrary acts of its ruler. The presence of the British Government and its guarantee removed it in the case of Native States. Therefore, it naturally follows that it is the duty of the British Government to remedy the wrong it has done. The British Government must now guarantee to the subjects of Native States their political liberty and the development of free institutions just as it has guaranteed to their rulers freedom from disturbances within the States.

THE STARVING INDIAN RAYAT

BY SIR DANIEL HAMILTON.

AWAY back in the year 1780, or thereabouts Adam Smith wrote in the "Wealth of Nations" that "in Bengal, money is frequently lent to the farmers at 40, 50 and 60 per cent. interest, and the succeeding crop is mortgaged for the payment." And in 1913 the MacLagan Commission wrote almost word for word:—"The money-lenders' rates we have found in many places to be as much as 38, 48 and 60 per cent. per annum." A bank rate of 38, 48 or 60 per cent. Is this all there is to show for 140 years of British rule? How much longer is the flag that stands for freedom to float over 300 millions of people who sit, mostly, in bondage? How much longer are the law-courts which stand for justice, to assist in plundering the people? I know that a Usury Act designed to check the usurer was passed the other day, and I wish it well; but when I read that the Act is so framed that no honest 'mahajan' has anything to fear from it, I can only conclude that it is more an evidence of the good intentions of a benevolent Government, than a serious attempt to destroy the evil which paralyses the whole body politic. What India wants is an Act written not with a goose-quill dipped in milk and water, but with an iron pen dipped in the blood of the mahajan; for, until the banking system for which the mahajan stands is dead, India will not live.

Gentleman, the foundations of India rest in the villages. The "rayat" is India and India is the "rayat" but in these stormy days the still small voice of the "rayat" is drowned in the political whirlwind. His silence is, to him, neither golden, nor silver nor copper; only a leaden weight of debt around his neck, to be united some time after 1932. The man who raises the £20,000,000 sterling to pay the army, and the crops by which we and all our industries live, has to stand aside and make way for the man who raises nothing but wind and dust. Apparently peace does not pay. To be peaceful is to be poor. What will happen when food prices soar skywards after the war I do not know, but if Government is wise it will not rely too much on the peaceful character of the people; for even the worm will turn, and if Government does not lay its plans now to turn him in the right direction, the sedition monger will turn him in the wrong. The other day in the Sunderbans, I heard of a man in khaki, no friend of the Government, going round the bazaars telling the people that, in view of the present high prices, Government would not mind much if they looted the shops, and the huts were being looted of cloth and salt. What are the people to do? The big money they got for their jute and paddy before the war, all went to the mahajan. The jute growers who, if they had had a banking system, ought to be rolling in money, are selling their brass-pots to buy food, and the paddy growers are no better off. The family clothing which formerly cost fifteen rupees for the year, now costs forty, another five rupees is wanted for salt, another five for kerosene oil, and so on. Where is the money to come from, and where does it go but to the mahajan?

India is the most lightly-taxed country in the Empire, but what is the lightness worth to the man with a broken back? India is the brightest in the British Crown, but where is the brightness when the dimness is more visible than the lustre? Under the British peace lies a mass of veiled violence and dull-dealt humanity, a banked fire of sedition ready for the spark. . . . I beg to submit that, in the interests of peaceful progress, it is the duty of Government to so push on with the development of the co-operative credit movement that India shall be covered with a co-operative banking system before 1923, or at latest 1928.—*Speech at the Co-operative Credit Societies' Conference.*

INDIGENOUS SYSTEMS OF MEDICINE

BY THE HON. DR. NILRATAN SIRCAR.

FROM the historical point of view, we all know that the accumulated wisdom of the race in every branch of art and of applied science has had its roots in practical instinct; and in the case of the healing art, these instincts, hygienic, sanitary, medicinal have had a pre-historical beginning like many other biological and sociological instincts. Our ancestors built on these instincts but they did not stop there; they advanced to empirical recipes based on the experience of generations. This is the empricism that precedes science, next came methodical observation and inductions and classifications mixed with inevitable error and superstition, and these in their turn led to hypothesis and speculations, all embodied in the form of "Sutras"—comprehensive synthetic enunciations which seek to cover with formal precision a vast assemblage of observed science. Thus a provisional science was reached; in fact, a rudiment of positive science, but which fell far short of positive experimental science on account of its being wanting in that precision of quantitative measurement and experimental verification based on quantitative measurement which has characterised the true scientific method.

But in every art of life our science can still go to school to learn the wisdom of untaught instinct and native tradition just as the accomplished aviator can get suggestions from the movements of a bird. The provisional science of the indigenous school has done yeoman service in cultivating the medicinal resources of the Indian climate and environment; thereby building up no mean storehouse of drugs and medicines. The Indian *Materia Medica* cannot be ignored, if we have in mind the relativity of the medical art and if we would avoid the imputation of being doctrinal in a sphere which is concrete and matter of fact. What we require is to carry our scientific test of the medicines of the Hindu and Unani systems in their action upon the Indian constitution and in their uses generally. This should be followed by a scientific examination of the more important principles of particular treatment according to these systems. In this task, we must interest the sympathy and the imagination of the rising generation of medical students and practitioners working in laboratories, in hospitals and near the bedsides of the private patients. And it appears to me that unless we introduce in the curriculum of our medical college subjects like Indian *Materia Medica* and Indian Therapeutics, and above all the comparative study of medical science, our efforts are doomed to be barren and unavailing.

A school of tropical diseases and a number of bacteriological research institutes and hygienic institutes are now accomplished facts in India. We are very grateful for all these. But this movement is bound to extend in other directions; our goal must be a school of Therapeutics and Medicine in relation to the actualities of Indian environment, hygiennic as well as morbific and the Indian constitution as acted upon by that environment. We cannot afford to ignore the relativity of the medical art, for here the governing factor is that of adaptation; in other words, distribution of life with regional adjustment working by the process of natural selection, segregation and convergence. In disease as in health, the organism responds to the variations in the zone of life. And we must follow up the work carried on in the past by our ancestors.—*From the Welcome Address to the First All-India Medical Conference, December*, 1917.

TECHNICAL EDUCATION IN INDIA.

BY MR. E. F. TIPPLE.

(*Thomason Civil Engineering College, Roorkee, U.P.*)

A BRIEF glance at the past history of the Indian Industrial Conference is sufficient to show that technical education has always been a subject of special interest at these annual meetings. At the present time, therefore, when two Commissions are completing investigations, which, from their terms of reference, must be intimately associated with this same subject, there seems good reason for reviewing past achievements in this important field of educational endeavour and for utilising such a review in an attempt to outline possible avenues of advance.

It must be admitted that there has already been a considerable amount of writing on this subject, and that, unfortunately, but little good appears to have resulted : this, however, in reality merely indicates the need for further writing, until some clear and definite ideas begin to crystallise out from the mass of statements available, and thereby to disclose certain fundamental and guiding principles, which must be borne in mind, when any attempt is made to formulate a scheme for the advancement of technical education.

Nowadays, any such scheme, so soon as it is published, will be subjected to a battery of criticism, and it is of great public importance that such criticism should, on the whole, be well informed. In the past, this has not always been the case, and such delay, as there has been, in getting a system of technical education into working order in this country, has not been entirely due to the slowness of Government methods, but in part to unnecessary difficulties which have been created by ill-informed criticism. It must be admitted that, for success, any scheme put forward must inspire public confidence, and this fact places an onerous duty upon the shoulders of the Indian leaders of public opinion ; since they in the main regulate the confidence in question. It is the more necessary, therefore, that a strenuous endeavour should be made under the auspices of this Conference, to lay down for future guidance those fundamental educational principles, which any scheme of technical education must embody, if it is to meet with general approval and to possess any real chance of success. Under existing circumstances, any formulated scheme will have to meet public criticism in India and expert educational criticism in England ; it is, consequently, of the utmost importance that leading Indian opinion should be well informed educationally, and that no representative gathering, such as this Conference, should grant the hall-mark of its approval to any scheme, which, from an educational point of view may be regarded as in any way unsound, or withhold it from one, which is sound.

In the report of the fourth meeting of this Conference held at Madras in 1908, there appears an interesting paper by Dr. Morris Travers, in which, among other matters, he directs particular attention to the two distinct grades for which provision must be made in any working scheme of technical education. The provision of these two distinct grades is a matter of fundamental importance. They are *firstly*, the higher grade necessary for the education of those, who will ultimately undertake the skilled management of some particular industry or the practice of some particular profession ; and *secondly*, the lower grade required for the training of the workmen or artisans including foremen.

These two grades may, for convenience, he states, be specified as "technical education" and "industrial training" respectively.

The first type requires its students to possess initially a sound scientific secondary education comprising a good working knowledge of element-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ary mathematics, chemistry and physics including mechanics and geometrical drawing, and, in India at the present time, English. The "technical education" reared on such foundations must, as Dr. Morris Travers pointed out, be the work of institutions of University rank.

The second type merely requires its pupils to possess a primary education; the "industrial training" reared on these foundations is the work of trade schools, which, as experience has shown, must, for success, be situated in centres where the trades taught are actually practised; hence textile and leather trade schools are suitable for Cawnpore, carpentry for Bareilly, etc.

All industrial countries, in which the factory system has become established, have been compelled to recognise the need for these two distinct grades of technical education. The reason for this is that the extension of the factory system kills the old system of handicrafts with its correlated system of apprenticeship, thereby depriving the artisan of the educational and social advantages enjoyed under the old apprenticeship arrangement. No educational system, in Western countries, has hitherto completely replaced all the advantages of the older system, but the establishment of what are known as continuation trade schools supplementing a compulsory system of primary education, does much to mitigate the social evils which result from the introduction of an unrestricted factory system of industrial manufacture. Such schools make provision for those sections of an industrial population whose circumstances compel them early to face the struggle for existence.

In India, the gradual growth of industrial centres like Bombay with its cotton mills, Calcutta with its jute mills, Cawnpore with its textile, leather and other miscellaneous manufactures, has produced in these cities, an industrial condition which now closely approximates to that existing in the large manufacturing centres of Western countries, and a corresponding educational organization is becoming an increasing need in such Indian districts. Such an organisation, however, necessitates, in addition to trade or industrial schools, provision for the higher grade training at the same time, which can only be supplied at technical institutions of university rank.

Now it happens that in India the leading technical institutions are the engineering colleges at Roorkee, Sibpur, Madras and Poona, which were originally established for the sole purpose of recruiting for the Public Works Department. At the time of their foundation, industrial expansion on moderen lines had not commenced in India, and practically the only need for men, technically trained in the Western sense, was in the Public Works Department. The colleges, therefore, were initially constituted to meet the needs of this department, and this accounts for the peculiar organisation at present existing in them with their civil engineering, and upper and lower subordinate sections.

This has tended to disguise in India the fundamental distinction existing between "technical education" and "industrial training." The resulting confusion has seriously hampered the growth of a complete system of technical education in the country, since the colleges, through their lower grade classes, have prevented the healthy development of industrial schools in industrial centres.

Moreover, the students trained in the higher classes of existing Indian engineering colleges, have naturally regarded themselves as qualifying for professional employment. The majority of these students realise that on leaving college, they are unfitted for such employment immediately, and in most cases, they are willing to go through the mill of apprenticeship and to trust to subsequent promotion on merit. Meanwhile employers have been inclined, by reason of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

lower grade classes existing at these same colleges, to regard such institutions as merely industrial schools, while unfortunately the product of the lower grade classes has been tempted to place too high a value upon the type of training, it has received. The result has been those evils which are so frequently shown up in evidence on Indian technical education, *e.g.*, discontented apprentices —the lower grade product—who value themselves rather too highly; and the higher grade product, among whom are many who are somewhat too sensitive, because they feel that they are often being regarded merely as workmen. In consequence of this, both have frequently proved of little value to commercial employers of labour.

Such general reasons indicate the necessity for making provision for higher and lower grade technical education separately. Other reasons of a more purely educational character also exist. The technical college is much more expensive to equip and staff than is the industrial school, and the number of students capable of taking the college course with profit, is correspondingly smaller than in the case of the school. Consequently the number of the schools must largely exceed that of the colleges and many of the college students must, therefore, come from a considerable distance to live in college, away from their homes. The college work, being of a higher type, further necessitates increased expense for books and other educational equipment, and thus the cost of the training to the student himself is necessarily greater. All this means that, save in cases of exceptional ability, the pupils of the technical college will be drawn from a different social grade from that to which the pupils of an industrial or trade school would ordinarily belong. Such schools, as stated, should be situated in the industrial centres, where the trades taught are actually practised, and the pupils would mainly be drawn from those sections of the population having association with the trades chosen. The training supplied, must be kept in close touch with the actual conditions of the industry, and the practical work must be conducted, so far as possible, under factory conditions; though this does not mean that any definite attempt should be made to cause the products of such work to pay for the upkeep of the school. It has been found that attempts of this kind always tend to hamper the educational efficiency of the school concerned.

It is clear, therefore, that the two grades—"technical education" and "industrial training"—meet the educational requirements of two distinct sections of the poulation, and denote trainings of two intrinsically different types. It is, consequently, of fundamental importance that provision should be made for them in two distinct types of institution, *viz.*, the technical college of university rank and the industrial school situated in a suitable industrial centre.

In this connection, great care must be taken that, in the demand which is frequently being made for the establishment of polytechnics in India, it may be made clear beyond the possibility of doubt, that what is not an institution on the lines of the so-called polytechnic in England, but the type which must, unfortunately, be known at the present time as German. The German polytechnic is an institution of University standing. In England the term is not restricted to any very definite type, and many English polytechnics, in the miscellaneous nature of the educational work which they undertake, resemble too closely the existing engineering colleges of India and attempt to provide both the higher and the lower grade training. In English educational circles, the opinion prevails that, despite much good work accomplished, the majority of English polytechnics give no adequate educational return commensurate with cost of their upkeep.

Some further points of difficulty now arise in India and are involved in the statement that the technical college should be of university rank,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Indian universities are mainly regarded as the gateways to Government service, and nearly all the most promising students have that goal alone fixed before them. Moreover, the more popular of the courses at the universities are of purely literary character and the school courses in this country are mainly arranged to be introductory to these. Furthermore, the early age 15 to 16, at which it is customary to attempt matriculation in India, has hampered the development of a high standard of secondary education.

These facts have complicated the problem of technical education in this country, and have involved it with other questions, such as the introduction of a school leaving certificate examination and the raising of the minimum age for matriculation.

The school leaving examination is necessary in order to bring the organisation of Indian secondary schools more into line with the requirements of modern industrial life; to enable these schools to provide the varied preliminary training suitable to the diverse careers which such life affords; and to secure a means of selection whereby the various aptitudes of different pupils may be developed by a suitably arranged system of optional courses. It is the absence of such a scheme in England which has been productive of the state of confusion which has existed in the secondary grade of education in that country, and the movement for a school leaving examination in India is one which deserves whole-hearted support. The school, whose courses are merely designed to meet the requirements of the old fashioned matriculation literary test, is a definite handicap to industrial expansion in India at the present time. It fails to encourage the development of those qualities which are of special value in modern industrial life. In this connection, object lessons, drawing, manual training courses and *practical work in a laboratary* are of the greatest importance, together with some method of judging the formation of industrious habits and ability to work under pressure. A properly arranged schedule for a school leaving examination makes provision for all these points.

The raising of the minimum age for matriculation appears necessary in order that the standard of secondary education in India may approach more nearly that obtaining in Western countries. At the present time, this standard is only reached at the intermediate stage in this country. So long as Indian universities are mainly concerned with opening the gates of Government service to their students, this question of the standard attained in the secondary schools is not one of very great importance. The securing of Government appointments, available to candidates in India, involves no competition with other countries. The position, however, is altered so soon as the universities turn attention to technical education. The value of technical education in any country is dependent upon the state of industrial expansion desired by that country and this at once involves competition with the outside world.

The standards of technical education attained in India must be comparable with those existing in other industrial countries, if its educational products are to take a leading part in Indian industrial life. Real industrial expansion in India, as distinct from mere exploitation, can only be achieved by the people of the country themselves and this necessitates their standard of living and education approaching more nearly to those of the outside industrial world.

Unfortunately, at the present time, any official attempt to raise educational standards in India is viewed askance by Indian leaders, and this want of confidence is being reflected in the attitude of Indian students towards officers of the Indian Educational Service. Such a position necessarily

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

hampers educational development in this country, more particularly on the scientific and technical side, where Western influence is most needed. Co-operation between the east and the west must be the key-note of further progress and, for such co-operation, confidence between two sections of the community is of the utmost importance; in the educational field, its value cannot be over-estimated and unfortunately it is here that it appears to be most lacking at the present time. Education being a recognised and widespread necessity, the aims of educated Indians and of educational officers should coincide. It will be fouud, on careful consideration, that such difference, as exists, lies mainly in the points of view adopted. The officer of the educationa service naturally looks keenly to the question of efficiency; in the eyes of the Indian, the radius of the sphere of educational influence appears of first importance. Progress is only possible along a *via media*, and then only if this path be followed by both parties in a spirit of willing co-operation. The difficulties of the position are undoubtedly great and can only be fully appreciated by those Indians and those educational officers, who are each able to envisage the point of view of the other.

For these reasons an attempt has been made to put forward in this paper, for the consideration of this Conference, the educational problems involved in the development of technical education, as they appear to an educational officer whose service has been entirely spent at an Indian Engineering College, and to indicate certain broad lines of advance which in the opinion of the writer, seem to be of first importance.

These may briefly be summarised as follows:—

(1) The complete separation of the two grades specified above as "technical education" and "industrial training," and the provision for each at its own type of institution, *i.e.*, technical colleges of university rank for the higher grade and continuation trade schools in industrial centres for the lower grade.

(2) The improvement of Secondary education by the introduction of a school leaving examination, as soon as possible, wherever this does not already exist, and the consequent provision of parallel optional courses in the secondary grade whereby a varied preliminary training suitable for diverse careers may be forthcoming, and a method of selection obtained for developing the special aptitudes of different pupils.

In conclusion, it must be admitted that under the above two items, are concealed many difficult points of educational and administrative detail. In themselves, they merely embody a programme laid down with considerable clearness and great foresight by Sir Auckland Colvin, Lieutenant-Governor, North Western Provinces and Oudh, in 1891-03, but which has never yet been fully developed in detail. A contributing cause to this delay was the rival scheme for a technological institute at Cawnpore put forward in 1907, and unfortunately endorsed by this Conference in the second resolutions passed at the meetings held in 1907 and 1908. Subsequently, this Conference somewhat modified its attitude, but some delay might have been avoided, if Indian leaders had been able in 1907 to direct attention clearly to the educational defects in the Cawnpore scheme which were indicated later on by the Secretary of State in his despatch dated 30th July 1909.—*A Paper written for the Indian Industrial Conference, Calcutta, December*, 1917.

THE PROTECTION OF THE COW.

BY THE HON. JUSTICE SIR JOHN WOODROFFE.

It is obvious that in the first instance we must see to the parents of the future animal by developing and providing good *breeding bulls and improving and selecting the cows.* As cows and bullocks are needed in this country for the two purposes of milking and draughting, the aim has been well stated to be, the production of a good milking cow and an efficient draught bullock. The bulls should be selected from pure breeds of good milking qualities. Steps must be taken to remedy the deficiency which now exists in suitable breeding bulls. . . . The High Courts have ruled that the Bulls which Hindus dedicate at *Sraddha*, which were allowed to roam about and were used for breeding purposes by the villages in which they were, are *res nullius* or no man's property. The result, of course, is that any one may take and kill them. Some are put in the scavenging carts, others, I am told, are slaughtered by the butchers. These High Court decisions are an apt illustration of the harm which follows the rigid application of foreign legal ideas to this country. The piety which dedicates a bull to public uses is not known to English Law but that is no reason why its beneficial results should be frustrated. I understand that the Hon'ble Mr. K. K. Chanda has accordingly brought forward a Bill to remedy the evil produced by these decisions (which though good law are not good sense) and which proposes to vest the Bulls in some authority who will maintain them for breeding purposes. I doubt myself whether great reliance can be placed on the Brahmani Bull. The piety which set him at large is itself on the decline together with other pieties so useful to the public such as the dedication of tanks, the planting of trees and so forth which marked the practical religious sense of past generations. Under these circumstances it is doubtful whether the supply of Brahmani Bulls will continue. . . .

It is, however, no use breeding a good animal if it is not *properly fed.* Defective feeding and careless tending is partly responsible for the deterioration of Indian milch-cattle. The former, it is said, is common among small owners in the country while the latter is to be seen in some large dairy farms (as in other places) where the hired men do not care to tend the animals properly. This latter is only one of many instances of that dishonest or neglectful service which is the cause of so many of the evils which we wish to see away and which can itself only be remedied by a moral and not a mere economic appeal.

The wisdom of the ancient Smritis provided that for every village and town ship a certain amount of common pasture land should be set apart. In recent times there has been great encroachment on these lands. This depredation on public property is assigned to economic reasons, it being said to be more profitable to the smaller men to cultivate the land than to keep it for grazing. In this case the desire for economic gain leads to the taking of other people's property. It seems to be generally ageeed that more ample facilities should be granted for the grazing of cattle; but there seems also to be much difference of opinion (due in part to conflicting interests) as to how this is to be given effect to. Some have suggested legislative action to protect grazing grounds and that steps should be taken to recover the encroached lands. Others propose that the Government should acquire from public funds new grazing grounds thus making the community generally pay for what was wrongly taken and should be restored. It has been even said that these depredations are economically justifiable and should not be interfered with: for this would be to frustrate an economic tendency which is a dangerous thing now-a-days. It is said further that as cattle are necessary for cultivation the tendency will

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

necessarily be for the price of cattle to rise as further encroachments are made of the existing remnant of grazing land until, as remarked by Mr. Moreland "the necessary adjustment of prices ensures the retention of waste land in grazing." Mr. Blackwood is of opinion "that though cattle will suffer to some extent in the process, it does not appear possible for Government to prevent it, nor, considering the difficulties in the way, does it seem desirable to do so." He suggests a solution by the growing of fodder crops such as jowar, lucerne and the like or by mixed farming, the main principle of which is to have grazing and cropping alternately. By throwing land into grazing it gets a rest and the manure obtained from the cattle is valuable for the purpose of fertilizing the soil for future crops. He, however, says that the latter cannot be carried out by raiyats cultivating small holdings. Something, however, must be done and if pasture lands are to be recovered or acquired it has been suggested to me that one-tenth of the quantity of arable land, along with a tank, should be reserved for each village. At present the cattle get insufficient food and the plough cattle are overworked. It is stated, I think in the *Parashara Smriti*, that four pairs of draught oxen were used in olden times so that each pair got a rest. But now-a-days the same oxen are sometimes used all day and every day. Besides the above suggestion there is another I may make which is not economic but which, I trust, is not too idealistic: that is to ask those in possession of public lands to restore them to the public use from which they have been wrongly taken. . . .

Then there is the *improper treatment of cattle in health and disease*. This is a matter which calls for the spread of agricultural knowledge in the Schools, Colleges and Universities which besides professorship, might establish the agricultural travelling lectureships which exist in America. This is more useful knowledge, under the circumstances, than the law which is now overmuch fostered. Hundreds of lawyers are being turned out every year. No one really wants them and a large number of the unfortunate ones do not want themselves. There may be at first some difficulty in turning minds away from visionary Deputy Magistracies and other forms of official but dependent service; but starvation will effect this cure. A time is coming when every one will have to work in any way available to him. Want will produce sense. Meanwhile education may be spread by means of works in the vernacular such as *Gopala Bandhava* by Sj. Prokash Chandra Sirkar and *Godhan* by Sj. Grish Chandra Chakravartti which have come to my notice though there may be others. I would, however, say to these authors and others:—Do not neglect the old works because of the new. See what the ancients said and did. After all the country then did well in these respects and if so it is because its people had knowledge. Consult, for instance, the *Brihat Samhita* of Varahamihira. Even now there are many who are versed in the ancient *Gochikitsa*. All this must, of course, be re-enforced by the scientific knowledge of modern times. Besides such books, pamphlets in the vernacular may be widley distributed. Something is, I understand, being done in this respect by the Agricultural Department but I am told that the pamphlets are not sufficiently circulared but supplied only to those who ask for them. . . .

The number of Veterinary Surgeons may, it is said, be usefully increased. I cannot speak as to this and am personally averse to the multiplication of officials of any kind. It might, however, be advantageous to encourage private veterinary practice. In any case it would be useful to distribute lists of persons in each Province who know how to treat cattle according to the Indian and European

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

methods together with their addresses. Do not let the old knowledge die as has, to some degree, occurred in the case of the Kabiraj. The ancients may not have known all that the years which followed them have told us; but they were not the fools which the entire neglect of the past on the part of some seems to indicate.

Want of proper treatment has led to *premature and avoidable death.* This is due to bad breeding (producing a weak stock), improper treatment insufficiency and unsuitability of fodder (particularly in the case of cows carrying calf) and want of exercise for cows and calves in Calcutta and other towns.

There is lastly the *slaughter of prime cows and calves*, that is cows which have not calved, say thrice, or whose milking capacity has not ceased to decline and cow-calves capable of themselves bearing. Some time ago the Calcutta Municipality attempted to stem this slaughter by increasing the fees but there was a "howl" (as it is called) before which it is customary now-a-days hurriedly to retire. There will always be a "howl" from people whose interests are affected. It is, however, the business of the community to enforce what is for the public good whatever private interests may stand in the way. This is the essence of respected rule. This question is of prime importance, for the best milkers are being sent to the towns and when their milk declines are being slaughtered in large numbers. The result, of course, is that the number of best cows are being diminished. So far as I know this problem is peculiar to this country. In Europe, America and the Colonies cattle are raised for two distinct purposes, namely, beef-cattle for food and dairy cattle for milk: No one ordinarily thinks of sacrificing a good dairy cow; and if dairy cows were killed there would be no need to do so in any quantity owing to the fact of the existence of beef cattle. If calves are slaughtered it is bull calves. Beef is not consumed in this country except practically by the European civilian population and by the European army. So the Indian people have hitherto not had the necessity of breeding cattle for that purpose as in Europe and America. But beef is required for the communities I have mentioned. The Government, I understand, refused (on what ground I do not know) to import the beef required for the army which, if done, would have largely checked the slaughter of Indian cattle. The Indian people are for the most part vegetarian or at any rate moderate animal-eaters, and for them the cattle are useful for draught or dairy. As there is no breeding for specific beef purposes, what appears to be taking place is an encroachment on draught and dairy cattle in the interests of those who require cattle for meat. But why should one interest be sacrificed to the other? As a portion of the community eat beef the slaughter must go on, but those who are interested in the milk-supply may rightly insist that they should not be made to suffer. Three remedies suggest themselves to me. The first is that Government should import its meat for the European troops in which case there would be only the limited European needs of the towns to be considered; the second is to define the age at which dairy cows can be slaughtered fixing it with reference to the period when their milking capacity declines; the third is that Government should be asked, or private parties be encouraged by the meat-eating public, to start in this country a specific beef-raising industry so that it will become unnecessary to have recourse to milch-cows for slaughter. *From the Presidential Address to the All-India Cow-Conference held at Calcutta in December*, 1917.

INDIAN COLONIAL EMIGRATION

BY MR. H. S. L. POLAK.

[In the September issue of the *Indian Review* for last year we published a criticism by Mr. M. K. Gandhi on the Resolution issued by the Government of India embodying the Report of the Inter-departmental Conference held in London in connection with the recruitment of Indian labour to the Colonies. The following exhaustive criticism of the recommendations of the Inter-departmental Conference by Mr. H. S. L. Polak will, we have no doubt, be read with considerable interest by our readers. *Ed. I.R.*]

THE basis of a consideration of the recommendations in question is to be found in the Despatch of the Government of India, dated October 15, 1915, wherein they recommended the total and early abolition of the system of recruitment of indentured labour in India for service in those parts of the Empire to which such emigration was directed. It was clearly laid down by them, a view concurred in by the late Secretary of State, Mr. Chamberlain, that it was no part of the duty of the Government of India to supply labour to the Colonies concerned. Still less is it the duty of the Indian people to do so. If, therefore, India permits such a labour supply to issue from her shores, she will only do so as an act of grace, and because she is convinced either that it is to her own indubitable advantage to do so, or that some paramount Imperial necessity requires it.

The onus obviously lies on those Colonies to show, not only that the emigration of Indian labourers is advantageous to the Colonial employer, which is self-evident, but that it also makes for the prosperity of the permanent and major portion of the populations of the Colonies. Still more must they prove to India that she will receive an extraordinary and direct benefit or that she should willingly make a sacrifice, in which they are prepared to share, for the general welfare of the Empire because of an imperative Imperial need. As to the first question, these considerations appear to have been generally ignored, the employers claiming, both in practice and by implication, to have a supreme right to be heard; whilst the present recommendations, so far from containing any evidence of a recognition that India must be convinced in the sense above set forth, have avoided the issue altogether, and thus entirely neglect certain primary factors that cannot be lightly brushed aside as having no bearing upon the case.

Whilst it is perfectly true, as Mr. Chamberlain says, that there seems to be some confusion of thought, in India, because of the deep-seated irritation aroused by the unfortunate treatment of Indian settlers in certain of the self-governing dominions, it cannot be forgotten that, to a large extent, that ill-usage has been a direct result either of the direct introduction, into certain Colonies (and notably, the Colony of Natal before it achieved self-government), or a lively fear of the future introduction of Indian indentured labour, or again, the observation of the nature and working of the system in some neighbouring Colony. Remembering this, one cannot be surprised at the persistency with which India insists upon grouping together all parts of the Empire, whether self-governing or not, in a consideration of the labour emigration problem, and in the light of the present recommendations. It must further be remembered that the indenture system now that its true character and incidence are thoroughly understood in India, whose conscience has revolted at the revelations of recent years, has so evil a reputation, from its introduction, in 1834, as a substitute for legal slavery, to the present day, that she will require overwhelming evidence that any scheme of assisted emigration officially put forward bears none of the taint of indenture, and contains satisfactory guarantees of protection for the emigrants, and the preservation of the national self-respect. This, it is respectfully submitted, the present recommendations fail to show.

The report not only assumes that the scheme now outlined will be advantageous to the emigrants, but, still further, that economic advantage outweighs all other considerations, an unwarranted assumption that has always been regarded by the opponents of the indenture system, as a primary fallacy underlying the arguments of its upholders. Nothing has given greater offence to the moral sense of India than this presumption, for it indicates that the fundamental objections of the people have been gravely misunderstood. It is possible that, within certain limits, the emigrants, under the present scheme, would derive some economic advantage by leaving India; but, as is suggested later, this is by no means certain. No attempt, however, is made in this Report to overcome the many political, moral, social and economic objection to any system of officially-aided labour emigration.

The fact that India is no longer content to be regarded in the outer Empire as a 'coolie' country an inexhaustible reservoir of cheap and servile labour for the enrichment of certain interests in those outlying parts of the Empire has been

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

wholly overlooked. In their report on the situation in Fiji, Messrs. Andrews and Pearson have expressly emphasised this danger, and Mr. Andrews has since written warningly in the Indian press on the same subject, from more recent observation in Australia and New Zealand. This danger is bound to militate against closer relations between the people of India and the white inhabitants of the colonies and dominions, not to speak of those persons, absentee directors and shareholders, who are members of the large companies and corporations deriving in many cases immense profits from the toil of these Indian labourers. I know, from my own experience in South Africa, how the whole Indian population, including those Indians who are born there, are classed alike as 'coolies' by the average white citizen of the union, a fact that is an unceasing cause of heart-burning amongst the Indian settlers, for they regard the mental attitude implied by this contemptuous designation as tending to create a permanent barrier against their civil and political progress. The report, under the heading 'Political Rights', appears to contemplate equality of political and municipal rights for the Indian immigants; but a community almost wholly unorganized, and, in the main, composed only of labourers, cannot possibly hold its own in relation to a white community, whose directing elements possess a superior organization, and represent principally the master class, whose normal interests are bound to differ radically from those of the immigrant Indian population. Moreover, experience seems to indicate that, even where they are willing, the colonial administration, unless they are strongly moved and supported by some active external agency, such, for example, as the Imperial Government, find it very difficult to emancipate themselves from the influence of local vested interests, representing persons of the same race, status, and civilisation as the Colonial officials themselves. Regard being had to these facts, equality of citizenship, would appear to be largely a formula incapable of being reduced to practice. This fundamental difficulty, it is feared, is, for the present, at any rate, insoluble, and the report altogether neglects its existence.

MORAL AND SOCIAL OBJECTIONS.

The moral and the social objections are equally grave. It is generally recognised that the natural unit in India is not the family but the village community, with its age-long traditions and well-tried organization. But it is here proposed to recruit by families and individuals. These are to be gathered together apparently, from all over India, wherever they can be secured, and they are, thus heterogeneously selected, to be removed from the religious and social sanctions with which they are familiar, placed in wholly unfamiliar surroundings, which still retain the evil associations of the indenture system, and there, unaided, expected to develope a self control and maintain a self-respect that European colonists, far more favourably situated, who are amongst their own kind and enjoying all the advantages of a familiar civilisation, have admittedly failed to display when subjected to considerably less temptation. Owing to geographical and other easily understood impediments, these Indian emigrants, as in the past, will lose touch with their spiritual guides, to whom they are accustomed to look for moral support and stimulation, and they are bound, unless they are allowed gradually to degenerate morally, to fall under missionary influences. Without in any way desiring to decry the most valuable work of the various missionary bodies, it ought to be understood that the inevitable submission of those unprotected and ignorant people to such influences is certain to create deep suspicion, hostility, and mortification in India. Being, moreover, deprived of their natural leaders, the Indian population must, in course of time, become largely denationalised, whilst a cleavage between these Indians who are born in the colonies, and know nothing of their parents' Motherland, save from hearsay, and those who have come from India, is hardly avoidable. The colonial-born Indian is entirely removed from the direct inspiration of India, is precluded from taking an intelligent part in her development, and is deprived of the immense help of a deep-rooted social tradition, and this is bound to be emphasised by the objectionable associations of the indenture system (which, after an existence of nearly a century, cannot be expected, in a brief period of time, to lose all its potency for evil,) as well as by the promiscuous intermingling of families, of widely differing social and racial conditions, and having a very slight nexus relating them to each other. These difficulties, sufficiently serious when they have arisen out of the voluntary emigration of Indian labourers within India herself, are immeasurably increased, and, as I think, insuperable, when they are the direct outcome of an artificially fostered system of emigration to places far beyond the confines of India.

The economic objection is no less great. The question has never been seriously examined or adequately answered: To what extent is further labour emigration from India in the interest

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the permanent populations of the Colonies concerned? It is, of course, undeniable, that a useful labour force, constantly renewed and augmented from outside the Colony, will usually be in the interests of the employers. But these are often commercial corporations, impersonal in their direction and management, whose shareholders and directorates are ordinarliy non-resident, and represented only by local officials, who are expected to produce the most profitable returns for the companies whom they serve. That is to say, their interest in the Indian labourers under their control is entirely subordinated to their desire to cut down the cost of production in order to increase dividends, a purely commercial consideration. In Fiji, for example, the largest employer of Indian labour is the Colonial Sugar Refinery Company, which is not really a Fijian concern at all. It is registered in Australia, whence it is administered. Its enormous dividends, which are not spent in the Crown Colony, are drawn from the labours of its Indian employees, who, together with the rest of the Indian and native Fijian population, derive practically no benefit thereform, and in whom it is, as a profit-making concern, wholly uninterested. In some respects, too, its interests are in conflict with those of smaller resident employers of labour in Fiji, as well as those of the free Indian cultivator; whilst the principles upon which it is conducted are completely at variance with the democratic labour policy of the Commonwealth. India has not been so generously treated by Australia that she can be expected to go out of her way to meet the commercial requirements of a group of Australian capitalists who, in the past, have totally disregarded her suscepitibilities, and have, by the treatment that they have accorded their labourers, made of Fiji a by-word even amongst the other Crown Colonies and caused her to be stigmatized as an 'awful warning' to the nieghbouring dominions. In the same islands, the Vancouver Sugar Refinery Company operates, with its headquarters in British Columbia. India naturally asks why she should be called upon to promote the commercial prosperity, not only of Fiji, where her children have suffered so severely, but of a Canadian Province, whose treatment of Indians has been such as to foster serious unrest and revolt in the Punjab, whence most of the emigrants have come. Whilst it is true, on the whole, that the West Indian Colonies have of late years, show much improved conditions, as against Fiji or Natal, it is equally true that the principal employers of Indian labour, present and prospective, are non-resident corporations, which have no living interest in the welfare of their Indian employees; and the memory of Commander Coombs, the then 'Protector' of Indian Immigrants in Trinidad, whose admissions in evidence before the Sanderson Committee created something like consternation in India, upon the publication of its report, has not yet disappeared.

CASE OF EXISTING NON-EUROPEAN POPULATIONS.

What then of the existing Indian and non-European populations of these Crown Colonies? How are their interests considered under this scheme? During the three years prior to the war, the total Indian emigration to the four colonies averaged annually some 7,500 souls. Since then and prior to the recent prohibiton, but only slightly due to war conditions and the consequent difficulties of transport, at a time when the employers were making largely enhanced profits because of the immensely increased demand for tropical products, the average annual number dwindled to about half that figure. Indeed, Jamaica managed to do entirely without further supplies of Indian labour. Both British Guiana and Trinidad contain a very large Indian population, apart altogether from the considerable non-Indian population, whilst Jamaica, with a relatively minute Indian population of 20,000, of whom one-seventh are under indenture, possesses an enormous non-Indian coloured population, part of which was actually emigrating to other labour zones (in some cases more unfavourably situated,) because of bad economic conditions locally. The Indian population of Trinidad, for the year 1911-12, was 112,796. To-day, it is probably about 120,000, of whom only one in 15 was under indenture in 1915-16. Such additional labourers as are required on the estates, to replace wastage and for normal, as apart from speculative, expansion of industry, ought easily to be secured from the large free Indian population and the other coloured inhabitants of the Colony, if proper conditions of pay and treatment are given. Similarly, in British Guiana, the Indian population, apart from the other elements of the population, is estimated to-day to number 137,000, of whom only one in 19 was under indenture, in 1915-16. This Colony, too, should have no difficulty in making up its labour deficit, if any really exist, from its general population. As for Fiji, the islands contain an Indian, as apart from a native Fijian, population of approximately 60,000, about one-sixth of whom are serving indentures; and independent persons, capable of judging of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the natural requirements of a normally expanding industry, are of opinion that the colony can manage very well, without introducing any further immigrants from India, but depending upon the natural increase of the present Indian population, and increased use of labour-saving device, and such inducements as may be accepted by the native Fijians to take up the work of agricultural development for private employers. Apart from this, Fiji, in particular, has no claim whatever for consideration from India, who, it is highly improbable, will be induced to permit her children to be recruited for service in that colony. Generally speaking, it may be said that, hitherto, the colonial employers have found it easier and more convenient to seek for their labour supply in India, rather than make the best use of local labour or use labour-saving devices, such as other large employers, in places where the white man does not will not or cannot work with his hands, have been obliged to do, notably the large concerns controlling the Witwatersrand goldfields and the Kimberley, Free State, and Transvaal diamond mines, and even the Natal planters, coal-mines, railways, and municipalities, since their Indian labour supply was cut off by enactment of the Indian Legislature.

QUESTION OF MINIMUM WAGE.

In the report, it is recommended that a minimum wage should be established in these four colonies, upon a basis that, for our present purposes is immaterial, save that it may be queried how far that minimum wage is at all commensurate with the profits of the employers. It is now estimated by the employers that it will cost them twice as much under this scheme as under indenture. As they evidently find it profitable to do so, it is plain, that, for years, they have been underpaying their Indian labourers. In other words the latter's wages were in no way comparable with the former's profits. The fact is that, in practice, the minimum wage is almost certain to remain the average maximum, not only for the new immigrants, but for a great part of the older labour population as well. In Natal, the wage of the free Indian was seldom in excess of that of the re-indentured Indian, when all allowances had been made, and often was even less than his. It is the natural tendency for cheap labour to undersell and underlive the costlier, and for the price of labour, accordingly, to seek the lower, rather than the higher level, particularly when that labour is unorganized for economic self-protection. The normal tendency, with the stoppage of labour importation, is for wages rapidly to reach a higher level, probably approximating to the fair economic wage of labour. Something like this has happened in Natal, since the stoppage of labour immigration from India, and the repeal of the £3 tax, which artificially depressed still further the wages of the free Indian labouring population. The present Indian and non-Indian labour populations of the four Crown Colonies are entitled to economic protection, and to be permitted to sell their only asset upon the terms most advantageous to themselves, and under normal competitive conditions. The sentiments of considerable portions of the non-Indian population of these Colonies is set forth at some length, in various documents reproduced in part III of the report of the Inter-Departmental Committee presided over by Lord Sanderson, (Cd. 5194), of 1910. Special reference is here made to the representations of the People's Association, of British Guiana, and the signatories to a memorial contained in Nos. 5 (f) and 5 (l), respectively; the memorial of the Jamaica Baptist Union, and its further letter on labour conditions in the Colony, contained in Nos. 13 (e) and 13 (g) respectively; and the memorandum of the working Men's Association of Trindad, contained No. 23 (b). Nor is there any guarantee that, with the fixing of a wage minimum, *and in the absence of a maximum period or amount of daily labour*, the position of the labourer will not be made worse than if no minimum wage were fixed, through an unscrupulous extension by the employer of the hours of work or the daily task. None of these matters seems to have beeu touched upon in framing the report now under consideration.

LABOUR DIFFICULTY IN INDIA.

The question, too, whether India can afford to tolerate an artificially stimulated system of labour emigration appears to have been entirely overlooked. I well remember how some of the commercial members of the Imperial Legislative Council, in 1910 and 1912, when the late Mr. Gokhale moved his memorable resolutions for the prohibitions of indentured labour recruitment, laid great stress upon the fact that India could not afford to export labour, which was required in an ever-increasing degree for the growing industries of India herself, and this plea was again urged last years, when the Hon. Pandit Madan Mohan Malaviya moved a further resolution on the same snbject. I believe that considerable evidence in the same sense was put before the Industries Commission that was recently sitting in India under the chairmanship of Sir Thomas Holland. I know,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as a fact, that one of the prime motives, apart from humanitarian reasons, that have prompted objections in the Madras Presidency to continued emigration to Ceylon and Malaya, has been the increased difficulty in obtaining labour for agricultural operations in South India. With great industries, such as those represented by the Assam tea-estates, the Mysore and Nilgiri coffee-plantations, and the Tata Steel and Iron Works at Sakchi to mention a few of the most important developments of industrial and agricultural activty competing for labour within the country, some of them being precluded from securing it by the artificial stimulus of recruitment, and compelled to rely upon the inducements offered by good pay and improved conditions of life, it is hopeless to expect that India will look favourably upon an attempt on the part or on behalf of colonies that have admittedly no claim upon her, and one at least of which is regarded as having done her an immense, and perhaps, an irreparable political and moral injury, to deprive her of a part of the very small floating labour-supply that actually exists, and which, in an increasing degree, is being absorbed in the great cotton industry that will presently have to compete with new rivals. Besides all other objections to labour emigration to the colonies, there is no reason to suppose but that, with the increasing demand throughout India for labour, Indians will be, relatively, at least as well off, economically, by remaining in India and proceeding to those parts of the country where labour is in most demand, as by going abroad. If any system of artificially assisted labour emigration by official agency be contemplated for the primary advantage of India, she will expect it to be one of internal emigration, for the deliberate promotion of industrial enterprise and agricultural development, which all observers agree is urgently needed for the welfare of the country in its endeavours to achieve a political status and an economic importance comparable with those enjoyed by the Self-Governing Dominions.

THE CONFERENCE'S SCHEME.

Having regard to the foregoing, it would almost seem to be unnecessary to examine the present recommendations in detail. Nevertheless, it is desirable to refer to some of them. It is stated that the labour required is to be recruited in India, under the authority of an emigration commissioner, appointed by the Colonial Governments, with the approval of the local Governments in India. Under him there are to be inspectors of emigration, as well as licensed emigration agents, whose licences are to be countersigned by the district magistrate and the protector of emigrants, both Indian Government officials. In each colony, there is to be, as theretofore, a protector of Indian immigrants, who is to remain a colonial official. Finally, every three years, the Government of India will send out either an official or a non-official deputy to examine the conditions prevailing in the colonies.

The whole principle of recruitment in India is, it is respectfully submitted, wrong and indefensible, and cannot be deprived of the wholly objectionable characteristics of the hitherto prevailing indenture system. It has in practice, been found that interested parties armed with officially countersigned licences, whose salaries and entire means of livelihood depend upon their securing the desired number of recruits, will not hesitate to make all kinds of misrepresentations. This has always been recognized as one of the most dangerous weaknesses of the indenture system, lending itself to abuses of the worst kind. When one remembers the extent to which that system, and all that it connotes, is detested by the people amongst whom it has operated for so many years, it is extremely unlikely that the new system will attract a class of recruiters appreciably less open to corruption than did the one that it is now proposed to displace. It is, indeed, held axiomatically, by those non-officials who have had an intimate experience of recruiting, that corruption and abuse are inherent in any system of recruitment, however well devised. If it be objected that, without recruitment, the colonies cannot obtain the supplies of labour that they require and expect, the answer is obvious. They cannot hope to be put upon better terms than employers of labour in India, who have a prior claim, and if they want Indian labour voluntarily to flow to the colonies concerned (and it may here be stated, parenthetically, that no system such as that now proposed can properly be described as *voluntary* emigration, in the ordinary meaning of the term, and against which no objection can be validly raised), which is, in the highest degree, improbable, they must offer such facilities and advantages as will induce it to do so, in competition with the attractions of a local demand. Otherwise, they must do without, and rely upon their own or other sources of supply, regard being had, in the latter case, by the Imperial authorities, to the welfare of the existing populations of those colonies.

Apart from this factor, India will have to be satisfied that her emigrants will receive that protection, under the new system, to which they are

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

entitled. But experience shows that this cannot be guaranteed. It is only recently that conditions on the Assam tea-estates have been improved in response to prolonged public agitation on behalf of the voiceless labourers, and the system there is of such recent creation that it is all too soon to come to any definite conclusions as to how far they are receiving that protection that the new system was designed to provide. Unpleasant stories of the treatment of the so-called free Indian emigrants to Ceylon and Malaya are rife, and are frequently published, with circumstantial details, in the Indian press, and support is lent to the complaints made by the representations of independent observers and non-official organisations. The 'protection' given in Natal, of which Sir Benjamin Robertson, when he visited South Africa, in 1914, and direct evidence, and the horrible conditions only recently revealed in Fiji, are notorious, and it is far from certain that conditions are such, in the three West Indian colonies, as to remove from the minds of thoughtful Indians all fear for the welfare of the Indian labourers there. When the Government of India and the Local Governments have been unable to secure—at least, and only in some degree, until quite recently—protection for Indian labourers and cultivators in Assam and Behar, who are directly under their observation and within their jurisdiction, and in Ceylon, which is only just outside the limits of India, it is hardly conceivable that they will be able, with all the supervision that is now proposed, to secure it for Indian labourers further afield. The reports of those who have been officially sent from India to the colonies to investigate, have borne witness to some of the existing evils, but some of the worst have been slurred over by them, or left for exposure by individuals or organisations of a private character. It is strange too, that the time is, apparently, not yet deemed ripe to appoint protectors of *Indian* Emigrants of *Indian* birth, specially selected for their sympathetic understanding of the peculiar psychology of the Indian cultivator, and their familiarity with the systems of labour recruitment. Finally, the fact that it has not been possible to induce the colonies to accept as protectors of *Indian* immigrants officials responsible to the Government of India, and entirely independent of the Colonial administrations, must bear a somewhat sinister significance in India, where it is known that this was, and has been for years, one of the strongest recommendationsof the Anti-Slavery and Aborigines' Protection Society, who have honestly believed that some *modus vivendi* between India and the Crown Colonies may yet be possible. In these circumstances, and judging from past experience, one may be pardoned for suggesting that it is premature to claim that the difficulties in this direction have been overcome. On the contrary, it is to be feared, if not even expected, that the safeguards now proposed will prove illusory.

Nor will the system of depots now set forth satisfy the new conditions, any more than before. For the success with which the recruiters have intimidated their victims in the past, and thrown dust in the eyes of inquirers, is well-known. Of all the persons who, according to those proposals, are likely to have any dealings, officially, or unofficially, with the intending emigrants, not one will necessarily have any personal or actual knowledge of the real conditions obtaining in any of the four Colonies. Any one who is acquainted with the characteristics of the average Indian emigrant must realise how wholly impossible it is for him to appreciate, at so great a distance from the prospective scene of his labours, the terms of his employment or imagine the conditions of life prevailing in the Colony to which he proposes to emigrate. The delivery to him, therefore of the written statement referred to in the Report, will, though, perhaps, better than nothing, be of no real value to him, at any rate until he has actually reached his distant destination. A British emigrant, proceeding to any of the self-governing dominions to settle, and with only his very limited experience of the conditions with which he is familiar in that part of the United Kingdom from which he comes, and such few and vague particulars of Colonial life as, with but little imaginative effort, he has been able to procure and digest, almost invariably finds that his new conditions are, for the time being, entirely strange, unexpected, and, not seldom, overwhelming. Yet he ordinarily has behind him official labour, or friendly organizations to help him through his period of disillusionment and advise him in his difficulties. How much more does the ignorant Indian peasant need such help, guidance, and support, only procurable, if at all, from unfriendly aliens, ordinarily incapable of understanding his peculiar difficulties or entering into his special mentality!

It is also recommended that emigration from pilgrimage centres should be prohibited during times of pilgrimage or festivals. It is more than doubtful if, in practice, this prohibition could possibly be effective. Many ways would be open to the ingenious recruiter for defeating its objects.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

One of the worst features of these proposals is that recruitment, otherwise than by families, which, in itself, is objectionable, for reasons already given, and was only tolerated for the moment as an emergency measure, and as in the nature of a *pis aller*, is seriously contemplated. In the face of the revelations that have already been made as to the conditions of immorality resulting from and prevailing under the indenture system, especially in Fiji, it seems hardly credible that it is now proposed to continue the recruitment of individual men. It is, obviously, always easier to recruit an individual than an entire family. Almost inevitably, recruiters will devote energies to securing individuals rather than families, and they will, as heretofore, be quite unscrupulous as to the methods that they employ, to separate individual men from their families. If unattached men, whether married or not, desire to find work outside of their own localities, there is ample scope for them to do so elsewhere in India, or they may, if they choose to do so—and this would be *genuine* voluntary emigration, with which this scheme has nothing to do—be left to emigrate at their own cost and risk. In the present circumstances of the Indian population of the various Colonies, now emerging from the indenture system, and with the moral life of large elements either blasted or atrophied by that system, it would be but adding to the existing immorality to subject unattached men to the moral contagion that now obtains.

It is suggested that 'the new system will be entirely free, and the indentured system together with the titles and characteristics attaching to it will be abolished.' It is to be regretted that this large claim cannot be sustained by a close and careful analysis of the present proposals. In the first place, it is one of the most familiar characteristics of indenture that the labourer has no voice in the selection of his employer, either before he leaves India, or upon his arrival at his destination in the colony. That characteristic is retained in these recommendations. It has evidently been found that no better way can be devised to bring employer and employee into touch with each other. That being so, it would appear that the proposals stand thereby self-condemned, for such an arrangement must, in the nature of the case, be purely mechanical, and, whilst, continuing to partake of the character of trafficking in chattel labour, be deprived of all human and social relationship. But an even graver criticism is provoked by the recommendation that, for the first six months after arrival in the colony, the labourer—and, presumably, his family, too—is bound to the selected employer. Except in extraordinary circumstances, of which he is not to be the judge, he cannot lawfully leave the service of that employer. But this is indenture in another guise and called by another name. It surely cannot matter *in principle* (though it would, of course, as to the *extent* of the injury to him), if a man be bound to an employer, not of his selection, for six months or five years. All idea of parity of contract disappears at once. And there is internal evidence of the recognition of this weakness in the recommendations, for it is stated that 'at no time will the immigrant be under any indenture, or any contract, *other than the above* (*i.e.*, that the immigrant is bound to be selected employer for the first six months of his life in the colony, save in so far as the protector may sanction or require during that period of change of employment)'. This, in itself suffices, in my opinion, to condemn the system now proposed. Of the six principal features of the indenture system described by the late Mr. Gokhale in his historic speech in the Imperial Legislative Council, on March 4, 1912, no less than five are, in all essentials, retained in the present scheme.

WHITE EMPLOYERS AND COLOURED LABOURERS

I have spent many years in observing, in various parts of the world, the relations of the white employer and the coloured labourer, especially the coloured immigrant labourer. After a very careful consideration of the conditions and circumstances of such employment, I have unhesitatingly come to the conclusion that, in no circumstances whatever, should any artificially stimulated system of coloured emigration be countenanced within the Empire. Although I am prepared to admit that this report indicates a very real desire to solve what is, I am convenced, an insoluble problem, and that present proposers are far in advance of anything that I had expected to result from the deliberations of the Inter-departmental Conference, I think that from the commencement it adopted a wrong view-point and that sight has been completely lost of the human elements inseparable from the problem, and of the failure and weaknesses of ordinary human nature, when faced with the question of the relations of a community of employers belonging to a race, highly organized for its own protection, and regarding itself as superior towards a labour population, variously derived, ill-organised for self-defence, and regarded as inferior. With all imaginable forms of protection

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the ignorant coolie, I am convinced that effectual protection is impossible. There is not, I feel positive, from much experience, a single form of protection of the labourer that cannot be evaded by an employer minded to do so. It is well-known that, even in so highly-developed a country as England, it is necessary to have constant official supervision for the protection of the workers, and especially for the women and children workers as against the employers, and it is equally well known that constant complaint is made that the protection afforded fails to prevent all kinds of evasions of the law. If these things can happen in populous industrial centres, where the workers and employers are of the same race, and bound together by the same national system and social conditions, under the very eyes of the Government inspectors whose vigilance is unquestioned and in spite of watchfulness of the trades unions and other labour organizations reinforced by the criticism of the press, and the powers of Parliament, then it is clear that the Indian labour emigrant, unorganized, and by his very circumstances, helpless effectually to organise, is likely to fare a great deal worse at the hands of the paid servants of the great corporations of distant shareholders, exploiting his labour, and profiting, in ignorance of the conditions of his toil, by its product.

It is stated that the object of the present recommendations ' will be to encourage the settlement of Indians in certain colonies after a probationary period of employment in those colonies, to train and fit them for life and work there, and at the same time to afford a supply of labour essential to the well-being of the colonists themselves.' It is singular and significant that the colonies selected for this experiment are not those which have been recommended for Indian colonisation by well-informed Indian public opinion, having regard to what, in the opinion of India, would be the best fields for independent Indian enterprise, all the factors being considered, but those four Colonies which have been, until the present year, in the habit of indenting upon India for their labour-supply. The primary purpose of this new scheme, therefore, is clearly not to encourage Indian settlement in those colonies for the advantage of the Indian settlers, or to train and fit them for life and work there, which would be a laudable and benevolent object, but ' to afford a supply of the labour essentail to the well-being of the (four) colonies themselves.' All else is of purely secondary importance. The conclusion is irresistible, therefore, that, if the labour requirements of the interested colonial employers had been met otherwise, this Conference would not have sat, or the present recommendations made. Their acceptance is, in my opinion, impossible.

Whilst it is true that we are bound to look at the matter primarily from the point of view of India, who has, in the past, been very deeply affected by the results of various schemes of labour emigration, the present scheme may be condemned equally from the much wider standpoint of the Empire as a whole. At the present stage of the relations of the various parts of the Empire, and in the existing state of chaos in the relations of capital and labour everywhere, which urgently call for the reconstruction of the economic system upon a more equitable basis, it will be in the best interests of the Empire, and of India as an integral part of it, that no scheme of labour importation from India into any other part of the Imperial dominions, by official agency, should be countenanced.

In the course of a statement made by him on November 27 last, when presiding at a meeting of the Royal Society of Arts, on the subject of 'Land Settlement within the Empire', the Rt. Hon. Mr. Walter Long, Secretary of State for the Colonies, is reported to have said :—

"They could not, either by compulsion or by bribery, induce able-bodied citizens of the Empire who were wanted here to leave this country, and they ought not to try to do it. They could not control, and he did not think that it was desirable that they should control, the wishes and movements of free citizens, and if men or women desire to transfer their energies and their intelligence and their muscles to another part of the Empire they could not prevent them. If they mean to go, however, every thing should be done to see that the conditions under which they left this country and entered the land of their choice were as satisfactory as possible so that they should have a fair start." I unhesitatingly accept that statement in its entirety, as applied to Indian conditions, and claim that it supports my argument as already set forth, in every essential respect. At the present time, Indians, and especially Indian labourers, are not 'free citizens of the Empire,' and I am strongly of opinion that, even under an absolutely *voluntary* system of emigration, with the free-will of the emigrants, and devoid wholly of any suspicion of recruitment or official agency even greater precautions are required for successful Indian colonisation, if deemed desirable by India, than are needed for the protection of British emigrants.'

(CONTINUED FROM THE LAST ISSUE.)

THE HISTORY OF BENGALI LITERATURE

BY MR. HARI PADA GHOSAL, M.A.

CHAPTER II.

[Bengali Literature from the Mahommedan conquest to the revival of Vaishnavism under Sri Chaitanya 1200-1500 A.D.]

Ever since the year 711 A. D., when Mahommad Kasim was sent out with 6,000 men for the first time to open a new field of renown and military glory of the later Mahommedan chiefs and generals, India had been the scene of chaos and devastation. By the year 1206 about the whole of Northern India came under the sway of the Moslems whose practical ability and military efficiency rapidly overcame the Rajputs who though brave and patriotic, gave way to the Moslems in tactics and discipline.

Coming to Bengal we see that Adisur or Vira-Sen was the founder of the Sen Dynasty and was probably ruling in the 10th century. Bakal who ruled in the 11th century is famous for the introduction of Kulinism among the higher castes of Bengal. The last Hindu king was Lakshmeya who ascended the throne in 1142 A. D. He reigned prosperously for over 60 years. In his old age Bengal was conquered by the Musalmans in 1204.

MAHOMMEDAN CONQUEST AND BENGALI LITERATURE.

From the literary point of view, the Mahommedan conquest of Bengal was not a calamity. The fire of poetry was not extinguished under the leaden pressure of a foreign conquest. The course of progress of vernacular literature did not stop. The political conquest of Bengal opened a distinctly new epoch. The era was not barren but on the other hand, it was one of great intellectual activity. An internal stimulus was needed and it was given by the Mahommedans. The greatest defect of old Bengali literature is its lack of first-hand interest. Old Bengali poems are sometimes mere repetitions in the beaten track of former poets. The Mahommedan kings of Bengal introduced variations and broke up monotony by causing many translations to be made from the Hindu Shastras. They became Bengalee. They lived among Hindu subjects and shared their thoughts and sentiments. Mosques rose by the side of Hindu temples. The kings noticed the great influence of the Ramayana and the Mahabharat. Their curiosity to know the usages and customs of their Hindu subjects led them to take great interest in Bengali literature. At their instance many translations of the Hindu Shastras were made. Nasir Khan, king of Gour, who ruled for forty years to 1325, caused a translation to be made in the vernacular. Hussain Shah employed Maladhar Basu in translating the Bhagvat and got the title of "Guneraj Khan" from the Mahommedan king. Paragul Khan who was a general of Hussain Shah and sent to conquer Eastern Bengal, subdued the Mags of Chittagong and founded a village Paragulpore in the district of Noakhali. By the order of Paragul the poet Kavindra Parameswar translated the whole of the Mahabharat.

The eager desire of the Mahommedan kings to hear the Shastras of their Hindu subjects through the medium of the vernacular which they understood and adopted as their own, gave a great impetus to the Bengali literature. This call from unexpected quarters was equally responded to by poets and writers. The examples set by these Mahommedan kings could not fail to awake in later Hindu kings a reverence for their mother-tongue.

THE IMPORTANCE OF TRANSLATIONS.

The flood-tide which began with the nationalisation of the Mahommedan kings in Bengal was of a various, plentiful, but inferior character

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

from the point of originality. But its importance lies in its scope in which new forms of poetry were tried and new veins of thought opened. This is the seed-time of our literature. When time came, these seeds broke into flower which grew naturally since circumstances were favourable.

The first great poet and, in fact, one of the greatest poets of Bengal, is Kirtibas. The year of his birth has finally been settled to be 1432. From the account which the poet gives of his own life, we know that he was seventh in descent from Nrishinha Ojha who, owing to political revolution in his own country, left his home and migrated to Fulia, a little village about two miles to the south-west of Ranaghat in Nadia. Banamali Upadhya was his father's name. Beyond this nothing definite is known about the poet and any attempt at conjecture is apt to lead to uncertainty and defective conclusion.

Born as he was in a Brahman family, Kirtibas was certainly versed in Sanskrit learning and did not, as he was once supposed to do, compose the Ramayana in the vernacular from hearing the songs of minstrels or strolling singers. It was, indeed, the happiest day in the history of Bengali literature on which he took upon himself the duty of writing the Ramayana. We do not possess the Ramayana in its original form. Scholars, ancient and modern, are trying to make for the fountain, but they are groping in vain through the darkness of obscurity to get the unsullied water of the original. The Ramayana in its present form is a work of many hands, so that the whole fabric has been woven in many looms. Still the untiring industry of modern scholars equipped with learning and skill in research, will be, we hope, amply rewarded in the long run. Thus much we can say that the Ramayana as we have it is not original, yet we are not losers by it. The force of the original has not been impaired by many later additions. Kirtibas will not shine more beautifully than at present.

That Kirtibas did not know Sanskrit is now a myth. It was his poetical genius, that led him to chalk out his own path even when he had a model before him. He read, indeed, the Ramayana by Valmiki and did not strictly keep to the original in the Bengali version. On the other hand, sometimes he differed very widely. His imaginative faculty and independence as a real poet led him to introduce new thoughts, new ideas not to be found in the original. Kirtibas was a poet by nature. The flow is spontaneous. The cadence is charming. The poet's genial spirit pervades throughout. His materials are drawn from the works of authors previous to or contemporaneous with him. But these detached fragments have been brought into a homogeneous whole by the wonderful power of the poet's brilliant imagination. The great storehouse of nature was spread before him. But the highly imaginative character of the original, which has ranked it in the foremost line of the world's classics—the song of the elephant in the garden of lilies, the bright firmament with the new moon looking like the horns of the bull, and such other exuberent effusions of unbounded and unrestrained poetical imagination,—are not to be met with in Kirtibas. Kirtibas's real power—his lasting hold on our memory is his universality. From the palace to the hut, from the learned scholar to the humble shop-keeper, everyone in short who understands the Bengali tongue, appreciates him and acknowledges his power with a thankful heart. Kirtibas's epic is written in homely, simple and unostentatious language. Its music is charming and sonorous. It depicts nature in its true colour, tells the tale in a straightforward manner and does not recourse to artifices which many a renowned poet considers indispensable. The poet is, perhaps, losing his property at the overwhelming production of the present presses. Young Bengal is bewildered with the fiction literature and is not allowedto find

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

time to enjoy the melody of the old poets. Only a few years ago we saw large crowds consisting of men women, old and young, gathered to hear the recital of the Ramayana in any village, at every home. The Ramayana of Kirtibas is an indispensable necessity in every Bengali household. We read it in our childhood, we read it again in our adult years and old age but its beauty is all the more enhanced. We may call Kirtibas a popular poet—a rare recognition which even Sakespeare in England, Goethe in Germany, Kalidas in India, and Bankim Chunder in Bengal, could not obtain. Kirtibas with the exception of Kalidas stands incomparable. Of all the translations of the Ramayana after that of Kirtibas, "Ananta Ramayana" is the best. Its antiquity is proved by internal evidence. It is short but there is poetry in it. The language is rough and not attracting. But in these ancient poets we see the attempt of levelling the uneven grounds of language which now being cultivated, is yielding a rich harvest.

Then follow a host of poets more or less indebted to their predecessors but in no way mere copyists. They possessed poetic thought. Here and there the purple patches give us delight in spite of the obsoleteness of expression.

The first in time to translate the Mahabharat was the poet Sanjoy. The great difficulty in reading the book is its language. But this obstacle is overcome by constant use. It is with patience and regard for the poet that we can understand its beauty and poetic spirit. The ruggedness of language is made good by the beauties scattered here and there throughout.

Another book called 'Sri Krishna Bijoy,' of Maladhar Basu, is a free translation of the Bhagbat. The poet seems to have a knowledge of Sanskrit. It was by the year 1480 that Maladhar Basu almost finished his work. It is love that is the mainspring of the book. But there is no artificiality in it. Far from this the love dealt with here is of a higher order. The 'Sri Krishna,' of Maladhar does not only please with love but is also pleased with it from others.

Kavindra Parameswar and Shrikar Nandi are two more translators of the Mahabharat in this period. The former flourished in the reign of Hussain Shah, king of Bengal (1494-1525) while the latter in the reign of Chuti Khan. These two poets wrote to please their Mahommedan sovereigns who rewarded them for their literary labours. The laurels they wore were the gifts of their own kings whose names have been handed down to distant posterity as patrons of Bengali literature.

Now we come to deal with two poets who have left imperishable characters on the scroll of fame. In many respects they may be ranked as first-rate poets. These favourite sons of the muse possessed in a remarkable degree the power of welding thought into language. Every line of theirs is fraught with simplicity, dignity, and beauty. The auroreal light of love showed their path and they marched towards the temple of the muse—the House Beautiful, erected by the artists of all ages and nations. It requires no common skill, no ordinary poetic gift to combine the Sublime with the Beautiful, to strike the keynote which makes the heart of the reader vibrate and revibrate in accompaniment with the poet's own.

Vidyapoti and Chandidas are the two flowers in the budding period of the Bengali literature. They are, indeed, the two bright gems sending forth their serene ray through the lenses of time. It is a pity that we have not been able as yet to know the exact dates of Bengal's two great poets. Many have been made poets by reading their beautiful lyrics. They were, indeed, the "poet's poets."

Vidyapoti was an inhabitant of Mithila. He was born in the later part of the 14th century and died perhaps late in the 15th. Being a Brahman he was learned, and obtained the title of Thakur in recognition of his scholarship. The

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

language in which he wrote his poems is what is known as Brajubuli—a mixture of Bengali and Hindi. It is said that Vidyapoti fell in love with the queen Lachima Devi. The king coming to know of this illict love-affair cast Vidyapoti into prison, and to test his poetic power, asked him to compose poetry. The poet's attempts failed. He could not produce even a single line with a great deal of labour. But as soon as Lachima Devi made her appearance at the window and then withdrew herself, the bard broke into song. The lid dropped down. The sweet fountain of poetry gushed out and there was a spontaneous flow of divine music and the poet began as follows :—

Where do you go, woman ! with elephant's pace ?
Turn round to glance with a smiling face.

This may be a mere story but the truth that "poetry is the record of the best and happiest moments of the best and happiest minds" is fully brought home to our minds. The dark prosaic unilluminated intervals of life are lighted by the glow of imagination. Evanescent visitations of thought sometimes associated with place or person awake kindred joy. A single passion, a single emotion, such as exultation, horror, grief or pleasure, touches the enchanted chord, reanimates and revivifies the image. The dark vistas of a supine and dormant soul are coloured with the evanescent hues of an ethereal world.

Vidyapoti's songs centre round Krishna and Radha. The subject is their mystical union. In the first few lyrical effusions is beautifully described the youthful hankering of each for union with the other. The states of their mind in union and separation have been psychologically described with realistic effect with no detriment to the laws of lyrical composition. The poet's keen eye and deep insight into human nature has penetrated to the bottom and has made many revelations which bring us to the conclusion that the poet has personally felt what he writes about human affections. Let me now show the poet's power in vividly painting the different states of emotion. Here are a few lines that describe Radha in her grief of separation :—

Behold her, O Madhab ! a comely girl,
Her tears like showers of Shraban fall ;
Her face as the full-moon clear,
Shrunk to a line in heaven's azure.

Again :—

The fresh flowers are blooming,
The cuckoo in groves singing,
The zephyr from mountain bold blowing,
My lover to his land not returning ;
The bee in the forest makes a humming sound.
The body's troubl'd with the heat of day,
In this spring my beloved's far away,
Well wot I God's in my way,
Fixed are the eyes with thirst to allay.
Innocent women suffer with heart as mound.

The lyrics of Vidyapoti end with a devotional song which embodies the poet's solicitous desire and he prays for getting out of the ocean of sins with the mercy of Krishna.

The songs of Vidyapoti, the Chaucer of our language, are extremely charming in spite of the difficulty of the language. In pure lyrical gift Vidyapoti stands unsurpassed. In beauty and variety his work is very great. His depth of thought and artistic skill are marked clearly in all his poems. He is the foremost of all poets in lyrical images. His language and insight into human character, his depth of love and extra-ordinary art, place him high over all other lyrics in our language.

Vidyapoti and Chandidas were contemporaries. It is not improbable, therefore, to conjecture that Chandidas was born by the end of the 14th

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

century (about 1383 A. D.) in the village of Nannur in the district of Birbhum. He was a Brahman by caste and worshipped the goddess Bishalakshi whose image and temple may yet be seen. There is no mosouleum, no splendid monument to preserve the memory of this great poet. This Birbhum—this garden of nature, her favourite play-ground— was the birth place of Joydev and Chandidas. Joydev was the first poet of Bengal—he marks the starting point of our literature. He composed his melodious 'Git Govind' in Sanskrit but it is not the Sanskrit of Valmiki or Vyasa. Inflexions and consonances occur so often in Sanskrit that those who are accustomed to read verses in it, will be astonished to see the wonderful power of Joydev in avoiding those constant gingles, those never-failing inflexional uses and changes of words which a strictly classical model demands. We feel the same felicity and ease in reading 'Git Govind' as we do in reading Bengali. In Vidyapoti we advance a step further and in Chandidas we reach the highest consummation.

There is a story how Chandidas, a worshipper as he was of the goddess Basuli, became a devotee of Krishna. One day he saw a lily floating by. He took it up with a glad heart and while he was about to place it at the feet of the goddess Basuli, she appeared before him and prevented him saying that a flower which had been used by her god, should not be placed at her feet. Chandidas was astonished and asked who that god was. Being informed that it was Sri Krishna, Chandidas prayed her to allow him to worship her god. At this the goddess was highly pleased and granted his prayer.

In the case of Chandidas as it was in the case of Vidyapoti, love was the wakener of the well of poetry. At first it was love in its lower form. This passion of love for the woman gradually developed into the higher and more exalted sphere of spirituality. In both the poets the affections of the heart are raised and solemnised in the invisible supersensuous world of idealism. Love was sanctioned by the Supreme Being for a higher object. This passion driven to excess is undefinable and undefined. It wipes away the line of demarcation between individuals. The ego or the self is annulled. Love, as it has been said, takes the Harp of Life and smites all the chords of self which trembling pass straight in music out of sight.

Chandidas was a poor Brahman boy. Left an orphan, the ceremony of investing him with the sacred thread was performed by the villagers who out of pity for him, employed him as a priest in the temple of the goddess Basuli and he lived in a cottage not far from the temple. In course of time a poor washerwoman Rammoni by name, came to the village and the people employed her also as a maidservant to do the menial services of the temple. Chandidas was not only a poet but a sweet singer also. He composed good many songs and sang them in front of the goddess. These beautiful compositions when set to music, appealed to the finer emotions of Rammoni. She sat the sole admirer of his songs in that solitary place. Gradually they became attached to each other in love and admiration.

This unusual union of a Brahman with the woman of a very low caste roused a storm of social indignation. But the poet cared a straw for it and he continued to live with the woman of his heart in perfect peace of mind. Rammoni was a sort of poetic inspiration to him. The inaudible harmony of a pious and reverent soul seeking so long for a fit vehicle of expression was now heard in the form of these immortal songs which are a landmark in the progress of our literature.

The imaginative power of Chandidas is, indeed, wonderful. Those are loftiest heights which display the poet's genuineness. All his poems are of love, and the beauty and sweetness of their composition make them agreeable. Chandidas is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the perennial fountain-head of pleasure. All his poetry has a purpose. It is so marked and apparent that it cannot be ignored. His mission as poet is to spread the name of Sri Krishna—the ideal of Vaishnavism. Poetry with a purpose is repugnant to many but all great poets of the world wrote their best works with some particular object in view. Thus Milton composed his great epic "To justify the ways of God to man." Shakespeare studies human nature in all its aspects and his art is employed in embodying his experience in his world-renowned dramas. He heard always "the still sad music of humanity." Keats strikes the keynote just at the very outset by saying, "A thing of beauty is a joy for ever;" and he dedicated all his efforts to the worship of Beauty. So we can absolve Chandidas from any blame on that account. In speaking of Rami, he goes beyond the definite limit of sensual love which is usually free from the taint of carnality. This is the view if we take him by his word but due concession should be allowed to flesh and blood. It was, indeed, Rami's love which he accepted as a stepping stone to the attainment and realisation of his spiritual ideal, but we cannot say that at its lowest stage it was free from the fret and fever of passion.

Chandidas finished the composition of his Padabali by 1433. These songs are 996 in number.

Vidyapoti was a courtier born and brought up in a learned family. He himself was learned also. He had all the advantages of a great poet, Chandidas was the poetic child of nature. He was brought up in the lap of poverty herself. With poverty was love. These two agents are alike crushing and pregnant with dangers and advantages. Chill penury could not repress the genial current of his soul, which was infused and invigorated and fed by the never-failing stream of love. It was his master-passion. Thus his poetic powers budded forth with the bracing vernal breeze of love. Vidyapoti is pedantic, in simile he is a veritable rival of Kalidas, his language is learned, his pictures are lifelike, his descriptions are vivid, his poetic genius was natural; he was a God-gifted poet, he had a true insight into every thing, he knew how to study beauty—whereas Chandidas was not pedantic, his pictures are not so full but more expressive—he does not recourse to figures of speech but could suggest ideas which Vidyapoti's erudition could not bring out with his floral language; the poetry of Chandidas is more expressive than the vivid pictures of Vidyapoti. Chandidas' poetry leads us to the other world, shows much that is not mundane. His love songs are more divine than human. It is truly said that Vidyapoti may be understood by the help of a good commentary, but Chandidas can be understood only by those who have taste for the subject. Another thing that clearly distinguished these two poets in the in fancy of our literature is that Vidyapoti had a judgment which always restrained him from over-exuberence. He prunes the straggling weeds of his imagination. This is due to his cultivated taste and learning. But Chandidas says all he thinks. The result is dilution. He does not, unlike Vidyapoti, check the overflow, but gives the freest vent to his fancy. There is no attempt at crucial examination of his spontaneous and exuberent thought. But in one respect Chandidas is far superior to Vidyapoti and it is this: Vidyapoti's image brings back with it a train of grand or beautiful associations. He is confined to external imagery alone. But in Chandidas there is a craving for the indefinite which arises "not from sensuous impression but from imaginative reflex" He has lost himself; he has merged his individuality in universality.

Chandidas' poems appeal to the heart through the sense organs. He appeals to the heart and creates a poetic vision—paints charming pictures and keeps them alive for ever. Vidyapoti is superior to Chandidas in poetic images. They

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

are the fruits of study and observation. Chandidas has reared up a beautiful edifice whose bricks are the eternal feelings of man. Through love he reaches that state of highest felicity where life and death are one and where pleasure and sorrow and fear are no more. Love was the mainspring of both Chandidas and Vidyapoti and both have tried to see life like a picture from all its sides but both were not alike successful. Chandidas speaks from the heart. He drinks the care-drowning draught of song, that healing beverage of life which changes all from indifferent, stale and flat to bright and brilliant. His poetry is full of the embodyings of the most subtle and airy imaginations and the most shadowy yearnings of the human heart. The pleasantest means of annulling self is the study of Chandidas' poems. Vidyapoti's poetry, on the other hand, has a beauty of its own. But he abandons himself too frequently to literary vanities and pedantic humours. His grief and sorrow bear the idle trumpery of egoistic feelings. He is a great master of language, and a great command of language a poet should not be without. But he has a few of what Wordsworth says," the amiable, the ennobling or the intense passions." To Vidyapoti his Lachima is a fairy shining far above this terrestrial globe in the clear vault of the blue.

But in spite of coincidences and divergences, in spite of similarities and dissimilarities, both these great poets possessed more or less the essential quality of genuine poets—the imaginative faculty. Another thing possessed in common is lyrical gift. For sweetness, for charm and beauty, these two earliest flowers of the garden of Bengali poesy will ever remain fresh and scatter fragrance for all ages to come.

His descriptions of Radha—the love-born lady of his songs—are not impregnated with a lofty sense of moral dignity. When the poetic fervour is on and his language is poetically impassioned, he makes his love on absolute sensuality and appetite. Vidyapoti seems to possess no other notion of the passion. His taste in music and poetry was exquisite, his education and way of life far superior to Chandidas. In spite of all this Vidyapoti has failed to reach the standard attained by Chandidas.

RESPONSIBILITIES OF LAND-HOLDERS

BY THE MAHARAJA OF DARBHANGA.

A GREAT progressive movement is sweeping through the nations of the world and like Phœnix, a new world is trying to arise from the ashes of the old. New ideas and new aspirations are afloat. It is therefore an inevitable corollary that India too, under the fostering care of British rule, should feel the touch of this world awakening. And we, zemindars, have to bear this in mind in considering our duty to the public. * * * * * *

We owe it to our rulers that we should do everything in our power to be of service at all times; and we owe it to the public that we should help them to realise their just aspirations on which the Government have set their seal of approval. Our position is difficult, our duties onerous and delicate. With loyalty as our creed and with an appreciation of the complicated and vast interests of the different sections and communities that constitute the Indian Empire, we should promote the evolution of the nation in a harmonious and healthy direction. As I said before, I am confident that the Government will satisfy the just aspirations of the people and grant the privileges for which the country is ripe, and I am also confident that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the great interests which we have the honour to represent will receive due recognition. And, meanwhile, it will be our duty to prepare ourselves for the share that may be alloted to us in the future political life of the country.

Our duty to the tenantry is obvious, and it is not necessary for me to speak at any length on this matter. In their contentment is our wealth —in their happiness our prosperity. I would ask landlords to take an ever-increasing interest in the education of their tenants; to see that the tenants do not fall into the clutches of *Mahajans* and make indiscriminate transfers of their land. I would ask them to see that the tenants are able more and more to manage their own affairs without resort to costly and ruinous litigation; to revive, popularise, and in every way encourage the institution of the village panchayet on a simple and useful basis. Perhaps I may draw your special attention to the co-operative movement, which has for its noble object the deliverance of the tenantry from the exactions of rapacious Shylocks, and which deserves to be encouraged by all and every means in our power. Equally it is our duty to draw their special attention to the new scientific and improved methods of agriculture, and popularise their adoption on an extensive scale, so that, as the phrase goes, there might grow two blades where one grows now, and greater harvests and consequent freedom of the tenants from indebtedness of every kind might accrue.

It is a sad reflection for me that the landlord class has lost a considerable portion of its former position and influence. Whilst I am aware that this decadence is due in some measure to causes over which we had no control, I am constrained to say that we have perhaps not helped ourselves as much as we might have and that we are not without blame in this respect. Charges of ignorance, illiteracy, apathy, and unwillingness to serve the country are now and again levelled against us, and I would ask my brother zemindars to remove all causes of reproach and to stand upon their own legs; to see that our children receive proper and suitable education according to our means and to the needs and requirements, so that we may be sure that, while imbibing whatever is best and highest in Western culture and education, they retain their own religious traditions and national characteristics and excellence; to take an ever-widening and intelligent interest in matters pertaining to the urban and rural affairs of their districts in addition to taking their proper share in the larger Imperial and Provincial matters; to act as a link between the authorities and the middle classes and the people; to do what they can in composing differences of religion, race and community, so that the entire population, Hindu, Mussalman, European, may be united by the common tie of loyalty to the Sovereign and love to the Motherland. If we, as a class, have not had a proper hearing and if our claims have not received an adequate recognition, it is to be largely attributed to the want of organisation that lies at the root of our present unsatisfactory condition. It is indeed strange that ours is the only community which is so large in number and yet so weakly organised. Organisation is the keystone of success in the modern day, and unless we co-operate and harmonise all our forces, and are able to present, so to say "an united front," we cannot expect to make our wants made known, our influence felt, and our capacity to do good exercised to the fullest extent. It is only that community which can stand on its own legs, and the members of which are, without being factious or quarrelsome, bound together in friendly co-operation and are imbued with a real and elevating education and able to take large and broad-minded views, of the political issues—it is only such a community that can aspire to be the permanent leaders of our country.—*Opening Address to the All-India Landholders' Conference, Delhi, Jan. 27.*

DR. SIR SUBRAMANIA IYER*

BY "AN ADMIRER."

INTRODUCTION

LORD Ampthill has said thus in words as noble as they are true about Sir Subramania Iyer: "I regarded him as the soul of honour, as a man who had absolutely no personal ends to serve, and who devoted his great abilities solely to the public good. It seemed to me that in his life and conduct he effected an ideal compromise between adherence to Indian ways and the requirements of European methods. Neither too conservative nor too progressive, he remains the perfect model of an Indian gentleman and is broad-minded enough to adapt himself gracefully to the political and social requirements of the British connection with India. His life is an example to all, for the virtues of piety, modesty, industry, and patriotism are equally essential to all classes and conditions of men. I shall never forget his demeanour when His Majesty the King, at that time Prince of Wales, visited Madras, for it was a picture of that respectful dignity and dignified respect which are among the true characteristics and most forceful qualities of Indians."

HIS LIFE.

He was born in the district of Madura on 1st October 1842. In his ninth year he learnt the English alphabet and then went to a Mission school and then to an English school started by one Krishnaswami Chettiar. Then he studied in the Zilla school in 1856. He eventually won a scholarship there and passed the English examination held by the Government. He then accepted a clerkship in the office of the Deputy Collector at Madura. Mr. Rama Row, Deputy Collector, took him to Ramnad, but he came back to the Madura Collector's office. While there he studied law and appeared for the Pleadership Examination and topped the pass list. But he was not able to get a pleader's *Sanad*, as Mr Cotton, the District Judge of Madura, was offended at his not salaaming him on entering the Court. Eventually the District Magistrate appointed him as Public Prosecutor. He then came back to the Collector's Office. Later on he passed the Matriculation Examination in 1865 and the F. A. Examination in 1866 as he desired to pass the B. L. Examination. He then passed the B. L. Examination in 1868. He was apprenticed to Mr. J. C. Mills, Official Reporter of the High Court. Then he was appointed as acting Tahsildar of Madura and continued so for six months. Then he went to Madras and was enrolled as a High Court Vakil. He decided to practise at Madura and found that fortune had begun to smile upon him.

In 1870 he was appointed as a municipal councillor of Madura and a member of the Local Board there. He had a park laid out at Madura at a cost of Rs. 18,000, his own family contributing Rs. 4,000.

In 1873 he conducted a suit against the temple committee in respect of a sum of Rs. 40,000 not properly accounted for, and won the suit. The people of Madura then elected him as a member of the Devastanam Committee. Throughout his life he has striven hard to introduce rectitude into the management of temples and his Presidentship of the Dharma Rakshana Sabha ever since its organisation is a fitting crowning of his lifelong labours in the direction.

In 1875 when His late Majesty King-Emperor Edward VII, then Prince of Wales, visited Madura, Sir Subramania Iyer had the unique honour of presenting to His Royal Highness an address of welcome on behalf of the people of Madura. Out of the funds raised for according a fitting reception to the Prince of Wales a surplus of Rs. 14,000 remained and Sir Subramania Iyer had the sum used to build a bridge across the Vaigai.

In 1884 Sir M. E. Grant Duff then Governor of Madras, visited Madura, and Sir

Subramania Iyer presented to His Excellency an address as the Vice-President of the Madura Municipality. The Governor came to know him and his worth and nominated him as a non-official member of the Madras Legislative Council. On 1st January, 1877, he was awarded a Certificate of Merit on the occasion of Lord Lytton's Durbar at Delhi.

His wife's death in 1884 turned his attention to the deeper problems of life. He became a member of the Theosophical Society and has been a staunch supporter of it ever since. This sketch is not a suitable place to discuss the origin or the development or the future of that movement which, whatever its merits or shortcomings in the light of Hindu thought and Hindu social ideals, has certainly played a large part in the life of a section of modern educated India.

In 1888 he was appointed as acting Government Pleader, being the first Indian to have that proud distinction in this Presidency. He conducted various important and sensational prosecutions, one of these being the famous Nageswara Iyer Forgery Case. He conducted also a sensational case against the Mahant of Tirupathi.

AS NON-OFFICIAL LEADER.

Thus his work as a non-official leader of the public was between 1877 and 1895 and was a record of honest and strenuous work for social uplift and regeneration. He never became the slave of his professional work or the spokesman of Government but stood up for justice, for manliness, and for honourable dealing. He regarded his professional success and eminence and his influence with the Government as means of effecting public improvement. He gave evidence before the Famine Commission in 1877 at Madura. He pleaded then for legislation to protect tenants from harsh and arbitrary eviction by landlords. He worked also for the lessening of the official element and the increase of the popular element in local bords and Municipa lities.

AS CONGRESSMAN.

When the Indian National Congress, which is now such a great political and unifying force in India, was born, Sir Subramania Iyer took a prominent part in guiding and developing it aright. At the very first Congress, held in Bombay, he recorded the resolution advocating the reform and expansion of the local and imperial legislative councils. Till he became a High Court Judge and also subsequent to his retirement he has striven to keep before his mind and heart the high and lofty ideals for which the Indian National Congress stands and to spread them broadcast and work for their realisation, In 1914 he was the Chairman of the Reception Committee when the Congress met at Madras.

During the two terms when he was nominated as a member of the Legislative Council at Madras the powers of the non-official members were very limited. The right of moving resolutions or even making interpellations did not exist. The non-official members tried to do what good they could within the limits rigidly and rigorously set for them by the paternal autocracy of the Government. Sir Subramania Iyer introduced into the Council in 1886, his bill for compensation for tenants' improvements in Malabar. The result of this measure was that the tenants were induced to reclaim and improve large tracts of uncultivated land and thus add to the agricultural wealth of the country.

AS FELLOW OF THE UNIVERSITY.

In 1885 he was appointed a Fellow of the Madras University and his valuable connection with the University continued till 1907. The proceedings of the Senate of the Madras University during those years show what a vital interest he took in the guidance of the education of the youths of the land. He pleaded for lightening the curriculum of studies, for making education less examination-ridden, and for other important educational reforms. He was the first Indian to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

be appointed as the Vice-Chancellor of the University. He was also the first Indian to receive the honorary degree of the Doctor of Laws which was conferred on him in 1908.

AS A JUDGE.

In January 1895 he was appointed as a Judge of the High Court of Judicature at Madras in succession to Sir T. Muthuswami Iyer whose greatness and legal acumen were admired by the Government as well as by all sections of the people irrespective of caste, colour, or creed. To succeed Sir T. Muthuswami Iyer worthily andto maintain the high traditions of the supreme judicial office were no easy task. Sir Subramania Iyer distinguished himself as a Judge and justified his choice in every way. He acted as the Chief Justice of Madras in 1899, 1903, and 1906. He was given a knighthood on the New Year day of 1900. He retired on 13th November, 1907 on account of failing health, though if he had remained in office for eight months longer he would have got as annual pension £1,000 instead of £880 now received by him. The Madras Government issued the following Gazette Extraordinary on the occasion of his retirement:

The Hon. Justice Sir. S. Subramania Iyer, K.C.I.E., Dewan Bahadur, is permitted to resign the office of a Judge of the High Court of Judicature at Madras with effect from the 13th of November 1907. The Governor-in-Council desires to place on record his appreciation of the eminent services rendered by Sir S. Subramania Iyer, K.C.I.E., during his long terms of office as a Judge of the High Court. The high judicial qualities, the independence of character, and the profound learning which he has at all times displayed throughout his long and honourable career have earned for him a name which will long be held in reverence and esteem by the Government and the public.

AS LAWYER.

He is widely read in law and took a keen interest in English and American Law and Roman Jurisprudence. Though he was not so subtle and acute a lawyer as Sir Bashyam Iyengar, he had rare legal acumen and splendid powers of advocacy and forensic eloquence. As a senior he was unique in his treatment of junior lawyers. In the annals of the legal profession he occupied a unique place as one who was eager to help merit to cheer and brace up the timid, and to preserve the highest traditions of the noble and learned profession of law.

CONTRIBUTIONS TO HINDU LAW.

His eminence and learning as Judge were acknowledged on all hands. In 1905 when the Madras Estates Land Bill was being considered in the Madras Legislative Council, Lord Ampthill said: "I have heard it said that the ryot of Southern India will never know how much he owes to Justice Sir Subramania Iyer for having declared that 'the Common Law' of Madras gives every ryot an occupancy right irrespective of the period of his holding." The Hon'ble Mr. G. S. Forbes, who introduced the Bill, referred to him and Sir T. Muthuswami Iyer as great and distinguished Judges.

RETIREMENT AND AFTER.

Ever since his retirement he has been living at the Beach House, Madras. Life after retirement has not been to him a life of purposeless leisure but a life of strenuous work for India's regeneration. He has been the President of the Dharma Rakshana Sabha ever since he founded it and has been using it as a means of reforming the management of Hindu religious institutions.

LINES OF NATIONAL WORK.

We may refer to a few other valuable ideals given by him in respect of proper lines of national work. In 1915 he said when presiding over the great meeting at Madras convened to welcome Mr. and Mrs. Gandhi: "We want the soul-force which Mr. Gandhi is trying to work up. Soul force consists in a man being prepared to undergo any physical or mental suffering, taking the precaution that he will not lay a single finger to inflict physical force upon the other side. It was that soul-force that was manifested by the South African Indians and it was the same force that should be developed in this country."

THE INTERNMENT OF MRS. BESANT.

No account of Sir S. Subrahmania Iyer's later activities will be complete which does not recount the leading part he took in the great agitation which soon spread throughout the country protesting against the famous speech of H. E. Lord Pentland, the Governor of Madras in May 1917, in the course of which His Excellency had attacked the Home Rule movement and its methods of work. It looked for a time as if His Excellency's threat of repression would dishearten public workers; but Sir Subrahmania Iyer displayed remarkable courage in writing the following bold communication to the press which will certainly bear recital.

Before I was raised to the Bench I was a Congressman and to me Home Rule is no new thing. I believe and have long believed that its early establishment is vital for the welfare of the country and the stability of the Empire and that it is therefore necessary to carry on a constitutional and educative agitation for it as ordered by Congress at its last session. Believing this I gladly accepted the Honorary Presidentship of the Home Rule League for India—honorary only because my health forbids active and strenuous work. I cannot retrace my steps. I will not resign my office even if the League be declared unlawful. I am ready to face any penalties which may follow on my decision. In the words of the Congress, in the reconstruction of the Empire after the war, to defend Home Rule is to me a civic duty and this duty I will discharge. I call on you my countrymen to do the same.

The effect of this was marvellous. It revived many a drooping spirit and it stirred up the public to a proper sense of its responsibility. And though Lord Pentland's Government followed up the famous speech with the internment of Mrs. Besant and two of her associates, Sir Subrahmania Iyer, undaunted, pursued his campaign against the Government and the agitation for her release with characteristic boldness and vigour. When Mrs. Besant and her associates were released it was said on all hands that the credit of it was due, in no small measure, to the courageous and indefatigable activities of "old" Sir S. Subrahmania Iyer.

AGITATION FOR HOME RULE.

But Sir Subrahmania Iyer would not rest content with the release of Mrs. Besant. As President of the Home Rule League he has been urging ceaseless activity and propaganda work for obtaining the reforms set forth in the scheme of the Congress and Moslem League. He has written numerous communications to the press and delivered many public speeches, denouncing the evil effects of the present bureaucratic administration and insisting times without number that the only reform that would save the situation is the breaking up of the monopoly of the Civil Service and giving the people popular control over the Executive. In his memorandum submitted to the Secretary of State, he hit the weakest spot in the present system of administration.

He rightly urged that "the only solution history has ever found for such diseases in the body politic is the extension of popular control over the executive. That is why Home Rule appears to me not only inevitable, not only a gracious boon conferred upon the people of this country by Britain, but the only remedy adequate to the needs of the situation, the only measure that can insure the continuance of the British Empire."

CONCLUSION.

Sir Subramania Iyer is still young in spirit though old in years. In the speech referred to above he said: "We are all young, not only you, but also I, in our dream of a new India, in our vision of a free nation discharging its own Dharma, fulfilling its own Mission." He is held in the highest esteem by all—young and old, Indian and European, official and non-official, as one who is "the soul of honour, as a man who had absolutely no personal ends to serve, and who devoted his great abilities solely to the public good."

CASTE: THEN AND NOW

BY THE MAHARAJA OF KASSIMBAZAAR.

IN many matters of national well-being the Hindu mind no longer gropes in the dark, uncertain of decision. Hesitancy and diffidence have ceased to remain the predominating features of the temperament of the average Hindu of to-day. We are moving with the times so far as possible, and the waves of progress are beating against the shores of our conservatism not in vain. I am, therefore, glad to find, included in the agenda of your business, such subjects as imparting suitable education to women and ameliorating the condition of widows, discouragement of child-marriage, and the raising of the condition of the Sudra and the untouchable castes. It is no good shutting our eyes to the fact that the ignorance of our women-folk and the condition of our backward classes have made the name of India a bye-word of contempt and reproach to the civilized world for a number of centuries and paralysed and atrophied the body politic even beyond Asiatic somnolence. We must look to the spirit of Japan and try to follow in her wake in our struggle for renaissance, and in this line we could do nothing better than to see our womanhood dignified and our backward classes elevated. As I said at Hardwar in 1915, as President of the second Conference of this Sabha, these have become questions of self-preservation with us. It is also conveniently forgotten that, at one time in the story of this ancient land, some of the best hymns of the Rig Veda were contributed by the daughters of India and that at a later stage not a few of them distinguished themselves in the study of mathematics, in the governance of kingdoms and in the fields of battle. Gargi, Maitreyi, Khana, Lilavati, Sita, Savitri, Damayanti, Tara, Draupadi, Sakuntala, Padmini, Sanjukta, Rukshmini, Durgawati and Ahalya Bai—where is the country or the people that would not feel proud or honoured to have daughters like these? Similarly, you will find that, before the rigidity of caste was estatablished in India in the way in which we know it to-day, a man of the untouchable class, Guhaka of Chunar, enjoyed the friendship of the great prince of Oudh whose name has passed into the Hindu pantheon, and that some of the most venerated Rishis of old—men like Viswamitra and Valmiki—who have left imperishable footprints on the sands of time, could trace their descent to no decent environment.

In a paper read before the International Congress of Orientalists at Berlin on the 14th of September, 1881, the following facts were brought out by a member:—

'We read in the Aitareya Brahmana (ii. 3—19) for example, Kavasha Ailusha, who was a Sudra and son of a low woman, was greatly respected for his literary attainments and admitted into the class of Rishis. Perhaps the most remarkable feature of his life is that he, Sudra as he was, distinguished himself as Rishi of some of the hymns of the Rig Veda (Rig., X 30—34). It is distinctly stated in the "Chandogyopanishad" that Jabala, who is otherwise called Satya-Kama, had no gotra, or family name whatever (Chand Upa, iv. 4); all that we know about his parentage is that he was the son of a woman named Jabala, and that he is called after his mother. Though born of unknown parents, Jabala is said to have been the founder of a school of the Yajurveda. Even in the Apastamba-Sutra, (ii 5—10) and the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Manu Smriti (X 65), we find that a Sudra can become a Brahmin and a Brahmin can become a Sudra, according to his good or bad deeds. Panini mentions the name of a celebrated grammarian called Cakravarmana in the sixth chapter of his "Ashtadhyayi" (p. vi.130); now Cakravarmana was Kshatriya by birth since he has the prescribed Kshatriya termination at the end of his name, which is a patronymic of Cakravarmana.'

Yudisthira, you are probably aware, was once confronted by a Yaksha with the following interrogatory :—

'By what, O, king! birth, character, study, or learning, doth a person become a Brahman?

In the *Vana Parva* of the Mahabharata, we read Yudisthira giving the following reply :—

'Listen, O, Yaksha! It is neither birth, nor study, nor learning that is the cause of Brahmanhood. Without doubt, it is character that constitutes it. One's character should always be well guarded, especially by a Brahman. He who maintaineth character unimpaired, never impairs himself. He, however, whose character is lost, is lost himself.'

In the Code of Manu, the great Hindu law-giver, we read (chapter 11, stanzas 238-240) :

'Receive pure learning even from a man of lower caste, the highest law even from the lowest, and the gem of a wife even from a base family. Wives, learning, (the knowledge of) the law, (the rules of) purity, good advice, and various arts may be acquired from any body.'

The Lord has himself proclaimed in the Gita :—

(The four castes were emanated by Me, by the different distribution of qualities and actions; know Me to be the author of them, though I am myself actionless and inexhaustible.)

'The same am I to all beings; there is none hateful to Me nor dear. They who worship Me with devotion, they are in Me, and I also with them.

'They who take refuge with Me, O Partha, though they may be born of the womb of sin, women, Vaisyas, even Sudras, they also tread the highest Path.'

Gentlemen, let me not be misunderstood. I do not appear before you to-day to condemn the system of caste. I personally believe in caste, and I do not think there is any nation in the world which has been able to do in the past or will be able to do in the future till the millennium without it in some form or another. What I am anxious to insist is that, while caste was intended in ancient India as a social insurance, it has degenerated in our day into a school of endless bitterness, hatred and hostility. The existing Varnashrama of to-day is only a travesty of its ancient original. While to-day it preaches the gospel of hate and cramps individuality, in ancient India it acted as a cement of society and inspired Hindus to assert their full and supreme manhood. The Hindus were then not, as now, irrevocably walled in by rigid and unalterable boundaries of social convention, but they were free to rise to the highest social dignities or sink to the lowest positions according to the inherent qualities or vices they might possess or the merits and demerits they might develop. The son of a Brahman sometimes became a Kshatriya, sometimes a Vaishya and sometimes a Sudra. At the same time, a Sudra certainly became a Brahman or a Kshatriya if he had many golden deeds to his credit. *Shankar Dig Vijaya says*:—

'By birth all are Sudras, by actions men become Dvija (twice-born.) By reading the Vedas one becomes *Vipra* and becomes *Brahman* by gaining a knowledge of God.'

A passage in the *VanaParva* of the Mahabharata runs thus: 'He in whom the qualities of truth, munificence, forgiveness, gentleness, abstinence from cruel deeds, contemplation, and benevolence are observed, is called a Brahman in the Smriti.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

A man is not a Sudra by being a Sudra, nor a Brahman by being a Brahman.

I will now quote a passage from a European writer of established reputation to show what the spirit caste really stood for in India before the age of soul-less materialism had established itself in this side of the world. Mr. Sidney Low, in his *Vision of India*, says :—

'There is no doubt that the system of caste is the main cause of the fundamental stability and contentment by which Indian society has been braced for centuries against the shocks of politics and the cataclysms of nature. It provides every man with his place, his career, his occupation, his circle of friends. It makes him, at the outset, a member of a corporate body; it protects him through life from the canker of social jealousy and unfulfilled aspirations: it ensures him companionship and a sense of community with others in like case with himself. The caste organization is to Hindu his club, his trade union, his benefit society, his philanthropic society. There are no work houses in India, and none are as yet needed. The obligation to provide for kinsfolk and friends in distress is universally acknowledged; nor it can be questioned that this is due to the recognition of the strength of family ties and of the bounds created by associations and common pursuits which is fostered by the caste principle.'

The picture thus drawn is very accurate and true, but, most unfortunately for Hindu society, the spirit of it has vanished to-day. We seem to have gone very far away from the spirit of the times which established caste in its original sense, and our decadence as a people is due not a little to our having forsaken the golden rules of ancient life. I hope most of us have seen the error of our ways and will be glad to retrace our steps to the ancient ideals. If this Conference will be able to draw up a scheme for the proper education of our womankind and the elevation of the untouchable classes and restore caste to its original purity, it will certainly deserve the endless gratitude of the Hindu community.—*Welcome Address to the Hindu Sabha.*

SCIENCE TEACHING IN INDIA

BY DR. GILBERT WALKER.

WHAT is wanted in life is ability to apply principles to the actual cases that arise and the man who understands is of enormously greater value than the living compendium of information. When Pasteur as a chemist was asked to find a remedy for the pest that was ruining the French silk industry, he knew absolutely nothing of silk worms: yet he solved the problem, and it was general understanding of Nature's methods that brought him success. For mere information a sensible man goes to books of reference: he does not waste energy in burdening his memory with it.

But if it is a pity when the teaching of mathematics is made lifeless, it is fatal when that of physics or chemistry is carried on without constant appeal to experiment. A boy who has played with a force-pump has no difficulty in grasping what we mean when we say "head of water," though the idea may be hard if based on the abstract definition of a "perfect incompressible liquid," and such corresponding electric terms as "electromotive force" and "capacity" are just as easy to a boy who has played to an equal extent with electric apparatus. But how many are nearly as familiar with electric appliances

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as they are with mechanical? And why should we wonder then that electromagnetic theory is usually found difficult?

Now all that I have said applies more to Indians than to Europeans, for two reasons: First the wonderful memories of most students of this country must be a continual temptation to them to remember a discussion rather than to absorb its ideas when memorising is easier than grasping; and secondly, early training in handling tools and apparatus is not nearly as general here as in England. As an example of what I mean I may be allowed to refer to my old school days at St. Paul's in addition to splendid laboratories for physics, chemistry and biology, there were prizes to encourage mechanical ingenuity and skill, and as evidence of the standard reached I remember one boy was someway down the list although he had made gyroscope that would spin for twenty minutes. I have no data as to the number of us that had collections of electric apparatus or small chemical laboratories or fitting shops at home, but it was appreciable and to those who had them they made an enormous difference. They made the laws of Nature real, concrete, and vivid, instead of mere abstract relations between quantities known only by definitions.

Training of the hands is necessary also for the acquirement of manipulative skill without which many discoveries would never have been made. As one example I will quote the Cape Astronomer Gill, who developed methods of measuring angles in the sky to one hundredth of a second, the angle suspended by a quarter-anna piece at a distance of 330 miles half the distance from here to Karachi. As another example we may take Ramsay's determination of the atomic weight of the rare gas niton. The largest volume of it that he could obtain was 1,200 of a cubic millimitre, not a hundredth of a pin's head in bulk; yet he utilised a balance so inconceivably delicate as to weigh this minute amount correctly.

* * * * * *

The only method of putting the science teaching of our universities into a satisfactory footing is to appoint sufficient numbers of first-rate teachers, men who are keen researchers and can impart their enthusiasm to their classes; and they cannot carry out investigations if their routine work leaves them no leisure. Further, unless they are to be professors of pure mathematics, they must have a laboratory training. For men who teach physics on its qualitative or experimental side this condition is universally accepted, but if it is to be taught on the quantitative side, this is just as necessary. To attempt to shuffle out of the obligation by re-labelling the subject as applied mathematics is dishonest and it has not even the merit of being good policy. For it gives you a man whose natural field for research work is barred to him; he is not familiar enough with current experimental work to apply mathematical methods to it.—*From the Presidential Address to the Indian Science Congress, Lahore.*

INDIA.

BY

MISS ESTHER FARING.

India! for a moment O, listen to my voice!
Above all, what is precious and dear to my heart,
India alone, and none but India will be my choice
Thou my desire, more than a mother and lover
thou art.

Poor be my heart, but all will I give,
India will I serve, as long as I live
Not like a stranger, but as one of your own.
This is my prayer, and this is my vow.

"Land" of beauty in nature and art,
Country with ideals so high and so pure,
Seekers for truth with a longing heart
O, for a pain thou hast dared to endure.

Japan in the World War

Mr. Naoshi Kato, the editor of a very important Japanese periodical, writing in a recent number of the *English Review* explains how to constitute a constructive position for the attainment of that New World-Spirit which alone can permanently remove the Prussian philosophy of force and so lead to a new orientation of light based upon President Wilson's conception of a League of Nations. He says that Japan's entry into the War was solely due to the request of the British Government in accordance with the Anglo-Japanese Alliance, under the explicit condition that Japanese operations should be limited to the Far East and the Chinese seas, though the Japanese navy is now taking an active part in many oceans. The chief weakness of the Allies has lain in the lack of single-front strategy not only in the military sense, but also in politics, diplomacy and finance; and the need of a Grand Allied Head Quarters is overdue.

The writer then proceeds to observe :—

"The question is whether England and France have shown the same sacrifice of attitude towards their internal troubles as in their external affairs. At once I think of Ireland . . . . . Why not settle their internal strife right out by the sacrifice of party contentions on both sides? Is not this world-war, involving the destiny of the British Empire, reason sufficient for the creation of a new atmosphere of reconciliation with regard to this age-long question? If this question be settled right now, at least 300,000 more troops could be sent to the front to fight against the Germans, instead of keeping large garrisons and beating marches against each other at this critical moment of the world's history. What about the Alsace-Lorraine question? Why does France attach the whole issues of the war to this question now, when surely the main objective is the defeat of the enemy? It seems like putting the cart before the horse. It is all very well to have splendid national aspirations, all kinds of irredenta, re-mapping, vistas of a new Europe, etc., but is it not more urgent for the Allies to conduct the war in such a way as to ensure final and complete victory over the enemy? And in order to achieve such a victory, it seems to me essential for the Allies to put forth far greater efforts than they have done in the past. First of all, they, each and all, have to change their attitude of mind, forget all about their petty contentions, throw off their suspicions, and devote the whole of their minds and hearts to the all-inclusive cause of the Grand Allies as a whole.

"The spirit of a common task and of mutual sacrifice as of complete co-operation in "the single-front" is, to my mind, yet very far from satisfactory realisation. The supreme will of the Allies in order to win the war should lie in the amalgamation of all national interests in one grand scheme of an International Commonwealth, based primarily on the principle of justice and equality. Is it not high time now to liquidate all national interest and strengths, both spiritual and material, into one common account of all nations now engaged in the war to crush the world's enemy? The lack of wider vision, the narrowness of the scope of co-operation, the insufficiency of an all-embracing imagination—in short, the unreadiness to sacrifice traditional prejudice—is, to my mind, the chief cause of the Allies' weakness, at least at the present moment."

"ALL ABOUT THE WAR—THE INDIAN REVIEW WAR BOOK".—A comprehensive and authentic account of the War with numerous illustrations, portraits, cartoons, maps and diagrams contributed by officers of the Indian Civil, Military and Medical Services, Ministers of Native States, Engineers, Educationists, Journalists, Lawyers, Publicists and other Specialists. Edited by G. A. Natesan with an introduction by His Excellency Lord Pentland. Price Rs. 4. To subscribers of the "Indian Review," Rs. 3.

The Protestant Reformation

In celebration of the fourth centenary of Martin Luther's protest against Catholicism in 1517, Mr. S. H. Swinny writes to the last December number of the *Positivist Review* and tries to answer two questions connected with the Reformation. (1) Why did it begin in Germany? (2) Why did it occur early in the sixteenth century? The first question is answered by the reply that it began in Germany because Germany had never been fully Romanised and had remained less conscious of the unity of western civilisation —at once less disciplined and more ready to rely on brute force to supply the place of a civilised orderly tradition. Germany was thus more ready to defy the common opinion of Christendom and to break away from the long-established spiritual unity than were any of the other great nations.

"The heresies of the fourteenth and fifteenth centuries were rather signs than causes of the coming storm. The relaxation of discipline, the schisms, the subservience of so many Popes to temporal powers and interests, did more to prepare the way, and were themselves a sign that new forces had arisen which the old Church was unable to control. At the beginning of the sixteenth century, all serious men were desirous of reformation—a reformation which the North affected by a violent breach, and the South in the end by a purification of the old institutions. And the scandals in the Church had another effect. The nobles had long resented the open path to merit that the Church offered. They grudged place and precedence to low-born ecclesiastics. They coveted the wealth of the monasteries. But so long as the Church was eminent for its learning and virtue, and encompassed by the love of the people, they could do nothing. Its degradation was their opportunity. Finally, there came in the fifteenth century the revival of ancient learning and the invention of printing, leading in Italy to an absorbing interest in ancient literature, and in the more backward North to a study of the original texts of the Bible, making possible the religious controversies of the next age. The protest against the exactions, the ambitions and the luxury of the clergy found then its natural consummation in a return to the imagined simplicity of the early Christians, and in the elimination of the priest as the intermediary between the believer and his God.

As has already been indicated, the results of the Reformation were largely unforeseen by the Reformers; and its good or evil has been hotly discussed. The individualism inherent in its theology gave the Protestant countries the lead in the development of modern industry and the exploitation of the world. Hence the wealth and prosperity of the northern nations in which Protestants have taken so much pride. Again the toleration rendered possible and indeed necessary by the multitude of sects, and the general atmosphere of controversy, not only stimulated intellectual interests, but reacted on the political life of Protestant communities. Moreover, the toleration and the partial—though most illogical—rationality of Protestantism gave encouragement and shelter to the first pioneers of a more complete emancipation."

The Future of Asia

Dr. Yujiro Miyake, Editor of "Japan and the Japanese" writes in the new year number of the *Japan Magazine* about the grave doubts that Japan feels as to how the war would end, and about Japanese diffidence as to the consequences which might be effected in China and India. No matter, what way the European war ends, China will be influenced more and more by the United States who will chiefly rely on her vast financial resources. As regards India, the writer proceeds thus:

"With an Allied victory India will be more submissive than ever to Great Britain and the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

dream of her independence will be for ever past. England will probably subdue all lands between Turkey and India, and a great colonial empire will rise between the Mediterranean Sea and the Indian Ocean. Russia, who was previously not on very friendly terms with England, will be too busy with internal domestic problems to take much interest in the acts of England, much less to interfere with them. England will have a free hand in the whole of south-western Asia. If Germany wins she will occupy this position, and if she does not take India she will at least exercise a strong influence there. If the war results in a draw, the international rivalry will be much the same as it has been hitherto. The victory of the Allies is essential to England's safety in India. If England should ever lose India, the world's balance of power would be lost.

With victory for England, India will come more and more into line with British ideals and gratify her desire for independence in the direction of greater self-administration and government. If China is able to maintain herself as a republic, after the manner of America, India will, undoubtedly, be influenced by it and Washingtons will probably appear there. To attain independence may prove a hard struggle for India, but if she be given self-government, she will, no doubt, attain it in time. And if India and China become republics, will not Turkey be induced to follow suit? And if Russia forms a republic the greater part of Asia will have renounced monarchy. If the majority of Asiatic peoples favour democracy and achieve government for the people and by the people, the result may be a vast confederacy that will effect changes undreamed of for three thousand years. Chinese, Indians and Russians as well as Turks are rich in powers of imagination and if they can unite to extend their power, it will certainly constitute an epoch in the world's history."

The "Servant of India"

We are glad that the Servants of India Society has taken up the publication of a new weekly Journal "to advance the causes which it cherishes, disseminate its principles and apply these to the interpretation of current affairs" It is fitting, indeed, that the Journal should commence from the 19th February the third anniversary of Mr. Gokhale's death. It was one of Mr. Gokhale's desires that the public should be educated on current topics in a healthy way and the Society under the direction of the Hon. Mr. V. S. Srinivasa Sastri began a series of cheap and very useful publications on political questions. The new venture is an advance in the same direction and we wish the "Servant of India" every success.

The first number enunciates the policy and spirit of the venture in the wise words of Mr. Ranade :—

> Liberalism and moderation will be our watch words. The spirit of liberalism implies a freedom from race and creed prejudices and a steady devotion to all that seeks to do justice between man and man, giving to the rulers the loyalty that is due to the law they are bound to administer, but securing at the same time to the people the equality which is their right under the law. Moderation implies the conditions of never vainly aspiring after the impossible or after too remote ideals, but striving each day to take the next step in the order of natural growth by doing the work that lies nearest to our hands in a spirit of compromise and fairness.

Then there is an appreciation of the late Sir William Wedderburn by Mr. N. M. Samarth; "Linguistic Provinces" by Mr. R. P. Paranjpye: a thoughtful essay suggested by Mr. Sarma's recent resolution in the Imperial Council; and a criticism of the "Income-tax Bill" by Mr. V. G. Kale. Altogether this number contains much interesting matter. The Servants of India Society have done well in fixing the annual subscription at Rs. 4 only thus placing the Journal within the reach of all. It is edited by the Hon. Mr. V. S. Srinivasa Sastri and published by Mr. A. V. Patvardhan at the Servants of India Society, Poona.

The Geography of To-day

Prof. B. C. Bhattacharya recently delivered a lecture in Calcutta (which is published in the February number of the *Modern Review*) in which he traces the broad steps which have led to the present high position now claimed by Geography. The migration of various races in ancient times must have contributed not a little to the widening of the scope of the geographical science as a whole. Likewise also, the great conquering expeditions of the heroes of the ancient world had the result of removing the physical barriers which had separated the different branches of the human race in perpetual ignorance of one another. The contribution of religious devotion which sedulously fostered pilgrimages to sacred places, should also be reckoned at its true value. A broad survey of the world being thus made, men's minds were naturally turned to something still higher than mere descriptive accounts. The result was the origin of Physical Geography. As the subject was progressing, it became evident to scholars that there existed, without doubt, an undeniable co-ordination between Physical Geography and human civilisation. On the geographical position of a country depend the essentials of man's livelihood, and those forces which are maintaining the very pulsations of the life of the present-day world. This in its turn led to the origin and growth of what is known as Economic or Commercial Geography. The present-day geography undertakes to study a country from several cardinal points of view, such as those of Geology, Biology, and Anthropology.

"Originally, Geography used to be defined in some such way as this:—Geography is the description of the surface relief of the earth. But certainly, a new definition, in view of the new conception of Geography, must supersede the old one and should rather take the following form Geography is the description of the earth in its relation to man. Robert Mill, the great authority on the subject, gives the following definition:—Geography is the exact and organised knowledge of the distributon of phenomena on the surface of the earth, culminating in the explanation of the interaction of man with his terrestrial environment."

Present day Geography has been mainly divided into six branches; *viz*, Mathematical Geography Physical Geography, Biological Geography, Anthropological Geography, Political Geography and Economic Geography.

Waste in Labour

The December number of the *Mysore Economic Journal* contains an able article by Mr. J. R. Clynes, M.P., who maintains that it would not be in the interests of trade and prosperity to keep up the same labour pressure after the war, which in national interest has been maintained during the war. It is not in this direction, he says, that trade prosperity can be found; trade must be made subordinate to life conditions. To fix a higher level of outlay and to expect the worker to always labour up to that higher level is merely driving the human being from his true life purpose. Trade should be made to live for man; and not man should be made to die for trade.

There is sometimes a mistaken impression that the trade and commerce of the country suffer through deliberately restricted output; and that in the working class establishments, there is a large amount of organised idleness. Piece-work, payment by various result systems, and the effects of keen superintendence tend to exact the utmost amount of service from most of the wage-earners of the country even where time is the basis of payment; most time-work is arranged so that the results produced shall be as near as possible similar to results produced on the piece-work basis. If work was performed under the conditions of ease and leisure which is sometimes

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

referred to in our platforms and newspapers, the victims of industry would be fewer than they are. Those who apply themselves to what must be done after the war must face more fully the human side of the question, as well as its trade and commercial side.

This attention to the human side is impossible whilst many employers look upon trade union organizations as instruments for fomenting trouble in workshops, or as a means for preaching amongst workmen the foolish doctrine of deliberately reducing the output, when men can well do better for trade without in any way doing worse for themselves.

National prosperity, therefore, must not be expected from any further industrial pressure, and the high level of production reached under war conditions cannot be maintained as a permanent feature of trade when peace has been restored.

Local Self-Government in India.

The November number of the *Journal of the Society of Comparative Legislation* contains a comprehensive survey of the results achieved in local self-government in India, from the pen of Sir H. Wheeler, K. C. I. E. In the writer's estimate, "difficulties still remain to be surmounted, but their existence does not indicate that the record hitherto has been one of failure." Of these, three defects are pointed out namely, (1) weakness of the civic spirit, (2) finance, and (3) the large area of the jurisdiction of many rural boards. "Of the three principal deficiencies which have been indicated, the remedying of the first would go far to cure the remaining two. If the civic spirit were stronger, heavier taxation would be accepted with greater alacrity, while smaller bodies could be constituted and trusted to display a competent and energetic interest in their affairs. The essential problem, therefore, is how to encourage the civic spirit, and in its growth time and education are the all-important factors."

The Path to India's Future

Dr. Miller, in his message to the members of the Christian College Day Association in December last (printed in the December issue of the *Christian College Magazine*) lays stress on the genuine desire of Britain to make India a fully self-directing member of the world-wide British Commonwealth. Though it is true that there has not only been remissness, but opposition to progress in the required direction, it is only on the part of men who naturally cling to power which they have long enjoyed.

"It is also well to bear in mind that in the moral and spiritual, as in the natural world, a certain amount of opposition must be overcome if the object aimed at is to be permanently gained. To all appearance this is a fundamental law of the world in which God has placed us. If rails were ideally smooth, no train could make its way along them: the friction they present is an indispensable condition for the forward movement of the engine. If there were no resisting force in the air, the aeroplane could never fly. If it had at any time to pass through a far-extending vacuum it would fall helplessly to the ground. Similarly in matters political and social, a certain amount of antagonism, not too great for persevering effort to overcome, is not a thing to be complained of but rather a thing to be desired. The one great lesson that such considerations teach is that, according to the inmost nature of all things round us, progress that is to be stable and enduring must proceed step by step by surmounting each particular difficulty as it arises. It is the lesson which I tried to emphasise to you a year ago—to the effect that if the India of the future is to be the self-directing nation which we desire it to become, that goal can be obtained only by the evolution of new arrangements out of those now in possession of the field, or in other words by following the path not of revolution but of steady and continuous reform."

Educational Aspects of the Kinematograph

The last December number of the *School World* contains an article by Mr. H. O. Hale summarising parts of educational interest in the report of the Kinema Commission which was appointed in America. The evidence of teachers and others offers encouraging suggestions on the subject of Kinema as an aid to education.

The difficulties and objections brought forward were chiefly as follows :—

(1) Kinema conditions are often far from hygienic. Ventilation is inadequate, while the glare and flicker, the rapidity of motion, and the concentration of visual attention promote eye-strain.

(2) It is affirmed that the first condition of education is mental effort, and that the dilution and peptonisation of the material presented render the child more difficult to instruct in other ways.

(3) The children have little appetite for educational films. The main interest is outside their school curriculum, and the residuum of information is small.

(4) The cost is out of proportion to the results obtained. Various makers, especially Messrs. Pathe Freres, have devoted much time and money to the production of scientific and educational films, but at a considerable financial loss.

The hygienic difficulties do not seem to be very formidable; while the second objection vanishes under a true conception of the educational use of the film, and the Kinematograph should be made first of all an instrument of inquiry. There is plenty of scope for mental effort in such enquiries not only in getting information, but also by explanation and improvement in method. The difficulty of cost is always with as for everything but it ought not to be made an insurmountable objection.

Re-Incarnation

In the last number of the *Occult Review* there is an article by Jocelyn Underhill about the growing belief in re-incarnation and about some personal memories with reference to the subject. The writer puts forward several experiences as evidence for the truth of re-incarnation, a hint of the continuity of memory from life to life, an echo of the certainty of life after death, and a suggestion of re-union in future lives with those we have loved and for the present lost.

A belief in the teaching of Re-incarnation has been growing steadily for the past forty years amongst the thinking minds who are devoting time and study to a consideration of the well-being of man, his past efforts and future destiny. The teaching was brought under modern notice most largely by Dr. Anna Kingsford—a brilliant and eccentric psychic and mystic who left no successor to carry on her teaching—and Mme. H. P. Blavatsky, the co-foundress of the Theosophical Society. A very large literature has grown up especially round the views expounded by Mme. Blavatsky, much of which is dogmatic and most of it the result of clairvoyant research on the part of two or, at most, three individuals, whose results often conflict with earlier testimony, and who give little information as to methods of research, beyond hinting at a special training in psychic investigation.

The conception of re-incarnation is itself so helpful, so satisfying, even when crudely expounded, that many people eagerly accept it without any direct perception or personal knowledge as to its truth. Although unable to remember past lives, they are resolute in believing that such lives have been lived. In some cases direct memory is claimed, but in these, generally speaking, the incongruity displayed between the present position and character and the previous character is so marked as to make one pause and wonder if self-deception has not entered in.

A Christian View of Indian Politics

In a lengthy article in the Madras *Christian Patriot* reviewing the present Home Rule agitation Mr. K. T. Paul, B.A., presents the following recapitulation of what Christians think of the present situation.

1. We are grateful to note the purpose of His Majesty's Secretary of State for India in regard to the 'progressive realization' of responsible Government in India as an integral part of the British Empire.

2. We offer to Government to accept a share in every responsibility to which the peoples of India may be called whether in Councils or in administrative machinery. In doing so, we desire to be recognized as one of the important minority communities in India which, in regard to capacity for rendering public services, is more advanced than its numbers would imply and is always on a thoroughly progressive path.

3. We ask for the immediate introduction of a measure of truly 'responsible Government' as understood in all democratic countries. For this purpose we recommend that the Imperial and the Provincial Legislative Councils be at least three-fourths elective, and that they be given definite portfolios of administration to execute through their leaders over whom they should have virtual powers of nomination and removal.

4. That the policy should be gradually to devolve more of the portfolios on the Councils so empowered.

5. That as regards the portfolios not so devolved the powers of the Councils be no greater than they are at present.

6. That the principle of communal representation be strictly adopted in making up the membership of these Councils, which shoud for this purpose be greatly enlarged.

7. That for the purpose of affording a real training and equipment for the art of 'responsible Government,' immediate advances be made along two lines, (*a*) Education, and (*b*) Local Self-Government.

8. (*Education*). That a scheme of education be introduced such as will suit the bulk of the people of India we cannot and obviously should not go to Universities.

9. (*Local Self-Government*). That a really liberal policy be pursued in introducing local self-government all over the country in village, taluk, district, and town.

That membership in all their governing bodies be made mainly elective and on the communal principle : in village and town the franchise being on the territorial basis, and in taluk and district on the community basis.

That all these bodies be given the privilege of electing their own executives.

10. That many more posts in all the services be thrown open to Indians ; That community interest be carefully safe-guarded in appointments ; that during the process of devolution, however, the posts reserved for Indians be always less than half and that preference be always given to candidates who have had training abroad.

Cattle Farms in Native States

In his article on cattle-farming in the *Agricultural Journal of India*, H. E. Lord Willingdon says that some Native States, in the Bombay Presidency have done good work in that line. "I am glad to be able to state that already in this Bombay Presidency two ruling princes are establishing stud herds in their States. His Highness the Raja of Rajpipla having started a herd of Kankreji cattle at Nandod, and His Highness the Nawab of Junagadh a herd of Gir cattle at Junagadiano, while the Chiefs of Sangli, Jamkhand and Aundh are directing attention to the Krishna Valley and Khallari breeds—examples which I trust may be followed by many more princes, chiefs, and landowners.

Ideals of Womanhood

The "Vedic Magazine" for January contains a number of interesting articles dealing with different aspects of womanhood. The articles are all written by ladies of culture, both English and Indian, and discuss the mission and destiny of womanhood in the light of the Vedas and modern thought as well. Kumari Vidyawati Devi, B.A., writes with special reference to Vedic teaching in her paper on the education of Indian women. On the other hand, Kumari Krishnabai Tulaskar is all for the most up-to-date American system of education. She writes feelingly of the condition of Indian women and urges a strong plea for the training of the future citizenness of the new "old" India. "She sees no harm in co-education." Eight other articles are devoted to the same topic. The Editor in his notes offers an instructive review of education for women in India and with ample arguments from the Vedic scriptures defines the supreme destiny of womanhood. He urges that the education of the two sexes must essentially be different as facilitating their respective avocations. He rails at what is now known as the economic independence of women. He also condemns the idea of educating women for professions as such occupations interfere with her supreme mission of womanhood. The Editor contends, however, that though physically and intellectually weaker than man

> Woman is not only not inferior to him but has actually been the goddess of his worship in all ages and in all civilized communities. She is emotionally superior to him and therefore exercises a potent and unshakable sway over his heart. She has finer intuitions, greater practical wisdom, greater capacity for judging individual character, perceptions more refined, greater charm, sweetness and persuasiveness, stronger love, deeper powers of attachment, stauncher fidelity, tenderer mercy, sweeter compassion and a more capacious and warmer heart. She rules by love, and the influence of a good, sweet, beautiful and cultered woman is uplifting, sanctifying and holy. She can, by her charm, regenerate sinners much more effectively than can the thundering sermons and withering and shrivelling fulminations and pasquinades of a hundred pastors and moralists.

Caste and Communal Representation

The Brahmin, observes the *Wealth of India* for January, (which by the way is amply illustrated) has come in for a great deal of criticism and abuse of late, specially in the Madras Presidency, on account of his supposed oligarchical tendencies; "but he gave up his claim to superiority long ago when he entered the Abkari Department and began testing the proof strength of arrack in liquor shops frequented by 'Pariahs'. A visit to the Mysore Tannery, Ltd., will show how freely the Brahmin mixes with and works for the amelioration of the much despised chuckler. The fact is the difficulties on account of caste are not so much due to the wily conduct of the Brahmin as to the non-Brahmins themselves. It is the latter that want the perpetuation of the caste in India. How else can be justified the loud cry for communal representation in the political controversies of the day. No better means could have been devised to retard the progress of social and political reform in this country than the grant of communal representation for Mussulmans under the Morley-Minto reforms some years ago."

University Education in Calcutta

The Rev. W. E. Holland, Principal, St. Paul's Cathedral School, Calcutta, in his recent criticism of University education as now conducted in Calcutta, observes :—

As regards the University, quite frankly we confess that we are rebels. But the instruments of our rebellion are not violence, but persuasion. For we recognise that the pass to which things have come is not of any one's designing. The sheer weight of overwhelming numbers and the pathetic keenness which brings students swarming into the University have brought about a situation, quite impossible to be grappled with by a single Senate. But we are out against a system that prostitutes education to examination, and makes knowledge not an end in itself but a means to a salary of so many rupees. We are out against a system that measures learning horizontally, by the quantity of surface it can cover, and not vertically by the depth it reaches. We prefer quality to quantity every time. We are out against an education that has no standard except the average attained in recent years. We maintain that there is nothing arbitrary in University standards: that a University is a place where the greatest teachers give their best; and its proper students are those who can assimilate that best. We are out against a system which so crowds colleges that the students cannot get the individual guidance they require, and which drags down the teaching given to the better students to the level of the bottom benches of students who should never have been admitted. We are out against a system which dooms half its matriculates to failure, when experience shows that given decent standards of admission and decent teaching the success of the great majority can be ensured. We are out against a system which encourages booksellers to advertise little paper cram-books "the perusal of which," so the advertisements tell us "will make it superfluous to study the books prescribed by the University." We maintain that even to handle decent books, and to peruse their table of contents is the beginning of a liberal education; that a library which is used is three parts of a University. We are out against an education that has killed the ancient Indian *gurukula*, where training of character had a foremost place; and has substituted for it a soul-less, Godless system, under which the moulding of his student's character is no part of the teacher's concern; partly for the sufficient reason that his classes are so huge that he can never know his men by name. We are out against a system which Mr. Gaganendranath Tagore depicts, not as a garden where tender plants are helped to grow, but as a mill which rolls its alumni into one flat pattern of insipid uniformity. Its system of cramming engenders not a love of learning but a loathing of all books. We are out against these things because we greatly care; because Bengal has as bright brains as any other country; because we long that it should have the glorious opportunity of the education we ourselves enjoyed at Oxford or at Cambridge; because Bengal is being intellectually starved.

Our aim then is the inspiration of our students with a passion for the truth, and the disciplining of their character for the service of the Motherland. To this end we insist on being small, that we may be a true collegium, a real society where each knows all, and every one contributes to the common life. We pride ourselves on being the smallest or one of the smallest colleges in Bengal. Our small numbers enable us to select our students, and so to secure homogeneous classes for teaching. Our rolls are called by name, not number. Our professors have to know their students personally, or they will be unable to report on them when they appear one by one before the staff in the terminal review.

Lord Chelmsford on Reform Proposals

In concluding his speech at the Imperial Legislative Council H. E. the Viceroy said :—

In the addresses presented to us we have had clearly placed before us the hopes and aspirations as well as the doubts and fears of the various communities in India. In the interviews we have endeavoured to elicit the opinions of those whom we were meeting. We have proved those opinions by searching cross-examination, not for the pleasure of mere dialectics, but to satisfy our minds that beneath the opinions expressed there was a solid substratum of fact and experience. I can say for my part, and I believe I can also speak for the Secretary of State, that we regarded these interviews as a liberal education. They enabled us to clear our minds and they assisted us to see how far opinions expressed in addresses were based on genuine conviction and solid thought. I should like to pay a tribute to the great ability with which so many of the addresses we heard had been drafted and to the careful labour and thought which they embodied. I also take the opportunity of cordially acknowledging the almost universal spirit of genuine co-operation which animated those who came to meet us in interview.

Availing ourselves then, of all the help that offers, we are threshing out the great problems with which we have to deal and I have every hope that the Secretary of State may be able to take home proposals embodying a sane and sober advance with future steps duly outlined so that provided we get that co-operation on which the announcement of August the 20th laid stress, we shall be able to progress towards the realisation of responsible government. Let me remind you of the words of the announcement that "ample opportunity will be afforded for public discussion of the proposals which will be submitted in due course to Parliament." If His Majesty's Government accept our request for publication, then it will be for those who represent the numerous communities interested to put their heads together and make reasoned representations to me upon them for transmission to His Majesty's Government.

I notice that it has been suggested that a deputation should go home and lay the case for the Congress-League scheme before His Majesty's Government. The same intention may exist in other quarters. I think that at the right moment that is a course worthy of consideration, and I would not have it thought that there is any desire on the part of Government to hamper any such representations. On the contrary I will gladly give all the advice and all the help which it lies in my power to give. You will observe that the procedure we propose to adopt is that which was followed on the occasion of the Morley-Minto Reform Scheme. It opens the door to full discussion and seems to me a highly convenient course to pursue. I do not disguise from myself that there will be those who will criticise our proposals whatever they may be, as not going far enough, while others will regard them as going dangerously far. That is inevitable but they will represent a sincere and honest attempt to give effect to the announcement of August the 20th which the Secretary of State and I have regarded as constituting our terms of reference, and therefore binding upon us. I would ask people generally to re-read that announcement as a whole, resisting the temptation to select that portion which suits their particular views and to reject the rest. I believe in the main, the announcement commanded general acquiescense and it behoves us all to endeavour to work together in general harmony with it, and to accept its spirit.

Extension of Female Education in Mysore

It is understood that the education committee of the Economic Conference has recommended among other things, the formation of a special faculty and special degrees for women in the University of Mysore, the medium of instruction for girls to be vernacular and English a compulsory second language, the sanction by Government of 100 scholarships of Rs. 10 each in addition to existing ones to pupils who join the English classes in high schools to be awarded on a communal basis, the starting as an experimental measure of boarding schools in selected taluks of each district, the establishment of a residential college for the science side at Bangalore, the appointment of three inspectresses of schools and the payment to women of salaries higher than those given to men in the public services.

H. H. The Nizam and the Aligarh College

His Highness the Nizam during his visit to Aligarh inspected the college building and received address of welcome. His Highness directed the Honorary Secretary to announce an annual grant of Rs. 1,000 for Arabic education and donation of 50,000 for the reconstruction of Kachha barrack.

The Hon. Nawab Sir Fayaz Ali, Khan Bahadur, President of Trustees, announced a donation of seven thousand in honour of Nizam's visit. Before leaving the college H. H. the Nizam announced personal reward of Rs. 500 to Maulana Hakki, Professor of Arabic and Rs. 500 to Imam and staff of the Mosque.

Raja of Kalahandi

Raja Braja Mohan Deo, Feudatory Chief of Kalahandi—a native State in Orissa, was installed by His Honour the Lieutenant-Governor of Bihar and Orissa at a Durbar held at Sambalpur on the 10th January, 1918. The State has an area of 3,745 square miles, and a population of nearly 4¼ lakhs. The ruling Chief has a permanent salute of 9 guns.

Sikkim's War Contribution

It is gratifying to find, writes the *Pioneer*, that since the outbreak of war this picturesque little State in the North-Eastern Himalayas has in proportion to its population contributed very largely to the armed forces of His Majesty. The actual figure is equivalent to slightly over one per cent. of the population, a proportion which will bear comparison with that of the Punjab.

Industrial Exhibition in Gwalior

The special feature of this year's Industrial and Agricultural Exhibition at Gwalior which comes off on March 11 will be the display of the varied and vast economic resources of the State: agricultural, forest and mineral. Like the two recent exhibitions at Bombay and Madras special encouragement is being given to the manufacturers of articles hitherto supplied by enemy countries. The work of fine arts, ladies' works, archæological and educational exhibits are included, while for the first time an exhaustive collection of indigenous medical drugs will be exhibited. The Gwalior spring race meeting will also be held during the exhibition season and already there are indications that there will be a large gathering at Gwalior in March. Large bazaars have been laid out besides the exhibition and for the convenience of visitors a separate camp has been provided to supplement the accommodation available in the hotels at Gwalior. In view of the growing importance of horse breeding in this country, special encouragement is being given by the exhibition committee to horse dealers and breeders and a large sale of horses and cattle is expected. The methods of commercial farming for which the Gwalior State offers such vast possibilities will be demonstrated in a big farm covering an area of several acres where a varied collection of big and useful machines of the American type have been brought together.

Indian Emigration

Mr. Henry Polak whose comprehensive paper appears on another page in this issue, delivered a lecture before the East India Association on Febuary 12, criticising the scheme of assisted Indian Emigration to the West Indies and Fiji, propounded by last year's Inter-Departmental Conference.

Sir Valentine Chirol said that, in the interests of the wider Confederation of the Empire, such questions must be settled gradually by a conciliatory attitude on both sides. It seemed to him that the interests at stake in such a scheme were infinitesimal, compared to the harm which might be produced by a revival of the elements criticised by Indians in the indenture system.

Lord Lamington urged that it would be unfair to place any obstacle in the way of voluntary Indian emigration.

Natal Indian Congress

The Maritzburg Indians, at a meeting held recently, passed the following resolution on the question of the Natal Indian Congress :—

"That this Meeting of Indians of Pietermaritzburg, although recognising the urgent necessity of resuscitating the now defunct Natal Indian Congress, is of opinion that the Indians of Durban should consult the Indians of other centres in Natal with a view to affording them their due share of representation in the step taken to reform that body."

Mr. C. D. Paruk, in moving the above resolution, said it was highly desirable that, in view of coming events to organise themselves, thus aiming at the solidarity of all sections. The Natal Indian Congress was the first political body formed in Natal. Owing to several causes, it had become dormant, and steps were being taken by the Durban Indians to resuscitate that body. It was nothing but proper that Indians in other centres should have a say in its formation.

South African Indian Brigade

The *Natal Advertiser* wonders why the Government of the Union have not approved of the formation of a combatant brigade of Indians from South Africa for service on one of the fighting fronts : So far, Natal Indians are represented only by the Indian Bearer Corps, a non-combatant unit which has done excellent work in East Africa, but which surely should not represent the sum total of South African Indian activities in the war. It is a matter upon which Indians themselves should take the initiative by representing to the Government that there are a certain number among them willing to go forward as members of a fighting unit.—*Indian Opinion.*

Indians in British Colonies

The *Panjabee* writes : While the galling distinction existing between the coloured and the white races there (British Colonies) are bad in all conscience, new restrictions are being introduced to further deepen the colour bar. The new Railway Regulations approved of by the Governor-General contain the following clauses applying to coloured passengers, including British Indians : (1) Non-Europeans (coloured persons or natives) will only be allowed to travel in the compartments or coaches specially set apart for their use, and they may not frequent or remain standing in the corridors in any portion of a coach which is set aside for European passengers ; (2) Non-European (coloured persons or natives) may not travel by the Imperial or Royal mail trains or by fast passengers trains or any other trains specially excepted from time to time either in the official Tariff book or by public poster. Needless to add, these regulations have caused deep resentment among the Indian settlers in South Africa. We look to Lord Chelmsford to move in the matter. His Excellency should see that no Indian is treated in the un-British way in which he is being treated in the British Colonies, because of the crime of his colour.

Shipbuilding in India

It is stated that Colonel MacGregor, of the Admiralty Construction Branch, is coming to India to inquire into the prospects of shipbuilding in the chief Indian ports and to discover how the labour problem in this country can be dealt with and what the needs are as regards material. Calcutta and Bombay shipbuilders are quite enthusiastic about the new scheme and are making all arrangements to provide every item of information for the Admiralty's representative. Some of them say that the great handicap is that of getting shipments of material needed for construction. The labour question is quite satisfactory, and it is believed that a start could be made in existing shipyards with a number of small craft and that as development went on bigger building will follow.

India's Foreign Trade

Before the Society of Arts Mr. D. T. Chadwick, the Indian Trade Commissioner, read a paper on Indian trade with Russia, France and Italy. He emphasised that before the war nearly fifty per cent. of Indian trade with Russia was done by Germany. The Russian demand for Indian products was varied and growing. There had been recently a desire in Russian circles to develop direct trade with India. Mr. Chadwick emphasised the importance of the questions of shipping and freights, and said it was stated that trans-shipment of goods at Hamburg was much cheaper than at London or Hull, and that it was in every way cheaper to ship from India *via* Hamburg.

With regard to France complaint was made with regard to the state in which certain Indian products arrived and also of depreciation in quality. This required attention, especially in view of the increasing competition. Italy promised to offer an aternative to Germany for several of India's products and he opined that there would be a wider field for Indian produce in Italy in future, though Germany would undoubtedly try to regain some of her position. In all three countries British weights and measures were criticised wholesale, (*as telegraphed*) and cleanliness, purity and quality were most important.

Lord Islington, who presided, said he hoped that the trade policy of the British Empire after the war would be characterised by broad-minded tolerance, even of enemies, but the products on which the safety of the Empire depended must be manufactured within the Empire not by enemies, and our raw materials must no longer be permitted to be the prime instruments, and sometimes the exclusive instruments of German trade and industry.

Japanese Line to India

Announcement has been made by the Toyo Kisen Kaisha that the firm will inaugurate a line to Calcutta with Kobe, the terminus in Japan. Its service will be two ships monthly with three ships in commission at the start. Among the ports of call decided are Kobe, Hongkong, Singapore and Calcutta, and the line may probably be extended to Rangoon later.

The Empire's Resources in Rice

Since the war it has become apparent that the resources of the Empire in food and raw materials have not hitherto been used to meet the needs of the Empire itself to anything like the extent that is desirable. Rice is a striking example of this state of things. Of the exports of Indian rice in the year 1913-14, Holland took 13·8 per cent., Germany 13·1 and Austria-Hungary, 8·7 per cent. the United Kingdom coming next among European countries with only 6·7 per cent. While this country occupied a relatively unimportant position as a direct importer of rice from India, it imported considerable quantities of rice from Holland and Germany, which had been first exported from India to these countries, and after being milled and polished there, had been re-exported to England.

All-India Landholders' Association

A meeting of the All-India Landholders' Association was held at Delhi on January 27 under the presidency of the Maharaja of Darbhanga. Many zemindars from different parts of the country attended. The proceedings began with the opening speech of the Maharaja, the main portion of which is reproduced in page 143. In welcoming those present, the Maharaja referred to the last meeting at Calcutta in November last and said :—

"It was in November last that we met in Calcutta to consider the memorial that was to be presented to His Excellency the Viceroy and the Right Hon. the Secretary of State for India and in December we waited upon them in deputation and were most favourably received. I think you will all agree with me that our November meeting was of an unique nature and one fraught with far-reaching consequences. Among the business transacted the most important was the proposal to start an organisation which would adequately safeguard and, with timely watchfulness, promote the great interests of our community ; and for this purpose a sub-committee was formed. Since then much spade-work has been done. The rules have been drafted and the organisation which was proposed to be formed will, we trust, begin its lease of life with its headquarters at Delhi."

The Maharaja then reviewed the present situation indicated the lines of work in the coming year to facilitate the progress of the country, dilated at some length on the duties and responsibilities of Zemindars to the Government on the one hand and to the public on the other and concluded :—

"The picture I see before me is of the landed noblemen throughout the country, fully and suitably educated, vying with each other in discharging in the best manner their duty by the tenants, the public, and the Crown ; standing in a corporate and organised body and taking their place as the natural and acknowledged leaders of the country. And let me express my fond and earnest hope that the organisation which will be inaugurated into full life from to-day will lay the foundation for the realisation of this glorious picture of our future."

On the conclusion of the opening address, the draft rules were, after some discussion, adopted with modification providing for the formation of a central committee at the capital of the government and of provincial committees to carry out the work of the organisation, and for the holding of an annual conference at such place and time as may be convenient.

Lord Willingdon on Cattle-Farming

In the course of an article in a recent number of the *Agricultural Journal of India*, H. E. Lord Willingdon writes :

"It is said that the farmer in India cares little for milk production but breeds entirely to produce good draught stock. My answer to that is that a good milking cow will produce just as good a draught bullock as a bad milker, that milk is becoming more urgently necessary for the inhabitants of our big cities, that a good milker costs no more to keep than a bad milker and therefore it must be a more profitable animal for the farmer. Again, it is objected that the buffalo is par excellence the milking animal of India as it is claimed that its milk contains more butter fat than that of ordinary cow, which is essential for the production of ghee. That may be true at the moment, but I am inclined to think that, with careful selection and breeding from the best milking strains and good management, dairy cattle may be produced in this country economically as paying an animal as the buffalo. Of this I am certain that no lover of cattle would prefer to keep a herd of buffaloes, if he can secure equal good results from the many beautiful animals I have seen since I have lived in India."

NOTICES OF BOOKS

[ONLY SHORT NOTICES APPEAR IN THIS SECTION.]

Sir William Wedderburn's Speeches and Writings. G. A. Natesan & Co., Madras. Price Rs. 3.

This is a handy cloth bound volume of 560 pages containing a comprehensive and exhaustive collection of the speeches and writings of Sir William Wedderburn. In a touching tribute prefixed to the book Mr. Natesan points out that Sir William was good enough to help him in the selection of the matter and that but for the exigencies of business the book should have been published by the end of last year. "It is to me nothing short of a misfortune" writes Mr. Natesan, "that I have been denied the privilege of presenting him with a copy of this book." The Publishers have made every endeavour to make this collection comprehensive and up-to-date.

Twelve Portraits. By Mukul C. Dey, Amal Home, Sukea Street, Calcutta.

Mr. Mukul Chandra Dey is a typical representative of the new artistic revival in Bengal under the inspiration of his master Abanindranath Tagore to whom this volume is appropriately dedicated. His is perhaps the first attempt at etching in India, as Sir John Woodroffe says in his introduction, and his studies of the twelve representative Bengalis are more than surface likenesses. They are singularly expressive of the "fundamental characteristics of the sitters."

Life of Ranoji Rao Sindhia. By Mukund Waman Rao Burway. Judge, Small Cause Court, Indore City.

This work, as the author observes in his preface, purports to be one of a series of "Short Studies of Great Marathas." The hero of this narrative, Ranoji Rao Sindhia, laid the foundations of the Gwalior Raj in the first half of the eighteenth century. Mr. Burway who has already written a similar biographical sketch of Sir Dinkar Rao, brings much scholarship and judgment in his treatment of such historical studies.

Sandhyavandana. By B. V. Kameswara Aiyar, M. A., Dewan Peshkar, Pudukottah State.

A thoroughly revised and enlarged edition of this useful book has now been issued by Mr. Kameswara Aiyar. The text has been printed in Devanagiri as Part I and the trans-literation of the mantras, translation, notes and commentary in English have been printed as Part II. The book is sure to interest the English-educated Brahmans to understand and appreciate the spirit and purport of the Sandhya.

True Tales of Indian Life. By Divijendra Nath Neogi, B.A., Macmillan & Co., London.

This book, as its title indicates, contains select episodes from the lives of Indian celebrities. There are no less than sixty-six stories in all: and being illustrated they must afford instructive reading for children.

Maharana Kumbha. By Har Bilas Sarda, F.R.S.L., Ajmere.

Mr. Sarda has in this study offered an informing sketch of one of the greatest of Rajput heroes who flourished in the fifteenth century. The versatility of the Maharana as statesman, soldier and scholar is very well brought out in this interesting biographical study. We are glad to learn that this is the first of a series of monographs bearing on Rajput history.

BOOKS RECEIVED.

A PLEA FOR THE REPRESENTATIVE AND RESPONSIBLE GOVERNMENT IN BRITISH INDIA. By N. Chelapati Row, B. A., Pleader, Ongole.

THE KINGDOM OF THE YOUTH. By J. H. Cousins Ganesh & Co., Madras.

A GARLAND OF SONGS. By Mr. V. Subba Aiyar, Police School, Vellore.

DIARY OF THE MONTH

January 23. Attack on the *Goeben*.

January 24. Judgment was delivered to-day on the Bakrid riot cases.

January 25. A wild sensation of shop-looting in Bombay.

January 26. The death is announced of Sir William Wedderburn.

January 27. A railway collision at the Itwari-yard.

January 28. Dr. P. C. Ray lectures at the Madras University Senate.

January 29. Air-raid on London.

January 30. Allied War Council met in Paris.

January 31. Strike in Berlin of 700,000 employees.

Sir Edward Carson speaks on the peace offers.

February 1. The Committee of the Imperial Indian Citizenship Association, Bombay, has addressed the Government of India on the report of the Inter-Departmental Committee.

February 2. British aircraft bombed enemy aerodrome.

The Swiss are reinforcing their troops on the frontier.

February 3. A purse containing Rs. 2 lakhs was presented to Sir J. C. Bose in Bombay at a meeting presided over by Sir Dinshaw Wacha.

February 4. Lady Willingdon opened an exhibition of educational work at the University Hall, Bombay.

February 5. Sir Douglas Haig's *communique* reports reciprocal activity at Hargincourt.

February 6. First Meeting of the Imperial Council. H. E. the Viceroy opened with a speech.

February 7. H. M. the King's Speech to the Parliament.

Aerial attack on Zeebrugge.

The "Ayuthia" disaster.

February 8. The Special Tribunal in the Behari riots delivered judgment to-day in the Bagabin case convicting 34.

Judgment was also given in the Mukhmilpore case convicting 9 of the accused.

February 9. Calcutta University institutes a faculty of commerce.

February 10. Sir Edward Carson has resigned.

German ultimatum to Roumania.

King Constantine's subsidy has been stopped.

February 11. Lord Ronaldshay opened the Carmichael College at Rangpur.

February 12. Mr. H. S. L. Polak lectured on Indian Emigration at the East India Association, London.

February 13. Sir James Meston has been appointed Financial Member in succession to Sir William Mayer.

Death of Sir Sundar Lal.

February 14. Sir James Meston presided over a meeting at Lucknow for inaugurating a fund for establishing a Kshatriya College.

February 15. Sir Harcourt Butler took charge of the Lieutenant-Governorship of the U. P.

February 16. Air attacks on London.

British aerial activity in the Western front.

February 17. Russo-German negotiations for peace.

February 18. Behar Planters' protest against the Champaran Agrarian Bill.

February 19. Third anniversary of Mr. Gokhale. The Servants of India Society has started a new weekly "The Servant of India."

February 20. The Dewan of Travancore opened the University Committee at Trivandram.

February 21. A dinner was given by the non-official members of the Imperial Council to the Secretary of State and his party at Delhi.

February 22. Annual meeting of the Bombay Medical Union was held at Bombay, Dr. K. M. Dubash presiding.

February 23. The meeting of the All-India Congress Committee came off to-day at Delhi.

Literary

ALL-INDIA LIBRARIES' CONFERENCE.

The first All-India Conference of Libraries met on the 4th January at the Government College Hall, Lahore, the Hon. Mr. Sharp, Educational Commissioner with the Government of India, presiding. There were thirty one members present including representatives from the Libraries and Colleges of the different parts of India.

The President after welcoming those present, said in the course of his address :—

"The main subject, which as it seems to me, we have to consider is the mobilisation of India's library resources. We are often told that India is a poor country ; and there is no doubt that it is a very large country with the major centres of population often situated at great distances from one another. The seeker after truth often finds himself inevitably cut off from books—or at least from books of a particular kind—collections are inevitably concentrated in the larger centres and even every such centre cannot offer all specialist facilities. We have to consider how the student in Peshawar may have access to the wealth, say, of the Connemara Library, or how the great collections of Calcutta, the Imperial Library, the Library of the Asiatic Society or the Botanical Survey may be made available to the dwellers in various parts of India which are not provided with such works as these contain. All the same, the number of important libraries in India is not so small. There are, of libraries that are public in one sense or another, the Imperial Library, the Connemara Library, the Libraries of the Asiatic Society of Bengal, the Bombay Branch of the Royal Asiatic Society and the Madras Literary Society. There are four or five large University Libraries and a considerable number of important College Libraries. Some of these contain large collections of scientific periodicals. Apart from that they are what might be described as "all round" libraries, not generally specialising, on the scientific side. The Scientific Libraries are those of the Geological Survey in Calcutta—Geology—the Indian Museum Library—Zoology—the Sibpur, Pusa, Cawnpur, and Dehra Dun Libraries—Botany and Forestry—the Simla and Alipur Libraries, Meteorology—the Library of the Surgeon-General, Bengal, that of the Medical College, Calcutta, and many others Medicine. There are collections of Engineering books at Roorkee, Sibpur, etc., of Agricultural in Calcutta (in the office of the Director of Agriculture) and elsewhere ; of Survey at Dehra Dun and Calcutta.

"The main object of our meeting, as I understand it, is to devise means for bringing these Libraries into touch with one another and for making the contents of one readily available to the readers of another."

On the conclusion of the address the session considered the nature of the numerous topics brought forward by the members and settled which should be discussed in full Conference and which in Committees. This done, the different Committees were formed for the discussion of the various topics on which resolutions were passed, notably some relating to "Reciprocity between Libraries" which was moved by Mr. G. A. Chapman of Calcutta. The Conference met again in full session on the following day. After the reading of papers on kindred subjects resolutions touching the principle of inter-borrowing of books between Libraries and the desirability of dividing India into a number of circles in order to afford facilities for circulation of periodicals and books and numerous other matters of allied interest were considered.

Educational

COMPULSORY EDUCATION IN BOMBAY.

Three more municipalities in the Bombay Presidency have decided to take advantage of Mr. Patel's Bill. Out of these, two are very small municipalities, Islampur and Baramati. The *Kesari* in drawing attention to this fact says that it shows that the desire for the spread of education is not restricted to any class or community, nor to any special areas, but that the desire exists all over the country.

SCHOOL FOR THE BLIND IN BURMA.

A Meeting was held at Bishop's Court, Rangoon, on January 19, under the presidency of Mr. Justice Young, to consider ways and means of raising funds for the support of a school for the blind in Burma, who number some 15,000. What is wanted is a school to serve as an adjunct to the present building. Dr. Jackson, recently appointed as clergyman in charge, has been himself totally blind since the age of three, and the chairman remarked that he was a living example of what could be done by training. He had won high honours at Oxford and had shown that a blind person could hold his own in other walks of life, he being a swimmer, an oarsman, and a skater. At the close of the meeting over Rs. 18,000 was subscribed or promised towards the starting of the building.

STUDENTS AND POLITICS.

The young citizen, says the Rt. Hon. G. W. E. Russell, must be, first and foremost, a lover of Freedom—Heaven's best gift to the individual and to society. The liberty, which Milton loved, "to know, to utter, and to argue freely"—the liberty to act in things secular and sacred, in public and in private according to one's own conviction of what is right—is the one incomparable good of life, the one priceless possession for which no earthly equivalent can be found, no conceivable boon be taken in exchange.

THE WEDDERBURN PRIZE.

Dr. P. C. Ray, C.I.E, who had been to Madras last month to deliver a series of lectures under the auspices of the Madras University has handed back to the University the honorarium paid to him for his lectures, to be instituted as a prize for proficiency in Chemistry. The prize is named after the late Sir William Wedderburn and will be awarded every year on the occasion of the University Convocation.

EDUCATION IN PUNJAB.

The Report of the Director of Public Instruction of the Punjab for the quinquennium ending March last year offers some interesting figures and observations. The programme drawn up in 1912 aimed at the establishment of 2,750 schools, but only 1,500 schools were actually established during the five years. The total educational expenditure for the year 1916-17 was Rs. 109 lakhs corresponding to Rs. 69 lakhs in 1911-12. The total number of students of all classes numbered 477,000 as against 381,000 and the number of institutions increased from 7,400, to 9,400. The number of primary schools for boys and girls increased from 3,417 with an attendance of 179,410 pupils at the end of 1912, to 4,913 with 245,628 pupils at the end of 1917. For every ten villages in the Punjab there was a school five years ago, but now there is one for every seven villages. The Director points out that "the average duration of school life is less than 4 years, and more than half the total number of pupils at school are in the two lowest classes. A year or two of a child's life spent in an infant class with children in varying stages of progress can have no lasting effect on the mind. Not only so but it discredits education in rural areas." The Government suggest that an increased staff and improved methods are the remedies, but they also point out that "before we force people to accept our gift, we should satisfy ourselves that the gift is one that they can turn to good account".

Legal

THE PRIVY COUNCIL.

In recording the elevation of Mr. Justice Darling as a Privy Councillor on December 21, the *Daily Chronicle* observes :—The office is old and honourable, and the Council has made important history during many centuries. Its Judicial Committee is the final Court of appeal for the Empire. That Committee decides questions which the Dominions themselves cannot settle ; but its attention is called to strange minute affairs in India whose coming to England for trial is a mystery to the man in the street—the ownership of a field, the ownership of a baby claimed by two Indian mothers. At home the Privy Council has done great things and strange things. It abolished the curse of army purchase : it decreed the blood-red profits painted upon stricken houses in the Plague ; it has even sent a needy scholar to a university and a fellowship.

A CHARGE AGAINST THE BURMA BAR.

Some remarks in the recent judgment of the Senior Magistrate of Mandalay in awarding four years' rigorous imprisonment on a charge under Section 326, I. C. P., to a Mandalay Burman have aroused the indignation of the Mandalay Bar, and four well-known Burman Barristers in Mandalay have promptly lodged an appeal for the appellant against this judgment, in the course of which they ask that these remarks be expunged as uncalled for and irksome. The chief remark to which exception is taken is as follows :—" The defence is the usual ready-made collection of perjury with which my friends of the Bar see fit to beguile the tedium of my afternoons in Court. I wonder if it ever occurs to these gentlemen what a lot of harm a stupid defence may do their clients, quite apart from the extra time they have to spend in jail before sentence is passed."

ANGLO-INDIAN LAW.

Presiding at the Rhodes Lecture at the University College by Sir John Jardine on "The Building up of a Corpus Juris in British India," Lord Islington said that a broad survey of law-making in India during the century and half in which Britain had been closely connected with India showed that there had been a genuine desire not to interfere with the customs and personal laws of the people of India. British administrators had treated with scrupulous care Indian usage and custom. Law and practice in many vital respects have remained undisturbed as they had been handed down through centuries. He paid a tribute to the ability and probity of the long list of lawyers and judges to whom the system of Anglo-Indian law was due.

Sir John Jardine emphasised that statesmen should only with great consideration modify the laws of India, which had grown from old customs many of which were based on religion.

THE LATE SIR C. M. GHOSE.

The death of Sir Chandra Madhab Ghose, Kt., retired judge of the Calcutta High Court, last month, removes one of the oldest Indian Judges. Born in 1838, he was educated at the Hindu and Presidency Colleges and passed the law examination at the age of 22. He rapidly rose in his profession and commanded a leading place at the Calcutta Bar. He was law lecturer for some time and among his students then were Sir Gooroo Das Banerjee and Sir Rashbehari Ghose. In 1885 he was raised to the bench of the High Court. He officiated as Chief Justice in 1906 and retired in the same year. He had also been a member of the Bengal Council and President of the Faculty of Law of the Calcutta University. He was elected President of the Indian Social Conference in 1906. The deceased was 80 at the time of his death.

Medical

DR. ROW ON MEDICAL WORK.

In concluding his presidential address to the recent All-India Medical Conference at Calcutta, Dr. Row of Bombay said :—

There is only one more matter which I might refer to here and that is to study carefully how the medical profession in Great Britain and Ireland has built up its own reputation and the prestige it enjoys to-day. Is it by Government support or favour of State concessions? The conditions in the two countries, I admit, are entirely different especially with regard to the attitude of the public to the medical profession. This is why the medical profession in India has a greater up-hill task before them, because it will be imperative for us in our own interest not only to do the self-sacrifice required for the professional work but undertake a propagandist work not by so much precept as by example and actual work done, with the hope of enlightening the public and awakening them to the sense of responsibility towards their fellow-men. Once we bound ourselves as enthusiastic and earnest workers, it does not seem to be a difficult task to work out a scheme of *modus operandi*. All one has to do is to impose on each one of ourselves a graduated tax and thereby collect a fund which can be utilised by the central body and distributed according to the contribution of each focus, for (1) founding small medical institutions and (2) to finance the pioneer workers with at least a minimum living allowance. Once such institutions are broadcast, they will not only be soon self-supporting, but will contribute to the popularity of the workers who will establish for themselves a reputation and even a good income for themselves when they once make their usefulness felt, and thereby also increase income for the central body. The details of such a scheme can be left to the committees, local as well as general, and a regular organised effort should be undertaken. Should these suggestions I have put forward commend themselves to this Conference, we need have no cause to fear or regret for this opportunity which is quite now in our own grasp, quickly slipping from our hands and mourn that some one else had done the work of "exploitation" in a sphere of work which is our own, and where labours of love can be achieved by us as by anybody else, independently of any extraneous aid, to the lasting benefits for the profession and the country in general.

ANTI-MALARIAL CAMPAIGN IN BENGAL.

At the end of January a very important Conference was held in Calcutta, when the members of the District Boards of Nadia, Jessore and the 24 Parganas met, at the invitation of Lord Ronaldshay, to consider some questions regarding the anti-malarial campaign which His Excellency proposes to inaugurate in those districts. There were also present some Zamindars. His Excellency dwelt on the acute danger of malaria which was sapping the vitality of the people with almost fiendish relentlessness. Even the Bengal Census Report of 1911 mentioned this as one of the main causes of the poverty of the people. Lord Ronaldshay mentions the 'Magra Hat' undertaking, where the drainage scheme has resulted in a wonderful prosperity. The land thus reclaimed has proved to be remarkably fertile and has yielded an outturn of crops worth almost Rs. 46½ lakhs, i.e., more than twice the amount spent on it. The three schemes now proposed would mean an expense of almost Rs. 19¾ lakhs, out of which the Government is prepared to contribute Rs. 4¼ lakhs. The District Boards will have to find the rest of the money, and it was in order to induce the Boards so to co-operate with the Government that H. E. the Governor of Bengal called them to this Conference.

Science

THE CHEMISTS' CONFERENCE.

The Chemists' Conference assembled at Lahore on Tuesday the 15th January with Sir Thomas Holland, President of the Indian Munitions Board in the chair. Sir Thomas put in a strong plea for the organization of chemical research in India especially in its bearing on the utilisation of raw materials in this country. The main portion of his speech on this subject appears in another page (112.) Sir Thomas pointed out that the war has shown the necessity for every country to be self-contained and that the chemist is a more dangerous fighter than either the gunner or the cavalryman. He then alluded to the work of the German chemists in the war and concluded by urging that research work should be organised and carried out on broad and efficient lines in India.

THE INDIAN SCIENCE CONGRESS.

The fifth session of the Indian Science Congress was held in the Town Hall, Lahore, on Wednesday the 9th January. Over three hundred delegates from various parts of India were present. His Honour Sir Michael O'Dweyer opened the session with a short speech welcoming the delegates on behalf of the people of the Punjab. Dr. Gilbert T. Walker, C.S.I., M.A., F.R.S., then delivered his presidential address which was illustrated with lantern slides. The president began with a reference to Sir Denzil Ibbertson "the only member of the Imperial Executive Council during the past twenty years with a scientific training." He then referred to the loss sustained by the Congress by the death of Dr. E. G. Hill and Prof. J. H. Barnes since they met last, and proceeded to discuss some features in the teaching of science which we reproduce on page 151. The president went on to observe that the initial cost of efficient equipment in research work would be more than compensated by the splendid results that would follow this experiment.

"It would be idle to contend that the initial cost of efficency will not be large; but the importance of the issue is enormous, and there can be no doubt that the expenditure would ultimately be remunerative. Let us consider wheat-growing as an example. Before the war an acre of wheat in England yielded about twenty-three maunds, but in India about eight maunds. In view of recent research work, however, it would appear not impossible to improve the Indian yield by two maunds an acre after which it would still not be half what is obtained in England."

The improvement of sugar and the revenues from forests afford further proofs of the need and value of scientific training and research work. Dr. Walker then spoke at some length on the prevalence of fever and malaria and urged that more attention should be paid to statistical methods.

"In conclusion I would urge on those of you who have any control over the collection of statistics to exercise all the care within your power in order to secure accuracy, and so by laying up invaluable materials for their use to deserve the gratitude of posterity."

On the conclusion of the President's address the Congress broke into sections with different presidents. The Congress came to a close on Saturday the 12th. The public functions of the Congress included a lecture by Major Norman White, Officiating Sanitary Commissioner to the Government of India, on "Some little living things: parasitism and disease," illustrated with cinematograph films. Major Hutchison and the officers of the Royal Flying Corps gave an interesting aviation display followed by a lecture on aviation by Lieutenant-Colonel Griffiths. The last day's functions included a garden party at Government House to meet the delegates, followed by a lecture on the same evening by Dr. D. N. Mullick, of the Calcutta University, on the planetary system, ancient and modern.

Personal

THE HON. MR. V. S. SRINIVASA SHASTRI.

The Bombay correspondent of *Capital* (5th January 18) writes :—

It is generally admitted by the official member of the gilded chamber that the non-official members who represent the Bombay Presidency are far and away from the soundest students of political science in the popular party; they are always worth listening to; Mr. Shastri, for instance, enjoys a reputation similar to that long possessed in the House of Commons by Mr. Tim Healy. When he begins to speak everybody, who had fled from the Chamber to escape some bore, returns at once and remains to the end of the speech. I have heard a European critic declare that Mr. Shastri combines the pungency of Mr. Joe Chamberlain with the graceful suavity of Lord Roseberry. Then we have the torrential Wacha, whose declamation is packed with facts, strong as Holy Writ; the shrewd Rahimtula; the reliable and self-reliant Fasulbhoy; and the collected Malcolm Hogg.

THE LATE SIR SUNDERLAL.

The Hon'ble Sir Sunder Lal, Vice-Chancellor of the Benares Hindu University, and the leader of the Allahabad Bar, died on the 13th instant after a brief illness, at the age of 60, from heart disease. Sir Sunder Lal was one of the oldest Congressmen, having been Chairman of the Reception Committee of the Allahabad Congress of 1910, when he had the honour of welcoming Sir William Wedderburn. He was respected both by the Government and the people. Sir Sunder Lal was very popular with all classes and his death is widely mourned throughout the country. In his death the Hindu University of which he was the Vice-Chancellor has sustained an irreparable loss. Sir Sunder Lal has two brothers, Pundit Baldeo Ram Dave, Vakil, and Pundit Kanhya Lal, Additional Judicial Commissioner, Oudh.

MR. GANDHI ON THE SITUATION IN KAIRA.

Speaking at a largely attended public meeting at Bombay on Febuary 5, Mr. M. K. Gandhi explained the present situation in the Kaira District which had been the subject of a press note recently issued by the Bombay Government. Mr. Gandhi said that the responsibility of the notice isssued by the Gujrat Sabha of Ahmedabad was his; and nobody expected that the Government would misinterpret the objects of the notice. The Gujrat Sabha had sufficient proof of the plight of the people in the Kaira District and that the people were even obliged to sell their cattle to pay taxes, and the notice was issued to console those suffering from hardships. The Sabha's request was to suspend the collection of dues till negotiations were over. If the Commissioner of the Division had not been angry with the deputation and had talked to them politely, such crises would not have happened. He fully expected that the deputation which would wait on the Governor would be able to explain the situation to His Excellency and the people's cause would succeed in the end. Public men had every right to advise the people of their rights. He trusted that those who had given the people the right advice would stand by them and would not hesitate to undergo hardships in order to secure justice. Mr. Gandhi continued :—

The first and last principle of passive resistance is that we should not inflict hardships on others but put up with them ourselves in order to get justice, and the Government need not fear anything if we make up our mind as we are bent on getting sheer justice from it and nothing else. We can have two weapons on occasions like this :—revolt or passive resistance, and my request is for the second remedy always. In order to remove distress through which the Gujrat people are passing, it is my firm conviction that if we tell the truth to the Government, it will ultimately be convinced and if we are firm in our resolve, the Kaira District people shall suffer wrongs no more.

The Chairman (Mr. Jamnadas Dwarakdas) then exhorted the merchants to contribute Rs. 25,000 needed for opening grain shops in the District, and announced that Rs. 10,000 has already been collected.

Political

COMMUNAL REPRESENTATION.

Mr. Lionel Curtis writes:—

Communal representation, as I understand it, means that Hindus and Moslems are to vote in separate constituencies, in such manner that a Moslem voter must vote for a Moslem candidate. He may not vote for one of any other religion; and the same applies to any other community to which communal representation is accorded. Moslems will thus learn to depend on an artificial protection, instead of facing the real source of their weakness, their relative backwardness in education. It is like keeping in irons a weak but healthy limb, which only needs exercise to recover its strength.

The concession of this principle when electoral institutions were inaugurated a few years ago, is the greatest blunder ever committed by the British Government in India. I believe that, if this principle is perpetuated, we shall have saddled India with a new system of caste which will eat every year more deeply into her life. So long as it remains, India will never attain to the unity of Nationhood. The longer it remains, the more difficult will it be to uproot, till in the end it will only be eradicated at the cost of civil war. To enable India to achieve Nationhood, is the trust laid on us; and in conceding the establishment of communal representation we have, I hold, been false to that trust.

The system has eaten into the life of this people so deeply that, already, it is not possible to abolish at one stroke what might have been refused a few years ago. But I feel that we shall be guilty of an unpardonable crime against India if we fail now to make provision whereby these fetters, in which we have allowed her to bind herself, can be loosed.

The experience of America, in the matter of slavery, may help to a solution. When the constitution was framed, it was laid down that the importation of more slaves from Africa was to cease in a particular year; I think in 1808. And the slave trade ceased in that year. But the courage of the convention failed them in the matter of slavery itself; and no time was fixed after which slavery should cease to stain the soil of America. The result was that eighty years later slavery was abolished, but only by drenching that soil with the blood of a million men.

I plead this precedent for a definite time-limit, to be set in the matter of communal representation. India is tied and bound by the chain of her past. Our first duty is to help her to break that chain instead of allowing one generation to rivet it more firmly than ever on those who come after. The least we can do is to fix a time-limit after which any arrangement now made for communal representation shall expire. Then we may hope that, meanwhile, the people of India may have learned such trust in each other that minorities will not insist on a system fatal to the development of all national life.

These, I know, are hard sayings for the Moslem community; yet "faithful are the wounds of a friend." Things there are bitter in the mouth, that chewed, swallowed and digested are sweet in the belly.

APPOINTMENT OF ASSISTANT ENGINEERS.

The following Press *Communique*, dated the 6th February, Delhi, says:—

The Secretary of State for India in Council has decided under the existing conditions not to appoint any Europeans as assistant engineers in the Indian Public Works and State Railways Departments in 1918. Applications for appointments will, however, be accepted from the Natives of India. They should be submitted on the prescribed form and addressed to the Secretary, Public Works Department, India Office, London, in time to reach him by the 31st March next.

General

THE ALL-INDIA HINDU SABHA.

The fourth session of the All-India Hindu Sabha met at Allahabad on the 9th January, with His Holiness the Jagatguru Sri Sankaracharya of Karvir Peeth, (formerly Dr. Shri Maha Bhagavat, Ph.D., M.R.A.S., F.R.A.S., etc.) There was a large gathering of learned pundits and the proceedings commenced with the singing of devotional songs by Pundit V. A. Kashalkar, Professor of Music in the Kayestha Pathshala. The Maharaja Manindra Chandra Nandi of Kassimbazar who welcomed the delegates made a lengthy speech describing the evolution of the Hindu people and the development of the system of caste. He eulogised the freedom and heroism and learning and piety displayed by women in ancient India, traced the growth of caste and the true meaning and import of that system (see page 149). and concluded :—

"Let us not interpret Hinduism in the light of its modern exegists and exponents, and let us not deceive ourselves into thinking that Hindu ideas are not capable of improvement and development. We must realize the fact that so long as we do not take care to interpret at every step the great truths of our philosophy in terms of our social and national life, there is no hope of our again occupying a place in the sun. I appeal to you, gentlemen, from the very bottom of my heart, to do your very best to resuscitate the best precepts of Hindu culture and to put them into practice every day of your life, to preach what you practise and practise what you preach, to have the old Hindu ideals always before your mind's eyes and to take courage in both hands to translate them in your life and conduct."

Pundit Deva Ratan Sharma then gave the substance of the speech in Hindi. The Hon. Lala Sukhbir Singh then having proposed the Jagatguru to the chair, the latter made an eloquent address in Sanskrit which was listened to with much respect.

He exhorted all Hindus to do all they could to uplift the Vedic *Dharma* which inculcated adherence to truth and *dharma*, (*Satyam vada, dharmam chara*). He regretted the neglect into which Sanskrit had fallen, but did not agree with those who called it a dead language. In his opinion it was not dead ; rather it was life-giving. He was not an opponent of the English language. On the other hand, he had a great regard for it. But what he urged was that proceedings of religious gatherings should be conducted in Sanskrit. He hoped that Hindu religion and language would again rise as a man wakes up after sleep.

Urged to speak in English, His Holiness said that they were gathered together to find means for guarding the ancient ideals and for preserving the unity of the Hindus.

Speaking of current events his Holiness said that the whole world was marching towards democratic ideas and no Government, no systems of repression could stop it. The attacks made the march swifter and more dangerous. His Holiness in conclusion dwelt at length on the resolutions on the agenda and showed how Hindu society could again be elevated.

Several resolutions were adopted, including one on loyalty to the Crown and success of British arms and another in connection with the recent Hindu-Muhammadan riots, calling upon Muslim and Hindu leaders to impress upon their respective communities the paramount necessity of respecting the religious feelings of their neighbours and of promoting a spirit of fellow-feeling and mutual regard and to exhort them to respect the agreement mutually entered into and requesting the authorities to work in full co-operation with the representatives of both communities.

The session concluded on the 14th January.

THE INDIAN REVIEW

A MONTHLY PERIODICAL DEVOTED TO THE DISCUSSION OF ALL TOPICS OF INTEREST.

PUBLISHED ABOUT THE THIRD WEEK OF EVERY MONTH.

EDITED BY G. A. NATESAN.

Vol. XVII. MARCH, 1916. No. 3.

FAREWELL TO LORD HARDINGE

BY MR. G. A. NATESAN.

IN bidding farewell to the Members of the Imperial Legislative Council at the last meeting, over which he presided a few days ago, Lord Hardinge gave touching expression "to the pang of regret," with which he had to say good-bye to the representatives of the people who had co-operated with him during the past five years and more. How deep should be the pang to the princes and people of India, who had found in Lord Hardinge an administrator of no mean order and, above all, a genuine Englishman who strove his best to make India realise that England ruled India not for her own aggrandizement but for fulfilling the nobler and higher purpose of her mission in this country! Lord Curzon who left to his immediate successor, Lord Minto, and after him to Lord Hardinge, a great legacy of discontent in this country, in one of his brilliant rhetorical performances uttered the remarkable sentence: "You will never rule the East except through the heart." Curiously enough the Proconsul who gave expression to this fine sentiment never realised it in practice, and instead of winning the affections of the people only alienated their sympathies and infuriated the disaffected. It was left to Lord Minto—blessed be his memory—to sooth aud allay this discontent, and by wise and timely measures assure the people of India that the policy of trust and confidence in the people would be pursued without any further interruption and that the legitimate demands and aspirations of the people would be respected and encouraged. In a speech made in London soon after the announcement of his appointment as Viceroy of India, Lord Hardinge assured his hearers that he would "watch over with utmost care and vigilance and do his utmost to consolidate the beneficent and far-reaching scheme of reforms introduced by Lords Morley and Minto for associating the people of India more closely with the management of their own affairs." He rightly at the same time added that he would "strain every nerve to conciliate all races, classes and creeds." It is now nearly six years since the Viceroy gave public utterance to these memorable words. Princes of the country and people of all classes, castes, and creeds can now with one voice acclaim that Lord Hardinge has proved true to every one of his promises, indeed has gone further than many of his predecessors to redeem them. The whole country acclaims to Lord Hardinge a high and honoured place in the rôle of the few Viceroys, who have writ their names large in the history of British rule in India. The truth is, to adapt the language of the great Christian soldier, General Gordon, Lord Hardinge tried to get into the skins of our people, strove strenuously to realise their feelings and understand their aims and aspirations.

The high mission of England in India has long been recognized by a succession of liberal statesmen. Macaulay's well-known vision of a renovated India is a commonplace with many of us. John Bright echoed again the same sentiments and confirmed the liberal prognostications of Macaulay. Speaking at Manchester, John Bright said:—

I believe that it is our duty not only to govern India well now for our sakes and to satisfy our own

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

conscience, but so to arrange our government and so to administer it that we should look forward to the time when India will have to take up her own government and administer it in her own fashion. I say he is no statesman—he is no man actuated with a high moral sense with regard to one great and terrible moral responsibility—who is not willing thus to look ahead and thus to prepare for circumstances which may come sooner than we think and sooner than any of us hope for, but which must come at some not very distant date.

Lord Ripon, one of the greatest and noblest of Indian Viceroys, in reply to an address presented to him on the eve of his departure from the country, gave expression to a similar sentiment :—

If England is to fulfil the mighty task which God has laid upon her and to interpret rightly the wondrous story of her Indian Empire, she must bend her untiring energies and her iron will to raise in the scale of nations the people entrusted to her care, to impart to them gradually more and more the richest gifts which she herself enjoys and to rule them not for her own aggrandisement nor yet for the mere profit of her own people, but with a constant and unwearied endeavour to promote their highest good.

Lord Hardinge has been truly following the footsteps of his illustrious and honoured predecessor, and no wonder that he stands to-day in the affection and esteem of the people of India on the same level as Lord Ripon. Lord Hardinge has honestly endeavoured, to use the famous expression of Lord Morley, to apply "the spirit, the temper, the principles and the maxims of British institutions" in this country. It is difficult to mention even in brief the many acts of Lord Hardinge's Viceroyalty, which have won for him the affection of millions of His Majesty's subjects. With the sanction of His Majesty the King Emperor and Secretary of State for India, he undid by one masterstroke of statesmanship the mischief and the injury done by the Partition of Bengal. He had also the courage to give expression in a public document as to what should be the policy of British rule in this country. We can never forget the significant passage in the momentous despatch of 1911, in which Lord Hardinge laid down that "in course of time, the just demands of Indians for a larger share in the government of the country will have to be satisfied and that the only solution would appear to be gradually to give the provinces a larger measure of Self-Government until at last India would consist of a number of administrations autonomous in all provincial affairs with the Government of India above them all." But not only did the Viceroy say it in his despatch but in his last utterance he has repeated it emphatically and given it full meaning, notwithstanding attempts made in high quarters to whittle it away. Throughout his Viceroyalty he has tried his best, subject to the limitations of his office, to secure for India "a just and proud place in the Empire."

It is now an open secret that it was Lord Hardinge who was mainly instrumental in urging upon the authorities at Home the advisability and the necessity of giving opportunities to the Indian troops to "fight the common foe side by side with sons of Great Britain, Canada, Australia and New Zealand." We can certainly look back with pride upon the brilliant achievements of the Indian troops in the battlefields of Europe. Lord Crewe was right when he declared : "that it would be a disappointment to our loyal Indian fellow-subjects if they found themselves debarred for any reason from taking part in the campaign on the continent of Europe." His Lordship went on to say : "We shall find our army re-inforced by soldiers, high-souled men of first rate training and representing an ancient civilization." That was the spirit in which the Secretary of State took up the decision of Lord Hardinge, who, in despatching the Indian troops, believed that "there is nothing like comradeship in arms before the enemy and joint participation in the dangers and hardships of war to level all distinctions, to inspire mutual respect and to foster friendship." "I cannot help feeling," continued His Lordship, "that as a consequence better relations will be promoted amongst the component parts of the British Empire, many misunderstandings removed, and outstanding grievances will be settled in an amicable and generous manner."

Witness again his brave efforts to bring about an amicable settlement of the South African Indian question and his labours in connection with the problem of immigration to Canada and other parts of the Empire on the basis of "mutual reciprocity." Indeed, the problem of indentured labour has for some time past elicited his most anxious care, and his courageous utterances and solicitous actions on behalf of the Indian emigrants are too well known to be repeated. But no half measures on this obnoxious question would satisfy the Indian public. Accordingly, to the infinite rejoicing of the country, when at a meeting of the Imperial Legislative Council, on March 20, the Hon. Pandit Madan Mohan Malaviya moved a Resolution for the abolition of the system of Indentured Labour, His Excellency on behalf of the Government of India and with the sanction of the Secretary of State announced his

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

decision to accept the motion which, to quote his own words, would pave the way for the "eventual abolition" of the Indentured System. This crowning act of his is not the least of his title to the gratitude of India, and his speech on this occasion is a fitting commentary on his enlightened and sympathetic administration :—

No one who knows anything of Indian sentiment can remain ignorant of the deep and genuine disgust to which the continuance of the indentured system has given rise. Educated Indians look on it, they tell us, as a badge of helotry. This is soon to be removed for ever, and is a source of deep personal satisfaction to myself that one of the last official acts that I shall perform in this country is to tell you that I have been able to do something to ensure that Indians, who desire to work as labourers in the tropical colonies, may do so under happier conditions and to obtain from His Majesty's Government the promise of the abolition in due course of a system which educated opinion in India has for long regarded as a stigma on their race.

Almost every province in India has reason to be thankful to Lord Hardinge. During his time the Central Provinces and Assam have been given Legislative Councils and in addition to the Executive Council, Behar has had a Legislative Council with an elected majority, a High Court and a University. We know Lord Hardinge's earnest attempts to create an Executive Council in the United Provinces and a High Court for Punjab, and we know it too that he has set his heart upon obtaining these for them. Lord Hardinge's recognition of the growing demands of Education and Sanitation has been proved by the large outlays on these heads during his time. His Excellency has declared himself over and over again and given the proof of his great faith in the effects of higher education and on the need for more Universities in this country :—

I share the view of those thoughtful Indian gentlemen who see in *the action of the new Universities the greatest of boons which the Government can give India, namely, the diffusion of higher education.*

It is the declared policy of the Government of India to do all within their power and within their means to multiply the number of Universities throughout India realising, as we do, that the greatest boon the Government can give to India is the diffusion of higher education through the creation of new Universities. Many, many more are needed, but the new Universities to be established at Dacca, Benares, and Bankipore, soon to be followed, I hope, by Universities in Burma and Central Provinces, may be regarded as stepts taken in the right direction.

But it is not so much the nature of the particular acts of his administration as the outstanding feature of his Viceroyalty that is of special note. Lord Hardinge never flouted public opinion like some of his predecessors but always paid the utmost regard to the opinions of the people's representatives though often inviting on his head the wrath of a section of the Anglo-Indian Press. Occasions there have been when the popular representatives and the Government of India have been unable to see eye to eye on many questions of policy and administration. But it has been a matter for congratulation that the relations between the Viceroy and the people's representatives have been throughout most cordial.

Every one who has come in contact with Lord Hardinge bears testimony to his serene temper, his charming manners and to his coolness and resourcefulness in success as well as in difficulties. But the supreme virtue of forbearance and forgiveness he showed when, a few days after the dastardly attempt on his life and on that of his beloved consort, at Delhi, he declared in no faltering accents that "the incident will in no sense influence his attitude." His attitude recalls the historic words spoken on *Calvary*.

In bringing to a close his last Council Meeting, His Lordship gracefully acknowleged that from experience gained in different parts of the world, he was in a position to say that the Imperial Legislative Council is "second to none in the dignity of its proceedings and the good feeling that animates its members." And his farewell is particularly touching :—

I am the second of my family to hold the highest office under the Crown, and I love India with an inherited love, increased manifold by personal experience of the sterling qualities, the kindness and the sympathy of the people of India. I can honestly say that I have given of my best for India, and that she will never be absent from my heart and my thoughts. I shall continually pray that the peoples of India may be blessed in all those things that make life brighter and better worth living.

India can only say, in reply, in the words of the All-India Address presented to him, at Delhi, on the 25th March :—

We salute you as the greatest Viceroy since the days of Lord Ripon. We recall with grief the terrible ordeals you have passed through in the performance of your arduous duties. The quick and deep sympathy of a nation followed Your Excellency in those troubles and tribulations. While we feel assured that you will continue to take an abiding interest in the people of this ancient land whom you have loved and served so well, we deeply regret that you are leaving us and that Your Excellency's official connection with India, which will form such a bright chapter in her history, will soon cease. May your days be long and prosperous, and may the Giver of All Good shower upon you and yours His choicest blessings.

INDIAN FINANCE IN WAR TIME

BY PROF. K. T. SHAH.

The main features of the Financial Statement for 1916-17 are :—

New taxation to meet an estimated deficit in 1915-16 of over £2 millions in the Imperial, as distinguished from the Provincial, revenues.

The new taxation takes the form of :—

(1) Increase of income-tax to :—

Six pies on incomes of Rs. 5,000 a year.

Eight pies in the rupee on incomes from Rs. 10,000 a year.

One anna in the rupee on incomes of Rs. 25,000 and over.

Increased income tax falls on only 57,000 persons.

(2) Increase of customs duties both by steepening the rate and by shortening the free list.

Grain, printing and other machinery, and railway material will henceforth pay $2\frac{1}{2}$ per cent. instead of being free.

Arms and ammunition will pay 20 per cent. *ad valorem* instead of 10 per cent.

Spirit and wine duties are increased, as also those on cigars and cigarettes.

The Government of India have not touched the cotton duties, in deference to the British Government, who desire to avoid fiscal controversy.

An export duty of Rs. $2\frac{1}{4}$ per bale is imposed on jute and an export duty of Rs. $1\frac{1}{2}$ per 100 lbs. on tea.

The salt tax is raised to Rs. $1\frac{1}{4}$ (from Re. 1) per maund.

Six pies in the rupee (instead of five pies) on incomes over Rs. 5,000 but under Rs. 10,000.

The total gain in revenue from all increased taxation will be :—

£2,150,000 from customs and liquor duties.

£600,000 from salt.

£900,000 from income-tax.

EVEN in normal times the finances in this country are a very fruitful source of anxiety to the minister in charge. It is impossible to make any accurate forecast when the most important source of public revenues are dependent on the annual rainfall, so that budgetting in India may very fitly be described as a "gamble in rain and railways." When war conditions supervened those already existing, the uncertainty of our finances became doubly alarming. For the peculiar trend of our recent development has resulted in reducing our old-world self-sufficiency and made us increasingly dependent on the outside world. Our artificial currency system has made our money-markets sensitive to every foreign influence. Our national prosperity has become indissolubly connected with foreign trade, and that trade is with the whole world, and the exports particularly to the continent of Europe. Little wonder then that every branch of finance was affected by the War.

And yet the direct effects of the War were comparatively insignificant. But for a slight spell of terror due to the ravages of the German cruiser *Emden*, the dislocation in trade was very little. True, the trade with the enemy countries was entirely cut off, and the unusually large stock of piece-goods in the country foreshadowed a depression in that important branch of trade. But as against these, there was a plentiful—an exceptionally good—harvest. The Treasury balances were a million and a half sterling in advance of the estimated figures at the date of the War. The five crore loan in India had proved a great success. Under the circumstances, then, it may be said that the economic and financial conditions were by no means dispiriting at the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

outbreak of the War. On the other hand, it must be admitted that the unbroken peace of two generations or more had made the Government in this country, as in every other part of the British Empire, out of touch with war conditions, and our estimates of the cost as well as the duration of the War were sadly inadequate.

Even before the first War Budget was introduced in the Council, steps had to be taken to safeguard the peculiar artificial currency system of India. The first shock of war was felt by the rupee as was inevitable. Government decided—and they announced this decision very soon after the declaration of hostilities—to sell a million sterling every week in London to maintain the Exchange value of the rupee. This measure at once tranquilised the market. The total amount of the bills thus sold did not exceed £9,000,000. But this was not all. The stock of gold must be preserved if the whole structure of credit were not allowed to break down. There was an appreciable panic in the first weeks of the War. Rupees and currency notes were withdrawn to be exchanged for gold. The English pound sterling reached a premium not known since the currency legislation at the end of the last century. A million and three quarters was withdrawn before the Government stepped in and refused to issue gold altogether to private persons. As if frightened by this action of the Government, people rushed to withdraw their Savings Banks deposits, and to change the currency notes for coin. The total withdrawals from the Post Office Savings Banks amounted to Rs. 10 crores and a half. As these deposits represented the unfunded debt, Government had to meet it by an equivalent loan from the Gold Standard Reserve. And as regards the rush to change the notes for cash, Government followed the excellent banking adage and gave every facility to the impatient holder of notes for encashment. By this policy the total note circulation was reduced by only Rs. 7 crores. Government paper depreciated only by $3\frac{1}{2}$ per cent. and when we consider the high value it had reached before the outbreak of the War, the depreciation is insignificant. First class securities remained practically unaffected, and the Bank rate fluctuated between 5 and 6 per cent. On the whole, then, in spite of the dislocation of the internal trade due to the timidity of the Marwaries, in spite of the cessation of the greater part of the export trade due to the exclusion of vast regions from the Indian markets, India was able to weather the storm with relative ease. No Moratorium had to be declared; no special emergency legislation was needed; no considerable interference with trade and industry by the Government was required. India had not the same stress put upon her as was the case in the United Kingdom; but neither had India the same dislocation of trade and industry, the same shock to credit, as the United Kingdom.

This was the situation at the outbreak of the War. By the time that the First Budget of the War was ready, the conditions had appreciably altered. During eight months of war, the Government had passed the most dangerous stage of the War. They began to settle down to War conditions. They realised the unusual character of this War. But still the hope of its speedy termination was not given up; and estimates were prepared in those hopes.

The outstanding feature of the First War Budget was that in spite of a large deficit of £3,833 millions *no new taxation was levied.*

We do not propose, said the Finance Minister, on this occasion to raise any money by increased taxation. We should not hesitate to do so to meet a deficiency in revenue which promised to be more or less of an abiding character. But the present circumstances are altogether peculiar. We know that ordinarily we can count on surpluses. India too has a very small unproductive debt; and with trade conditions depressed, and the present abnormal rise in food prices, we have come to the conclusion that we ought not to add to the existing taxation unless it is absolutely necessary.

Including the capital account, *i.e.*, the loans incurred every year for productive works, and a further possible drain upon the Post Office Savings Banks deposits, the total liabilities came to about $14\frac{1}{2}$ millions sterling. There were besides pending obligations amounting to 14 millions. The whole of this was proposed to be met by borrowing. The loan of £7 millions from the Gold Standard Reserve was left outstanding; and so also the Secretary of State's £7 million India bills were renewed. The rest was proposed to be met by permanent and temporary borrowing as follows:—

		£
From balances	...	4,500,000
Rupee loan	...	3,000,000
Sterling loan	...	6,500,000
Famine insurance, &c.	...	400,000
Total	...	14,400,000

It is one of the well-known maxims of sound finance that all non-recurring, unproductive, unforeseen expenditure should be met out of borrowing, provided steps are taken to redeem

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the debt thus incurred in a definite period. The policy of the Government of India is thus so far beyond cavil. True, this estimate of theirs was based on the expectation that the War would be over by the end of the year, and to the extent that this estimate has been proved inaccurate, their policy may be considered to be open to criticism. But in this mistaken estimate of the duration of the War, the blame does not lie on the Government of this country. They took their cue from the Home Government, who were in this respect more to blame than any of the other Governments in the Empire. And in their borrowing the Government of India adopted much sounder principles than those which the British Government adopted in theirs at least at first. The Rupee loan was, it is true, raised at a slightly higher rate of interest, *i.e.*, 4 per cent. as against the old 3½ per cent. But it was made redeemable by 1923, and the whole of it was underwritten by the Presidency Banks. The total subscriptions were 60 per cent. more than the amount of the loan. Besides an effort was made to enlist the sympathies of the small investor by offering special facilities through the Post Office, and nearly Rs. 50 lakhs were raised by that means, a lesson which the Home Government copied in their next great loan.

(2) As the War went on, the need for still greater caution became still more evident. Besides the curtailment in the usual borrowing programme, *rigid economy was exercised on all sides except the Military.* The Provincial Governments were instructed to restrict their expenditure in every possible way. The policy of reducing expenditure does not commend itself always to the spending departments, especially in a country like this. However unfashionable that policy might have become, one cannot deny that for a poor country at least it is the only sound policy; and we would not be the poorer for a closer attention to it even in normal times.

The War, however, went on beyond the calculations of the Government, and the Second War Budget had to be prepared on entirely different principles. The conditions were no longer the same. The first shock of War was over, and with it had disappeared the rush on the Savings Banks deposits and the frenzied demand for the encashment of currency notes while the deposits have remained practically at the same figure at which they stood in the last Budget, the notes in circulation now amount to Rs. 54 crores. On the other hand, the monsoon has been very poor, and trade continues to be depressed on account of the same reasons. Scarcity in shipping and dearness of freight have added to the effects produced by the closure of the ordinary channels and special restrictions on trade. In spite of some improvement in revenues over the Budget estimates, which has reduced the budgetted deficit from 3·8 million to 2·7 million pounds, there is still a heavy deficit to face. On the present basis of taxation the total revenue for 1916-17 is estimated at £82·5 millions and the total expenditure at £85·5 millions. There is thus a net deficit of £3,000,000, of which £400,000, the provincial deficit, is to be met out of the provincial balances.

The War continues, said the Finance Minister, and we cannot go on year after year with uncovered deficits. We consider it essential in the present uncertain outlook to increase our revenue resources to make good the anticipated Imperial deficit of the coming year and also to supply a substantial surplus.

Before, however, we consider the new taxation, we must offer some general remarks. The Budget cuts down the capital account in a fairly drastic manner. Including the £2 millions for the discharge of debt, it is brought down to £6·6 millions as against the £14 millions of 1915-16 Budget (subsequently reduced). The Railways, for instance, get £3 millions as against the £4·9 millions of the revised estimates of 1915-16, and the Budget estimate of £8 millions for the same year. This year there is to be no sterling borrowing, but a Rupee loan will be raised to the extent of 6½ crores. By this means and the adjustments in taxation there is expected a surplus of nearly a million. Now the first question is:—

(1) It may not unreasonably be questioned whether there is any great likelihood of such a deficit as is budgetted for. The estimates of revenues are admittedly very cautious. Even apart from the possibility of the termination of the War (which cannot last for ever) an abundant rainfall and a fairly normal war trade could easily convert the anticipated deficit into a surplus. Such things have not been unknown in the past in Indian finance.

(2) Assuming that there would be a deficit if the existing basis of taxation were retained, would it not be possible to meet the deficit by borrowing? This is admittedly an unusual demand not likely to continue after the War, and it has always been recognised as a sound maxim in public finance to meet all such unusual demands by borrowing. Even supposing that there is no

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

further room for reduction in the capital account, the experience of last year would seem to show that the Government could easily raise in this country alone the small deficit likely to occur. It is true we are cut off from borrowing in the London market, and it is generally believed that there is only a limited scope for borrowing in India. But the ease with which the £3 million loan was floated and over-subscribed last year would warrant the belief that there is a much greater field for borrowing in India than is generally believed. And even admitting that there is not an unlimited field for loans in this country, we have ample cash balances to meet such deficit as might still occur after the Government had borrowed all that it conveniently could.

(3) Granting that the deficits were inevitable and that borrowing was either impossible or inadvisable, it is still questionable whether it is good finance to deliberately budget for a surplus of a million pounds in such a poor country as this by additional taxation. And if it is prudent to get a surplus, it ought at least to be got from sources least likely to prove burdensome to the people. Briefly stated the changes in taxation are :—

(*a*) The general import tariff of 5 per cent. *ad valorem*, to be raised to 7½ per cent. with the exception of sugar, calculated to bring in an additional £420,000.

(*b*) An import duty of 10 per cent. on sugar. expected to yield an extra £400,000.

(*c*) A material curtailment of the free list being confined to gold coin and bullion, silver, bronze, and copper coin of India, some essential materials, certain agricultural requisites, etc., etc.

(*d*) 2½ per cent. *ad valorem* duty on grain and pulse, cotton spinning and weaving machinery, railway material, and ships, and printing material.

(*e*) The 1 per cent. duty on steel and iron to be raised to 2½ per cent. Other metals to pay the 7½ per cent. general tariff.

(*f*) An export duty of Rs. 1½ per 100 lbs. on tea, Rs. 2-4 on raw jute, Rs. 10 a ton on jute sacking, and Rs. 16 a ton on hessians.

(*g*) An increase of the salt duty by As. 4 per maund, bringing in an additional £600,000.

(*h*) A graduated rate of the income tax, being 6¼ per cent. over yearly incomes of Rs. 25,000 and upwards, and yielding an additional £900,000.

This Budget is likely to be regarded by some as heralding an altered fiscal policy. The Finance Minister has called it a message of peace as well as of hope. It is impossible however to find any distinct indication of a changed fiscal policy in this Budget. The one great grievance of Indian industries is the duty on cotton manufacture made within the country to counterbalance the duty on imported cotton manufactures of 3½ per cent. It was hoped that this most unpopular tax on Indian industry would be removed, and the duty on imports of cotton manufactures would be raised. Conscious of the prevailing sentiment in the country, the Government of India put the case before the Home Government, who, however, "felt that the raising of this question at the present time would be most unfortunate," and the matter was therefore postponed to a more convenient season. Whatever the wisdom of this decision, we cannot regard the present Budget as having inaugurated a new fiscal policy. The duties are one and all revenue duties, and there is very little reason to believe that the development of India's resources by means of the action of the State has become a recognised policy. High hopes had been raised ever since the Viceroy, speaking for the Government of India and with the authority of the Government of His Majesty, approved of the Resolution of the Hon. Mr. Shafi, in September last, asking for a direct representation of India at the next Imperial Council. And these hopes were further stimulated by the Resolution in the House of Commons, asking for a closer co-operation between the various parts of the Empire with a view to the better development of the resources of the Empire. But these hopes have for the present to be content with the assurance that "His Majesty's Government feel that fiscal relationship of all parts of the Empire, as between one another and the rest of the world, must be re-considered after the War; and they desire to leave the question raised by the cotton duties to be considered then in connection with the general fiscal policy, which may be thought best for the Empire."

Apart from this disappointment in the case of the cotton duties there are other points in which the Budget leaves much to be desired. The rise in the duty on salt has very properly been taken exception to. If it is not fair to raise the duties on import because the Manchester industry is already hard hit, it seems still less fair to impose a duty on the Indian poor, which is already a serious tax on their slender resources, especially as there are other directions in which the requirements of the Government can be more easily met. And, besides, even if the salt duty had not been

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

raised, there would have been no deficit; for while the expected yield by the increase in duty is estimated at £600,000, there is a surplus of nearly a million provided for. So that if the whole increase in the salt duty were removed, there would still be a surplus of £400,000.

If we cannot approve of the increase in the duty on salt, the same cannot be said of the other tariff changes. The export duty on tea and jute can be supported on economic as well as fiscal grounds, though perhaps not in equal degree. For, while jute is a practical monopoly of India, and the demand for it is inelastic, the tea trade is by no means a monopoly of India, nor is the demand for that article as intense as that for jute. The imposition of heavy duty on tea in England must curtail the demand appreciably; and it is to be seen how far the duty on tea becomes productive for the Government. The duty on imported sugar might conceivably encourage the production of that article in India.

The changes in the income tax are noteworthy. The principal of graduated taxation has been carried a little further, though of course not to the same extent as in the United Kingdom. If additional taxation were necessary, this seems to be the most unexceptionable method of raising it. It is to be wished that the graduation were a little more steep, for people with very high incomes are not likely to feel even a 10 per cent. or 15 per cent. duty very much.
